882. In regard to the Poor Law, there appears to be but one opinion, that epileptics, especially sane epileptics, should not remain in workhouses. Mr. Jenner-Fust, General Inspector of the Local Government Board, recommends that epileptics not classed as insane should be removed from the care of the guardians, since many, perhaps the majority, are to a certain extent of unsound mind, and some are dangerous when their fits occur; and he argues "that expert opinion advises that they can be properly treated in an asylum on the colony system apart from the lunatic or imbecile patients; and that guardians could not provide satisfactorily for them except in combination (to adopt which method for any purpose they have shown great unwillingness) and even then only for paupers." Dr. Downes, Senior Medical Inspector for Poor Law purposes of the Local Government Board, takes up the latter point and concludes that there should be a central authority, and that to avoid the difficulty of one authority, the Poor Law, dealing with pauper, and another authority dealing with non-pauper epileptics, a single authority should deal with all. Miss Fry points out how much sane epileptics now cost to the rates, even though they are living under conditions unsuitable to them:—"In one union in Somerset (population 24,250) there are two sane epileptics costing £13 each per annum in the workhouse, and five in receipt of out-relief, averaging 3s. 6d. per head per week, and eight insane epileptics in asylums, of whom seven cost £23 11s. 5½d. each per annum, and one costs £27 7s. 6d. per annum."

Jenner-Fust, Vol. I., p. 139, c. 2. Dendy, Vol. I., 886, 905.

Downes, Vol. I., 1813.

Cf. also Dendy, Vol. I., 884-886. Wills, Vol. II., 14877. Brooks, Vol. II., p. 61, c. 2. Fry, Vol. II., p. 227, c. 1.

Gaskell, Vol. II., 16491, p. 313.

Mr. Gaskell, Secretary of the National Society for the Employment of Epileptics, said:—"In the absence of any special provision for persons thus afflicted, it is not surprising that in a large proportion of cases where they have no relations to maintain them they drift into the Poor Law infirmaries and workhouses. Here no arrangements are made for their occupation; the disease grows upon them; they deteriorate morally and mentally till at last a worse fate befalls them, and they end their days in the lunatic wards of the workhouse or in an asylum."

Beach, Vol. I., 7136.

Dr. Fletcher Beach, who gave evidence on behalf of the Royal College of Physicians, considered that workhouses were unsuitable for sane epileptics, and in support of this view quoted a sentence of Dr. Alexander's :—

> "They spend their time in workhouses, fighting and quarrelling and passing a miserable existence till they die."

Miss Wemyss, in her evidence regarding epileptics, stated :—"They need plenty of fresh air, and a variety in food, and a certain amount of liberty and variety in their lives, also to have their interest in their work cultivated, and to be treated with respect, not as paupers, and this increases their own self-respect, and raises and improves them in every way. From long and intimate personal knowledge of workhouse inmates one cannot help feeling that all these things, so necessary for the improvement of human character, are wanting in the generality of workhouses." Wemyss, Vol. II., 18505, .p 430, c. 2.

'urtis, Vol. I., 18762, . 440, cols. and 2. Recommendation XC.

It would seem, therefore, that, as in the case of the mentally defective, it would be better that epileptics should be dealt with apart from the Poor Law and placed under the care of the Board of Control and the Committees for the care of the mentally defective. Rhodes, Vol. I., 9436, 9442. Townsend, Vol. II., 18324, p. 418, c. 1.

Elementary Education and Epileptics.

883. Next in regard to the children, the only legislation which deals directly with epileptics is the Elementary Education (Defective and Epileptic Children) Act, 1899, with its amending Act, dated 1903. The Elementary Education (Defective and Epileptic Children) Act, 1899, was the outcome of the Report of the Departmental Committee on Defective and Epileptic Children (C. 8746). In regard to epileptics, that Committee recommended that epileptic children of normal intellect who suffered only from a slight form of epilepsy should be educated in ordinary schools; that those who suffered from this form of epilepsy, and were feeble-minded, should be educated, like other defective children, in special classes or special schools; and that for epileptics who suffered from severe epilepsy, but were not insane or imbecile, special provision might be made. This provision took the form of special residential schools for epileptic children of from seven to sixteen years of age. By the Act, it was required that no school of this kind should contain more than sixty children, and no building attached to the school for the residence of children should house more than fifteen. The Act of 1903, permitted a modification of this limitation. By a minute of the Board of Education, "thirty" was substituted for "fifteen." The Elementary Education (Defective and Epileptic Children) Act, 1899. Report of Departmental Committee on Defective and Epileptic Children, 1898, c. 8746. Sec. 2 (6) Board of Education Minute, May 13th, 1904, p. 201, c. 1.

884. The Board of Education Minute (May 13th, 1904), appears to indicate that the Board expected to provide education in these schools for children, who were of normal intellect or merely somewhat backward. They write—"School instruction should as nearly as possible resemble that given in an ordinary elementary school." In the same minute, in reference to boarding schools for defective children, however, they say that the—"Instruction must be given in accordance with the rules prescribed by the Education Department for day schools and classes for defective children." Board of Education Minute, May 13th, 1904. Appendix, Vol. V., p. 201, c. 2. Appendix, Vol. V., p. 198, c. 1.

It is thus clear that the intention of the Act, and of the regulations drawn up by the Board of Education for its administration, was that these epileptic schools should be adapted for the reception and education of epileptic children, who suffer from severe epilepsy but who are not so mentally defective as to require to be educated as mentally defective children.

The Elementary Education (Defective and Epileptic Children), Act, 1899, Sec. 2 (2) and (3), and Sec. 9.

885. The Act of 1899, contains four provisions for dealing with epileptic children. It empowers education authorities (1) to enquire as to the number of children in their districts—"who, not being idiots or imbeciles, are unfit by reason of severe epilepsy to attend ordinary public elementary schools," and (2) to establish and maintain boarding schools for them, or (3) to acquire, maintain, or contribute to certified schools established by other agencies; and (4) it enables boards of guardians to contribute to certified schools in respect of scholars, who are either resident in a workhouse or in an institution to which they have been sent by the guardians. The Elementary Education (Defective and Epileptic Children) Act, 1899, Sec. I., (1) (b).

Under the first of these provisions, the inquiries were made in London, Birmingham and Bradford, the results of which are stated in para. 871 above.

Chance Vol. II. p 169, c., I. Fry, Vol. II, pp. 226, 227, c. 1.

886. The second provision of the Act which enables education authorities to establish residential schools has not yet been adopted, though schemes for their establishment have been discussed by the authorities in London, Bradford, Surrey, and Bristol. Residential schools. Kerr, I., p. 437, c. Garbutt, Vol. II. p. 125, c. 1 and 2.

Power to contribute to schools.

887. The third provision of the Act enables education authorities to contribute to certified epileptic schools established by other agencies. This has been acted upon to a limited extent. There are, at present, four certified epileptic schools in England with certified accommodation for 222 epileptic children, and they contained eighty-two children who were paid for by the education authorities.

888. The four schools are :—

Appendix, Vol. V., p. 188.

The School and Home for Epileptics at Lingfield, Surrey.—This was established and is maintained by the Christian Social Service Union. It is certified for 100 boarders, but at present houses 103, of whom twenty-nine are paid for by the education authorities, sixty-five by boards of guardians, and nine privately. It, like the Starnthwaite Colony, represents a very interesting and useful experiment. The schools are placed in large grounds. The cost of maintenance and schooling per child is 12s. 6d. a week. If half-a-crown a week were added it would earn per child the interest on the invested capital. The cost per bed, including cost of the site, redemption of capital, etc., has been £170.

Brooks, Vol. II., p. 63, c. 2, 12044–12061.

Appendix Vol. V. page 188.

The School and Home for Epileptics at Starnthwaite.—This was also established by the Christian Social Service Union. It is managed by a local committee. It is certified for thirty boarders, and has twenty-eight in residence, who are paid for by the education authorities and by boards of guardians.

Information supplied by the St. Elizabeth School Authorities.

The St. Elizabeth School for Epileptics at Much Hadham.—This was established and is maintained as a charity of the Roman Catholic Church. It is certified for fifty-six boarders, and has in residence twenty-one, of whom four are paid for by education authorities and fourteen by boards of guardians, and three were private cases.

Information supplied by the David Lewis Trust.

The School of the David Lewis Manchester Epileptic Colony was established by the trustees of the David Lewis bequest. It is licensed for thirty-six boarders, but forty-two are in residence. Of these thirty-eight are paid for by education authorities and four by boards of guardians.

Subscriptions by Poor Law Guardians to certified epileptic schools.

889. The fourth provision of the Act enables boards of guardians to subscribe to certified epileptic schools. Of this, advantage has been taken, as the evidence shows. In the four certified schools there would appear to be ninety-nine epileptic pauper children who are paid for by boards of guardians.

Classification of epileptics in certified schools.

890. In order to ascertain what classes of epileptics were cared for in these schools, some members of the Commission visited three of them. Returns were also obtained of the mental condition and the severity of the epilepsy in each case. An abstract of the returns is shown in the table below. "Severity of epilepsy" is severity as estimated by the superintendents. Cases entered as having no fits are cases in which the patients have had no fits since their admission or for a prolonged period, such as a year or so.

Severity of Epilepsy.	Total.	Mentally Defective.	Imbecile.	Normal.
1.	2.	3.	4.	5.
		Maintained by Education Authorities.		
Severe - - -	56	33	8	15
Mild - - -	13	9	1	3
No fits - - -	13	6	0	7
		Maintained by Boards of Guardians.		
Severe - - -	60	50	3	7
Mild - - -	33	25	0	8
No fits - - -	6	1	1	4
Total - -	181	124	13	44

This table shows that the number of epileptics who are dealt with by education authorities and boards of guardians in certified epileptic boarding schools is very small, and that of this small number, probably, many are epileptics who do not come under the definitions of the Act. Only 22 out of the 181 cases strictly satisfied the terms of the Act, severe epilepsy and normal intelligence..

891. So large is the number of mentally defective and imbecile children in these schools that it is reasonable to infer that they have become custodial homes, rather than boarding schools for children capable of education which "as nearly as possible resembles that given in an ordinary elementary school."

Classification of epileptics in certified schools—*contd.* p. 201, c. 2. Appendix, Vol. V.,

892. On this point, the evidence of Dr. Basden and Mr. Brooks of the Lingfield School and Home throws further light. Dr. Basden suggests that the epileptic children should remain under the care of the education authorities until the age of nineteen instead of sixteen, and that the boards of guardians should then provide for them till the age of twenty-one, but he argues, in favour of what is really a more complete measure, that it would be of great advantage to the country to keep as many epileptics as possible permanently in colony life, on the ground that "certainly in the majority of the cases the existence of the disease is due to inherited tendency, either to epilepsy, or to some allied neurosis." And for children too, he says, that they "have found the colony system to be the ideal one." He urges that there might be a second colony or section of a colony for the children of the age of fifteen or sixteen, from which they might be "transferred to yet another colony provided for those adults who required permanent supervision." Whether child or adult the same rule applies, which he applies to the children, the rule of employment. "We have," he says, "at the Lingfield Colony been much impressed with the importance of giving the children constant employment, and providing for them as many interests as possible. Our experience is that loafing means increase of fits, whereas suitable occupation, organised play, and healthy amusements, mean diminution of fits." And as to staff he says, that "as epileptics are naturally inclined to idleness and self absorption, a considerable staff of intelligent workers is required if a large colony is to be worked on satisfactory lines, and this will be increasingly so the more carefully the children are graded."

The School and the Colony. Basden, Vol. II., p. 57, c. 1, and p. 58, c. 2. *Cf.* also Brooks, Vol. II., p. 62, c. 1.

Basden, Vol. II., p. 57, c. 2.

Cf. Alexander, Vol. II., p. 331, c. 1.

The suggestion here is that the school system, as in the case of mental defectives, must be supplemented by a colony system for the permanent members of this class. In fact, by this argument, the present educational provision under the Act of 1899 is set aside and a new method proposed. The school is itself transferred to the colony and becomes part of it. Next, as in the case of the mentally defective, a manual and industrial education to a large extent supersedes the normal curriculum, though "the better class children might be taught as ordinary scholars with, of course, more industrial training."

Brooks, Vol. II., p. 64. Brooks, Vol. II 12091.

893. Dr. Basden brings to light another question. He shows to how very small an extent is the population of children in the epileptic school permanent. In fifteen months in a school of 120 children "pretty well half have changed." A certain number have reached the age limit and have left, and a certain number have been sent away as being hopeless. "We got an exceedingly poor class of children to begin with till within the last year." Some "were practically imbeciles, practically unteachable. They have gone. They are in most cases in the workhouses in the imbecile wards. There should be a section of the colony set aside for them." Dr. Alexander, the Honorary Consultant of Maghull Home for Epileptics, says :—"These hopeless imbeciles should be separated from the others and placed in institutions where they are to be fed, clothed, kept clean, and interested as far as possible. Their removal from home is a necessity for the peace and general welfare of the families to which they belong. But elder children who are not of this type, when they leave the colony, "return in some cases to the workhouse, in others they take up a wandering life with the practical certainty of becoming vicious or criminal, and probably both." Their "colony training is thus wasted" and they become "a nuisance to society and their children keep up the supply of defectives and degenerates." And this intervention should be pushed further, it is said: "The children of the poor who are epileptics cannot be treated at home, and no serious attempt is ever made to save them from drifting into the hopeless condition of epileptic insanity." "Prejudice, ignorance and poverty of many parents render treatment at home futile. Most of them only have medical aid for a month or two, or even less

Change of population in schools. Basden, Vol. II., 11913–11917.

11921–11924. Alexander, Vol. II., p. 331. c. I.

McCullum, Vol. II., p. 75.

Change of population in school.—*contd.*

time than this, unless improvement is obvious ; others have no treatment at all after the first convulsion and fright is over, as they are firm in their faith that the child will grow out of the disease, whereas the fact is they grow into it."

Provision for epileptic children must include provision for "after care."

894. There is thus in the case of epileptic children, as in the case of the mentally defective, no sufficient accommodation, no link with other establishments, a congestion of children for whom little can be effected, and ultimately, after a sojourn in school, a dispersion of children under most unsatisfactory conditions. The remedy would seem to lie in an endeavour to organise assistance in view of the nature and character of the disease, considered in reference to the life of the patients as a whole. The number of epileptic children, who are otherwise "normal," appears to be small.

The case of children of school age who suffer from epilepsy in combination with other defects has been considered by us in Chapter XVIII. above.

The Commencement of Epilepsy in Relation to its Treatment.

Statistics of commencement of epilepsy. Bond, Vol. I., p. 470.

895. Several investigators have submitted to us figures showing the age at which the disease usually commences. Dr. Bond put before us statistics of 300 consecutive admissions into the Ewell Epileptic Colony—making no distinction between those with and without congenital weak-mindedness. These are his figures with, parallel to them, the corresponding statistics collected by Dr. Aldren Turner in 366 cases at the colony of Chalfont St. Giles's :—

The epilepsy showed itself before 5 years of age in 23 per cent.		
Do., between infancy and 14, in 53 per cent.	54·6	Corresponding percentages from the Chalfont Colony statistics.
Do., between 15 and 20, in 15 per cent.	17·4	
Do., between 20 and 25, in 9 per cent.	8·1	
Do., after 25 years of age, in 23 per cent.	19·7	

Bond, Vol. I., p. 470, c. 2.

Bond, Vol. I., p. 467, c. 2.

896. These figures show that 53 or 54 per cent. of the epilepsy occurs before the age of fourteen ; that the next period of strain comes with adolescence. Lastly, there is the epilepsy of later age which Dr. Bond says is due in nearly all cases over the age of thirty-five or forty directly to alcoholic excess or syphilis, or to both of these two causes.

Alexander, Vol. II., p. 331, c. 1.

897. With these statistics may be compared statistics compiled by Dr. Alexander at the Maghull Home, and by Mr. Gaskell at Chalfont Epileptic Colony. Dr. Alexander's table shows that the ages at which the disease commences is as follows :

	Cases.	
At birth or under one year	63	
During the first ten years of life, including the above sixty-three	171	
During the second ten years of life	159	= 394
During the third ten years of life	46	
During the fourth ten years of life	18	

Alexander, Vol. II., p. 331, c. 1.

These figures, though differently classified, support the conclusions which were drawn from the previous table as to the period of the incidence of the disease. In Dr. Alexander's opinion, "Nearly half of the epileptics, 171 out of 394 or 43 per cent. would require to be educated in an epileptic school. The remainder would be fairly educated before the onset of the disease." Accepting this opinion, we may conclude that about 40 to 50 per cent. of epileptic persons of the epileptic population of mixed ages, would require special schooling of one kind or another, for Dr. Alexander makes no allowance for children who might remain in the ordinary classes, even though they suffered from epilepsy.

Gaskell, Vol. II., p. 310, c. 2.

898. Mr. Gaskell's figures which are given in the following paragraph confirm the statistics we have just quoted, though, in this return again, the classification of the figures is different.

"From an examination of the case-papers of 250 male and 250 female epileptics, applicants for admission to the Chalfont Colony, I find that the age at onset, stated in age periods, was as follows :— Statistics of commencement of epilepsy.—*contd.* Gaskell, Vol. II., p. 310 c. 2.—*contd.*

Age at Onset.	Males.	Females.	Total.
0–5	55	54	109
6–10	30	34	64
11–15	62	74	136
16–20	51	52	103
21–25	24	12	36
26–30	12	8	20
31–35	9	7	16
36–40	4	4	8
41–45	–	3	3
46–50	1	1	2
51–55	1	1	2
56–60	–	–	–
63	1	–	1
	250	250	500

"The average age at onset was : males 15, females 13, all persons, 14."

It appears from these figures that in half of the cases the epilepsy declared itself before the age of fifteen, and that the next marked incidence of the disease is—though at a much smaller percentage—between the sixteenth and twentieth year

899. With these statistics, we have to compare other figures which show the period of life at which patients are admitted to the regular treatment of the home or colony. Dr. Alexander noted that "in 455 cases at Maghull only twenty-three came to the Home within a year from the onset of the disease ; 100 had been ill from two to six years ; 115 from six to ten years ; 90 from ten to fifteen years ; 54 from fifteen to twenty years ; 33 from twenty to twenty-five years ; 22 from twenty-five to thirty years, and eighteen for thirty years and upwards." Duration of disease on admission to home or colony treatment. Alexander, Vol. II., p. 331, c. 1. *Cf.* Gaskell, Vol. II., p. 313, c. 2.

Mr. Gaskell's corresponding table is as follows :— Gaskell, Vol. II., p. 314, c. 2.

	Males.	Females.	Both Sexes.
Average age at application	24	26	25
„ „ onset (as previously stated)	15	13	14
Average duration of disease at time of application	9	13	11

From the date of application until admission there is, generally speaking, an interval of somewhat over a year, owing to the lack of sufficient accommodation to meet the demand.

These returns, if compared with the tables, show that there is no relation between the commencement of the disease, and, so far as the Home is concerned, the commencement of specific and permanent treatment ; and as Dr. Alexander says, in considering results under our present arrangements we must make allowance for "the length of time that the patients have been idle and unemployed, and during which, both mind and body have had time to become disorganised." Alexander, Vol. II., p. 313, c. 1.

900. As to the great utility of early and immediate treatment there is no marked difference of opinion. Dr. Bond says :— Results of colony treatment. Bond, Vol. I., p. 469, c. 2.

"Neither the congenitally mentally deficient nor epileptics *need* become lunatics ; and he has no doubt whatever that, by the adoption of more enlightened means of dealing with them when young, a considerably less number than at present would ultimately need asylum care, and thus also a certain amount of relief would be afforded to the present pressed accommodation of most asylums."

And Dr. McCallum, Physician to the Starnthwaite Epileptic Colony, says :— McCallum, Vol. II., p. 75, cols. 1 and 2.

"Timely intervention of the State has a splendid chance of saving the epileptic from the doom awaiting him by early removal to a colony, where suitable surroundings and medical treatment will, in over 60 per cent. of all cases, check the convulsions and so cure the disease before gross irreparable damage is done to the brain."

And in the case of adults also very good results may be anticipated, especially if the treatment follows closely upon the manifestation of the disease. "In 1903" Dr. Alexander wrote "we found that in the case of 246 patients who had been with us for some time, twenty had ceased to have attacks for periods of from three to four years. In 185 cases the attacks were reduced considerably and in sixty-one cases the attacks had increased. . . There is no doubt that between 7 and 10 per cent. derive so much benefit from the home as to be Alexander, Vol. II. p. 331, c. 2.

Results of colony treatment—*contd.* Gaskell, Vol. II., p. 314, c. 1.

considered practically cured." Mr. Gaskell submitted to us a return of 159 cases prepared by Dr. Aldren Turner on the same subject. It is as follows :—

Frequency of Fits.	Total Number of Cases.	Percentages.
Daily (one or more)	18	11·3
Weekly (one or two)	72	45·3
Monthly (one or two)	35	22·0
Quarterly (one or two)	7	4·4
Yearly (one or two)	8	5·0
In series	13	8·2
Arrested cases	6	3·8
Total	159	100·0

"When a colonist has been free from fits for two or two and a half years he is usually discharged; but the results have been somewhat disappointing, as in a number of cases there has afterwards been a relapse necessitating re-admission. On the other hand there have been a certain number of cases where patients have been taken away by their friends as cured, after an immunity of only six or nine months, but where nevertheless we have heard long afterwards that the immunity has continued. So much, of course, depends upon the circumstances in which the patient is placed after discharge from the colony. If the circumstances are likely to be unfavourable, two years immunity at the colony affords little security against recurrence; while in the contrary case a much shorter period of immunity may justify removal where the friends desire it."

Provision for children and adults in colonies desirable.

Recommendation XC.

901. We may conclude, then, that, taking into account the nature and character of the disease, treatment in a colony should be provided both for child and adult; that to meet the demands of the disease treatment subject to the necessary safeguards, should be available for patients of all ages, if proper provision is not forthcoming at the patients' homes; that the present accommodation is not only insufficient, but that it is not yet in any measure co-ordinated so as to meet the needs either of children or adults in such a way as to ensure that the treatment will follow closely on the early manifestation of the disease; and that any effectual administration for the care of epileptics must be founded on this principle.

Sane Epileptics in Prisons.

Sane Epileptics in Local Prisons.

902. Judging from the returns of our medical investigators, the number of sane epileptics in the local prisons are but few, and would make practically no difference in any count or estimate of the number of sane epileptics in the country.

Insane Epileptics in Asylums and Workhouses.

Epilepsy and Insanity.

903. Our medical investigators found in the selected areas in England and Wales 700 epileptics who were not certified, but were other than sane, in a population of 2,362,222, say three in 10,000 of the population. These were epileptics living either in institutions or among the general population.

Needham, Vol. IV., 26985.

In the county and borough asylums Dr. Needham stated that 12·4 of the lunatics suffered from epilepsy. This would indicate that among the inmates of these asylums, 89,342, there may be as many as 11,078 epileptics. But except in so far as they are not now employed upon the land and might be so employed according to the plan adopted at the Ewell Labour Colony, it does not seem that any special recommendation in regard to them is necessary.

60th Report of the Commissioners in Lunacy, p. 2.

Of the number of insane epileptics certified as insane but allowed to remain in workhouses under Sec. 24 of the Lunacy Act, we have no precise information.

The question is indeed one of minor importance, for as mentally defective persons, all these cases are already certified and would come under one general scheme of care and supervision.

Epileptics who are Idiots and Imbeciles.

Beach, Vol. I, 380, c. 1.
Crichton-Browne, Vol. I., 332, c. 1.
Dendy, Vol. I., 861.

904. In asylums for idiots it is the rule to exclude epileptic patients. Nevertheless, in three asylums seventy-eight epileptics were found. Sir James Crichton-Browne pointed out that epileptic imbeciles in affluent circumstances are freely admitted to these asylums; and the seventy-eight epileptics may belong chiefly to this class. In regard to these institutions, also, as the epileptics are also mentally defective, the question of their actual number is a matter of less importance, unless the fact that they suffer from epilepsy leads to some difference in their institutional treatment. As suggestive of a more suitable treatment of insane epileptics we describe the Colony at Ewell in a few words.

905. The London County Council have established a special colony asylum for the treatment of insane epileptics, the Ewell Epileptic Colony. It consists of 127 acres of land, of central buildings for administration, recreation, etc., and a number of detached one-storey villas and some workshops. It has accommodation for 266 men and fifty-eight women. As far as possible the inmates are employed. Most of them work on the land, but those who are unfit for that work are employed in workshops or in domestic duties. The patients are epileptics who have symptoms of insanity. They are described, many of them, as not very insane, whilst many of them, at times, show no symptoms of insanity at all. Judging both from the evidence which we have received and from our personal observation, we are satisfied that the treatment of epileptics who are subject to minor degrees of insanity is very much better in a colony asylum of this description than it is in an ordinary closed asylum. The more suitable surroundings, the greater liberty, the more wholesome work, and the separation from the more degraded of patients are all advantageous to the epileptics and tend to alleviate their misfortune. This institution is called a labour colony, but it might equally well be called an asylum built on the "villa" principle, like the asylums at Purdysburn near Belfast, at Kingseat and Bangour in Scotland, and in Holland, Germany, and America, where the treatment is similar. The cost of the land and buildings amounted to £282 per bed, and the cost of maintenance is nearly 16s. 4d. per inmate per week, which is 5s. more than the average cost of all patients in London County Council asylums, and 6s. more than the average cost of all asylum patients in county and county borough asylums. If the method of treatment in "colonies" is to receive, as we hope, a wider application, it must, it is obvious, be adopted under much more economical conditions in its future development.

Voluntary Institutions.

906. In discussing the question of schemes for the combination of unions (Paragraphs 184 to 189) we have described the institutions proposed to be built by the Birmingham, Aston and King's Norton Boards both for mentally defective and for epileptic persons in receipt of poor relief. In Paragraph 881, we described the Langho Colony for Epileptics inaugurated by the Manchester and Chorlton Guardians in 1906. We have now therefore to refer to the voluntary institutions only.

Curtis, Vol. II., p. 441, c. 2.

Sayer, Vol. II., p. 452, c. 1.

907. Of these the Maghull Home for Epileptics is the oldest. It was founded in 1888. It is situated near Liverpool and has accommodation for over 200 epileptics. The cost per patient per week is 12s. 8d., or including payment for rent and mortgage 8¼d., 13s. 4¼d. There are eighty acres under cultivation. On the last year's working there was a loss of £62; but in the three previous years there had been a gain of £50, £191, £61. Six acres of the land are in kitchen and market gardens or orchard. The farm is only seven miles from the Liverpool markets and Mr. Grisewood says: "We could develop even more than we have done in the direction of market gardening. We could use more land for that purpose. Without adding to the land we could put 100 more upon it, that is, fifty males and fifty females." The general profits on the farm "seem to show that a farm colony can be carried on with a small margin of profit by utilising the labour of the patients and even making a small weekly allowance to a certain number of them. The sum of £107 allowed under that head in 1905 was equal to the wages of two healthy labourers." The Home, it is evident, has been very carefully and economically developed. It is not licensed either as a lunatic asylum, or as an idiot asylum, or as a special school for epileptics. The patients in it are divided into four classes according to the scale of payment made for them, a scale ranging from 7s. 6d. per week to £2 2s. per week and upwards. All, with eleven exceptions, are over school age. Of the 208 patients in the home, nine are reported by the medical officer to be imbecile, and seventy-seven to be weak-minded, with memories much impaired and powers of conversation limited; 122 he does not consider defective, though "some impairment of the memory and of control over actions is evident." A local medical practitioner attends the home daily; and the acting consulting medical officer, Dr. Alexander, attends weekly. Otherwise it is under the charge of a lady superintendent, who is a trained hospital nurse; and the patients are nursed and watched by a large staff of attendants, and are encouraged to do wholesome and useful work. There is about one attendant to eight patients. Of the male patients, about one-third work on the farm or in the garden, while

the remaining two-thirds are found to be unfit for any but the very lightest and simplest work. Most of the female patients are employed in domestic duties; a few are engaged in basket-making. About two thirds of the inmates attend evening classes conducted in the institution; these classes are recognised by the Board of Education as a continuation school, and the managers of the institution earn a Government grant amounting to over £60 per year. The nature of the instruction given is indicated by a report of the head teacher, which is quoted by Mr. Grisewood in evidence, and which states:—"The difficulties entailed in teaching epileptics are chiefly due to lack of self-control and of mental power. . . . In some cases we find it difficult to make the work educational. Many look bright and happy after an hour's hard work, but, when asked at the next lesson to learn something new, become at once listless and dull. Epileptics are all capable of study and useful work, provided it is not a strain on either body or mind."

Grisewood, Vol. II., p. 337, c. 2.

Grisewood, Vol. II, p. 33 c. 2.

Many of the inmates in the institution are paid for by boards of guardians, and two or three are paid for by education authorities.

The Meath Home of Comfort.
Annual Report, 1905.

908. Five years after the establishment of the Maghull Colony, in 1893, Lady Meath founded a home for epileptic girls and women, which is known as the Meath Home of Comfort. The institution is situated near Godalming in Surrey, and it has subsidiary homes at Hayling Island. It has accommodation for ninety-seven patients. Patients are received from all parts of England, at payments ranging from 8s. per week for children under twelve years of age to £2 2s. per week for ladies. Boards of guardians pay for many cases. According to the last annual report as many as forty-seven boards were paying for patients. Epileptic girls and women who are likely to derive benefit from a residence in the home and are able to engage in some occupation such as needlework, beadwork, basket-making, or laundry are considered suitable for admission. Patients who are "violent, hysterical, imbecile or lunacy cases" are, under the rules, excluded. Many of the children admitted are of school age, but the institution is not certified by the Board of Education, nor does it receive any education grant. The class of case at the home is similar to that at Maghull. Most of the inmates have symptoms of mental defect, slight in some but marked in others.

The Chalfont Epileptic Colony.
Beach, Vol. I., 381, col. 1. Gaskell, Vol. II., 16491.

909. The Chalfont Epileptic Colony was founded by the National Society for the Employment of Epileptics in 1894 for the assistance of sane epileptics. It was the first colony opened in England for sane epileptics. It consists of a farm of 210 acres, nine residential houses, an administrative block and workshops. It has accommodation for 198 colonists, of whom 134 are males and sixty-four females. Among the males eleven are under sixteen years of age, among the females none are under that age. Cases for admission are carefully selected, and epileptics who have a marked mental or moral deficiency or are liable to attacks of insanity are excluded, as are also those who by reason of awkwardness, irritability or physical defect are not suited for life in the colony.

Gaskell, Vol. II., p. 312, c. 2.

Vol. IV., p. 313, c. 2.

Vol. IV., p. 312, c. 2.

There are no educational facilities in the colony; two of the houses were built as a residential certified epileptic school, but owing to the restrictions imposed by the Elementary Education (Defective and Epileptic) Children Act, 1899, limiting to fifteen the number of children to be provided for in any one building, the project was abandoned, and the houses are now used for other purposes.

Vol, IV., p. 314, c. 2.

The majority of the male colonists are employed in farm and garden work; others are employed in carpentering, plumbing, painting, brick-laying, smith's work, tailoring, boot repairing, and domestic duties. Formerly basket-making was used as an employment for men, but it has been abandoned. It was found to be too sedentary. Of the female colonists, about one-half are employed in the laundry, and the remainder in dressmaking, needlework, and housework. The labour of the inmates produces a considerable profit. The farm and garden account shows a profit of £300 and the building and works account a profit of £127, in all £427, or about £2 per inmate per year. In addition, the labour of the inmates reduces the cost of maintenance, which now stands at 10s. 8d. per patient per week. Although patients are excluded whose mental deficiency is marked, there are many who are to some extent mentally defective; this was noticed by members of the Commission, and it is supported by Mr. Gaskell's statement that "probably one-third of them would seem reasonably capable of managing their own affairs."

Vol. IV., p. 316, c. 1.

Vol. IV., p. 317, c. 2.

Gaskell, Vol. II., 16576-16577.

askell, Vol. V., p. 315, 1 and 2.

The houses and homes in the colony are under the charge of a lady superintendent who is a trained hospital nurse, and, as at Maghull, a local medical practitioner visits twice a week and as often as required, and there is an honorary visiting physician. The Chalfont Epileptic Colony.—*contd.*

910. The David Lewis Colony for sane epileptics was opened at Sandlebridge, near Manchester, in 1904; it was founded by the trustees of the David Lewis bequest, and provides accommodation for 200 colonists in all, but this includes the accommodation required for the certified epileptic school referred to above which is not available for the ordinary purposes of the colony. The buildings consist of a large central administrative block with the kitchen, laundry, etc., and a number of detached residential villas. The estate consists of about 115 acres, and with some workshops it provides work for the more able-bodied class of patients, a class similar to that admitted to Chalfont. In the greater number of the cases, signs of mental defect may be noticed: in some, they are well marked. The payments for patients vary from 14s. a week to 50s. Children may be admitted. This colony differs from the institutions at Maghull, Chalfont, and Meath in that it is under the superintendence of a resident medical officer. The David Lewis Colony. Report David Lewis Colony, November, 1905.

911. There is one other institution—St. Luke's Home, at Bournemouth. From the Annual Report for 1904, it would appear that it provides accommodation for twenty epileptic women and girls, members of the Church of England, who require nursing. The payment is 12s. 6d. a week. St. Luke's Home, Bournemouth.

912. Two at least of these institutions represent a type of colony or colony home which might, we think, be generally adopted in any future arrangements for the care of so-called sane epileptics. They are dependent on voluntary support and, probably, partly for that reason have been economically built and are thriftily managed; and those who support them desire that they should retain their voluntary character, while their usefulness, as they hope, will be largely extended.

The Development of Industrial Colonies for Epileptics.

913. "To my mind," Mr. Gaskell said, "it is highly important to draw a distinction between colonies such as ours"—that at Chalfont—"which are for voluntary patients, and colonies where you have to detain people. . . . I think it would spoil the colony for those who are contented and amenable, if they were mixed up with a set of people who needed compulsion and detention." But apart from this distinction, whether it be desirable to maintain it or not, there is on the part of the managers of these institutions a general wish to preserve their voluntary nature. Dr. Basden, referring to the Lingfield School and Home, said: "We are hampered in the sense that we are hampered for money. We like it being a voluntary thing, because we get people interested who are interested in it for its own sake; but we feel the need of more funds." And Mr. Gaskell said that he did not think that any of these institutions would be so well managed by public authorities as they would be by voluntary management:— Gaskell, Vol. II., 16614, 16616. Grisewood, Vol. II., 16895. Basden, Vol. II., 11946. Gaskell, Vol. II., 16639, 16640.

> "There is a considerable amount of flexibility now in the management which I think you could never get with public management. The tendency is for public management to become a matter rather of hard and fast rule, and that is fatal in an epileptic colony. I think the fact that you get in the voluntary charity such a large number of people interested in it from one source and another is a great advantage, as all that tends to add to the variety of an epileptic colony. With a committee such as ours, some of the members take an interest in it from one point of view and some from another, and similarly with our subscribers and other helpers. All this variety of interests is of the greatest value. It saves us from the monotony of institutionalism, and adds immensely to the zest and variety of the lives of the colonists. With public management you would not get this kind of thing to the same extent."

So Dr. Alexander, of the Maghull Home for Epileptics says:—

> "I think the home should be always voluntary. If you have it under a public authority there is a danger of too much red tape. You require a certain amount of freedom in managing institutions of that sort. The patient cannot be brought to any distinct rule; you have to manage as well as you can." Alexander, Vol. II., 16707.

914. Yet the demand for accommodation is so great that the present homes and colonies are not able to meet it, and desire to extend. Hence suggestions for help from the State in some form, on the understanding that whether entirely voluntary, from the point of view of finance, or in some degree subsidised, Grisewood, Vol. II., p. 338, c. 1. Brooks, Vol. II., 12139 and 12140.

The development of industrial colonies for epileptics—*contd.*

the institution, should be certified and inspected. Two or three questions thus arise. One question is the difficulty of meeting any general demands from public authorities which entail extension, without some guarantee that the outlay required will be justified by the continuance of the use of the institution by these authorities. Thus Mr. Brooks, of the Epileptic Homes at Lingfield and Starnthwaite said :—

> "Our difficulties are these. We have children from the boards of education and children from the guardians just paying maintenance. I would rather charge a larger maintenance and find our own capital, sinking fund, and building, as we required, and be independent. Speaking for myself, I should not like to be trammelled by outside authorities ; I can do my work much better as I am doing it. If capital can be found by increased maintenance it would be the best way of finding it, by voluntary bodies. We have at this moment many children applying that we cannot take. That does not contradict what I said a little while ago, for there is a county asking us to take ninety, another asking us to take twenty. We cannot do with them. But if the capital outlay could be met by an increased charge for maintenance, we could continue to meet the demand so far as it is made upon Lingfield, and I would rather meet it in that way than any other. . . . Our difficulty is a guarantee. If we took from a county council say twenty children without any guarantee and then we built for those children and they withdrew them, there would be our difficulty. We say we must have maintenance, and a guarantee from someone. We cannot put up buildings and afterwards have them empty. . . . There is a desire to give a guarantee, yet they do not want to hamper their successors. There should be some method whereby they could come so that there should not be children waiting admission that cannot be taken" Vol. II., 12139. Vol. II., 12140. Vol. II., 12141.

Vol. II., 12142. They could raise funds to meet the cost by borrowing, Mr. Brooks believed.

Assistance might be given from public funds to voluntary associations.

915. To enable voluntary associations, therefore, to extend so as to meet public needs there must be some fixity of custom, which will enable them to meet the demand without undue speculation. If the institution in its charge for weekly maintenance in the individual case included a proportional amount of all its expenditure, it would be able by degrees to repay any loan that it may have to raise ; and as its accounts would be open to official inspection, the public authority would have all the information necessary to prevent any undue expenditure being incurred and charged either to the maintenance or the establishment accounts. We think that under these conditions voluntary homes would be so sufficiently supervised as to allow of their receiving public assistance by way of loans.

Grisewood, Vol. II., p. 335, c. 2, and p. 336, c. 1, 16899.

916. Another question is raised by Mr. Grisewood. The managers of the Maghull Home have raised £31,048 by voluntary contributions and loans on mortgages ; and as he says in referring to the managers :—

> "We have come to a point where we have spent a considerable amount of capital which we have been obliged to raise either from voluntary contributions or else on mortgage of the property, and that means a certain liability upon the committee, and it is difficult to go on with the extension which we feel to be desirable. We should like to provide better for the children than they are provided for now."

Vol. II., p. 338, c. 1. Accordingly he suggests that "the capital sum required for land building and equipment might be advanced on terms that would repay the amount in say thirty to fifty years." In fact he urges that a recognised voluntary institution might, subject to the usual safeguards, receive a loan on the lines adopted in the case of loans granted to public authorities. As we have seen, the Cheshire County Council have already made a loan for the Home for the mentally defective at Sandlebridge ; and Dr. Alexander stated to us his belief that "if the buildings and laundry were founded for the institution, they could be made self-supporting ; but if the people paid who could, and if the guardians paid for those who could not pay, the institution would be self-supporting ; that," he added, "is our experience at Maghull." Mr. Gaskell took a similar line. He suggested that conditional grants might be made to voluntary institutions. He said :—

Dendy, Vol. I., 1000.

See ante paragraph 341.*

Alexander, Vol. II., 16749

> "I think that to some extent such institutions might be aided as to the establishment cost by grants from county councils or other bodies in the event of new legislation making it the duty of the county council to provide institutions for epileptics and the feeble-minded. . . . I do not think it would be advisable that the whole should be provided from public sources, because if you once provide the whole from public sources you get a very great difficulty as to any security for the permanent carrying on of the institution under voluntary management."

Gaskell, Vol. II. 16630, 16631.

Gaskell, Vol. II. 16632–16634. He thought that grants from the State might, in principle, be fixed on some scheme by which a proportionate amount of the total required might be raised voluntarily ; and that the colony might otherwise be supported, in part by the

payments made to it for patients who were admitted to it on the account of local authorities, and in part by voluntary contributions; but he said:— Assistance might be given from public funds to voluntary associations—*contd.*

Gaskell, Vol. II., 16635.

> "I think it is eminently desirable that voluntary associations should provide some part of the cost by subscriptions, because I do not think voluntary management would ever be really effective unless there were some financial responsibility thrown upon the management of that voluntary association. It appears to me that the burden of collecting funds is one of the conditions absolutely necessary for keeping up the efficiency of voluntary bodies."

These suggestions for the extension of voluntary institutions are, we think, worthy of serious consideration. We are very strongly of opinion that in this branch of work, official intervention should not be used in such a way as to exterminate or even to weaken voluntary effort. On the contrary, we think that in the interest both of economy and of efficiency voluntary effort should be turned to the utmost account by the Board of Control and by the Committees for the care of the mentally defective under the safeguards that we have proposed. Recommendations XLII., XC.

917. To sum up; the accommodation for sane or uncertified epileptics is altogether insufficient; all our witnesses on that point are unanimous. There are, it is estimated, 30,000 epileptics in England and Wales "many of whom must be sane epileptics," but whether this be so or not, and whether many of these are, or are not, mentally defective in some degree, as well as epileptic, the accommodation now available is obviously insufficient. Apart from the workhouses and the institutions established for the Chorlton and Manchester Guardians, and the Birmingham, Aston and Kings Norton Guardians, it provides for about 951 persons, adults and children. Existing accommodation for sane epileptics insufficient. Beach, Vol. I., p. 379, c. 2. Paragraphs 888, 907–911.

918. Almost all our witnesses are agreed that the further provision that is necessary should take the form of farm and employment colonies like the Chalfont and the David Lewis Colonies. There is some difference of opinion in regard to the extent to which a colony which is used in part for mentally defective epileptics should be used for sane epileptics also. As we have seen, many who are classed as sane epileptics are but little removed from the mentally defective, so that probably during their life as workers and patients they may have to be transferred from one colony or institution to another as the epilepsy passes into mental defect and eventually becomes the lesser malady. Yet it would seem best at the outset, and as long as is desirable, that the sane epileptics should be either in a separate industrial colony or in a separate section of such a colony. The same colony, provided there is sufficient space and suitable organisation, might serve, we think, both for children and for adults. The evidence which we have received on all sides in favour of the treatment of sane epileptics in an industrial colony we accept as decisive. The industrial colony and sane epileptics. Coward, Vol. II., p. 92, c. 1 and 2. McCallum, Vol. II., 12196, p. 75, c. 1 and 2. Ferrier, Vol. I., 6889. Rhodes, Vol. I., p. 551, c. 2. Leiching, Vol. II., 19661. Bevan Lewis, Vol. II., p. 16, c. 1 and 2. Helby, Vol. I., 5264–5266. Raw, Vol. II., p. 399, c. 2, and 18029. Jackson, Vol. II. p. 414, c. 2. Beach, Vol. I., p. 379, c. 2.

Some Miscellaneous Questions and Conclusions.

919. There remain for our consideration the opinions of witnesses on three or four important questions of administration. One is that, as children, unless they are seriously affected, sane epileptics should be taught in the ordinary classes with other children. Another is that teaching and training at an early age in an industrial colony is the best method of staying the disease of epilepsy, and, as far as it may be, of curing it, and hence the sane epileptics should at an early age be admitted to a colony. Another is that marriage with an epileptic is usually bad for the offspring. And lastly, epilepsy, it is said, is so closely allied to mental defect that any public organisation that deals with the one must take cognizance of the other. Coward, Vol. II., p. 92, c. 1. Kerr, Vol. I., 7991. Macdonald, Vol. II., 19527-19530. Basden, Vol. II., p. 57, c. 1. Brooks, Vol. II., p. 62, c. 1 and 2. Bond, Vol. I., p. 465, c. 1 and 2. Bond, Vol. I, p. 470, c. 2.

920. In regard to the two opinions first mentioned, the evidence would seem to show that, in the case of children, very good results follow from life and treatment in a colony. But we have received no evidence on the question whether in families which are not in affluent circumstances there may not be equally good results, if the child is carefully trained, bodily, as well as mentally, at home and at school. Where this training is not forthcoming the malady, it appears, grows rapidly worse. As a matter of fact, it is stated that "the children of the poor cannot be treated at home, and no serious attempt is ever made to save them from drifting into the hopeless condition of epileptic insanity. . . Removal to a colony, where there are suitable Education and care of sane epileptic children. McCallum, Vol. II., p. 75, c. 1 and 2.

Education and care of sane epileptic children—*contd.*
Beach, Vol. I., p. 381, c. 2.

surroundings and medical treatment will, in over 60 per cent. of all cases, check the convulsions, and so cure the disease before gross irreparable damage is done to the brain." "Experience has shown," Dr. Beach says, "that young epileptic cases are those in which the best results are gained by the colony system of treatment. The children learn to muster up and exercise their distracted faculties, to master themselves, to be punctual and obedient, and above all things—a matter in which the epileptic is often wanting—to find pleasure in regular activity, and to regain the confidence which he has often lost in his own power of performance"; the "fits are fewer" and "with proper training and a sufficient staff of teachers, great progress is made mentally and physically." This is the experience of the Institution for epileptics at Zurich; it is equally the experience at Chalfont—in the case of twenty-four boys who were admitted to it at fourteen years of age. Our conclusion is that it would be better in cases in which the epilepsy is likely to be permanently checked or remedied, if a colony were made the place of education and employment alike. This would imply that not merely children suffering from serious epilepsy would be admitted to the colonies but others also, if it were to their benefit. If, however, it were considered best that a child should remain in the ordinary school, as some prefer, there would be nothing to prevent it. We would urge only that the physical condition of these children should be considered from time to time, so that further measures may be taken for their care, if they are necessary.

See Paragraph 871 above.

921. According to the estimate which has been submitted to us there are probably 1,000 epileptic children for whom provision would have to be made on the ground of the severity of the disease, but some of these children it seems probable would also have a claim upon the community on the ground of mental defect.

Epileptics and marriage.
Bond, Vol. I., p. 465, c. 1.

922. As to the third point: in favour of the segregated life for epileptics Dr. Bond's evidence may be quoted:—"An epileptic family history is to be regarded as especially dangerous. In the case of a parent who is an epileptic, the disease may be regarded as practically always present, and, moreover, in the vast majority of cases will have developed either early in life, or at least prior to the birth of the next generation." . . . . "In a series of 300 epileptics certified as insane (excluding the congenital cases, only one of whom was married), of those in whom the epilepsy developed *before* the age of fourteen no less than 20 per cent. had become subsequently married."

Bond, Vol. I., p. 465, c. 2.

Notification of sane epileptics not suggested.

923. But we do not propose that cases of sane epilepsy should be notified. In the course of the medical inspection of schools, epileptics no doubt will come to light, and they should then be considered by the committees for the care of the mentally defective, with a view to their being treated as sane epileptics, if they are free from mental defect and require care and treatment, or as mentally defective, if they combine mental defect with epilepsy. For their future welfare the register of their cases while they are at school should prove very valuable. Sane epileptics, strictly so-called, would not be certifiable, though they might become resident in a colony for epileptics generally.

Recommendations as to epileptics.
Bond, Vol. I., p. 470 c. 2.
Tredgold, Vol. I., p. 398, c. 1, and p. 400, c. 2.

924. As regards the present provision for epileptics it may be stated that large numbers of them are dealt with in lunatic asylums, large numbers in workhouses in surroundings which are generally described as ill-adapted for their requirements, a small number in certified epileptic schools, a small number in idiot asylums, and a certain number, not very large, in philanthropic institutions. Some of them are relieved by county councils as lunacy authorities, some by guardians as "lunacy authorities," some by boards of guardians as Poor Law authorities, others by county councils as education authorities, others by guardians as "education authorities," and others by philanthropy. Some are in institutions inspected by the Board of Education, others in institutions inspected by the Lunacy Commission, others in institutions inspected by the Local Government Board, and others in institutions not subject to any Government inspection. In respect of some, Treasury money is paid on account of their lunacy, of others, on account of their education, and in respect of others, no Treasury grant is paid. As a

rule mental defect of a more or less marked degree is found to accompany epilepsy; and sane epilepsy is the exception. The relation between epilepsy and mental defect is so close that it is not possible to make provision for sane epilepsy separately and under a separate authority. We propose, therefore, that the Board of Control and the committees for the care of the mentally defective should provide for all cases of epilepsy—so far as it may be necessary.

Recommendations as to Epileptics—*contd.*

925. All cases of epilepsy combined with mental defect come under the recommendations which we have made for the care of the mentally defective. As to epileptics not provided for as mentally defective, we recommend that the Board of Control be empowered to register, inspect and report on all institutions or houses for the care of epileptics not provided for as mentally defective, and to regulate the same if they form part of an institution for the mentally defective, and that the committees be authorised to consider and deal with the cases of these epileptics and to provide for their accommodation, maintenance, care, treatment, education, training and control, and with regard to these epileptics shall have the powers referred to in Recommendations XXXII.–XXXIV. (inclusive), XXXVII.–XL. (inclusive), XLIV., XLVI. and XLVII., XLIX.–LI. (inclusive), and in Recommendations from LXXV.–LXXXVI. (inclusive), so far as may be necessary. In addition to these powers our general Recommendations as to the mentally defective are in the following instances specifically applied to the cases of epileptics not mentally defective, viz., Preamble (1), Recommendations XLI., XLII., LXXIII., XC., XCII., XCIII., and XCVI.

Recommendation XC.

RECOMMENDATIONS AS TO ENGLAND AND WALES.

PART XI.

CHAPTER XLIII.

PREAMBLE.

It has appeared to the Commissioners desirable that this short preamble should be prefixed to their Recommendations. The following are points which should be borne in mind in reference to the Recommendations as a whole:—

(1) It is not intended that the maintenance at public expense of the mentally defective, or of epileptics not mentally defective, should be extended to those who either at their own cost or at that of their relatives or friends can be otherwise suitably and sufficiently provided for.

(2) It is not intended to interfere in any way with the authority or powers of the Secretary of State for the Home Department as laid down in the Lunacy Act of 1890, though the procedure in regard to plans is somewhat altered under Recommendation XLIV.

(3) With the reservations mentioned below, the powers of the Lord Chancellor, whether under the prerogative or under the Lunacy Act of 1890, remain intact. The exceptions recommended are as follows:—

(i) The jurisdiction of the Judge and Masters in Lunacy is proposed to be transferred to the Chancery Division.

(ii) The duties of the Lord Chancellor's Visitors will be undertaken by the members of the proposed Board.

(4) It is understood that all the existing powers of the Lord Chancellor or the Secretary of State, whether by virtue of the prerogative or under Statute, relating to Lunatics, with the reservations mentioned above, are preserved and extended to all classes of mentally defective persons as defined in Recommendation IV.

(5) The words "Institution" or "Home" are used in these Recommendations in the widest sense to include all establishments in which mentally defective persons are maintained wholly or in part at the expense of the rates or taxes, or at the charges of charitable endowments or voluntary contributions, and not for private profit.

(6) A "House" in these Recommendations means a place in which two or more mentally defective persons are maintained for private profit.

(7) The three methods of oversight, certification, and detention are recommended as available for the mentally defective; they will be applied subject to statutory safeguards and at the advised discretion of a responsible Committee. According to the different classes, for some oversight will suffice, for others certification, and for others certification with an order for detention. The aim of the scheme is the application of particular methods suitable for the cases of different persons, not the general adoption of any one method exclusively. We have described these methods in our Report.

See paragraphs 372, 683–754, 763.

A.—THE CENTRAL AUTHORITY.

(Recommendations I. to XXVII.)

RECOMMENDATION I.

See paragraphs 190–192 597, 634–644, 765–808, above.

The single central authority.

That there be one central authority for the general protection and supervision of mentally defective persons and for the regulation of the provision made for their accommodation and maintenance, care, treatment, education, training and control.

RECOMMENDATION II.

See paragraphs 472–5, 528.

Act for the care and control of the mentally defective.

That, consistently with the above Recommendation and in view of the alterations in administration and procedure suggested below, the Lunacy Acts, 1890 and 1891, and the Idiots Act, 1886, be remodelled and that such of the provisions of these Acts as are consistent with the scheme suggested in these Recommendations, together with such new statutory provisions as may be required for bringing the complete scheme into operation, should be embodied in an Act for the care and control of the mentally defective.

RECOMMENDATION III.

See paragraph 530, and Chapter XXVIII.

Changes in nomenclature and definition of "mentally defective."

That the statutory use of the word "lunatic" be discontinued, that the term "Hospital" be substituted for the word "Asylum," and that the term "mentally defective" be defined in the proposed Act for the care and control of the mentally defective as comprising the classes of mentally defective persons set out in Recommendation IV.

RECOMMENDATION IV.

See Chapter XXVIII., and paragraphs 563 and 596.

Classes of persons supervised by the central authority.

That there be placed under the general protection and supervision of the central authority:

(1) "Persons of unsound mind," *i.e.*, persons who require care and control owing to disorder of the mind and are consequently incapable of managing themselves or their affairs, and are not included in classes (2), (3), (4), (5), (6), (7), (8), and (9), below.

NOTE.—The term "unsound mind" under this Recommendation might be said to stand as generally equivalent to the word lunatic.

NOTE.—Persons are detained at present as persons of unsound mind either in consequence of an inquisition (see Lunacy Act, 1890, Sec. 90, set out in note to Recommendation VIII.); or in ordinary cases (*i.e.* cases not under inquisition)—

(i.) Under an urgency order usually made by a relative on the certificate of one medical man, which is temporary only, or

(ii.) Under a reception order obtained on petition to a judicial authority, or

(iii.) Under a summary reception order made by a magistrate where the lunatic is wandering, a pauper, or neglected, or

(iv.) Under an order made by the Commissioners in Lunacy, or

(v.) Under an order made under the Criminal Lunatics Acts, or

(vi.) Under an order made under the Idiots Act.

The Statutory provisions governing (i.) to (iv.) above are under the Lunacy Act, 1890, Sec. 11 (see Recommendation LXXI.), Secs. 4 to 10 (see Recommendation LXVIII.), Secs. 13 to 27 (see Recommendation LXXI.). Those governing (vi.) are under the Idiots Act (see Recommendations LII.). Those governing (v.) are under the Criminal Lunatics Acts, viz.:

Criminal Lunatics Act, 1800, Sec. 2.

Lunatics Removal (India) Act, 1851, Secs. 1 and 2.

Trial of Lunatics Act, 1883, Sec. 2.

Criminal Lunatics Act, 1884, Sec. 2.

For practical purposes criminal lunatics may be divided into (a) King's Pleasure Lunatics and (b) Secretary of State's Lunatics. Both classes are in custody by virtue of an order of a court of law and cannot be discharged without a warrant signed by the Secretary of State.

(2) "Persons mentally infirm," *i.e.*, persons who, through mental infirmity, arising from age or from the decay of their faculties, are incapable of managing themselves or their affairs.

(3) "Idiots," *i.e.*, persons so deeply defective in mind from birth or from an early age that they are unable to guard themselves from common physical dangers, such as, in the case of young children, would prevent their parents from leaving them alone.

NOTE.—This definition was suggested in evidence before us by the Royal College of Physicians of London.

(4) "Imbeciles," *i.e.*, persons who are capable of guarding themselves against common physical dangers, but who are incapable of earning their own living by reason of mental defect existing from birth or from an early age.

NOTE.—This definition was suggested in evidence in the form before us by the Royal College of Physicians of London.

(5) "Feeble-minded," *i.e.*, persons who may be capable of earning a living under favourable circumstances, but are incapable from mental defect existing from birth or from an early age (a): of competing on equal terms with their normal fellows; or (b) of managing themselves and their affairs with ordinary prudence.

NOTE.—This definition is, with slight verbal alterations, in the form suggested in evidence by the Royal College of Physicians of London to us, assuming as we do that the "prodigal" and the "facile" are included within the term.

(6) "Moral Imbeciles," *i.e.*, persons who from an early age display some mental defect coupled with strong vicious or criminal propensities on which punishment has little or no deterrent effect.

NOTE.—This definition is as recommended by the Royal College of Physicians, with the deletion of the words in brackets and the substitution in their place of the words "some mental defect coupled with :"—"a person who displays from an early age [*and in spite of careful up-bringing*] strong vicious or criminal propensities on which punishment has little or no deterrent effect."

Part. X. ve.

(7) "Epileptics," *i.e.*, persons who, being epileptics, are also mentally defective.

Chapter I. above.

(8) "Inebriates," *i.e.*, persons who, being inebriates, are also mentally defective.

Chapter III. above.

(9) "Deaf and Dumb" or "Blind," *i.e.*, persons who, being deaf and dumb or blind, are also mentally defective.

RECOMMENDATION V.

para-phs -807.

That the central authority, which would deal with the whole class of mentally defective persons and the divisions of that class, be called "The Board of Control," and the members thereof be called Commissioners of the Board of Control.

Title of the central authority.

RECOMMENDATION VI.

para-phs -810.

That there be appointed to the post of Commissioner, according to the demands of the business of the Board of Control, persons who are specially qualified for that post, subject to these qualifications, (1) that a certain proportion of the number be qualified medical men who have expert knowledge in regard to the various classes of mental defect mentioned in Recommendation IV., and respecting institutional and other administration; (2) that a certain proportion of the number be legal members, being barristers-at-law qualified to deal with particular cases and points of law, including such questions as may arise out of the new conditions which the plan proposed by us must necessarily entail; (3) that the number of Commissioners be sufficiently large to dispense with the necessity of appointing deputy Commissioners in case of temporary absence through illness or other cause; (4) that the Commissioners be appointed at such salaries as with the concurrence of the Treasury may seem reasonable in view of the scale of salaries generally paid in Government departments; (5) that a paid Chairman be appointed on similar terms, due regard being had to the responsibilities of his office; (6) that Sections 158 (1) and the first paragraph of Section 165 of the Lunacy Act of 1890 be repealed provided that it be made a rule of the Board that no Commissioner should be deputed to visit a licensed place with which he has been connected within one year last preceding his appointment.

Constitution of the central authority.

NOTE.—The sections—158 and 165 of the Lunacy Act—which are referred to above, are as follows ; the parts proposed to be repealed being printed in *italics* and in [—].

158.—[(1.) *A person shall not be qualified to be a Commissioner or secretary or clerk of the Commissioners if he is, or within one year prior to his appointment has been, interested in a licensed house.*]

(2) If any Commissioner or the secretary or any clerk of the Commissioners becomes interested in a licensed house, he shall be disqualified to hold his office.

(3) Any disqualified person continuing to act shall be guilty of a misdemeanor.

165.—[*A person shall not be appointed a Chancery Visitor if he is or has been within the two years preceding his appointment directly or indirectly interested in any licensed house* ;] and if any person after his appointment becomes so interested, his appointment shall become void, and thereupon his salary shall cease.

RECOMMENDATION VII.

Transfer of the jurisdiction of the Judge and Masters in Lunacy to the Chancery Division.

That, subject to Recommendations VIII. and IX. below, the Lunacy Jurisdiction now exercised by the Judge and Masters in Lunacy be transferred to the Chancery Division of the High Court, and the jurisdiction of the Masters, as separate officials, be abolished.

See paragraph 789-804.

NOTE.—The jurisdiction which the Sovereign as *Parens Patriæ* exercises over insane persons is part of the Royal prerogative. Such jurisdiction was originally exercised by the Crown in its Court of Exchequer. It next passed to the Lord Chancellor ; then to the Court of Wards ; and on the abolition of that Court back again to the Lord Chancellor (*Pope on Lunacy*, 2nd Ed., p. 28). It is, moreover, either (1) Original or (2) Appellate. The original jurisdiction has again in practice been severed in modern times into (a) Judicial and (b) Ministerial. The *Judicial* portion of the original jurisdiction has ever since 1851 been possessed by the Lords Justices, each one of whom is usually entrusted with it by Royal Sign Manual. But so much of it as relates to holding of inquisitions is usually exercised under the direction of the Lords Justices by the Masters in Lunacy (Lunacy Act, 1890, Secs. 111–114), and by such other persons as may be specially appointed (see *ibid*, Sec. 113), but may be exercised by means of an issue directed to be tried in the High Court of Justice (see *ibid*, Secs. 94 and 334). The *Ministerial* portion of the Sovereign's jurisdiction over insane persons has of modern years, and ever since its first establishment, been exercised by the Lunacy Office, of which Office the Masters in Lunacy are the head.

The Sections of the Lunacy Act referred to above are reprinted below :—

Jurisdiction of judge in Lunacy.

108.—(1.) The jurisdiction of the Judge in Lunacy under this Act shall be exercised either by the Lord Chancellor for the time being entrusted by the Sign Manual of Her Majesty with the care and commitment of the custody of the persons and estates of lunatics, acting alone or jointly with any one or more of such Judges of the Supreme Court as may for the time being be entrusted as aforesaid, or by any one or more of such Judges as aforesaid.

(2.) The Judge in Lunacy may make orders for the custody of lunatics so found by inquisition and the management of their estates, and every such order shall take effect as to the custody of the person immediately, and as to the custody of the estate upon the Master's certificate of completion of the committee's security.

(3.) Where upon the inquisition it is specially found or certified that the person to whom the inquisition relates is of unsound mind so as to be incapable of managing his affairs, but that he is capable of managing himself, and is not dangerous to himself or to others, the Judge in Lunacy may make such orders as he thinks fit for the commitment of the estate of the lunatic and its management, including all proper provisions for the maintenance of the lunatic, but it shall not be necessary, unless in the discretion of the judge it appears proper to do so, to make any order as to the custody or commitment of the person of the lunatic.

(4.) Any order under this section may be made notwithstanding proceedings are pending for a traverse or new trial, and any person acting upon an order so made shall be indemnified as effectually as if there had been no right of traverse or new trial.

Masters in Lunacy.

111.—(1.) There shall continue to be Masters in Lunacy as heretofore, and they shall, subject to the provisions of this Act and the Rules in Lunacy, execute and perform the same powers and duties as heretofore, and shall perform such other duties for the benefit of lunatics and their estates as the Lord Chancellor may direct.

(2.) The powers and authorities of the Masters shall be joint and several, and they shall execute commissions and conduct inquiries connected with lunatics or their estates, and perform all other duties committed to them, either separately or together, and at such places, within such times, and in such manner as the Rules in Lunacy, and, subject thereto, as the Judge in Lunacy may by any special order direct.

(3.) A Master must be a barrister of not less than ten years standing, and shall be appointed by the Lord Chancellor.

(4.) A Master shall, before being capable of acting, make before the Lord Chancellor, in the manner now used, the declaration to be made by a Master set forth in the First Schedule.

(5.) The Masters shall have such clerks and officers as the Lord Chancellor may, with the concurrence of the Treasury as to number and salaries, determine.

(6.) The salaries of the Masters, their clerks and officers, and their expenses to the amount sanctioned by the Treasury, shall be paid out of moneys provided by Parliament.

Commission of Inquiry.

112. A general commission of inquiry, with such variations as may be expedient, may from time to time be issued in duplicate under the Great Seal, directed to the Masters by name, jointly and severally, who shall by virtue thereof proceed, in each case of alleged lunacy concerning which the Judge in Lunacy orders them to inquire, in like manner and with all the like powers and authorities (subject to the provisions in this Act contained) as heretofore.

Special Commission may issue.

113. The Lord Chancellor may issue a commission specially to any person or persons alone or in addition to the Masters, or one of them, if upon any occasion he thinks it proper to do so ; and the provisions of this Act so far as applicable shall extend to every commission so issued specially.

Power to summon witnesses.

114. The Masters may administer any oath and take any affidavit and may summon any person to give evidence before them, and every person so summoned shall be bound to attend as required by the summons.

Inquiries before a jury may be made by means of an issue in the High Court.

94.—(1.) Wherever the Judge in Lunacy orders an inquisition before a jury, he may by his order direct his issue to be tried in the High Court, and the question in such issue shall be, whether the alleged lunatic is of unsound mind and incapable of managing himself or his affairs ; and the provisions of this Act with respect to commissions of lunacy, and orders for inquisition to be tried by a jury, and the trial thereof, and the constitution of the jury, shall apply to any issue to be directed as aforesaid, and the trial thereof, and subject thereto and to the provisions of this Act, such issue and the trial thereof shall be regulated by the Rules of the Supreme Court for the time being in force relating to the trial of issues of fact by a jury, and the verdict upon any such issue finding the alleged lunatic to be of unsound mind and incapable of managing himself or his affairs shall have the same effect as an inquisition under this Act.

(2.) On the trial of every such issue the alleged lunatic shall, if he is within the jurisdiction, be examined before the evidence is taken, and at the close of the proceedings, before the jury consult as to their verdict, unless the Judge who tries the issue otherwise directs ; and such examinations shall take place either in open court or in private as such Judge directs.

Meaning of word commission in other Acts extended.

334. Where in any Act of Parliament, order or rule of court, or instrument, reference is made to a commission of lunacy, or the inquisition thereon, the general commission and the inquisition, or certificate operating as an inquisition, and the issue and verdict thereon respectively in this Act mentioned, shall be deemed to be included in the reference.

RECOMMENDATION VIII.

See paragraphs 781–804.

Ascertainment of mental defect by legal commissioner.

That where an issue is not directed in the High Court or a jury is not demanded or thought necessary, the inquiry in regard to the question whether or not a person who has property is suffering from mental defect as defined in Recommendation IV. above, and is incapable of the responsible control of himself and his affairs, be entrusted, under rules to be framed by the Rules Committee of the Supreme Court, to any one of the legal Commissioners, members of the proposed Board of Control (see Recommendation VI. above) who if necessary, shall be assisted by a medical Commissioner of the Board as assessor, and who shall have for the purposes of such inquiry and in relation thereto the same duties, jurisdiction, and powers as the Masters in Lunacy, and the practice and procedure of whose court shall be the same as that of the Masters in Lunacy.

NOTE.—Under the scheme the judge would direct the inquisition in ordinary cases before one of the legal Commissioners, but if a jury were demanded, or thought necessary, the issue would be tried in the High Court (*see* Sec. 94 of the Lunacy Act, 1890). At present the inquisition is as to whether the person is "of unsound mind and incapable of managing himself and his affairs" (*see ibid.*, Sec. 90 (1)), but it may be found that the person is "of unsound mind so as to be incapable of managing his affairs but that he is capable of managing himself, and is not dangerous to himself or others" (*see* Sec. 98 (2)). Under the recommendation it is proposed to extend the inquiry so as to include the other classes of mentally defective persons defined in Recommendation IV. The Sections of the Lunacy Act, 1890, bearing on these inquiries are reprinted below :—

Order for inquisition as to lunacy.

90.—(1.) The Judge in Lunacy may upon application by order direct an inquisition whether a person is of unsound mind and incapable of managing himself and his affairs.

(2.) Where the alleged lunatic is within the jurisdiction, he shall have notice of the application and shall be entitled to demand an inquiry before a jury.

(3.) Upon the hearing of the application, the alleged lunatic may withdraw any demand for a jury made by him.

Demand of a jury by alleged lunatic.

91. Where the alleged lunatic demands a jury, the Judge in Lunacy shall in his order for inquisition direct the return of a jury, unless he is satisfied, by personal examination of the alleged lunatic, that he is not mentally competent to form and express a wish for an inquisition before a jury; and the Judge may, where he deems it necessary, and for the purpose of personal examination, require the alleged lunatic to attend him at such convenient time and place as he may appoint.

Cases where a jury may be dispensed with.

92. Where the alleged lunatic does not demand a jury, or the Judge in Lunacy is satisfied by a personal examination that he is not mentally competent to form and express a wish in that behalf, and it appears to the Judge, upon consideration of the evidence, and of the circumstances of the case, to be unnecessary or inexpedient that the inquisition should be before a jury, and he accordingly does not in his order for inquisition direct the return of a jury, then the Masters shall, without a jury, personally examine the alleged lunatic, and take such evidence, upon oath or otherwise, and call for such information as they think fit or the Judge directs, in order to ascertain whether or not the alleged lunatic is of unsound mind, and shall certify their finding thereon.

Jury to be had, if Masters certify that it is expedient.

93. Where the Judge in Lunacy does not in his order for inquisition direct the return of a jury, but the Masters, upon consideration of the evidence, certify that in their opinion an inquisition before a jury is expedient, they shall, without further order, issue their precept to the sheriff, and shall proceed in like manner in all respects, and their proceedings shall be as valid and effectual as if the Judge had directed the return of a jury in the first instance.

Inquiries before a jury may be made by means of an issue in the High Court.

94.—(1.) Wherever the Judge in Lunacy orders an inquisition before a jury, he may by his order direct an issue to be tried in the High Court, and the question in such issue shall be, whether the alleged lunatic is of unsound mind and incapable of managing himself or his affairs; and the provisions of this Act with respect to commissions of lunacy, and orders for inquisition to be tried by a jury, and the trial thereof, and the constitution of the jury, shall apply to any issue to be directed as aforesaid, and the trial thereof, and subject thereto and to the provisions of this Act such issue and the trial thereof shall be regulated by the Rules of the Supreme Court for the time being in force relating to the trial of issues of fact by a jury, and the verdict upon any such issue finding the alleged lunatic to be of unsound mind and incapable of managing himself or his affairs shall have the same effect as an inquisition under this Act.

(2.) On the trial of every such issue the alleged lunatic shall, if he is within the jurisdiction, be examined before the evidence is taken, and at the close of the proceedings, before the jury consult as to their verdict, unless the Judge who tries the issue otherwise directs; and such examinations shall take place either in open court or in private as such Judge directs.

Certificate of Masters without a jury to have the force and effect of an inquisition.

95. Where the Masters certify that the alleged lunatic is of unsound mind, and incapable of managing himself or his affairs, or that he is of sound mind, and capable of managing his affairs, the certificate shall have the same effect as an inquisition taken upon the oath of a jury.

96. Where the alleged lunatic is not within the jurisdiction it shall not be necessary to give him notice of the application for inquisition, and the inquisition shall be before a jury.

Jury to be had if lunatic out of jurisdiction.

97. The Lord Chancellor may, by order, regulate the number of jurors to be sworn, but so that every inquisition upon the oath of a jury be found by the oaths of twelve men, at least.

Number of jury. Nature and limit of inquisitions.

98.—(1.) The inquisition shall be confined to the question whether or not the alleged lunatic is at the time of the inquisition of unsound mind, and incapable of managing himself or his affairs, and no evidence as to anything done or said by him, or as to his demeanour or state of mind at any time, being more than two years before the time of the inquisition, shall be receiveable in proof of insanity, or on the trial of any traverse of an inquisition, unless the person executing the inquisition otherwise directs.

(2.) If upon such inquisition it appears that the alleged lunatic is of unsound mind, so as to be incapable of managing his affairs, but that he is capable of managing himself, and is not dangerous to himself or to others, it may be so specially found and certified.

Power of person executing inquiry.

99. The person executing an inquisition with a jury shall, while so employed, have all the powers, authorities, and discretion of a Judge of the High Court.

Inquisition may be ordered on report of Commissioners.

100. Where the Commissioners report to the Lord Chancellor that they are of opinion that the property of any person detained or taken charge of as a lunatic, but not so found by inquisition, is not duly protected or that the income thereof is not duly applied for his benefit, or to the same effect, the report shall be filed with the Masters, and shall be deemed to be an application for inquisition supported by evidence, and the alleged lunatic shall have notice of the report from such person as the Judge in Lunacy directs, and the case shall proceed and be conducted as nearly as may be in all respects as is hereinbefore directed upon an application for inquisition.

RECOMMENDATION IX.

Management and administration of property of mentally defective persons.

That on the ascertainment of mental defect by a legal Commissioner of the Board of Control, or on an issue directed in the High Court, the management and administration of the property of the person affected be entrusted to the Chancery Division of the High Court of Justice.

See paragraphs 789–804.

RECOMMENDATION X.

Provisions of Lunacy Act 1890 as to management and administration of estates applied to all mentally defective persons.

That the powers and provisions of the Lunacy Act, 1890, relating to management and administration, shall apply to all mentally defective persons as defined in Recommendation IV.

See paragraphs 755–764.

RECOMMENDATION XI.

Registration and visitation of cases.

That all cases of mentally defective persons dealt with under any of these Recommendations be registered at the office of the Board of Control; that the work of the Board be so arranged as to allow of the frequent personal visitation of mentally defective persons, and that this visitation consist of not less than two visits a year paid to each such person, unless, in view of the circumstances of particular cases or classes of cases, the Board determines that in regard to them this frequent visitation is unnecessary.

See paragraphs 584, 660–662

NOTE.—*Visitation of persons of unsound mind.* Persons certified as lunatics at present are under visitation by the Lunacy Commission (Sec. 194, Lunacy Act, 1890). Persons found lunatic by inquisition are visited by the Lord Chancellor's Visitors. *All* patients in hospitals and licensed houses are, however, visited at present by the Lunacy Commissioners. Lunatics found by inquisition in such institutions are also visited by the Chancery Visitors, at considerable expense. Under the scheme, the visitation of all mentally defective persons would be by the Board of Control only, the Chancery Visitors as such ceasing to exist, special directions being given, where required, as to more frequent visitation in case of propertied lunatics under the care of the Chancery Division.

RECOMMENDATION XII.

Mentally defective persons, including single patients, in private families and charitable establishments.

That the provisions of the Lunacy Act, 1890, Section 206, be applicable to all persons who are mentally defective or alleged to be mentally defective, including single patients.

See paragraphs 649, 668, 713–714.

NOTE.—The Section of the Lunacy Act referred to above is reprinted below.

206.—(1.) If it comes to the knowledge of the Commissioners that any person appears to be without an order and certificates detained or treated as a lunatic or alleged lunatic by any person receiving no payment for the charge, or in any charitable, religious, or other establishment (not being an institution for lunatics), they may require the person by whom the patient is detained, or the superintendent or principal officer of the establishment, to send to them, within, or at such time or times as the Commissioners may appoint, a report or periodical reports by a medical practitioner of the mental and bodily condition of the patient, with all such other particulars as to him and his property as they think fit.

(2.) Any one or more of the Commissioners may at any time visit any such patient and report the result of the visit to the Commissioners, and may exercise, with respect to such patient, all the powers (except that of discharge) given to them as to persons confined in any institution for lunatics, or as single patients.

(3.) The Commissioners may, if they think fit, transmit any reports received by them, or may report the results of any inquiries made by them under this section, to the Lord Chancellor, who may thereupon make an order for the discharge of the patient from the custody in which he is detained or for his removal to an institution for lunatics, or to such other custody as he may think fit, and the expenses properly incurred of carrying any such order into effect and of maintaining the patient if so removed shall, if the order so directs, be paid by the guardians of the union in which the patient was found, until the authority legally liable for his maintenance has been ascertained; and such guardians shall have the same right to recover any such expenses paid by them against the lunatic and his estate, and the person or authority legally liable for his maintenance as in the case of orders for maintenance under this Act.

(4.) Where an order is made by the Lord Chancellor under this section for removal of a lunatic to an asylum, any justice of the county or borough in which the asylum is may exercise all the authorities conferred upon a justice by this Act, for the purpose of making the lunatic's property applicable to his maintenance and for maintaining him as a pauper.

(5.) All reports and particulars sent to the Commissioners under this section shall be kept by them, and shall be open to inspection only by the Commissioners and the Lord Chancellor, and by such persons as the Lord Chancellor directs.

RECOMMENDATION XIII.

See paragraphs 645–662.

That the Board of Control undertake the registration, supervision and inspection of all institutions or houses (as defined in the Preamble) in which mentally defective persons are maintained, and of all arrangements made for their care, and visit all such institutions or houses at least twice a year.

Registration, supervision and inspection of institutions or houses.

NOTE.—The visitation of workhouses in which there are or are alleged to be any "lunatics" is at present carried out by the Commissioners once a year in the Metropolitan district asylums and workhouses having special lunatic wards, but in the smaller workhouses having no separate accommodation, and where the imbeciles are distributed amongst the ordinary paupers, the inmates are only visited once in three years, unless the Commissioners have special reasons for going more frequently. Under the suggested scheme all institutions in which mentally defective persons are maintained must be registered and inspected by the Board of Control. Any "persons of unsound mind" hereafter in workhouses would be there only by arrangement made between the Committee for the care of the mentally defective and the guardians, and the Committee would only make such arrangements where suitable separate accommodation was available, and cases so provided for would be visited and inspected by the Committee and by the Board in the same manner as other persons of unsound mind.

RECOMMENDATION XIV.

See paragraphs 623, 635.

That all institutions and houses (as defined in the Preamble) for the care and maintenance of mentally defective persons, wherever situate in England and Wales, be licensed solely by the Board of Control and not by the licensing justices as under the Lunacy Act, 1890, and be registered at the office of the Board, and at the office of the Committee of the County Council or County Borough Council within the area of which they are chargeable for the payment of rates; and that, in view of the special class or classes of mentally defective persons which are to be maintained in the several institutions, the Board draw up such regulations as may be necessary in regard to the accommodation to be provided in such institutions, due regard being had to economy in outlay and in administration.

Licensing of institutions or houses for mentally defective persons.

NOTE.—With regard to Sec. 207 (6) of Lunacy Act, which limits the power of granting new licences in the case of houses for lunatics, no suggestion is here made as to the restriction of new licenses for any kind of institution. It is felt that this question can only be settled by decisions in regard to the fitness of particular institutions in respect to which a licence is desired. Sections 207 to 224 of the Lunacy Act of 1890, will have to be revised in view of this recommendation, but the Board of Control should be the sole licensing authority, to the exclusion of the "licensing justices" referred to therein.

RECOMMENDATION XV.

See paragraph 813.

That England and Wales be divided into at least eight districts suitable for purposes of supervision and visitation.

Division of England and Wales into districts.

RECOMMENDATION XVI.

See paragraph 813.

That an Assistant Commissioner be appointed to each district and that for special branches of work Assistant Commissioners may, if necessary, be appointed, provided always that the Assistant District Commissioners be qualified medical practitioners.

Appointment of Assistant Commissioners to each district, and, if necessary, for special branches of work.

RECOMMENDATION XVII.

That the duties of the Assistant Commissioners shall be such as the Board of Control may direct, and shall extend to all classes of persons under the supervision of the Commissioners. The District Commissioners shall make an annual report to the Commissioners in regard to their several districts, and such parts of their Reports as the Board shall deem to be of public interest or importance shall be published in the Annual Report of the Board.

Duties of Assistant Commissioners.

RECOMMENDATION XVIII.

Qualifications of Assistant District Commissioners.

That in any appointment of Assistant District Commissioners, special consideration be paid to the claims of persons who have expert knowledge in regard to the various classes of mental defect mentioned in Recommendation IV., or respecting institutional and other administration.

RECOMMENDATION XIX.

Honorary Commissioners.

That Honorary Commissioners be appointed for a term of years, but so that a proportion of the number retire in each year, and that in making such appointments, consideration be paid to the claims of persons who combine a general interest in the well-being of the mentally defective with special knowledge in regard to some branch of institutional or administrative work, or who have such other qualifications as are likely to be of special service to the Board of Control.

See paragraph 810.

RECOMMENDATION XX.

Board of Control o include one woman at least.

That inasmuch as women are very deeply concerned in questions relating to the care and control of the mentally defective, it is desirable that one at least of the members of the Board of Control should be a woman of special experience in the subject.

RECOMMENDATION XXI.

Civil Service rule of retirement to apply.

That the tenure of office for Commissioners and Assistant Commissioners be that of ordinary civil servants and that the ordinary Civil Service rule of retirement at the age of 65 shall apply to the salaried members of the Board of Control, to the Secretary, and to the Assistant Commissioners, but that in determining the amount of the pension, due consideration be paid to the comparatively short tenure of office which, in individual cases, might result in hardship owing to such retirement being enforced.

See paragraphs 610, 711, 77

RECOMMENDATION XXII.

Visitation by single member of the Board of Control.

That all duties respecting the visitation of institutions or houses for the care of the mentally defective, such as those required by Sections 187 and 191 of the Lunacy Act, 1890, for the visitation of asylums, hospitals and licensed houses, unless in the particular instance the Board of Control decide otherwise, may be undertaken by one Medical Commissioner, or by one other Commissioner, assisted by a Medical Commissioner or by an Assistant District Commissioner, and that, except where the Board of Control otherwise decide, a single member of the Board be authorised to inquire and report in regard to any scheme advanced or any educational, custodial or other arrangement, proposed by any local authority or public or voluntary agency for the aid, support, or benefit of mentally defective persons, and that the present powers and duties of the Honorary Commissioners under the Lunacy Act, 1890, with regard to lunatics, be extended to all mentally defective persons as defined in Recommendation IV.

See paragraph 661.

RECOMMENDATION XXIII.

See paragraphs 586, 715–716, 850–852.

Annual Report of the Board of Control.

That the Annual Report issued by the Board of Control should include particulars of methods of treatment for mental defect in England and Wales and elsewhere, accounts of new results of medical science and progress in regard to the proper care and supervision of the several classes of mentally defective persons, with the necessary statements of expenditure, plans, etc., etc., and that economy in construction and management of institutions should be a question considered and reported upon by the Board from year to year in their Annual Report.

TRANSITORY MEASURES.

RECOMMENDATION XXIV.

See paragraphs 635, 643, 805.

Amalgamation of office, etc., of Chancery Visitors with that of Lunacy Commissioners, and appointment of additional Medical Commissioners.

That for immediate purposes, and pending the establishment by the Legislature of the proposed central authority and local authorities, it is expedient that the Lord Chancellor, in pursuance of his powers under Section 337 of the Lunacy Act, 1890, should at once

See paragraphs 775–788.

See paragraphs 635, 643.

(1) Amalgamate the office of the Chancery Visitors and their duties and staff with the office, duties and staff of the Lunacy Commissioners; (2) appoint two additional Medical Commissioners to the amalgamated office, at such salaries as, with the concurrence of the Treasury, he may think reasonable.

NOTE.—Section 337 of the Lunacy Act, 1890, is as follows:—

Power to amalgamate the lunacy departments.

337.—(1.) The Lord Chancellor may, if it seems expedient to him so to do, by order under his hand, amalgamate the office of the Masters and their staff, and the office of the Chancery Visitors and their staff, and may amalgamate such offices, or either of them, with the office of the Commissioners, and may give such directions as he may think fit for the reconstitution of the Commissioners, and for the exercise and performance of the powers and duties of the Commissioners, and of the officers and staff amalgamated respectively under any order under this section.

(2.) In the event of any such amalgamation, the Lord Chancellor may, with the concurrence of the Treasury, fix the qualifications and salaries of the members of the amalgamated office and of the staff attached thereto, and may, with such concurrence, increase or diminish the number of such members and staff.

(3.) An order under this section shall not be made so as to prejudice the rights of the Masters, Visitors, and Commissioners respectively holding office at the passing of this Act.

(4.) The Lord Chancellor may by order direct that such proportion as he may consider reasonable of the expenses incurred in carrying any such amalgamation into effect, including the cost of providing office accommodation, shall be paid out of the percentage charged on the incomes of lunatics.

RECOMMENDATION XXV.

See paragraph 801.

Transfer of lunacy jurisdiction to Chancery Division to be brought into operation as rapidly as possible.

That in making fresh appointments and by the exercise of any of the powers and jurisdictions possessed by the Lord Chancellor, the coming into operation of Recommendation VII. be effected as rapidly as may be, and if possible be applied to the business at present transacted under the Lunacy Act, 1890.

RECOMMENDATION XXVI.

See paragraphs 610, 810.

Honorary Commissioners to be appointed to fill existing vacancies.

That it is expedient that in pursuance of his powers under Sections 150 and 151 and 337 of the Lunacy Act, 1890, the Lord Chancellor should appoint Honorary Commissioners to fill the existing vacancies on the Board of the Lunacy Commission, being, as far as may be, persons who combine a general interest in the well-being of the mentally

defective, with special knowledge in regard to some branch of institutional or administrative work, or who have such other qualifications as are likely to be of special service to the Commission.

Note.—Sections 150 and 151 of the Lunacy Act, 1890, are as follows :—

The Commissioners in Lunacy.

150.—(1.) There shall continue to be Commissioners in Lunacy, and such of them as are qualified for appointment by being medical practitioners or barristers shall be entitled to receive salaries.

(2.) The salaries of the paid Commissioners and the expenses of the Commissioners to the amount sanctioned by the Treasury shall be paid out of moneys provided by Parliament.

(3.) A Commissioner shall not, so long as he remains Commissioner and receives any salary in respect of his office, accept, hold, or carry on any other office or situation, or any profession or employment, from which any profit is derived.

Vacancies among the Commissioners may be filled.

151.—(1.) As often as a Commissioner dies, or is removed from his office, or is disqualified, or resigns, or refuses or becomes unable through illness or otherwise to act, the Lord Chancellor may appoint a person to be Commissioner in his place.

(2.) Every person appointed in the place of a medical practitioner shall be a medical practitioner, and every person appointed in the place of a barrister shall be a practising barrister of not less than five years standing, and every person appointed in the place of any other Commissioner shall be neither a medical practitioner nor a practising barrister. Provided that a medical or legal Commissioner may upon resigning his office be appointed to fill any vacancy among the unpaid Commissioners, and if so appointed he may, upon the request of any four of the Commissioners, perform any duty which he might have performed before his resignation. Provided also that the secretary for the time being of the Commissioners shall be eligible to be a Commissioner in the place of a barrister.

(3.) In case of the temporary illness or disability of a medical or legal Commissioner, the Lord Chancellor may, on the recommendation of the Commissioners, appoint a person qualified to be a medical or legal Commissioner to be his substitute so long as the illness or disability continues, and the substitute may exercise all the powers of the person for whom he acts.

(4) The Commissioners for the time being may act notwithstanding any vacancy in their body.

(5) Every Commissioner hereafter appointed shall, before he acts as Commissioner, make before the Lord Chancellor, or before any three Commissioners qualified to act, the declaration to be made by a Commissioner set forth in the First Schedule.

Recommendation XXVII.

Architect to be appointed to the Lunacy Commission.

That the Treasury sanction the engagement of an Architect to devote his whole time to the work of the Commission.

See paragraphs 616–617, 677–678.

B.—THE LOCAL AUTHORITIES.

(Recommendations XXVIII. to XLVIII.)

(a) CONSTITUTION AND DUTIES.

(Recommendations XXVIII. to XXXIV.)

Recommendation XXVIII.

Local Authority to make provision, etc., for mentally defective persons.

That the Council of each County and the Council of each County Borough be the local authority under the proposed Act, and be required by Statute to make suitable and sufficient provision for the care and control of the mentally defective in the County or County Borough, in institutions, homes, or houses, in observation or reception wards, or under family guardianship, or in any other way of which the Board of Control shall approve.

See paragraphs 193–195, 814 above.

Note.—The words of the recommendation, "make suitable and sufficient provision for the care and control of the mentally defective," would need to be substituted for "shall provide and maintain an asylum or asylums for the accommodation of pauper lunatics" in Sec. 238 of the Lunacy Act, 1890 (see below). Under the scheme, while the County Councils and County Borough Councils would be local authorities the other authorities named in Sec. 240 would be merged in them; the words "and the Council of each of the Boroughs specified in the Fourth Schedule, or in the case of the City of London the Common Council" would have to be deleted.

Lunacy Act, 1890.

Local authorities to provide asylums.

238.—(1.) Every local authority, as defined by this Act, shall provide and maintain an asylum or asylums for the accommodation of pauper lunatics.

(2.) Where the asylum accommodation of a local authority appears to the local authority to be insufficient, the local authority may supply the deficiency by exercising the powers by this Act conferred for providing asylum accommodation, or by rebuilding or enlarging any existing asylum.

(3.) For the purpose of providing asylum accommodation a local authority may purchase any licensed or other houses and land.

51 & 52 Vict. c. 41.

(4.) For the purpose of providing asylum accommodation a local authority not being a county council shall have the same powers as are by section sixty-five of the Local Government Act 1888, conferred upon a county council.

Note to Recommendation XXVIII.

Local Authority Defined.

Local Authority defined.

240. The council of every administrative county and county borough respectively constituted under the Local Government Act, 1888 [and the council of each of the boroughs specified in the Fourth Schedule, or in the case of the City of London the Common Council], shall be a local authority for the purposes of this Act.

Powers for Providing Asylums.

Power to provide asylums for pauper and private patients.

241. A local authority may provide asylum accommodation for pauper and private patients, together or in separate asylums, and may provide separate asylums for idiots or patients suffering from any particular class of mental disorder.

Power of Secretary of State to Enforce Act.

Default by county or borough in providing asylum.

247. If the Commissioners report to a Secretary of State that any local authority has failed to satisfy the requirements of this Act as regards asylum accommodation, the Secretary of State may require the local authority to provide such accommodation in such manner as he may direct, and the local authority shall forthwith carry the requisition into effect.

Recommendation XXIX.

Local authority to act through a Committee.

That the local authority shall exercise the powers proposed to be conferred on them under the proposed Act through a Statutory Committee.

Note.—The Statutory precedents for the course suggested are as follows:—Lunacy Act, 1890, Sections 169, 175, 239, and the Local Government Act, 1888, Section 82.

Visiting Committees of Asylums.

Constitution of Visiting Committee.

169.—(1.) For every asylum there shall be a Visiting Committee appointed annually by the local authority, consisting of not less than seven members.

(2.) The Visiting Committee of a district asylum shall be constituted of the number of members fixed by the agreement under which the asylum is provided.

(3.) Where there is more than one asylum, the local authority may appoint one committee for the management and control of all the asylums, and such committee shall appoint a sub-committee for each separate asylum, and may delegate to that sub-committee such powers and duties as the committee from time to time think fit.

(4.) Where a county borough has contributed towards the cost of any county asylum, the council of the borough may, if they so desire, appoint to be members of the Visiting Committee of the asylum such number of members of the council as may be agreed upon, or in default of agreement be determined by the Commissioners under the Local Government Act, 1888, or after they have ceased to hold office, by arbitration under that Act. Such appointment shall be in substitution for any appointment previously made on the part of the borough. 51 & 52 Vict. c. 41.

(5.) Where a borough, not being a county borough, has contributed towards the cost of any county asylum, and the representatives of the borough on the county council are not entitled to vote for the appointment by the council of visitors of the asylum, the council of the borough may appoint two persons to be members of the committee.

(6.) During the continuance of a contract for the reception of the pauper lunatics of a county borough or borough specified in the Fourth Schedule into a county asylum, the council of the borough shall appoint a Visiting Committee to visit the lunatics sent from such county borough or borough in the asylum.

Meetings of Visiting Committee.

175.—(1.) The provisions of section eighty-two of the Local Government Act, 1888, with respect to the proceedings of committees of county councils shall apply to the proceedings of every Visiting Committee appointed wholly or partly by a county council, and the chairman of such committee may be elected accordingly.

(2.) To other Visiting Committees the following provisions shall apply:—

(*a.*) The members of the committee shall within one month after their election meet at some convenient place, to be named in a notice in writing given by two or more of such members, or by the clerk of the outgoing committee by the direction of two or more of such members;

(*b.*) Notices of meetings shall be given to each member personally, or left at his place of abode, or sent by post seven days at least before the time appointed for the meeting;

(*c.*) The members shall at the first meeting elect one of their number to be chairman of the committee;

(*d.*) The chairman shall preside at all meetings at which he is present. In case of his absence from any meeting the members present shall elect one of their number to be chairman of the meeting;

(*e.*) Any meeting may be adjourned from time to time and from place to place;

(*f.*) The committee shall meet as often as they may think fit.

(*g.*) A meeting may be adjourned by two members; for all other purposes three members shall be a quorum;

(*h.*) Every question shall be decided by a majority of the votes of the members present, and in the event of an equality of votes the chairman shall have a second or casting vote;

(*i.*) The clerk of the committee shall, whenever required in writing by the chairman or any two members of the committee, or by the manager of the asylum, and the chairman may, whenever he thinks fit, summon a meeting of the committee;

Powers to be exercised by a Visiting Committee.

239.—A local authority shall exercise the powers conferred by this Act for providing asylum accommodation by a visiting committee, subject, if the local authority thinks fit, to their directions as to which of the methods of providing asylum accommodation authorised by this Act shall be adopted.

NOTE TO RECOMMENDATION XXIX.

Local Government Act, 1888, Section 82.

Proceedings of committees.

82.—(1.) A county council appointing under this Act any committee may from time to time make, vary, and revoke regulations respecting the quorum and proceedings of such committee, and as to the area (if any) within which it is to exercise its authority; and subject to such regulations the proceedings and quorum and the place of meeting, whether within or without the county, shall be such as the committee may from time to time direct, and the chairman at any meeting of the committee shall have a second or casting vote.

(2.) Every committee shall report its proceedings to the council by whom it was appointed, but to the extent to which the council so direct, the acts and proceedings of the committee shall not be required by the provisions of the Municipal Corporations Act, 1882, to be submitted to the council for their approval.

(3.) In the case of a joint committee the councils and courts appointing the joint committee shall jointly have the powers given by this section, and the provisions of this section shall apply accordingly.

RECOMMENDATION XXX.

Name of the Committee and transfer of duties of Visiting Committees.

That the Statutory Committee be called the Committee for the Care of the Mentally Defective and take over the duties of the Visiting Committee or Visiting Committees of the Council of the County or County Borough as the case may be.

NOTE.—The sections of the Lunacy Act, 1890, relating to the duties of the Visiting Committee are as follows:—

Visits by Visiting Committee.

188.—At least two members of the Visiting Committee shall together, once at least in every two months, inspect every part of the asylum, and see every patient therein, so as to give everyone, as far as possible, full opportunity of complaint, and examine the order and certificate or certificates for the admission of every lunatic admitted since the last visitation and the general books kept in the asylum; and shall enter in the Visitors book any remarks they think proper in regard to the condition and management of the asylum and the lunatics therein, and shall sign the book upon every visit.

Visits to lunatics received under a contract.

189.—(1.) During the continuance of a contract for the reception of the pauper lunatics of a county borough or other borough in a county asylum not less than two members of the Visiting Committee of the borough appointed for the purpose shall together, at least once in every six months, visit the asylum and see and examine the lunatics received under the contract, and shall report the result of their visit to the council of the borough.

(2.) The Visitors may, if they think fit, be accompanied by a medical practitioner who is not an officer of the asylum, and they may by order direct payment to such medical practitioner of such a sum as they think fit for his services, and such sum shall upon the production of the order be paid to the medical practitioner by the treasurer of the borough.

(3.) Every report under this section shall be entered among the records of the Council of the borough, and may be inspected by the Commissioners, and the Commissioners may, if they think fit, require the town clerk of the borough to transmit to them a copy of any such report.

Reports by Visiting Committee.

190.—(1.) The Visiting Committee of every asylum shall in every year lay before each local authority to which the asylum belongs, at their quarterly meeting in November, or at such other time as the local authority appoints, a report in writing of the state and condition of the asylum, and as to its sufficiency to provide the necessary accommodation, and as to its management and the conduct of the officers and servants, and the care of the patients therein.

(2.) The committee may in the report make such remarks in relation to any matters connected with the asylum as they think fit.

RECOMMENDATION XXXI.

Co-opted members of the Committee.

That the Committee for the care of the mentally defective be constituted so as to include within it by co-option additional members, of whom one at least shall be a woman, who have special experience or knowledge.

RECOMMENDATION XXXII.

Powers of local authority delegated to the Committee.

That all matters relating to the exercise by the Council of their powers (under the proposed Act for the care and control of the mentally defective), except the power of raising a rate or borrowing money, shall stand referred to the Committee for the care of the mentally defective, and the Council, before exercising such powers, shall, unless in their opinion the matter is urgent, receive and consider the report of the Committee for the care of the mentally defective with respect to the matter in question. The Council may also delegate to the Committee, with or without restrictions or conditions, as they think fit, any of their powers (under such an Act) except the power of raising a rate or borrowing money.

Recommendation XXXIII.

Duty of Committee to receive requests as to provision and to report to Board of Control in case of refusal of requests.

That it shall be the duty of the Committee for the Care of the Mentally Defective to receive from parents and others in charge of mentally defective persons requests for the provision of care and control of those mentally defective persons, and on the receipt of such requests it shall be the duty of the Committee, after making any necessary enquiries as to the requirements of the mentally defective persons referred to, to arrange for the admission of those mentally defective persons into suitable institutions or houses or into suitable private care, and in the event of the Committee failing to provide such care for any such case it shall be a duty of the Committee to report the fact that they have not acted on such request, and the reasons for not so acting, to the Board of Control.

Recommendation XXXIV.

See paragraphs 372, 383, 754, 763.

Discretion of Committee as to method of dealing with particular case.

That subject to the Regulations of the Board of Control it shall be at the discretion of the Committee to deal with mentally defective persons on whose behalf they deem that intervention on their part is necessary as they shall think best in the individual case, either registering the case only, or having it certified also, or taking steps for its certification and detention, or placing it in an Institution or Home or House or Colony or under private care or family guardianship, or leaving it to the care of its parents or guardians with or without the appointment of a Friendly Visitor, or taking any other measures that seem to them desirable.

(b) MEDICAL OFFICERS AND CERTIFYING MEDICAL PRACTITIONERS.

(Recommendations XXXV. to XXXVI.)

Recommendation XXXV.

Medical officer to be appointed by the local authority.

That on the recommendation of the Committee and subject to the approval of the Board of Control the Council of the County or County Borough appoint a specially qualified medical officer or officers to assist them in the care and control of the mentally defective in the county or county borough, on the understanding that the internal management of institutions should remain in the hands of the Superintendents in charge of them, subject to the supervision and authority of the Committee.

Recommendation XXXVI.

Appointment of certifying medical practitioners.

That in order that there may be a certifying medical practitioner at hand in different parts of the County or County Borough, the Committee divide the area of the County or County Borough into such districts as they may deem suitable, and that the Council of the County or County Borough, on the recommendation of the Committee and subject to the approval of the Board of Control, appoint in each of these districts one or more duly qualified medical men to act on behalf of the Committee as certifying medical practitioners; and that such certifying medical practitioner be paid by the Council by fee for each case examined by him, and his services shall be "a public duty" so as to secure for him the benefit of the Public Authorities Protection Act, 1893. The Board of Control shall make Rules to be observed in respect of the appointment, and amongst others as to the medical qualification and as to disqualifications from partnership or relationship or personal interest, and as to acting outside a district, and altering districts, and for the appointment of deputies.

(c) JOINT COMMITTEES AND MERGING OF CERTAIN BOROUGHS IN COUNTIES.

(Recommendations XXXVII. to XXXIX.)

RECOMMENDATION XXXVII.

Joint Committees of local authorities.

That with a view to promoting a common policy in the treatment and care of mentally defective persons in the administrative County and County Boroughs, and also for the supply of sufficient and suitable accommodation at the least expense, it is desirable that advantage should be taken of Section 81 of the Local Government Act, 1888, by these authorities, adequate powers being given by statute to Joint-Committees so appointed.

NOTE.—The Section referred to is as follows :—

Appointment of Joint Committees.

81.—(1) Any County Council or Councils, and any Court or Courts of Quarter Sessions, may from time to time join in appointing, out of their respective bodies, a joint committee for any purpose in respect of which they are jointly interested.

(7) This section shall apply to the Councils of County Boroughs in like manner as to Councils of administrative counties, and a standing joint committee may be appointed for two or more administrative counties, inclusive of County Boroughs, and the members of such joint committee shall be appointed by the several Quarter Sessions and Councils in such proportion and manner as they respectively may arrange, and in default of arrangement, as may be directed by a Secretary of State.

RECOMMENDATION XXXVIII.

Merger of certain boroughs in the county.

That the Boroughs which are local authorities for the purposes of the Lunacy Act of 1890 under Schedule 4, be merged for this purpose in the administrative County in which they are geographically situated, in accordance with the general policy of unification indicated in Section 246 of the Lunacy Act.

NOTE.—The Sections referred to above are reprinted below.

Lunacy Act, 1890, Section 240 :—

LOCAL AUTHORITY DEFINED.

Local authority defined.

240.—The council of every administrative county and county borough, respectively constituted under the Local Government Act, 1888, and the council of each of the boroughs specified in the Fourth Schedule, or in the case of the City of London the common council, shall be a local authority for the purposes of this Act.

NOTE.—The Boroughs mentioned in Schedule 4 referred to are as follows :—Barnstaple, Bedford, *Berwick-on-Tweed*, *Bridgwater*, Bury St. Edmunds, Cambridge, Colchester, Doncaster, *Dover*, *Grantham*, Gravesend, Guildford, Hereford, King's Lynn, London (City of), *Maidstone*, Newark, Newbury, Newcastle-under-Lyme, *New Sarum*, New Windsor, Penzance, *Poole*, Rochester, *Scarborough*, Shrewsbury, Tiverton, Warwick, Wenlock, *Winchester*.

Lunacy Act, 1890, Section 246 :—

Where borough contracts with county powers of borough to provide an asylum to cease on determination of contract.

246.—Where any borough specified in the Fourth Schedule has contracted for the reception of the lunatics of the borough in the asylum of the county in which the borough is situate, the borough shall, on the determination of the contract, cease to be a local authority under this Act, and subject to the enactments providing for an additional charge for the maintenance of lunatics in cases where no contribution has been made towards the cost of building and furnishing an asylum, shall be liable to contribute to the county rate of the county in respect of such lunatic asylum in like manner as the rest of the county.

The boroughs printed in Italics have been struck out of the Schedule by the Lunacy Act, 1891, Section 29 and Schedule, or have ceased to be Local Authorities under Section 246 above.

RECOMMENDATION XXXIX.

Agreements between local authorities to unite in providing accommodation.

That it is desirable that, in accordance with the principle of Section 242 of the Lunacy Act, 1890, Councils of Administrative Counties and County Boroughs, acting through their Committees for the care of the mentally defective, should associate in any way they may think best for the supply of accommodation for any class or classes of the mentally defective, subject to the approval of the Board of Control and, as to financial arrangements, subject to the approval of the Local Government Board.

NOTE.—The Section of the Lunacy Act, 1890, above referred to is printed below.

NOTE TO RECOMMENDATION XXXIX. Modes in which asylum may be provided.

242.—(1.) For the purpose of providing asylum accommodation, a local authority may do all or any of the following things:—

(*a.*) Provide and maintain an asylum alone;

(*b.*) Agree to unite in providing and maintaining a district asylum with any other local authority or local authorities;

(*c.*) Agree to unite with any other local authority or local authorities upon such terms as to payment and otherwise as may be thought proper for the joint use as a district asylum of any existing asylum, and, if they think fit, for the enlargement of the same.

(2.) Where an agreement to unite has been entered into, an agreement for further union may be entered into between all or any of the local authorities concerned, and for all the purposes of this Act an agreement for further union shall be deemed to be an agreement to unite.

(3.) An agreement to unite shall not be carried into effect without the approval of a Secretary of State.

(d) FINANCIAL ARRANGEMENTS.

(Recommendations XL to XLVII.)

RECOMMENDATION XL.

See Part VIII. above.

Discontinuance of 4s. grant.

That the transfers and payments now made by county and county borough councils pursuant to s. 24 (2), (e), (f) and (g) of the Local Government Act, 1888, out of the funds placed at their disposal by the Exchequer contribution under that Act from Local Taxation, Probate Duties, etc., consisting of:

(*a*) 4s. per week to the county fund liable to bear the expenses of pauper lunatics chargeable to the county in respect of each county lunatic;

(*b*) 4s. per week to boards of guardians in respect of each lunatic chargeable to guardians and maintained in an asylum, registered hospital or licensed house;

(*c*) 4s. per week to borough councils in respect of each lunatic chargeable to borough funds

shall be discontinued.

That the total cost of the maintenance, care and treatment, education, training and control of mentally defective persons and of the provision of suitable accommodation for them shall be borne by the county and county borough councils aided by new grants from the Exchequer.

Local Government Act, 1888, Section 24 (2) (*e*) (*f*) and (*g*):—

(2) In substitution for local grants, the council of each county shall from time to time as from the said day pay out of the county fund and charge to the Exchequer Contribution Account the following sums, that is to say—

(*e*) They shall transfer to that account of the county fund to which the maintenance of any pauper lunatic chargeable to the county is charged, a sum equal to four shillings a week for each such pauper lunatic, for whom the net charge upon the county council, after deducting any amount received by the county council for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so transferred;

(*f.*) They shall pay to the guardians of every poor law union wholly or partly in the county a sum equal to four shillings a week for each pauper lunatic chargeable to that union, and maintained in an asylum, registered hospital, or licensed house, for whom the net charge upon the guardians, after deducting any amount received by them for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so paid; and

(*g.*) They shall pay to the council of each borough to which the maintenance of any pauper lunatic is chargeable, a sum equal to four shillings a week for each such pauper lunatic for whom the net charge upon the council of the borough, after deducting any amount received by them for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so paid.

RECOMMENDATION XLI.

See Part VIII. above.

Exchequer grant payable to local authorities.

A.—That substantial financial assistance be granted from the Exchequer to a Council of the County or County Borough for the care and maintenance of mentally defective persons, and of epileptics not mentally defective, and that this assistance be granted by one or other of the following methods, either:—

(i) On them ethod of an annual block grant on the principle that the grant be greater or less according to the proportion of the local expenditure to an approved standard of proper and economical expenditure and also greater or less as the assessable value per head of the population of the district is smaller or larger; or

(ii) That in addition to the present Exchequer contributions there be paid by the Exchequer to the Councils of Counties and County Boroughs annually a grant based on the number of mentally defective persons, and epileptics not mentally defective, for whom provision is made beyond the numbers provided for on the 1st of January, 1908, and that such grant be the sum which the Board of Control certify to be equal to one-half of the cost properly incurred by such Councils in respect of such additional numbers.

B.—That this block grant or this maintenance grant be payable subject to the certificate of the Board of Control that the local authority has carried out its duties under Recommendation XXVIII. satisfactorily, and that in the event of the Board of Control refusing to give such a certificate an appeal shall lie to the Secretary of State, whose decision shall be final.

C.—That in addition to the above grant, whether it is a block grant or a maintenance grant, there be provided from the Exchequer annually for a term of years a grant in aid for the provision of necessary accommodation in the manner and in the locality advised by the Board of Control.

RECOMMENDATION XLII.

Use of grant by local authority, and power to contract with others to supply accommodation.

That, subject to the approval of the Board of Control, the Council of the County or County Borough acting through the Committee for the care of the mentally defective shall be authorised to use whatever grants may be made to them by the Exchequer in any way they may think best for the well-being of the mentally defective, and epileptics not mentally defective, and may contract with any Poor Law or other public authority, public or voluntary agency, or private person, under such conditions as they may deem advisable, for the care, education, training, or maintenance of mentally defective persons, or of epileptics not mentally defective.

RECOMMENDATION XLIII.

Architect to the Board of Control.

That an architect be appointed to assist the Board of Control by examining and reporting on plans, contracts, particulars and specifications submitted by Local Authorities to the Board, and in other ways, and that such architect receive a fixed salary, on the understanding that he is exclusively employed on the work of his department.

See paragraph 616–617. 677–678.

RECOMMENDATION XLIV.

Plans for buildings, and estimates.

1. That the staff at the Offices of the Local Government Board for surveying, engineering, building and sanitation be available for the Board of Control in regard to sites, plans, particulars, specifications and estimates for the provision of accommodation for mentally defective persons, and that in cases of applications involving loans the Board of Control be under obligation to apply for such assistance.

2. That a local authority proposing to establish, alter, restore, or enlarge buildings, or to purchase or lease any estate or house, for the accommodation of mentally defective persons, shall send to the Board of Control all necessary plans and particulars with estimates.

3. That the Board of Control on receiving these plans, particulars and estimates, give them a preliminary consideration and, with the advice of their Architect, decide from their expert point of view, whether they are primâ facie suitable for the purpose intended, and involve no unreasonable expenditure.

See paragraph 677–681.

4. That the Board of Control should next transmit them to the Local Government Board for report in regard to all questions as they arise connected with the survey of land, engineering, building and sanitation, for consideration and report in regard to the proposed cost, and for their opinion as to whether a loan to meet this cost would fall within the conditions of the Local Government Act of 1888, and the Municipal Corporations Act, 1882, and whether, subject to public inquiry, they are prepared to sanction the loan.

5. That on the receipt of the report of the Local Government Board, and of the information above mentioned, the whole matter be further considered by the Secretary of State, the Board of Control, and the representative of the Local Government Board, and, if desired, by representatives of the Local Authority.

6. That it be laid down clearly in the Act that plans, etc., shall not be approved which involve unreasonable expenditure.

7. That thereafter the approval of the plans, etc., be notified to the Local Authority by the Secretary of State, and the Local Authority then apply to the Local Government Board for a loan.

8. That the Secretary of State, on the report of the Board of Control, shall have power to prohibit the use of any parts of buildings for purposes other than those which were approved by him or which shall be deemed unsanitary or unsuitable.

Note.—The present statutory provisions as to "plans," etc., are as follows :—

Lunacy Act, 1890, Section 254 (2) :—

(2.) Plans and contracts agreed upon by a visiting committee shall not be carried into effect until approved by a Secretary of State.

Lunacy Act, 1891, Section 16 :—

16.—In sub-section two of section two hundred and fifty-four of the principal Act, there shall be added after the word "contracts" the words "for the purchase of lands and buildings and for the erection, restoration, and enlargement of buildings."

Lunacy Act, 1890, Section 272 :—

Approval of Secretary of State.

272.—For the purpose of procuring the approval of a Secretary of State to any agreement, contract, or plan requiring approval under this Act, the agreement, contract, or plan, with an estimate of the probable cost of carrying it into effect, shall be submitted to the Commissioners, and to the Secretary of State, and the Commissioners shall make such inquiries as they think fit, and shall report thereon to the Secretary of State, who may approve the agreement, contract, or plan, with or without modification, or may refuse his approval. Mode of obtaining approval of Secretary of State.

Lunacy Act, 1890, Section 274 :—

Borrowing Powers.

274.—(1.) For the purpose of paying any money payable under this Act, or for repaying any moneys borrowed under this Act or any former Act, authorising borrowing for purposes of asylum accommodation, the local authority may with the consent of the Local Government Board, and subject to the provisions of the Local Government Act, 1888, and the Municipal Corporations Act, 1882, according as the same respectively are applicable to the local authority, borrow on the security of the county or borough fund, and of any revenue of the local authority, or on either such fund or revenues or on any part of the revenues, such money as the local authority requires. Power to borrow. 51 & 52 Vict. c. 41. 45 & 46 Vict. c. 50.

(2.) The Public Works Loan Commissioners may, if they see fit, make any loan for the purposes of this Act to the local authority upon the security of any fund or revenues applicable to the purposes of this Act.

Recommendation XLV.

That the Board of Control have power to hold a public local inquiry in regard to any plan, scheme or proposal which has been submitted to them for the care of mentally defective persons. Public Local Inquiries by Board of Control.

Recommendation XLVI.

Settlement by counties.

That in view of the following considerations:

(1) that under Recommendations XXVIII. to XXXIV. the obligation of dealing with mentally defective persons is imposed on the Committee of the Council of the County or County Borough; *See* paragraphs 193–195, and 814 above.

(2) that the mentally defective persons dealt with hitherto as pauper lunatics will be no longer under the care of the Poor Law authorities; and

(3) that the charges for these persons are likely to be more or less heavy, as are at the present time the charges for persons dealt with as lunatics under the Lunacy Act of 1890,

it is desirable that a system of settlement based on residence by Counties and County Boroughs be introduced for the purpose of the administration now proposed.

Recommendation XLVII.

Time of residence in any institution, etc., for the mentally defective not to count for acquisition of settlement.

That residence in any institution, house, hospital, establishment or home licensed for the accommodation, maintenance, care, treatment, education training or control of any of the classes of mentally defective shall not count as part of the period of residence necessary to the acquisition of any settlement.

(e) ANNUAL REPORT.

(Recommendation XLVIII.)

Recommendation XLVIII.

Annual Report of Committees for the care of the mentally defective.

That the Committees for the Care of the Mentally Defective shall publish each year an annual report which shall be forwarded to the Board of Control, and the Board shall publish such of these reports or such extracts from these reports as they may deem to be of public interest or importance; and, in such a form as they may deem advisable, the Board shall require, and the Committees shall furnish, such statistical and other information as may be considered necessary in order to show the nature and extent of the work of the local authorities.

C.—GUARDIANSHIP AND SUPERVISION.

(Recommendations XLIX. to LIV.)

(a) PERSONS UNDER 21.

(Recommendations XLIX. to LII.)

Recommendation XLIX.

Cases under 21 not under suitable parental or other control, etc.

That in the case of persons under 21 years of age for whose care and control any Council is required to make suitable and sufficient provision, and who, in the opinion of the Committee, are not under suitable parental or other control, and are not receiving suitable training or are cruelly treated or otherwise neglected, and who in the opinion of the responsible Medical Officer of the Committee come within any of the classes (3) to (9) inclusive of Recommendation IV., the Committee may *See* paragraphs 345, 728–734.

Recommendation XLIX.—*cont.*

resolve that until the child reaches the age of 21 all the rights and powers of the parent or parents or other person who is the guardian of the child or is liable to maintain the child or has the custody of the child shall vest in the Committee until the child reaches the age of 21, and thereupon those rights and powers shall so vest. Provided (1) that the Committee may rescind the resolution if they think that it will be for the benefit of the child that it should be rescinded, or may permit the child to be either permanently or temporarily under the control of the parent or of any relative or of any friend or of any society or institution for the care of children; (2) that a Court of Summary Jurisdiction, if satisfied on complaint made by a parent, or if there is no parent, by the legal —or if there be no legal, then by the acting—guardian or the near relation of the child, that there was no ground for the resolution, or that it is for the benefit of the child that it should be permanently or temporarily under the control of its parent or guardian, or that the resolution of the Committee should be determined, may make an order accordingly, and the Committee shall comply with any such order; if the order determines the resolution, the resolution shall be thereby determined as from the date of the order, and the Committee shall cease to have the rights and powers of the parent as respects the child; (3) that an appeal from the Court of Summary Jurisdiction to the Quarter Sessions be allowed.

Note.—This recommendation proceeds on similar lines to the Poor Law Act, 1899, but with the addition of a right of appeal from the Court of Summary Jurisdiction to the Court of Quarter Sessions.

Poor Law Act, 1899, Section 1 :—

Control of guardians over orphans and children of persons unfit to have control of them.
52 & 53 Vict. c. 56.
61 & 62 Vict. c. 60.

1.—For sub-sections one, two, and four of section one of the Poor Law Act, 1889 (which sub-sections are hereby repealed), shall be substituted the following sub-sections :—

"(1.) Where a child is maintained by the guardians of a poor law union and—

"(i.) the child has been deserted by its parent ; or

"(ii.) the guardians are of opinion that by reason of mental deficiency, or of vicious habits or mode of life, a parent of the child is unfit to have the control of it ; or

"(iii.) a parent is unable to perform his or her parental duties by reason of being under sentence of penal servitude or of being detained under the Inebriates Act, 1898 ; or

"(iv.) a parent of the child has been sentenced to imprisonment in respect of any offence against any of his or her children ; or

"(v.) a parent of the child is permanently bedridden or disabled, and is the inmate of a workhouse, and consents to the resolution hereinafter mentioned ; or

"(vi.) both the parents, or in the case of an illegitimate child the mother of the child, are or is dead ;

"the guardians may at any time resolve that until the child reaches the age of eighteen years all the "rights and powers of such parent as aforesaid, or if both parents are dead of the parents, in respect "of the child shall, subject as in this Act mentioned, vest in the guardians, and thereupon those "rights and powers shall so vest accordingly, and shall continue so vested whether the child does "or does not continue to be maintained by the guardians.

"Provided that the guardians may rescind the resolution if they think that it will be for the "benefit of the child that it should be rescinded, or may permit the child to be, either permanently "or temporarily, under the control of the parent, or of any other relative, or of any friend, or of any "society or institution for the care of children.

"(2.) A court of summary jurisdiction, if satisfied on complaint made by a parent or if there is "no parent by the guardian of a child that there was no ground for the resolution, or that it is for "the benefit of the child that it should be either permanently or temporarily under the control of its "parents or guardian, or that the resolution of the guardians should be determined, may make an "order accordingly, and the guardians shall comply with any such order, and if the order determines "the resolution the resolution shall be thereby determined as from the date of the order, and the "guardians shall cease to have the rights and powers of the parent as respects the child."

Recommendation L.

Cases under wardship of Committee to be reported on at age of 21.

That in all cases of mentally defective persons who are under the wardship of the Committee under Recommendation XLIX., the Committee shall report to the Board of Control as to their condition when they reach the age of 21, and the Board shall decide what further steps shall be taken in view of the continuance of such persons under care and control.

RECOMMENDATION LI.

Cases under 21 under suitable parental or other control.

That in the case of persons under 21 years of age who, in the opinion of the Committee, are under suitable parental or other control, and are receiving suitable training, or are not cruelly treated or otherwise neglected, but in the judgment of the responsible Medical Officer of the Committee come within any of the classes (3) to (9), inclusive, of Recommendation IV., the Committee endeavour to make a voluntary agreement with the parent or guardian for the appointment of a Friendly Visitor who, with the Committee, shall be consulted as to any proposed removal of the person from his or her present residence or any change in regard to his or her education and training or any question of marriage, and generally in regard to any matter that may affect the well-being of the person at the time or in the future, so that the parent or guardian may have the benefit of the advice and co-operation of the Committee and of the Friendly Visitor.

See paragraph 345.

RECOMMENDATION LII.

Adaptation of Idiots Act procedure to other classes of mentally defective persons.

That, following the precedent of the Idiots Act, 1886, any person under 21 years of age who comes within any of the classes (3) to (9), inclusive, of Recommendation IV. may be placed by the parents or guardians or by any person undertaking and performing towards him the duty of a parent or guardian, or by the Committee, in any registered institution or house for the mentally defective, upon the certificate in writing of a qualified medical practitioner, without the intervention of a judicial authority; and on reaching the age of 21 may, with the consent of the Board of Control, be retained after he is of full age.

See paragraph 531.

NOTE.—The Sections of the Idiots Act specially referred to above are reprinted below:—

SECTION 4 OF THE IDIOTS ACT, 1886.

4. An idiot or imbecile from birth or from an early age may, if under age, be placed by his parents or guardians or by any person undertaking and performing towards him the duty of a parent or guardian, and may lawfully be received into, and until of full age detained in, any hospital, institution, or licensed house, registered under this Act for the care, education, and training of idiots or imbeciles upon the certificate in writing of a duly qualified medical practitioner in the Form One in the Schedule that the person to whom such certificate relates is an idiot or imbecile, capable of receiving benefit from such hospital, institution, or licensed house, accompanied by a Statement in the Form Two in the Schedule signed by the parent or guardian of the idiot or imbecile, or the person undertaking or performing towards him the duty of a parent or guardian.

FIRST PARAGRAPH OF SECTION 5 OF THE IDIOTS ACT, 1886.

5. Any idiot or imbecile who has while under age been received under this Act into any hospital, institution, or licensed house, registered under this Act, may, with the consent in writing of the Commissioners in Lunacy, be retained therein after he is of full age . . . . .

The SCHEDULE.

FORM 1.

Form of Medical Certificate.

I, the undersigned *A.B.*, a person registered under the Medical Act, 1858, and in the actual practice of the medical profession, certify that I have carefully examined *C.D.*, an infant [*or* of full age], now residing at , and that I am of opinion that the said *C.D.* is an idiot [*or* has been imbecile from birth, *or* for years past *or* from an early age], and is capable of receiving benefit from [the institution (describing it)], registered under the Idiots Act, 1886.

(Signed)
Dated (full postal address).

FORM 2.

Form of Statement to accompany Medical Certificate.

[If any particulars in this statement be not known, the fact to be so stated.]
Name of patient, with Christian name at length.
Sex and age.
When and where previously under care and treatment.
In any asylum or institution.
Whether subject to epilepsy.
Whether dangerous to others.
I certify that to the best of my knowledge the above particulars are correctly stated.
(Signed) Name and full postal address.
[To be signed by the parent or guardian of the idiot or imbecile or the person undertaking and performing towards him the duty of a parent or guardian.]

Note to Recommendation LII.—*contd.*

(b) PERSONS AFTER 21.

(Recommendations LIII. to LIV.)

RECOMMENDATION LIII.

That in the case of persons over 21 years of age for whose care and control any Council is required to make suitable and sufficient provision, who have not been under the wardship of the Committee or dealt with under Recommendation LI. above, and are alleged to be mentally defective as defined in Recommendation IV., the Committee shall deal with the case as they think fit with a view to the proper care, control, and safeguard of the mentally defective person, and may, if they deem it right by one of their officers, present a petition as next friend of the said person, under Sections 4 to 8 of the Lunacy Act, 1890, as modified in Recommendation LXVIII., or may make an urgency order or apply for a summary reception order under Sections 11 and 13 of the Lunacy Act, 1890, as modified in Recommendation LXXI.

Petition may be presented by the Committee as next friend in certain cases over 21.

RECOMMENDATION LIV.

That if in the opinion of the Committee and of their Medical Officer it is desirable that any person over 21 years of age who is mentally defective as defined in Recommendation IV., and who might otherwise be taken charge of by the Committee, should be retained under the care of a relation or friend, nothing in the proposed Act shall prevent this.

Power to allow relation or friend to retain mentally defective person.

D.—PROCEDURE IN REGARD TO MENTALLY DEFECTIVE PERSONS.

(Recommendations LV. to LXXI.)

(a) INQUIRY AS TO THE NUMBERS OF DEFECTIVE PERSONS AND NOTIFICATION.

(Recommendations LV. to LVIII.)

RECOMMENDATION LV.

See paragraphs 311–312, 584, 598.

That, with a view to facilitate the work of the Committee in the first instance, it shall be its duty in pursuance of regulations to be laid down by the Board of Control to ascertain as far as possible the number of mentally defective persons for whom the Council is liable to provide, either by the Medical Officer of the Committee or by a well qualified medical man appointed for the purpose, acting under the supervision of the Medical Officer.

Inquiry as to number of mentally defective persons.

Note to Recommendation LV.—*contd.*

Note.—The principle involved in such an inquiry has already received legislative sanction See Section 1 of the Elementary Education (Defective and Epileptic Children) Act, 1899, as follows:—

"1 (1) A school authority, as defined by the Elementary Education (Blind and Deaf Children) Act, 1893, may, with the approval of the Education Department, make such arrangements as they may think fit for ascertaining—

(*a*) What children in their district, not being imbecile, and not being merely dull or backward, are defective, that is to say, what children by reason of mental or physical defect are incapable of receiving proper benefit from the instruction in the ordinary public elementary schools, but are not incapable by reason of such defect of receiving benefit from instruction in such special classes or schools as are in this Act mentioned; and

(*b*) What children in their district are epileptic children, that is to say, what children, not being idiots or imbeciles, are unfit by reason of severe epilepsy to attend the ordinary public elementary schools.

(2) The school authority, in making their arrangements under this section, shall provide facilities for enabling any parent who is of opinion that his child ought to be dealt with under this Act to present such child to the school authority to be examined, although he may not have been required so to do by that authority; and any school authority failing to provide such facilities shall be deemed to have acted in contravention of this Act.

(3) For the purpose of ascertaining whether a child is defective or epileptic within the meaning of this section, a certificate to that effect by a duly qualified practitioner approved by the Education Department shall be required in each case. The certificate shall be in such form as may be prescribed by the Education Department.

(4) For the purpose of the exercise of the powers conferred by this section, it shall be the duty of the parent of any child who may be required by the school authority to be examined to cause the child to attend such examination, and any parent who fails to comply with such requirement shall be liable on summary conviction to a fine not exceeding five pounds."

Recommendation LVI.

Notification of mentally defective persons.

That it be the statutory duty of the Medical Officers of the Local Education Authorities, of the Guardians of the Poor, and of the Public Health Committees, the Relieving Officers of Boards of Guardians, the Medical Officers of Convict and Local Prisons, the Police, and the Managers of any Homes for Inebriates or any Charitable, Religious or Voluntary Institutions or Societies, or any Naval or Military Authorities, to notify to the Committee all cases of mental defect coming to their knowledge in the course of duty appearing to come within Recommendation IV. above, provided always that a Secretary of State may, on special grounds to be stated in the Annual Report of the Board of Control, by regulation exempt any particular authorities from the fulfilment of this duty.

Recommendation LVII.

Notification of Mentally Defective Patients received for Profit.

That anyone who for profit shall receive to reside as a patient or maintain any person appearing to come within any of the classes of mentally defective persons defined in Recommendation IV. shall within 7 days thereafter notify the same to the Board of Control.

See paragraphs 649. 713, 71

Recommendation LVIII.

Report as to recurrent cases of unsound mind.

That it shall be the duty of Medical Officers who are in charge of Institutions for persons of unsound mind, Receiving Houses, and Reception Wards, to report to the Committee for special consideration the cases of persons who are repeatedly certified and admitted and repeatedly discharged, or who are in such a mental condition as would be likely to occasion their relapse under the stress of life, with a view to care and control being exercised in regard to them, if desirable, in some other and more effectual manner; and in cases of doubt whether the patient should or should not be discharged there may be an appeal to the Board of Control on the question, and the decision of the Board shall be final.

See paragraph 668.

Note.—As to Receiving Houses and Reception Wards see Recommendations LXIV—LXVII.

(b) ADMISSION, CONTINUANCE ORDERS, TRANSFERS AND DISCHARGES.

(Recommendations LIX. to LXIII.)

Recommendation LIX.

Medical Officer, honorary or paid, for every institution or house.

That as a condition of its licence, every institution or house for the care of the mentally defective shall through its Committee of Management appoint an honorary or paid Medical Officer who shall give such attendance as may be directed by the Board of Control.

Recommendation LX.

Annual revision of mentally defective cases dealt with by the Committee.

See paragraph 534.

(1) That at least once in every year there be a revision by the Committee of all cases of mentally defective persons who are being dealt with by them, and (2) that any changes made be reported to the Board of Control; and that the certificate of the Medical Officer of the institution shall, under regulations to be made by the Board of Control and subject to the approval of the Committee and the Board, suffice for the continuance of residence of the mentally defective person in the institution.

Recommendation LXI.

Transfer from one institution or house to another or private care or *vice versa*.

That in the case of mentally defective persons dealt with by the Committee no transfer (except as mentioned in the proviso below) shall take place from one institution or house to another or from an institution or house to private care or *vice versa* without the authority of the Committee and subject to their approval as to the selection of the institution or house or private care to which the mentally defective person is to be transferred, and the Board of Control shall make such regulations as may appear to them necessary in relation to the several classes of cases, for reports of transfers being made to them, and for the granting or withholding of their consent, provided always that the Board of Control may order the transfer of any particular case where it appears to the Board that such transfer is desirable.

Recommendation LXII.

Discharge of persons from institutions.

See paragraph 668.

That in the case of discharges of mentally defective persons from institutions into which persons coming under classes (2) to (9), inclusive, have been admitted, the discharge may, if the Committee think fit, be ordered by the Committee on the certificate of the Medical Officer of the institution; and, if the Medical Officer of the institution be of a contrary opinion to that of the Committee in regard to the discharge, there shall be an appeal to the Board of Control whose decision shall be final. The Regulations of the Board to be made under Recommendation LX. shall embody directions as to the principles on which discharges shall be ordered.

Recommendation LXIII.

Notification to the Committee and Board of Control of all admissions, transfers, etc.

That under regulations to be made by the Board of Control all admissions, transfers, continuance orders, discharges and deaths be at once reported to the Board of Control and to the Committee for the care of the Mentally Defective.

(c) RECEIVING HOUSES OR RECEPTION WARDS.

(Recommendations LXIV. to LXVII.)

Recommendation LXIV.

Receiving Houses or Reception Wards to be established.

That for the reception and observation and temporary treatment of cases of mental defect the Committee, under regulations to be made by the Board of Control, shall provide or contract with others to provide such Receiving Houses or Reception Wards in various parts of their area as may be necessary; and that such Receiving Houses or Reception Wards be exclusively used for that purpose and be licensed by the Board of Control and placed under the management of the Committee; and that they be available not only for poor persons but also, on payment, for persons who might be fully and sufficiently provided for otherwise at their own charges or at the charges of their relations or friends.

See paragraphs 706-716.

Recommendation LXV.

Statutory obligation on certain public authorities to provide accommodation for Receiving Houses or Wards on request of the Council of the County or County Borough.

That there be a statutory obligation imposed on public authorities within the area of the County or County Borough, such as Boards of Guardians and District and Borough Councils, on the request of the Council of the County or County Borough, if approved by the Board of Control, to provide the necessary accommodation for Receiving Houses or Wards on such terms as may be arranged between them; and that in case of a difference of opinion between the Council of the County or County Borough and the other authority in respect of the necessity for such provision or of the expediency of using any existing building for such purpose, there shall be an appeal to the Secretary of State; provided that in the case of any building provided, or to be provided under the authority of the Local Government Board, it shall be the duty of the Local Government Board, after inquiry, to determine if the building should be provided or used for the proposed purpose, and, if so, upon what terms; and the decision of the Local Government Board shall be final.

Recommendation LXVI.

Cases in receiving houses, etc., to be seen by a Medical Officer representing the Committee.

That in the case of all mentally defective persons taken to a Receiving House or Reception Ward it shall be necessary for the Medical Officer or one of the Medical Officers of the Committee, or a certifying medical practitioner, to attend at the Receiving House or Reception Ward, and act as one of the certifying medical officers.

Recommendation LXVII.

Application for Admission of Mentally Defective Persons to Receiving House or Reception Ward.

That, under any immediate certificate or order that the Board of Control under its regulations may require, any person alleged to be mentally defective, as defined in Recommendation IV., may be at once admitted to a Receiving House or Reception Ward on application made either by the person himself or on his behalf, subject to the approval and order of the Medical Officer in charge, and (except in cases of payment under Recommendation LXIV.) all necessary expenditure for the maintenance of such persons shall be borne by the Committee. And further, that the Medical Officer in charge of the Receiving House or Reception Ward shall at once on the admission of such person report the fact to the Medical Officer of the Committee with a view to such sufficient action being taken on their part as, in their opinion, the case requires.

See paragraph 713–714.

(d) MODIFICATIONS OF THE LUNACY ACT, 1890.

(Recommendations LXVIII. to LXXI.)

Recommendation LXVIII.

That Sections 4 to 8 of the Lunacy Act, 1890, be altered in the manner stated below:

See paragraphs 719–727.

[N.B. The following is a transcript of Sections 4–8 of the Lunacy Act, 1890, as proposed to be amended.

Reception orders on Petition applicable to mentally defective persons.

The principle of these alterations is to adopt the system in force under the Lunacy Acts and extend it to all classes of mentally defective persons as defined in Recommendation IV., without regard to the question whether they are "paupers" or not.

(1) The word "lunatic" is replaced by "mentally defective person" throughout, and the word "pauper" eliminated.

(2) The Committee may through its representative, present a petition as "next friend" of the mentally defective person where it thinks such petition ought to be presented, either at the request of the relatives or when the relatives or friends have failed to act (Sec. 5 (5)).

(3) The judicial authority may select a suitable institution or house or leave the selection to the Committee, in cases where the relations or friends of the mentally defective person have failed to select one (Sec. 6 (1)).

(4) The order of the judicial authority should state whether or not the patient has been personally examined by him (Sec. 6 (2)).

The alterations made in the sections of the Lunacy Act are designated as follows :—

Additions are made in *italic* print, and words deleted are printed within square brackets, *i.e.*, [ ]. As to the procedure in regard to persons under 21 coming under classes (3) to (9) of Recommendation IV. without the intervention of a "judicial authority," *see* Recommendation LII. above.]

PART I.

Reception of Lunatics.

Reception Orders on Petition.

Private patients not found mentally defective by inquisition to be received only unde order of judicial authority.

4.—(1.) Subject to the exceptions in this Act mentioned, a person, not being [a pauper or] a [lunatic] *mentally defective person* so found by inquisition, shall not be received and detained as a [lunatic] *mentally defective person* in an institution *or house* for [lunatics] *mentally defective persons* or as a single patient, unless under a reception order made by the judicial authority hereinafter mentioned. A relative of the person applying for an order under this section or of the [lunatic] *mentally defective person,* or of the husband or wife of the [lunatic] *mentally defective person,* shall not be capable of making such order.

(2.) The order shall be obtained upon a private application by petition accompanied by a statement of particulars and by two medical certificates on separate sheets of paper.

Petition for reception order.

5.—(1.) The petition shall be presented, if possible, by the husband or wife or by a relative of the alleged [lunatic] *mentally defective person.* If not so presented it shall contain a statement of the reasons why the petition is not so presented and of the connexion of the petitioner with the alleged [lunatic] *mentally defective person,* and the circumstances under which he presents the petition.

(2.) No person shall present a petition unless he is at least twenty-one years of age and has within fourteen days before the presentation of the petition personally seen the alleged [lunatic] *mentally defective person.*

(3.) The petitioner shall in the petition undertake that he will personally, or by someone specially appointed by him, visit the patient once at least in every six months; and the undertaking shall be recited in the order.

(4.) The petition shall be signed by the petitioner and the statement of particulars by the person making the statement.

(5.) *Notwithstanding anything contained in this section, the Committee of any Council of a County or County Borough for the care of the mentally defective, may authorise its Medical Officer or one of its Medical Officers to present a petition as next friend of the alleged mentally defective person in any case where the Committee deems it advisable so to do, either at the request of the relatives, or in consequence of any failure, for any reason, on the part of any husband, wife, or other relative of the alleged mentally defective person so to present a petition, and where the Committee is advised by its Medical Officer or one of its Medical Officers that such petition ought to be presented.*

Procedure upon petition for a reception order.

6.—(1.) Upon the presentation of the petition the judicial authority shall consider the allegations in the petition and statement of particulars and the evidence of [lunacy] *mental defect* appearing by the medical certificates, and whether it is necessary for him personally to see and examine the alleged [lunatic] *mentally defective person*; and, if he is satisfied that an order may properly be made forthwith, he may make the same accordingly *either directing the admission of the mentally defective person to a particular institution or house which the petitioner, his relative, or friend may desire, or failing that, which in his opinion, on the evidence submitted to him or his personal knowledge, is suitable for the admission of the said person or directing the admission of the mentally defective person to an institution or house*

RECOMMENDATION LXVIII.—(*cont.*)

suitable for his proper care and control, as may be decided by the Committee for the Care of the Mentally Defective; or if not so satisfied he shall appoint as early a time as practicable, not being more than seven days after the presentation of the petition, for the consideration thereof; and he may make such further or other inquiries of or concerning the alleged [lunatic] *mentally defective person* as he may think fit. Notice of the time and place appointed for the consideration of the petition (unless personally given to the petitioner) shall be sent to the petitioner by post in a prepaid registered letter addressed to him at his address as given in the petition.

(2.) The judicial authority if not satisfied with the evidence of [lunacy] *mental defect* appearing by the medical certificates, may, if he thinks it necessary so to do visit the alleged [lunatic] *mentally defective person* at the place where he may happen to be. *And the order shall contain a statement that the patient has or has not been personally examined by such judicial authority.*

(3.) The petition shall be considered in private, and no one except the petitioner, the alleged [lunatic] *mentally defective person* (unless the judicial authority shall in his discretion otherwise order), any one person appointed by the alleged [lunatic] *mentally defective person* for that purpose, and the persons signing the medical certificates accompanying the petition, shall, without the leave of the judicial authority, be present at the consideration thereof.

(4.) At the time appointed for consideration of the petition the judicial authority may make an order thereon or dismiss the same, or, if he thinks fit, may adjourn the same for any period not exceeding fourteen days for further evidence or information, and he may give notice to such persons as he thinks fit of the adjourned consideration, and summon any persons to attend before him.

(5.) Every judicial authority and all persons admitted to be present at the consideration of any petition for a reception order, or otherwise having official cognisance of the fact that a petition has been presented, except the alleged [lunatic] *mentally defective person* and the person appointed by the alleged [lunatic] *mentally defective person* as aforesaid shall be bound to keep secret all matters and documents which may come to his or their knowledge by reason thereof, except when required to divulge the same by lawful authority.

Dismissal of petition.

7.—(1.) If the petition is dismissed, the judicial authority shall deliver to the petitioner a statement in writing under his hand of his reasons for dismissing the same, and shall send a copy of such statement to the [Commissioners] *Board of Control,* and shall also, where the alleged [lunatic] *mentally defective person* is detained under an urgency order, send notice by post or otherwise to the person in whose charge the alleged [lunatic] *mentally defective person* is, that the petition has been dismissed.

(2.) Any judicial authority making or refusing a reception order, shall, if so required by the [Commissioners] *Board of Control,* give to them all such information as they may require as to the circumstances under which the order was made or refused.

(3.) The [Commissioners] *Board of Control* may communicate such information as they think proper, on the dismissal of the petition or the release of the alleged [lunatic] *mentally defective person,* to him or to any person who may satisfy them that he is a proper person to receive the information.

(4.) If after a petition has been dismissed another petition is presented as to the same alleged [lunatic] *mentally defective person,* the person presenting such other petition, so far as he has any knowledge or information with regard to the previous petition and its dismissal shall state the facts relating thereto in his petition, and shall obtain from the [Commissioners] *Board of Control,* at his own expense, and present with his petition, a copy of the statement sent to them of the reasons for dismissing the previous petition, and, if he wilfully omits to comply with this sub-section, he shall be guilty of a misdemeanor.

Right of [lunatic] *mentally defective person* to be examined by judicial authority.

8.—(1.) When a [lunatic] *mentally defective person* has been received as a private patient under an order of a judicial authority, without a statement in the order that the patient has been personally seen by such judicial authority, the patient shall have the right to be taken before or visited by a judicial authority, other than the judicial authority who made the order, unless the medical officer of the institution *or house,* or, in the case of a single patient his medical attendant, within twenty-four hours after reception, in a certificate signed and sent to the [Commissioners] *Board of Control,* states that the exercise of such right would be prejudicial to the patient.

(2.) Where no such certificate has been signed and sent, the manager of the institution *or house* in which the patient is, or the person having charge of him as a single patient, shall within twenty-four hours after reception, give to the patient a notice in writing of his right under this section, and shall ascertain whether he desires to exercise the right; and if he, within seven days after his reception, expresses his desire to exercise the right, such manager or person shall procure him to sign a notice of such desire, and shall forthwith transmit it by post in a prepaid registered letter to the judicial authority, who is to exercise the jurisdiction under this section, or to the justices clerk of the petty sessional division or borough, where the [lunatic] *mentally defective person,* is, to be by him transmitted to such judicial authority, and the judicial authority shall thereupon arrange, as soon as conveniently may be, either to visit the patient or to have the patient brought before him by the manager or person as the judicial authority may think fit.

RECOMMENDATION LXVIII.—(*cont.*)

(3.) The judicial authority shall be entitled, if he desires so to do, to see the medical certificates and any other documents, upon the consideration of which the reception order was made, and shall after personally seeing the patient send to the [Commissioners] *Board of Control* a report, and the [Commissioners] *Board of Control* shall take such steps as may be necessary to give effect to the report.

(4.) For the purposes of this section the jurisdiction shall be exercised by any judicial authority having authority to act in the place where the person received is, and not being the judicial authority who made the reception order; and arrangements shall for that purpose from time to time be made amongst themselves by the persons having such authority as aforesaid.

(5.) If any manager of an institution *or house* for [lunatics] *mentally defective persons* or any person having charge of a single patient, omits to perform any duty imposed upon him by this section, he shall be guilty of a misdemeanor.

NOTE.—The judicial authority referred to above is thus defined in the Act.

THE JUDICIAL AUTHORITY DEFINED.

Judicial authorities defined.

9.—(1.) The powers of the judicial authority under this Act shall be exercised by a justice of the peace specially appointed as herein-after provided, or a judge of county courts, or magistrate [having* respectively jurisdiction in the place where the lunatic is.]

(2.) Every judicial authority shall, in the exercise of the jurisdiction conferred by this Act, have the same jurisdiction and power as regards the summoning and examination of witnesses, the administration of oaths, and otherwise, as if he were acting in the exercise of his ordinary jurisdiction, and shall be assisted, if he so requires, by the same officers as if he were so acting, and their assistance under this Act shall be considered in fixing their remuneration.

(3.) A judge of county courts and magistrates shall not be required to exercise any powers under this Act so as to interfere with or delay the exercise of his ordinary jurisdiction.

Appointment of justices to make reception orders.

10.—(1.) The justices of every county and quarter sessions borough, shall annually appoint out of their own body as many fit and proper persons as they may deem necessary to exercise [within the* county and borough respectively], the powers conferred by this Act upon the judicial authority. In making such appointments the justices of every county shall have regard to the convenience of the inhabitants of each petty sessional division thereof.

(2.) The annual appointments under this section shall be made by justices of a county at their Michaelmas quarter sessions, and by justices of a borough at special sessions to be held in the month of October.

(3.) If in any year such appointments are not made, it shall be lawful for the Lord Chancellor by writing under his hand, to make the same; and if, on any representation made to him that the number of justices so appointed for any county or borough is at any time insufficient, the Lord Chancellor is satisfied that such representation is well founded, he shall have power to appoint, by writing under his hand, any other justices of such county or borough to act, until the next Michaelmas quarter or special sessions, with the justices so appointed.

(4.) If in the case of a borough or place not having a separate quarter sessions, representation is made to the Lord Chancellor that public inconvenience is likely to result, unless power is given to the justices of such borough or place to exercise [within the same]* the powers conferred by this Act upon the judicial authority, it shall be lawful for the Lord Chancellor, from time to time, with or without a fresh representation, to appoint, by writing under his hand, one or more of the justices of such borough or place to exercise [within the same]* during such time as the Lord Chancellor thinks fit the powers aforesaid, together with any other specially appointed justices acting therein.

(5.) In the case of the death, absence, inability, or refusal to act of any justice appointed under this section the justices of the county or borough, or the Lord Chancellor, as the case may be, may appoint a justice to act in his place. Such appointment may be made by justices of a county at any quarter sessions, and by justices of a borough at special sessions to be held at the same time as any quarter sessions.

(6.) All appointments of justices under this section shall be recorded by the clerk of the peace of the county or borough, or in the case of a borough or place not having a separate quarter sessions, by the clerk to the justices, and it shall be the duty of every such clerk to publish the names of the justices so appointed in each petty sessional division of the county and otherwise for the information of all persons interested. In the case of quarter sessions boroughs, the clerk to the justices making the appointment shall forthwith notify the same to the clerk of the peace of the borough.

RECOMMENDATION LXIX.

Form of order for reception on petition under Recommendation LXVIII.

That the following form be adopted as the form to be signed by the Judicial Authority, Judge of County Court, or Stipendiary Magistrate making an Order under Recommendation LXVIII.

FORM.

Order for the reception of a mentally defective person, to be made by the Judicial Authority appointed under the Act for the Care and Control of the Mentally Defective, Judge of County Court, or Stipendiary Magistrate.

I, the undersigned, E.F., being a Justice for , specially appointed under the Act for the Care and Control of the Mentally Defective, on the petition of C.D. of (1) in the matter of A.B., a mentally defective person accompanied by the medical certificates of G.H. and I.J. hereto annexed, and upon the undertaking that the said C.D. do visit the said A.B personally or by some one specially appointed by the said C.D. once at least in every six months, while under the care and control under this order (authorise you to receive the said A.B. as a patient into your Hospital, Institution, Registered House or Home) (2) or (authorise the Committee for the Care and Control of the Mentally Defective in the County of , or in the County Borough of to place the said A.B. as a patient in such Hospital, Institution, Registered House or Home, as they may think best in view of this order and the certificates that accompany it).

And I declare that I have (or have not) personally seen the said A.B. before making this order.

(*Signed*) E.F.,
A Justice appointed under the above-mentioned Act
(or the Judge of the County Court of
or a Stipendiary Magistrate).

To (3)

(1.) Address and description.

(2.) To be addressed to the medical superintendent or superintendent of such hospital, institution, or registered house or home selected; *or* to be addressed to the Committee for the Care and Control of the Mentally Defective for the county or county borough.

(3.) Here the name of the medical superintendent or superintendents; *or* the name and address of the committee of the county or county borough.

* The words in brackets [ ] in Sections 9 and 10 were repealed by the Lunacy Act, 1891, Schedule.

RECOMMENDATION LXX.

Form of certificate.

That the following form be adopted for the Certificates of a General Medical Practitioner, a Medical Officer of the Committee for the Care of the Mentally Defective, or a Certifying Medical Practitioner appointed under the Act for the Care and Control of the Mentally Defective.

See paragraph 727.

FORM.

Certificate of a Medical Officer of the Committee for the care of the Mentally Defective of the Council of the County or County Borough, or of a Certifying Medical Practitioner or of a General Medical Practitioner.

In the matter of A.B. (1) in the County or County Borough (2) of (3) a person alleged to be mentally defective.

I, the undersigned, C.D., do hereby certify as follows :

1. I am a person registered under the Medical Act, 1858, and I am (the Medical Officer of the said Committee) or (a Certifying Medical Practitioner appointed by the said Committee) or (in the actual practice of the Medical profession).

2. On day of , 19 , at (4) in the County or County Borough (5) of , (separately from any other practitioner) (6), I personally examined the said A.B., and came to the conclusion that he is mentally defective within the meaning of Section of the Act for the Care and Control of the Mentally Defective ; and that he requires care and control accordingly.

3. I formed this conclusion on the following grounds, namely :—

(*a*) Facts indicating mental defect ascertained by myself during (observation) (7) and examination (8) namely :—

(*b*) Facts communicated by others : (9)

(*If an urgency certificate is required it must be added here. See subjoined form.*)

4. In my opinion the said A.B. comes within the class of mental defect defined in subsection of Section of the Act for the Care and Control of the Mentally Defective (see back).

5. The said A.B. was (or was not) in my opinion, in a fit condition of bodily health to be admitted or removed to such a Hospital, Institution, Registered House or Home as is suitable for persons of mental defect coming under Clause of Section of the Act [10].

6. I give this certificate, having first read the sections of the Act of Parliament printed on the back.*

Dated (*Signed*) C.D., of [11]

* The schedule printed on the back would be as follows :

(1) Extract from Section 317 of the Lunacy Act, 1890, incorporated in the Acts for the Care and Control of the Mentally Defective.

Any person who makes a wilful misstatement of any material fact in any medical or other certificate or in any statement or report of bodily or mental condition under this Act, shall be guilty of a misdemeanor.

(2) Section of the Act for the Care and Control of the Mentally Defective containing the definitions of classes of mental defect (as defined in Recommendation IV.)

FORM.

Statement accompanying Urgency Order.

I certify that it is expedient for the welfare of the said A. B. (or for the public safety, *as the case may be*) that the said A. B. should be forthwith placed under care and control.

My reasons for this conclusion are as follows : (*State them.*)

(1.) Insert residence of patient.
(2.) County or county borough as the case may be.
(3.) Insert profession or occupation, if any.
(4.) Insert place of examination, giving name of street, with number or name of house, or should there be no number the Christian and surname of occupier.
(5.) County or county borough, as the case may be.
(6.) Omit this where only one certificate is required.
(7.) "Observations" include any observation of the patients at times other than the examination, for instance, at a Receiving House or Reception Ward.
(8.) If the same or other facts were observed previous to the time of the examination, the certifier is at liberty to subjoin them in a separate paragraph.
(9.) The names and Christian names (if known) of informants to be given, with their addresses and descriptions.
(10.) Strike out this clause in case of a private patient whose removal is not proposed.
(11) Insert full postal address.

RECOMMENDATION LXXI.

Urgency orders and summary reception orders applicable to mentally defective persons.

That Sections 11 to 23 of the Lunacy Act, 1890, be altered in the manner stated below :—

See paragraphs 719–727.

[N.B.—The following is a transcript of Section 11 to 23 of the Lunacy Act, 1890, as proposed to be amended. The principle of these alterations is to adopt the system in force under the Lunacy Act and extend it to all classes of mentally defective persons as defined in Recommendation IV., without regard to the question whether they are "paupers" or not.

(1) The word "lunatic" is replaced by "mentally defective person" throughout, and the word "pauper" eliminated. The latter change renders Sections 14 and 18 unnecessary, and they are accordingly printed in large square brackets.

(2) The word "workhouse" is deleted in the other sections which stand, and the words "Receiving House or Reception Ward" substituted. It will be noted that under Recommendations LXIV.–LXV. the Committee may contract with others, including Boards of Guardians, to provide the necessary accommodation for Receiving Houses or Reception Wards.

(3) The Committee may, through its representative, make an "urgency order" as "next friend" of the mentally defective person where it thinks such a course advisable, either at the request of the relatives or when the relatives of the mentally defective person have failed to act. (Sec. 11 (8)).

(4) The "Master in Lunacy" where referred to is eliminated, and "Legal Commissioner or a Judge of the High Court" substituted in accordance with Recommendations VII. and VIII. (Sec. 12).

RECOMMENDATION LXXI.—(*cont.*)

(5) The procedure on Summary Reception Orders is altered in the following ways:—

(a) The duty of informing a judicial authority as to mentally defective persons not under proper care and control, or cruelly treated or neglected, is imposed on medical officers of a Poor Law parish or union and on representatives of the Committee, in addition to constables, relieving officers, and overseers who at present have to give such information as to "lunatics" (Sec. 13 (1)).

(b) The judicial authority, on receiving information on oath of any person whomsoever as to such mentally defective person, must authorise the medical officer of the Committee or a certifying medical practitioner to examine the mentally defective person.

It will be noted that one medical representative of the Committee is substituted for the two medical practitioners who at present make the examination of "lunatics" under similar conditions (Sec. 13 (2)). Under Section 16 the Justices could at present make an order on one medical certificate in the case of a pauper alleged to be a lunatic or an alleged lunatic wandering at large. We propose to eliminate Section 14, relating to a pauper alleged to be a lunatic, but to extend the provisions of Sections 15 and 16 to all mentally defective persons wandering at large.

The effect of our alterations is to make it necessary—

(i.) In cases of mentally defective persons not under proper care and control, or cruelly treated or neglected, brought before a "judicial authority," to require a certificate from one medical representative of the Committee (Sec. 13 (2)).

(ii.) In cases of mentally defective persons wandering at large brought before a justice to require a certificate from any one medical practitioner (Sec. 16).

(c) The order of detention is, in the first instance, to be for not more than fourteen days to a Receiving House or Reception Ward, or other institution or house (Secs. 13 & 16), during which period the Committee will decide on a suitable institution or house (Secs. 13 (3) and 16).

(6) The procedure under Section 23, as to Reception Orders by any two or more Commissioners is extended to all mentally defective persons, and to epileptics whether mentally defective or alleged sane in registered institutions or houses for epileptics. The Commissioners will communicate with the Committee as to the admission of such cases into suitable institutions or houses.

The alterations made in the Lunacy Act are designated as follows:—

Additions are made in *italic* print, and words deleted are printed within square brackets.

As to the procedure with regard to Reception Orders on Petition, relating to mentally defective persons coming within any of the classes defined in Recommendation IV., *see* Recommendation LXVIII. above, and as to the procedure in regard to persons under 21 coming within classes (3) to (9) of Recommendation IV. without the intervention of a "judicial authority," *see* Recommendation LII. above.]

Lunacy Act, 1890, Section 11.—

Urgency orders.

URGENCY ORDERS.

11.—(1.) **In cases of urgency where it is expedient, either for the welfare of a person [not a pauper] alleged to be a [lunatic]** *mentally defective person*, **or for the public safety, that the alleged [lunatic]** *mentally defective person*, **should be forthwith placed under care and treatment, he may be received and detained in an institution** *or house* **for [lunatics]** *mentally defective persons, or in a receiving house or reception ward*, **or as a single patient upon an urgency order, made (if possible) by the husband or wife or by a relative of the alleged [lunatic]** *mentally defective person*, **accompanied by one medical certificate.**

(2.) An urgency order may be signed before or after the medical certificate.

(3.) If an urgency order is not signed by the husband or wife or by a relative of the alleged [lunatic] *mentally defective person*, **the order shall contain a statement of the reasons why the same is not so signed and of the connexion with the alleged [lunatic]** *mentally defective person*, **of the person signing the order, and the circumstances under which he signs the same.**

(4.) No person shall sign an urgency order unless he is at least twenty-one years of age and has within two days before the date of the order personally seen the alleged [lunatic] *mentally defective person.*

(5.) An urgency order may be made as well after as before a petition for a reception order has been presented. An urgency order, if made before a petition has been presented shall be referred to in the petition, and if made after the petition has been presented, a copy thereof shall forthwith be sent by the petitioner to the judicial authority to whom the petition has been presented.

(6.) An urgency order shall remain in force for seven days from its date; or if a petition for a reception order is pending, then until the petition is finally disposed of.

(7.) An urgency order shall have subjoined or annexed thereto a statement of particulars.

(8.) Notwithstanding anything contained in this section the Committee of any Council of a County or County Borough for the care of the mentally defective may authorise its medical officer or one of its medical officers to make an urgency order as next friend of the alleged mentally defective person in any case where it deems it advisable so to do, either at the request of the relatives or in consequence of any failure on the part of any husband, wife or other relative of the alleged mentally defective person so to make an urgency order and when the Committee is advised by its medical officer or one of its medical officers that such urgency order ought to be made.

RECOMMENDATION LXXI.—(*cont.*)

[Lunatics] *mentally defective persons* so found by inquisition.

Lunacy Act, 1890, Section 12 :—

RECEPTION AFTER INQUISITION.

12. A [lunatic] *mentally defective person* so found by inquisition may be received in an institution *or house* for [lunatics] *mentally defective persons* or as a single patient upon an order signed by the committee of the person of the [lunatic] *mentally defective person* and having annexed thereto an office copy of the order appointing the committee, or if no such committee has been appointed, upon an order signed by a [Master] *Legal Commissioner or a Judge of the High Court.*

Lunacy Act, 1890, Section 13 :—

SUMMARY RECEPTION ORDERS.

[Lunatics] *mentally defective persons* not under proper care and control or cruelly treated or neglected.

13.—(1.) Every constable, relieving officer, and overseer of a parish *or medical officer of a union or representative of the Committee of any Council of a County or County Borough for the care of the mentally defective* who has knowledge that any person within the district or parish of the constable, relieving officer, or overseer *or medical officer of a Poor Law parish or Union, or the Committee* who is [not a pauper and] not wandering at large, is deemed to be a [lunatic] *mentally defective person* and is not under proper care and control, or is cruelly treated or neglected by any relative or other person having the care or charge of him, shall within three days after obtaining such knowledge give information thereof upon oath to a justice being a judicial authority under this Act.

(2.) Any such justice, upon information on oath of any person whomsoever, that a person [*within the limits of his jurisdiction] [not a pauper and] not wandering at large, is deemed to be a [lunatic] *mentally defective person* and is not under proper care and control, or is cruelly treated or neglected as aforesaid, may himself visit the alleged [lunatic] *mentally defective person*, and shall, whether making such visit or not, direct and authorise [any two medical practitioners whom he thinks fit] *the Medical Officer, or one of the Medical Officers of the Committee of the Council of the County or County Borough for the care of the mentally defective, or a certifying medical practitioner*, to visit and examine the alleged [lunatic] *mentally defective person*, and to certify [their] *his* opinion as to his mental state, and the justice shall proceed in the same manner so far as possible, and have as to the alleged [lunatic] *mentally defective person* the same powers as if a petition for a reception order had been presented by the person by whom the information with regard to the alleged [lunatic] *mentally defective person* has been sworn.

(3.) If upon the certificate of the medical [practitioners] *practitioner* who [examine] *examines* the alleged [lunatic] *mentally defective person*, or after such other and further inquiry as the justice thinks necessary, he is satisfied that the alleged [lunatic] *mentally defective person* is a [lunatic] *mentally defective person*, and is not under proper care and control, or is cruelly treated or neglected by any relative or other person having the care or charge of him and that he is a proper person to be taken charge of and detained under care and treatment, the justice may, by order, direct the [lunatic] *mentally defective person* to be received and detained in any Institution [for lunatics] *Receiving House or Reception Ward, home or house for mentally defective persons* [to which, if a pauper, he might be sent under this Act], *for not more than fourteen days*, and the constable, relieving officer, or overseer *Medical Officer of a Union, or representative of the Committee* upon whose information the order has been made, or any constable whom the justice may require so to do, shall forthwith convey the [lunatic] *mentally defective person* to the Institution, *home or house or to the Receiving House or Ward* named in the order, *and the Medical Officer of the Committee of the County or County Borough for the care of the mentally defective shall, within the said fourteen days, ascertain to what Institution or house the mentally defective person may most suitably be admitted, and shall, with the approval of the Committee, have him admitted to that Institution or house.*

Lunacy Act, 1890, Section 14 :—

NOTE.—This is probably unnecessary in view of other alterations.

Notice to be given of pauper lunatic who ought to be sent to an asylum.

14.—(1.) Every medical officer of a union who has knowledge that a pauper resident within the district of the officer is or is deemed to be a lunatic and a proper person to be sent to an asylum, shall, within three days after obtaining such knowledge, give notice thereof in writing to the relieving officer of the district, or, if there is no such officer, to an overseer of the parish where the pauper resides.

(2.) Every relieving officer and every overseer of a parish of which there is no relieving officer, who respectively have knowledge, either by notice from a medical officer or otherwise, that any pauper resident within the district or parish of the relieving officer or overseer is deemed to be a lunatic, shall, within three days after obtaining such knowledge, give notice thereof to a justice having jurisdiction in the place where the pauper resides.

(3.) A justice, upon receiving such notice, shall by order require the relieving officer or overseer giving the notice, to bring the alleged lunatic before him or some other justice having jurisdiction in the place where the pauper resides at such time and place within three days from the time of the notice to the justice as shall be appointed by the order.

* Section 13, Subsection 2, from "within" to "jurisdiction" was repealed by the Lunacy Act, 1891, Schedule.

RECOMMENDATION LXXI.—(*cont.*)

Lunacy Act, 1890, Section 15 and 16.—

[Lunatic] *mentally defective person* wandering at large to be brought before a justice.

15.—(1.) Every constable and relieving officer and every overseer of a parish who has knowledge that any person [whether a pauper or not] wandering at large within the district or parish of the constable, relieving officer, or overseer is deemed to be a [lunatic] *mentally defective person*, shall immediately apprehend and take the alleged [lunatic] *mentally defective person*, or cause him to be apprehended and taken before a justice.

(2.) Any justice, upon the information upon oath of any person that a person wandering at large within the limits of his jurisdiction is deemed to be a [lunatic] *mentally defective person* may by order require a constable, relieving officer or overseer of the district or parish where the alleged [lunatic] *mentally defective person* is, to apprehend him, and bring him before the justice making the order, or any justice having jurisdiction where the alleged [lunatic] *mentally defective person* is.

[Lunatic] *mentally defective person wandering at large* brought before a justice may be sent to *Receiving House*, institution, *or house* for [lunatics] *mentally defective persons.*

16.—The justice before whom [a pauper alleged to be a lunatic or] an alleged [lunatic] *mentally defective person* wandering at large is brought under this Act shall call in a medical practitioner, and shall examine the alleged [lunatic], *mentally defective person* and make such inquiries as he thinks advisable, and if upon such examination or other proof the justice is satisfied [in the first mentioned case that the alleged lunatic is a lunatic and a proper person to be detained, and in the secondly-mentioned case], that the alleged [lunatic] *mentally defective person* is a [lunatic] *mentally defective person*, and was wandering at large, and is a proper person to be detained, and if [in each of the foregoing cases] the medical practitioner who has been called in signs a medical certificate with regard to the [lunatic] *mentally defective person* the justice may by order direct the [lunatic] *mentally defective person* to be received and detained in the *Receiving House or Reception Ward, or other* Institution *or House* for [lunatics] *mentally defective persons* named in the order, *for not more than fourteen days*, and the relieving officer, overseer or constable who brought the [lunatic] *mentally defective person* before the justice, or [in the case of a lunatic wandering at large], any constable who may by the justice be required so to do, shall forthwith convey the [lunatic] *mentally defective person* [to such Institution] *to such Receiving House or Reception Ward, or other Institution or House for mentally defective persons, and the Medical Officer of the Committee of the County or County Borough for the care of the mentally defective shall, within the said fourteen days, ascertain to what institution or house the mentally defective person may most suitably be admitted, and shall, with the approval of the Committee, have him admitted to that institution or house.*

Lunacy Act, 1890, Section 17:—

Power to examine alleged [lunatic] *mentally defective person* at his own abode or elsewhere.

17. Where, under this Act, notice has been given to, or an information upon oath laid before a justice [that a pauper resident within the limits of his jurisdiction is deemed to be a lunatic, and a proper person to be sent to an asylum, or] that a person [whether a pauper or not] wandering at large [within the limits aforesaid] *within the limit of his jurisdiction* is deemed to be a [lunatic] *mentally defective person*, such justice may examine the alleged [lunatic] *mentally defective person* at his own house or elsewhere, and may proceed in all respects as if the alleged [lunatic] *mentally defective person* had been brought before him.

Lunacy Act, 1890, Section 18:—

NOTE—This will probably be unnecessary owing to other alterations.

When lunatic may be treated as a pauper.

18. A justice shall not sign an order for the reception of a person as a pauper lunatic into an institution for lunatics, or workhouse, unless he is satisfied that the alleged pauper is either in receipt of relief, or in such circumstances as to require relief for his proper care. If it appears by the order that the justice is so satisfied, the lunatic shall be deemed to be a pauper chargeable to the union, county, or borough properly liable for his relief. A person who is visited by a medical officer of the union, at the expense of the union, is, for the purposes of this section, to be deemed in receipt of relief.

Lunacy Act, 1890, Section 19:—

Suspension of removal under reception order.

19.—(1.) A justice making an order for the reception of a [lunatic] *mentally defective person* otherwise than upon petition, in this Act called a "summary reception order," may suspend the execution of the order for such period not exceeding fourteen days as he thinks fit, and in the meantime may give such directions or make such arrangements for the proper care and control of the [lunatic] *mentally defective person* as he considers proper.

(2.) If a medical practitioner who examines a [lunatic] *mentally defective person* as to whom a summary reception order has been made, certifies in writing that the [lunatic] *mentally defective person* is not in a fit state to be removed, the removal shall be suspended until the same or some other medical practitioner certifies in writing that the [lunatic] *mentally defective person* is fit to be removed, and every medical practitioner who has certified that the [lunatic] *mentally defective person* is not in a fit state to be removed shall, as soon as in his judgment the [lunatic] *mentally defective person* is in a fit state to be removed, be bound to certify accordingly.

RECOMMENDATION LXXI—(*cont.*). Removal of [lunatic] *mentally defective person* to [workhouse] *Receiving House or Reception Ward* in urgent cases.

Lunacy Act, 1890, Section 20:—

20. If a constable, relieving officer, or overseer is satisfied that it is necessary for the public safety or the welfare of an alleged [lunatic] *mentally defective person* with regard to whom it is his duty to take any proceedings under this Act, that the alleged [lunatic] *mentally defective person* should, before any such proceedings can be taken, be placed under care and control, the constable, relieving officer or overseer may remove the alleged [lunatic] *mentally defective person* to the [workhouse of the union in which the alleged lunatic is] *receiving house or reception ward*, and the master of the [workhouse] *receiving house or reception ward* shall [unless there is no proper accommodation in the workhouse for the alleged lunatic] receive and relieve, and detain the alleged [lunatic] *mentally defective person* therein, but no person shall be so detained more than three days, and before the expiration of that time, the constable, relieving officer, or overseer shall take such proceedings with regard to the alleged [lunatic] *mentally defective person* as are required by this Act.

Temporary removal of [lunatic] *mentally defective person* to [workhouse] *Receiving House or Reception Ward* under order of justice.

Lunacy Act, 1890, Section 21:—

21.—(1.) In any case where a summary reception order might be made, any justice, if satisfied that it is expedient for the welfare of the [lunatic] *mentally defective person*, or for the public safety, that the [lunatic] *mentally defective person* should forthwith be placed under care and control, and if it appears to him that there is proper accommodation for the [lunatic] *mentally defective person* in the [workhouse] *receiving house or reception ward* [of the union in which the lunatic is], may make an order for taking the [lunatic] *mentally defective person* to and receiving him in that [workhouse] *receiving house or reception ward.*

(2.) In any case where a summary reception order has been made, an order under this section may be made to provide for the detention of the [lunatic] *mentally defective person* until he can be removed.

(3.) An order under this section shall not authorise the detention of a [lunatic] *mentally defective person* in a [workhouse] *receiving house or reception ward* for more than fourteen days, after which period such detention shall not be lawful, except in accordance with the provisions of this Act as to the detention of [lunatics] *mentally defective persons* in [workhouses] *receiving houses or reception wards.*

(4.) An order under this section may be made by any justice having jurisdiction in the place where the [lunatic] *mentally defective person* is.

Lunacy Act, 1899, Section 23:—

RECEPTION ORDER BY TWO COMMISSIONERS.

Commissioners may send [pauper] [lunatic] *mentally defective person* to an institution *or house* for [lunatics] *mentally defective persons.*

23.—(1.) [Any two or more Commissioners may visit a pauper lunatic or alleged lunatic not in an institution for lunatics, or workhouse, and may, if they think fit call in a medical practitioner.]

(1) "Any two or more Commissioners may visit a mentally defective person who is in a house or institution, not registered as an institution for the care and maintenance of such persons, or any mentally defective or alleged sane epileptic in a registered institution or house for epileptics, and may, if they think fit, call in a medical practitioner.

(2.) If the medical practitioner signs a medical certificate with regard to the [lunatic] *mentally defective person*, and the Commissioners are satisfied that the [pauper] *person* is a [lunatic] *mentally defective person*, and a proper person to be detained, they may by order direct the [lunatic] *mentally defective person* to be received in an institution *or house* for [lunatics] *mentally defective persons or a Receiving House or Reception Ward*, and the relieving officer of the district or any constable who may by them be required so to do shall forthwith convey the [lunatic] *mentally defective person* to such institution *or house for mentally defective persons or to a Receiving House or Reception Ward.*

(3.) The said Commissioners in such cases shall communicate with the Medical Officer of the Committee of the County or County Borough Council, or one of the Medical Officers of the Committee, or a certifying medical practitioner, and it shall be the duty of that officer to arrange for the reception of the mentally defective person in an Institution or house, or Receiving House, or Reception Ward, registered as suitable for the admission of such persons within the County or County Borough.

N.B.—Secs. 24 to 27. These sections, which apply to "workhouses," are unnecessary in view of other alterations.

E.—EDUCATION AND TRAINING.

(Recommendations LXXII. to LXXXVI.)

RECOMMENDATION LXXII.

Amendment of the Elementary Education (Defective and Epileptic Children) Act, 1899.

That the Elementary Education (Defective and Epileptic Children) Act 1899, be amended so that the provisions of that Act shall no longer apply to mentally defective children or to epileptic children so afflicted by severe epilepsy as to be unfit to attend ordinary Public Elementary Schools.

See paragraphs 31, 346, 367–[illegible] above.

RECOMMENDATION LXXIII.

Statutory provisions required for giving effect to Recommendations LXXII. to LXXXVI.

That the proposed new Act for the care and control of the mentally defective should contain the necessary provisions to give statutory effect to the suggestions contained in Recommendations LXXII. to LXXXVI., and to apply the same as far as may be necessary to cases coming under Recommendation XC.

RECOMMENDATION LXXIV.

See Chapter XVII. above.

That the County Council or County Borough Council, as the case may be, acting through its Committee for the care of the mentally defective, be under statutory obligation to provide for the manual and industrial and other training of all mentally defective children who come under Classes (3) to (9) inclusive, in Recommendation IV., except such children who have not otherwise been properly and suitably provided for.

The Committee for the care of the mentally defective to be responsible for training of mentally defective children.

RECOMMENDATION LXXV.

See paragraph 367.

That the Local Education Authorities place at the disposal of the Medical Officer of the Committee the register and roll of children who are of age to attend school, and notify to him any cases of children of that age who are thought to be mentally defective, as defined in Recommendation IV., and that the Medical Officer of the Committee, or one of the Medical Officers of the Committee, after consultation with the Medical Officer of the Local Education Authority, report all such cases to the Committee with a view to action being taken under Recommendations XLIX. or LI.

Local Education Authority to submit attendance register of children and notify mental defectives to Medical Officer of the Committee.

RECOMMENDATION LXXVI.

That the Committee, in making their arrangements under the above Recommendation, shall provide facilities for enabling any parent who is of opinion that his child ought to be dealt with under the proposed Act to present such child to the Medical Officer of the Committee, or one of the Medical Officers of the Committee, or a certifying Medical Practitioner, to be examined, although he may not have been required so to do by the Committee, and any Committee failing to provide such facilities shall be deemed to have acted in contravention of the proposed Act.

Examination of alleged mentally defective child by Medical Officer of Committee.

RECOMMENDATION LXXVII.

That the Medical Officer of the Committee, or one of the Medical Officers of the Committee, or a certifying Medical Practitioner, if he is of opinion that any such child is mentally defective as defined in Recommendation IV., shall report to the Committee to that effect.

Report of Medical Officer of the Committee.

RECOMMENDATION LXXVIII.

That it shall be the duty of the parent of any child who may be required by the Medical Officer of the Committee to attend for the purpose of examination, to cause such child to attend with that object, and any parent who fails to comply with such requirement shall be liable, on summary conviction, to a fine not exceeding five pounds.

Duty of parent to cause child to attend medical examination.

RECOMMENDATION LXXIX.

See paragraph 315.

That where a school authority has made provision for the education of mentally defective children under the Elementary Education (Defective and Epileptic Children) Act, 1899, by special classes in public elementary schools or by boarding out or by establishing schools:—

School Authority to be under statutory obligation to contract with the committee as to existing special schools or classes.

(1) the classes or schools or the arrangements for boarding out children shall pass under the control of the Board of Control and shall not remain under the control of the Board of Education.

(2) the school authority shall be under statutory obligation in the case of special schools or classes previously certified by the Board of Education to contract with the Committee for the education of such mentally defective children as the Committee may deem it advisable to educate in that manner.

RECOMMENDATION LXXIX.—(*cont.*)

(3) the school authority shall be under statutory obligation in the case of mentally defective children boarded-out subject to the regulations of the Board of Education, to transfer to the Committee any contracts that they may have entered into in regard to such children.

(4) the school authority shall be under statutory obligation in the case of schools established for mentally defective children and previously certified by the Board of Education, if the Committee so desire, to transfer such schools to the Committee at a price to be agreed upon, or failing that by arbitration, or to contract with the Committee for the education of mentally defective children in these schools, and to carry on the schools in order to fulfil the terms of the contract made with them.

RECOMMENDATION LXXX.

The committee to pay for children admitted as mentally defective in special schools or classes already established.

That in regard to special schools or classes now in existence under the Elementary Education (Defective and Epileptic Children) Act, 1899, the children admitted to those classes as mentally defective be paid for by the County Council or County Borough Council through the Committee for the care of the mentally defective.

RECOMMENDATION LXXXI.

Establishment of new special schools or classes, institutions or homes.

That, subject to the approval and regulations of the Board of Control, special schools or classes, and institutions or homes, residential or other, necessary for the education of the mentally defective may hereafter be established either by the Committee for the care of the mentally defective or by the Local Education Authority at the request of the said Committee, and the Committee shall have full power to transfer children from schools or classes to institutions or homes, or *vice versa*, as in the interests of the children they think necessary, or to board out children, if necessary, near a special school or class.

RECOMMENDATION LXXXII.

The committee to pay for children kept for observation purposes in existing or future special schools or classes, institutions or homes.

That children, in regard to whom it is a matter of uncertainty whether they are mentally defective or not, may be placed on a special probationary list and retained for such period as may be considered necessary in a special class, school, institution or home for the mentally defective for purposes of observation, until it is decided whether such children should be adjudged mentally defective or merely dull and backward; and that the cost of their maintenance while under probation in such class or school, institution or home, be paid for by the County Council or County Borough Council through the Committee for the care of the mentally defective.

See paragraphs 313 315 above.

RECOMMENDATION LXXXIII.

Periodical examination of children in special schools and classes.

That the Committee shall arrange for the frequent and periodic examination of the mentally defective children in special schools or classes, with a view to determining whether they should continue in such classes, or whether their education should be otherwise provided for.

Recommendation LXXXIV.

Transfer of a child no longer mentally defective from care of the Committee to the care of the Local Education Authority.

That in the case of any child of school age who has been dealt with by the Committee as mentally defective, it shall be the duty of the Medical Officer, at any time, if the child, in his opinion, is not mentally defective, to report the case to the Local Education Authority, on whom the education of the child will from that date *ipso facto* devolve.

Recommendation LXXXV.

Duty of parents to provide for education, instruction or training of mentally defective child.

That the duty of a parent under Section 4 of the Elementary Education Act, 1876, to provide elementary instruction for his child shall, in the case of any child coming within classes 3 to 9 of Recommendation IV., include the duty to cause the child to attend a class or school, or to reside in any home or institution for the instruction or training of the mentally defective, from and up to such age as in the interest of the child may, on the report of their Medical Officer or one of their Medical Officers, seem necessary to the Committee, whether this instruction or training be provided by the Local Education Authority in contract with the Committee or by the Committee itself; and a parent shall not be excused from this duty by reason that a guide or conveyance is necessary.

Recommendation LXXXVI.

Guides or conveyances may be provided.

That in the case of children who, in the opinion of the Committee, cannot be trained suitably except at a special school or class, the Committee shall provide guides or conveyances if, in the judgment of the Committee and its Medical Officer or one of its Medical Officers or of a certifying medical practitioner, the children without this provision would be unable to attend the school or class in question.

F.—CRIMINAL MENTALLY DEFECTIVE PERSONS.

(Recommendations LXXXVII.-LXXXIX.)

Recommendation LXXXVII.

See paragraphs 380, 397, 406, 457–468.

Cases tried in Court. Summary Jurisdiction.

I. That in cases which may be determined summarily, and in which a court of summary jurisdiction is of opinion that the person charged is mentally defective, the court may adopt any of the following courses:—

(1) The court may remand the person charged to a receiving house or reception ward or other institution maintained or controlled by the Committee, or to the custody of an officer of the Committee, or, if in the particular case it appears necessary, to prison,

See Recommendation LXXI.

(2) The court may adjourn the hearing of the charge, pending the report of a medical officer of the Committee, and it may subsequently adjourn the case *sine die*, if on the certificate of the medical officer it makes a summary reception order for the reception of the accused person in a suitable institution which is under the committee's control.

(3) After conviction any officer or representative of the Committee, may, on their behalf, become a surety for the offender, and in that case the court may bind him over to come up for judgment at some future time, or when called upon.

RECOMMENDATION LXXXVII.—(*cont*).

(4) After conviction, the court instead of sending the offender to prison, may on the report and certification of the medical officer, or one of the medical officers of the Committee, or a certifying medical practitioner order his reception under a summary reception order in any institution that the Committee may determine, being maintained by the Committee or under its control.

Recommendation LXXI.

(5) After conviction the court, instead of sending the offender to prison, may accept recognisances from a surety or sureties on his behalf, on condition that he remains under the control of the Committee until they discharge him.

Procedure on committal for trial.

II. That in cases triable by indictment justices if satisfied that the person charged is mentally defective shall have power when committing for trial to accept recognisances on behalf of the Committee from any officer or other representative of the Committee or to order the accused to the custody of the Committee, instead of to prison, until the trial takes place.

Cases tried at Assizes and Quarter Sessions.

III. That in cases tried at assizes and quarter sessions the court shall, in regard to mentally defective persons including persons of unsound mind, have the powers referred to above in I. (3), (4), (5).

IV. That in cases tried at assizes and quarter sessions the court should be empowered to direct that the accused be submitted to examination, and if necessary, certification, notwithstanding that he has been acquitted of the offence charged, if, in the opinion of the court, it is desirable that his mental condition should be ascertained with a view to provision being made for his care.

Duty of police in cases of apparent mental defect or recurrent short sentences.

V. That in cases of apparent mental defect or recurrent short sentences which are brought before the courts, the police should be under statutory obligation to apply to the Board of Control, and to the Committee for the care of the mentally defective, for any information they may have with regard to the person charged, and to lay the same before the court.

RECOMMENDATION LXXXVIII.

Mentally defective persons under sentence or order of detention

That subject to the approval of the Secretary of State, any officer having in custody any person under sentence, or order of detention, shall at any time during detention hand over such person if certified to be mentally defective to the care of the Committee responsible for him, and it shall be the duty of the Committee to maintain that mentally defective person in a suitable institution.

RECOMMENDATION LXXXIX.

Discharge from Institutions.

That the consent of the Secretary of State for the Home Department be necessary for the discharge from any institution maintained by or under the control of the Committee of any person dealt with in accordance with the procedure proposed in Recommendations LXXXVII. and LXXXVIII.

See paragraph 406.

G.—MISCELLANEOUS.

(RECOMMENDATIONS XC. TO XCVI.)

RECOMMENDATION XC.

See Part X. above. See also paragraph 37.

That the Board of Control be empowered to register, inspect and report on all institutions or houses for the care of epileptics not provided for as mentally defective, and to regulate the same, if they form part of an institution for the mentally defective, and that the Committees for the care of the mentally defective be authorised to consider and deal with the cases of these epileptics and to provide for their accommodation and maintenance, care, treatment, education, training and control, and with regard to these epileptics shall have the powers referred to in Recommendations XXXII—XXXIV. (inclusive), XXXVII.—XL. (inclusive), XLIV., XLVI. and XLVII., XLIX.—LI. (inclusive), and in Recommendations from LXXV. to LXXXVI. (inclusive) so far as may be necessary.

Epileptics not mentally defective.

RECOMMENDATION XCI.

See paragraphs 426–428.

That as it appears that mentally defective cases to a large extent are at present dealt with under the Inebriates Acts, it is desirable that those Acts should be amended so far as may be necessary to make it clear that the Committees shall be under the obligation of dealing with such Inebriates as are mentally defective.

The Inebriates Acts.

RECOMMENDATION XCII.

See paragraph 96 above.

That no person shall be deprived of any franchise, right or privilege or be subject to any disability or disqualification by reason of the receipt of any assistance derived from any rate, towards the accommodation and maintenance, care, treatment, education, training and control of any member of his family whether such member be mentally defective or epileptic though not mentally defective.

Avoidance of Disabilities. Elementary Education, Defective and Epileptic Children Act, 1899, Sec. 8.

RECOMMENDATION XCIII.

That where the Committee incur any expense in respect of any mentally defective person, the parent or guardian or other person who is liable to maintain or has the actual custody of such person shall be liable to contribute towards his expenses a weekly sum such as may be agreed upon between the Committee and the party or parties so liable, or in default of agreement, as may, on the application of the Committee or the party or parties so liable, be settled by a Court of Summary Jurisdiction, and any sum so agreed upon or settled may without prejudice to any other remedy, be recovered by the Committee as under Section 6 (2) of the Youthful Offenders Act, 1901 And that this Recommendation shall apply to any persons who are epileptic though not mentally defective.

Contributions by parents, etc. Elementary Education (Blind Deaf Children) Act 1893. Sec. 9. Elementary Education (Defective & Epileptic Children) Act 1899. Sec. 8. Industrial Schools Act 1866, Sec. 39. Youthful Offenders Act 1901, Sec. 6 (2).

NOTE.—The Youthful Offenders Act, 1901, Section 6, sub-sec. 2, provides that an Order may be enforced as an Order of affiliation. As to the enforcement of Orders of affiliation see section 4 of the Bastardy Laws Amendment Act, 1872, and section 54 of the Summary Jurisdiction Act, 1876. Sums due in pursuance of an Order may be recovered under warrant of distress and sale of the goods and chattels of the defaulter, and he may be ordered by the Court to be kept in safe custody until return can conveniently be made to the warrant of distress, unless he gives sufficient security for his appearance on the day for return of the distress. If no sufficient distress can be had, he may be imprisoned for not more than three months.

RECOMMENDATION XCIV.

See paragraph 351 above.

That the accounts of boroughs relating to the care and control of the mentally defective, including the accounts of asylums, should be audited by the Local Government Board auditor and that the specification for tenders and the contract prices, in all institutions for the mentally defective, should be examined by the Board of Control or be investigated by the Local Government Board auditor and form part of his report to the Local Government Board.

Borough Accounts relating to the Mentally Defective to be audited by Local Government Board.

RECOMMENDATION XCV.

Protection of Mentally Defective Persons under the existing law as to sexual crimes, etc.

That the Lord Chancellor and Secretary of State have their attention called to the Evidence before us on the subject of the protection of mentally defective persons against sexual crime and immorality, and be invited to consider whether the existing law provides adequate protection for such persons.

See paragraph 469 above.

RECOMMENDATION XCVI.

London.

That, notwithstanding any existing Statutes, the general Act for the care and control of the mentally defective should provide that in the case of the administrative County of London:—

(*a*) **The institutions of the Metropolitan Asylums Board for mentally defective persons should be transferred (on such terms, and subject to such arrangements as may be provided in the Act) to the London County Council for the use of its Statutory Committee for the care of the mentally defective, on whom the duty to make suitable and sufficient provision for the care and control of the mentally defective in the administrative County of London will, by the said Act, devolve; and that**

See paragraph 276 above.

(*b*) **All grants now payable to the Metropolitan Asylums Board and to Boards of Guardians from the Metropolitan Common Poor Fund and from the Exchequer for the maintenance of lunatics or imbeciles, and any sums in future payable from the Exchequer on account of mentally defective persons, or epileptics not mentally defective, should, after the passing of the proposed Act, be payable to the London County Council for the use of the Statutory Committee for the care of the mentally defective** (*see* **Recommendations XXVIII. to XXXIV. and XC.**)

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED.

PART XII.

SCOTLAND.

CHAPTER XLIV.

The State of Mentally Defective Persons not Certified under the Lunacy Laws.

926. In the discussion of several questions which we have been considering we have referred more particularly to the difference in the methods which are pursued in Scotland from those which are in force in England and Wales; and in Chapter XXXI. (Paragraph 633) we submitted a statement of the differences in the methods of administration in lunacy in England and Scotland. We have now to ascertain as far as may be possible, what are "the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded or defective persons not certified under the Lunacy Laws" in Scotland; and we have to consider the sufficiency of the provision made for these classes, and the desirability of amending the laws relating to them, or of proposing other measures. Incidentally we have also to consider the constitution, jurisdiction and working of the Board of Lunacy in Scotland in reference to the subject. We propose therefore to submit in the first place a summary of the position of "persons not certified under the Lunacy Laws" and then to treat in more detail the conditions under which they are or may be cared for, trained and controlled in connection with the Poor Law, the Education Acts, the administration of the criminal law, and the Board of Lunacy. The evidence falls into two parts; that which bears upon the conditions of the country at large; and that which relates to Glasgow, with which we will deal separately.

The number of the mentally defective in Glasgow, as returned by the Medical Investigators, was 1,614, or ·26 on the population. If this figure holds good in the case of Scotland as a whole, the total mentally defective population of Scotland, excluding certified lunatics, would be 11,627. But it is obvious that such an estimate must be accepted with great reserve. The percentage of mentally defective persons on the population of the investigated areas is as follows: England and Wales, in eleven typical areas, ·46; Scotland, Glasgow only, ·26; Ireland, in four typical areas, ·57. In England and Wales and in Ireland the percentages of the mentally defective in different areas, urban and other, show considerable variations. It is impossible, therefore, to conclude that a percentage that may apply to Glasgow should apply to the whole of Scotland; but for what it is worth the figure is given.

Vol. VI., pp. 34 and 52, and paragraphs 1024 and 1025 below.

927. Of many developments of the administration of lunacy in Scotland we have expressed our strong approval—the economy and adaptability of the boarding-out system, the adoption of villa asylums and of observation wards, the certification of incipient cases, and the great utility of the Judicial Factors Act of 1880 in protecting the property of mentally defective persons. All these points represent a very significant advance. At the same time if the evidence that we have taken be considered as a whole, it must be admitted, we think, that some important changes are necessary, and that generally the question of the care of the imbecile and feeble-minded in Scotland is in need of further attention.

I.—General State of the Feeble-minded or Imbecile.

928. The state of the feeble-minded or imbeciles in Scotland is indeed very far from satisfactory. It is admitted by some witnesses guardedly, by others fully and absolutely, that there is a large class of persons who require care and are not certifiable under the existing law. Mr. Spence, the Secretary of the General Board of Lunacy for Scotland said: "There are unquestionably many weak-minded or abnormally constituted persons, young and old, who would never appear as imbeciles or feeble-minded in the Census Returns. The difficulty is that the less mentally defective such persons are, the greater becomes the difficulty of dealing with them under the existing lunacy or other laws, and the greater becomes the likelihood of their being a danger to the community." . . . "There are a great number of them; there are hundreds in every city that might be certified, but they are not certified."

Uncertified imbecile, feeble-minded and defective persons. Spence, Vol. III., 21145, 21146.

Uncertified imbecile, feeble-minded and defective persons—*contd.* 21142, 21143. 21188, 21189.

The Scottish Lunacy Law was not sufficient, he thought, to deal with mentally defective persons who were not at present regarded as certifiable, though under the Lunacy Acts in Scotland certification was much more easily obtained than in England, alike in the case of insanity and in that of imbecility and other forms of mental unsoundness; a new Act was required to deal with the uncertifiable cases. 21135-40.

Dr. John Macpherson, one of the Commissioners in Lunacy, referring to children, considered that if two new institutions were erected, between "800 and 1,000 children of a more or less educable type would be provided for, and the present state of matters would be greatly ameliorated or perhaps wholly mitigated." He argued in favour of "a wider recognition of insane conduct as a sign of insanity and as a basis of certification," but "unfortunately," he said, "the medical profession as a whole did not take that view of it as yet, and they refused to certify many of these cases, moral imbeciles or defectives," who are perhaps the most dangerous of any of the defectives.

John Macpherson, Vol. III. p. 31, c. 1. Vol. III. 21384, 21388.

Dr. Carswell, Certifying Physician in Lunacy to the Glasgow Parish Council, said:—

Carswell, Vol. III. p. 61, c. 1.

"There exists a large class of feeble-minded persons who do not come within the scope of existing lunacy legislation, the character and degree of whose mental infirmity is not easily defined, and for whose proper control and care no satisfactory provision exists, although they are nevertheless a burden upon the community, being found in special schools, industrial schools, reformatories, poorhouses, prisons and similar institutions."

Clarkson, Vol. III. 22008-22009.

929. Dr. Clarkson, the Medical Officer of the Scottish National Institution for the Education of Imbecile Children at Larbert, said that he did not think that there were many idiots uncertified and unknown to the authorities, but there were a good many imbeciles, pretty low grade imbeciles.

Russell, Vol. III. p. 180, c. 1.

Sir James Alexander Russell, a member of the District Board of Lunacy in Edinburgh, said:—

"Unfortunately, a good many persons of unsound mind who would be the better for being certified, in their own interests and in that of the public, are in practice excluded from the benefits of the lunacy laws. This arises firstly from the existence of a restricted idea in the minds of the public and of ordinary medical practitioners as to the amount of unsoundness which justifies certification. It is common to hear an expression such as that so-and-so is insane, but not bad enough for certification: secondly, from a natural reluctance on the part of friends to formally admit the existence of insanity and so put a life-long stigma upon the patient, and thirdly from the danger of actions at law, which, although seldom successful, are always costly to the defendants.

Clouston, Vol. III. p. 201, c. 1.

Dr. Clouston, the Physician Superintendent of the Royal Edinburgh Asylum, says of the feeble-minded who have been sent to the asylum, especially the young women, as certified patients, that "through conversation with the patients themselves and through the inquiries by nurses and the information supplied by parents and relatives, and from bodily indications where they have had children, I have come to the conclusion that such persons in a large city are subject to overwhelming temptations and pressure towards sexual immorality."

"I am strongly of opinion that a proper care of feeble-minded girls would appreciably diminish the immorality, especially of our large cities, and would cut off one of the supplies of future imbeciles and criminals. During my long experience, I have now seen many cases of the grandchildren of imbeciles who were themselves insane or epileptics."

Allan, Vol. III. 25054.

930. Mr. R. S. Allan, the Chairman of the School Board for Glasgow, said he was "afraid that his evidence did not quite agree with some evidence that the Commission had received as to the actual danger. The girls, he believed, were exposed to the very greatest danger, and a great deal of care was necessary to prevent their going wrong."

Fyfe, Vol. III, p. 235, c. 2, 24725.

Mr. T. A. Fyfe, Sheriff-substitute of Lanarkshire, thought "that in the interest of the community as a whole, it was necessary that the liberty of the subject should be interfered with drastically, in the case of imbeciles, habitual inebriates, confirmed adult criminals, and the like. In the case of young persons of feeble-mind, the present state of the law was weak. I agree with those who think that feeble-mindedness even short of insanity should be certifiable, in the same way as scarlet fever or any other infectious disease, and then the local authority should have power to deal with the patient in the general interest if the patient is not able to be treated satisfactorily at home."

Sutherland, Vol. III, 24818, 24825.

931. Dr. Sutherland, Deputy Commissioner in Lunacy for Scotland, supported Dr. Clouston's general conclusion. He said: "The imbecile woman who is certified is perfectly well protected, but a great many feeble-minded women who are not certified are not protected"; and in support of this view he submitted statements regarding eight or nine parishes, giving the histories of certain feeble-minded women and their offspring.

Mr. Motion, the Inspector of Poor to the Parish of Glasgow, and Clerk and Treasurer to the Lunacy District Board, dealing with the question from the point of view of the Poor Law, laid stress on the large number of persons who went repeatedly into and out of the Poorhouse, who though "not directly certifiable as feeble-minded . . . should be compulsorily detained in poor-houses or labour colonies." "Some were habitual drunkards, a feeble-minded and most degraded part of the population"; in his judgment "they were 90 or 95 per cent. of them mentally defective." Uncertified imbecile, feeble-minded and defective persons. —*contd.* Motion, Vol. III. p. 52, c. 2., p. 54, c. 2, 21707-9.

Mr. Barclay, the General Superintendent of Poorhouses for the Local Government Board for Scotland, said that his experience led him to conclude that the class of women who came to the poorhouses with more than one illegitimate child were generally of feeble-mind. Barclay, Vol. III., p. 164, c. 1.

932. Of the constant recurrence of short sentences in the case of feeble-minded adults and young persons and its inutility much information was submitted to us.

933. These few notes and extracts suggest that in Scotland the general condition of imbecile, feeble-minded, and defective persons not certified under the Lunacy Laws is not materially different from that which prevails in England and Wales.

We have now to enter on the subject in more detail.

II.—The Poor Law and the Mentally Defective.

934. The relation of the Poor Law authorities to the Board of Lunacy in Scotland differs from that which exists between the corresponding bodies in England. Hence, before we discuss the question of the Poor Law, it is necessary to explain shortly what are the constitution and duties of the Board of Lunacy.

935. The General Board of Commissioners in Lunacy consists of a Chairman, who is unpaid, two unpaid legal Commissioners, and two paid medical Commissioners. There are also two medical Deputy-Commissioners who are not members of the Board. The medical Commissioners are required to visit all establishments for the insane twice in a year, and to report to the Board on them, and on the care and condition of the patients. The duties of the Deputy-Commissioners consist chiefly of visiting and reporting to the Board on all persons of unsound mind under private care who come for any reason under the notice or jurisdiction of the Board. The General Board of Lunacy. Spence, Vol. III. p. 8, c. 2.

936. There are Royal asylums, district asylums, private asylums and parochial asylums and licensed wards of poorhouses. Classes of Asylums. Spence, Vol. III., p. 9, c. 1.

The Royal asylums are primarily charitable foundations. "The Board of Lunacy have no power to make rules and regulations for their good order and management, except in relation to books, and minutes, and returns, and entries therefrom"; but the medical Commissioners visit, inspect, and report on them. There are seven of these "hospitals," as they would be called in the English Lunacy Acts, four of which receive pauper patients on payment.

937. The district asylums are erected or acquired and managed by district Boards of Lunacy. The General Board of Lunacy have power to make rules and regulations for them, subject to the approval of the Secretary for Scotland. These asylums, when they have spare accommodation, may with the sanction of the Board receive private patients. Such patients are to have the same accommodation in all respects as pauper lunatics. Sites, plans, specifications and estimates for these asylums and for all subsequent additions and alterations must receive the sanction of the Board; no other sanction is necessary. Vol. III., p. 9, c. 1. p. 13, c. 1

938. Private asylums correspond generally to licensed houses in England, There are three of them, of which two are very small.

939. Parochial asylums are "asylums erected and managed by parish councils." There are only three such asylums and the Board of Lunacy have no power to license any new establishment upon that footing. "They receive Vol. III., p. 9, c. 1.

Classes of Asylums.—*contd.*

patients labouring under all forms and degrees of insanity, and patients are admitted to them on the order of the Sheriff and under the same procedure as is followed in the case of other asylums." Thus these "parochial asylums" are also called "lunatic wards of poorhouses, with unrestricted licenses."

Spence, Vol. III., p. 10, c. 2, Lunacy (Scotland) Act 1862, 25 and 26 Vict. c. 54, Sec. 3.

940. Licensed lunatic wards of poorhouses are those wards or parts of a poorhouse which have been sanctioned by the Board for the reception and the detention of pauper lunatics. Thus these licensed wards are also called "lunatic wards of Poorhouses with restricted licences." Such patients must be certified as "of unsound mind" and "incapable of deriving benefit from treatment in an asylum," but not "dangerous"; and there are other conditions of certification.

941. Besides these asylums there are institutions for the care and training of imbecile children. These are charitable institutions licensed by the Board under the Lunacy Amendment Act of 1862.

Lunacy (Scotland) Act 1862, Secs. 1 & 3. Spence, Vol. III., p. 10, c. 2.

942. A pauper lunatic means and includes any lunatic towards the expenses of whose maintenance any allowance is given or made by any parish council.

"The licences for wards in poorhouses are given for the reception only of pauper lunatics who are not dangerous and do not require curative treatment in accordance with "Rules and Conditions" on which such wards are licensed, drawn up by the Board and approved of by the Secretary for Scotland. These conditions require that the accommodation for lunatics must be entirely separate and distinct from that occupied by ordinary paupers, and that separate grounds must be provided. They further deal with the medical supervision of such wards, the attendance required, the dietary of the inmates, and generally with all that concerns the good order and management of the establishment. The licence may be withdrawn if the requirements of the Board are not attended to. The wards are under the management of the Poorhouse Committee, and the governor of the poorhouse is in the position of superintendent. The Board do not require a resident medical officer unless the number for which the wards are licensed exceeds one hundred, which is the case at present only in two instances. The Board require that sufficient land be attached to the wards to secure healthy outdoor occupation. They require the same statutory and other forms of registers and books to be kept in such wards, and notices of entries in them to be transmitted to the Board, as in the case of other establishments for the insane."

943. There is thus provision for pauper lunatics to some extent in the Royal asylums, and to a large extent in the district asylums and in the licensed wards of poorhouses. Many are boarded out. The general distribution of these pauper lunatics is shown in a Return which has been forwarded to the Commission. On the 1st January, 1908, the pauper patients numbered in all 15,226; 1,703 were in Royal asylums, 9,186 in district asylums, 568 in parochial asylums, *i.e.*, lunatic wards of poorhouses with unrestricted licences, and 743 were in the "lunatic wards of poorhouses with restricted licences." Of the remainder, 2,780 were "boarded-out" in private dwellings, 246 were in training schools. The private patients who were lunatics numbered 2,632. In the criminal lunatic department of the Perth prison there were 49 patients. The total number of lunatics in Scotland was 17,907—8,735 males, and 9,172 females.

Appendix to Vol. III., p. 328d.

District Boards of Lunacy.

Lunacy Districts (Scotland) Act, 1887, 50 and 51, Vict. 39, and Lunacy (Scotland) Act, 1857, Secs. 49 to 53. Local Government (Scotland) Act, 1894, Sec. 22. Prisons (Scotland) Act, 1877, Secs. 61 and 62. Spence, Vol. III. p. 8, c. 2.

944. It is the chief duty of the District Boards of Lunacy, as we have said, to erect or acquire and maintain district asylums. In the principal towns a lunacy district consists of a single parish, and the parish council—a popularly elected body—is constituted the District Board of Lunacy, and "in that capacity performs functions entirely separate and in many respects of a different nature from those performed by the same body under the Poor Law." Elsewhere the area of the District Board consists of groups of counties or single counties, or parts of counties; and the board is "elected by the county council, or county councils of the county or group of counties comprising the district, and by the magistrates of burghs within such county or counties." Under Sec. 22 of the Local Government (Scotland) Act, 1894, the parish council exercises all the powers and duties which formerly devolved upon parochial boards. The first of these is the administration of the Poor Law Acts; the second the administration of the Lunacy Acts in so far as they relate to paupers. In the large towns therefore we have a single elected body which as a District Board provides and manages the necessary asylum accommodation and as a parish council maintains all persons who are certified as "lunatic," being lunatic or insane or idiot or of unsound mind, at district asylums or elsewhere or by boarding

ice, Vol. p. 12, c. 1, erland, III. 8, 24809.

out. On the other hand, when the parish council is a separate body from the District Board of Lunacy—that is, everywhere except in the large towns—the severance between the two bodies is complete. The parish councils in the district "find the patients and provide the maintenance" and settle who should be "boarded-out"; and the District Boards of Lunacy simply maintain and manage the district asylums without having any concern in those who are admitted or discharged. District Boards of Lunacy—*contd.*

945. For the admission of a patient to an asylum, two medical certificates are necessary, and the order of the sheriff, or rather of the sheriff-substitute, who "occupies a position corresponding more or less to that of a county court judge in England." Admission and reception in asylums, poorhouses, and private dwellings.

"Patients are admitted to lunatic wards of poorhouses upon papers in a prescribed form consisting of an application by the inspector of poor, a statement by the inspector of poor of facts similar to those given in the case of patients admitted to asylums, a statement by the medical officer of the parish, or establishment from which the patient has been removed, giving such particulars with regard to the patient's mental and bodily state, conduct, and habits, as throw light upon the question of his fitness for such wards, and a medical certificate which must certify that the patient is 'of unsound mind,' and, further, that he 'is not dangerous, is incapable of deriving benefit from treatment in an asylum, has no habits or infirmities which render care difficult, and is in a sufficiently good state of bodily health to be removed to the lunatic wards' named in the application. Spence, Vol. III. p. 8, c. 1, p. 9, c. 2, p. 11, c. 1. Lunacy (Scotland) Act 1862 25 and 26, Vict. c. 54, Secs. 3, 8, and 14. Section 5.

"If the Board are satisfied with the facts stated in the papers laid before them, sanction to the patient's reception is appended upon a simple form.

"If the patient, when removal to such wards is proposed, is not an already certified lunatic, a second medical certificate is required. The great majority of the patients received into such wards are, however, removed to them from asylums, or from private houses where they have been residing as certified patients under sanction of the Board."

To admit to the lunatic ward of a poorhouse, that is, a ward "with a restricted licence," no order of the sheriff is required.

946. The Board also sanctions the reception and detention of patients in private dwellings. Occupiers of houses may be licensed for the reception of patients not exceeding four in number; and "the Board, in the case of a lunatic who is a pauper, on the application of the inspector of the poor of the parish liable at the time for the maintenance or *interim* maintenance of such lunatic, or in any other case, on the application of anyone legally entitled to make the same, accompanied by medical certificates . . . may sanction the reception and detention of such lunatic in any house so specially licensed. . . ." Lunacy (Scotland) Act 1862, Sec. 5.

947. There are no Committees of District Lunacy Boards like the Visiting Committees of the councils of counties or county boroughs in England, though there is a power to appoint such Committees and in some degree the Boards perform similar duties. They erect and maintain asylums, and they supervise them generally; but they have no powers in regard to the admission or discharge of patients. The authority for the discharge of patients from asylums is thus stated by Mr. Spence, the Secretary to the General Board of Lunacy:— Discharges. Spence, Vol. III. 21179, 20917, etc,

"Persons in asylums, who have in the opinion of the medical officer recovered their sanity, are in the position of persons who are not lunatics, and they must accordingly be discharged on the authority of the Superintendent. There is, however, no distinct provision in the Scottish Lunacy Acts with regard to the discharge of recovered patients, as Section 17 of the Amendment Act of 1862 deals rather with the case of patients who, though 'so far recovered,' are still more or less insane. But the Order of the Sheriff committing insane persons to asylums as dangerous lunatics under Section 15 of the Amendment Act of 1862 states that they are to be detained only 'until cured,' or, if still insane, not to be discharged until certain prescribed formalities have been gone through. Spence, Vol. III. p. 10. c. 1. 25 & 26 Vict., c. 54, S. 17. 25 & 26 Vict., c. 54, S. 15.

"The ordinary authority for the discharge of an unrecovered private patient is the person at whose instance he is detained, or, in the absence of such person, his nearest known relative. This is not specially provided for in the Act, but may be inferred from the terms of certain provisions for their discharge other than at the instance of such persons, and for their transfer to other asylums. 20 & 21 Vic , c. 71, S. 92. 25 & 26 Vict., c. 54, S. 16–17.

"If the discharge is desired of a private patient not detained as a dangerous lunatic, but who is in the opinion of the Superintendent dangerous, the Superintendent must communicate the fact to the Procurator-Fiscal; but if the Procurator-Fiscal does not see cause to proceed against the patient as a dangerous lunatic, he must be discharged if otherwise entitled to discharge." 29 & 30 Vict., c. 51, S. 12.

Discharges—*contd.*

Spence, Vol. III. p. 10. c. 1 and c. 2, and p. 11. c. 2. Lunacy (Scotland) Act, 1866, Secs. 9 and 11.

The usual authority for the discharge of an unrecovered pauper patient is a minute of the parish council of the parish chargeable with his maintenance, but if, in the opinion of the superintendent, the patient is unfit to be discharged, he may appeal to the Board of Lunacy, who will then decide. Unrecovered patients are transferred from one asylum to another, or from an asylum to the lunacy ward of a poorhouse, or to the care of a guardian in a private dwelling by the order of the parish council of the parish by which they are maintained, subject to the approval of the Board; but without the order of the sheriff they cannot be transferred from a poorhouse ward to an asylum. Patients in private

Charles Macpherson, Vol. III. p. 45. c. 2.

dwellings, in addition to the inspection of the General Board, are under the supervision of the parish medical officer, who visits them once in every three months, and of the inspector of the poor, who visits them at least twice a year. The whole system for the care of lunatics is thus at the present time involved in the administration of the Poor Law of the country, and in the chief towns

Motion, Vol. III, p. 51. c. 1.

the parish councillors in one capacity or another, as administrators of poor relief, or as administrators of institutions for lunacy, provide for lunatics as an asylum authority, and pay for them as a parish council. It is under these principal conditions that we have to consider lunacy administration in Scotland in relation to the Poor Law.

Mentally Defective persons in poorhouses.

948. In Scotland on admission to a poorhouse an order from the inspector of poor is necessary, and a certificate of the medical officer. This certificate requires the medical officer to state whether "the applicant or any dependant is 'lunatic, insane, idiot or of unsound mind;'" "and it is pointed out on the

Barclay, Vol. III. p. 163. c. 1 and 2.

certificate that 'no person so described can be legally sent to or received in a poorhouse, unless it possesses lunatic wards, and then only with the sanction of the General Board of Lunacy.'" The relation of the Poor Law to the Board of Lunacy is in this way also very unlike the relation between the Poor Law and the Lunacy Commission in England. In England the ordinary admission to the workhouse entails no medical certificate and there is no express proviso in the orders of the Local Government Board that no lunatic, insane person or idiot, or person of unsound mind should be admitted, except to a separate and licensed ward. Yet, though the stipulation that such persons should be ex-

Cf. paragraph 104, p. 30.

Mackenzie, Vol. III. 23330, 23336, 23370, 23371.

cluded from the poorhouses is now insisted on in Scotland, there are, it would appear, many of them still in the ordinary wards of poorhouses. Also, "many of the inmates admitted to the poorhouses suffer from 'weakness or facility of mind' or become so during their residence therein."

Barclay, III. p. 16 c. 2.

949. Mr. Barclay, General Superintendent of Poorhouses under the Local Government Board, states that there are seventy poorhouses in Scotland, twenty-four of them parish, and forty-six "combination" poorhouses. They contained on May 15th, 1906, 13,187 inmates. Mr. Barclay thus describes these and other defective inmates in poorhouses other than those in the large cities:—

Barclay, III. p. 16 c. 1.

Twelfth Report of the Local Government Board for Scotland (Cd. 3470), 1907, p. xiv. Barclay, Vol. III. p. 163. c. 2.

"There are young people whose mental development has ceased at an early age, who cannot be classed as idiots, but who have been found incapable of receiving educational training. I may illustrate my meaning by the case of a lad of twenty-two who has been in a small poorhouse since a boy. He is a capital worker, can clean the brasses, sweep the rooms, wash the dishes, and set the dinner in the dining-hall, and understands and obeys any instruction given to him, but it would never occur to him to do anything of his own accord. He is cleanly in his habits, but cannot enter into conversation, and has no will power of his own."

"There are men in the prime of life, of good education, who are incapable of doing more than the drudgery of copying letters and invoices."

"There are women who have had several illegitimate children, and who are of low mental type and facile disposition. I may note a case where I had recently to examine a woman of this class. She is known to have had ten illegitimate children. She can neither read nor write. She could not tell me, counting on her fingers, how many children she had. In this same poorhouse there is a feeble-minded mute who has had seven illegitimate children. Another illegitimate woman has had ten illegitimate children; her eldest daughter is following in her footsteps, and two of the young children (twins) show signs of weakness. In another small poorhouse with nineteen female inmates, thirteen were infirm and sick, four were epileptics, and three weak-minded; one of the latter has had three illegitimate children, and all the three women are not allowed out as they are sent there for protection. In another small poorhouse there are five women. Two sisters, one weak-minded, have three illegitimate children each—one to a near relative. One woman is a deaf and dumb mute of low intelligence, and two are infirm. I may mention the case of a woman now in a small poorhouse suffering from venereal disease. She has an ungovernable temper, and is destitute of any feelings of modesty. Her husband is also in this poorhouse, a mental and physical nonentity. Her father put her out of the house one night for her bad conduct, when she was sixteen years of age, and this man, who was passing at the time, took her to his house and married her. She has had six children, and has been prosecuted for neglecting and ill-treating them."

"My experience leads me to say that the class of women who come to our poorhouses with more than one illegitimate child are generally of feeble mind." Mentally defective persons in poorhouses.—*contd.*

"We have also in our poorhouses many epileptics. They are a constant source of anxiety to the officials, and it is a marvel to me that we have not many serious accidents occurring among them. In the smaller poorhouses they are under no official supervision, but are looked after by other inmates. The medical officers as a rule endeavour to have the fits removed from day to night, which is a great safeguard." Barclay, Vol. III., p. 164, c. 1.

"There are also in our poorhouses many cases discharged from asylum as recovered, but so feeble-minded as to be unable to maintain themselves outside. These inmates sometimes lapse, and have to be sent back to the asylum. They have no special attention in the small poorhouses, and the monotony of their lives does not improve their mental condition. If young or middle-aged persons leave the asylum cured or improved, they are not, as a rule, sent to the poorhouse. The cases we have in poorhouses are mental and physical wrecks, often from their own previous bad conduct, and are not likely to be benefited by any ameliorative treatment. They are not of a class which could be boarded-out. No guardians would have them at a rate which the parish could afford to pay, and which it would be fair to the ratepayers to spend on them."

"There are also many senile cases. In the smaller poorhouses a large proportion of the inmates are over seventy years of age. In some cases they have been in the poorhouse for years, and have been preserved to senility by the good treatment they have received. In other cases they have been sent in as they were unfit to look after themselves and had no one to look after them."

"With reference to the 'Ins and Outs' I may say that there is scarcely one of the smaller poorhouses that has not at least one case of this kind, but I cannot say that those which have come under my notice are feeble-minded."

950. The feeble-minded persons to whom Mr. Barclay refers could not, he thinks, have been certified as insane and fit for treatment in an asylum by any medical man. Nor are they "fatuous cases" such as are sent to the lunacy ward of a poorhouse. "Very few of them land ultimately in the asylum." They could discharge themselves from the house, but they have no great strength of will and they can be persuaded to remain; and no person has a right to take a feeble-minded person out unless he be his or her guardian. Yet a young woman, for instance, could not be detained as against such a person, even if the object of removal was some pecuniary or immoral purpose. These women, Mr. Barclay said, were not allowed to go out on "liberty" day, once a week or once a fortnight, when other inmates went out. Yet, "if they demanded their discharge they could only be prevented from going out by putting them off from day to day." In Scotland then, as in England, there is no security against feeble-minded persons who cannot take care of themselves going out of the poorhouses. There is no method of certification that might be used in particular cases to prevent them. Yet the need of such a power is obvious. Feeble-minded paupers not properly certifiable under the Lunacy Acts. Barclay, Vol. III. 23456, 23461, 23491, 23507, 23510, 23513.

951. Mr. Barclay gives a return showing the mental condition of women in two of the smaller poorhouses who have had more than one illegitimate child. These women, twenty-two in number, had had eighty-eight illegitimate children. Of the mothers all were feeble-minded except five: and these were described as "low and coarse; father, weak-minded;" in two cases "normal;" "low type;" and "violent temper, syphilitic." The children of six mothers are entered as "normal," "fairly normal," and in four instances "as far as known, normal." The condition of the children in two cases is "unknown;" and in one case the two children died in infancy. In the remaining ten cases one or more of the children was feeble-minded, imbecile, or lunatic. Illegitimacy and feebleness of mind in poorhouses.

952. Dr. Sutherland, Deputy Commissioner in Lunacy in Scotland, said that he had communicated with a dozen inspectors of the poor—in parishes which he knew best, and in which a large part of the parish area was rural, with populations 10,000 to 20,000; and they had sent him notes of twenty cases of "that type of woman who is incapable of looking after herself and is taken advantage of by unscrupulous people." We quote one case and the statements of two of the inspectors:— Sutherland, Vol. III., 24819, 24824, 24825.

Case of Female E. W.

"This woman has had a family of six illegitimate children (two of whom are dead) to different fathers. Four of the children have been brought up by the parish of Maybole, viz.:—

"J. W. was boarded with a guardian at 7s. 6d. weekly. This aliment being paid on account of his being weak-minded. He absconded from his guardian on October 6th, 1902, and has ceased to be chargeable.

"W. W. was sent to Larbert Imbecile Institute when seven years of age on January 22nd, 1895, and remained there till May 13th, 1905.

"A. W. when three years of age was sent to board, on January 6th, 1896, at 3s.6d. weekly, and is still chargeable.

"G. W. when three years of age was sent to board, on October 2nd, 1899, at 3s. 6d. weekly, and is still chargeable.

Illegitimacy and feebleness of mind in poorhouses.—*contd.*

"This woman was a pauper belonging to the parish of G., and was chargeable to that parish up till August 29th, 1892, in the Combination Poorhouse. On leaving the poorhouse she got married to a man, D. M. who had been an inmate of the poorhouse and belonged to M. parish. After that date the chargeabilities continued to be in M. and have been more or less continuous since. The children Annie and George are legitimate.

"This case has also cost the M. parish a considerable outlay. The lad W.W. alone has incurred an expenditure of over £350, and it is even doubtful whether in the future he will ever be able to maintain himself.

"Parish of——

"Women with illegitimate children receiving relief, five; dependents, eleven; of whom three mothers are 'soft' or feeble-minded. These three have eight dependents. Four of the women have had children to putative fathers. One of the women was illegitimate herself. One of the children, perhaps two, are 'soft.'

"Parish of——

"1. M. R., 34, 'soft'; has two children to different fathers.

"2. J. K., about 30, nearly imbecile, has had one illegitimate boy who had to be sent to Baldovan Imbecile Institution.

"3. L. B., Illegitimate, 30; has one illegitimate child to a man at least fifteen years her senior and who is 'soft.'

"4. J. S., had two illegitimate children to different fathers—one imbecile.

"5. M. M., Illegitimate, about 50, suffers from lupus of face; illegitimate daughter Jessie—weak-minded, has had two children to different fathers.

"6. J. K., 60; has had four illegitimate children, four daughters and one son; son married has large family. One daughter has had a number of illegitimate children. Another daughter has had three illegitimate children. Another daughter, partially blind, has had one illegitimate child.

"7. A. S., In asylum; has one illegitimate boy, considered queer at times.

"8. A. T., 50; has had three illegitimate children, one daughter and two boys. Daughter has had two illegitimate children."

J. Macpherson, Vol. III., p. 33. c. 2. 21222.

953. Dr. John Macpherson, Commissioner in Lunacy, made a personal investigation of two poorhouses which he visited as being exceptional. In one he saw less than a hundred of the inmates, and "when going round picked out fourteen imbeciles, but there may have been others whom he did not see. The fourteen were all well-marked cases."

"Among them was one lad who had been trained at the Imbecile Institution, Larbert. He could converse very fairly and reasonably, but was evidently unfit to take care of himself. Another imbecile seen was a woman apparently about twenty-five years old; she was markedly defective, could neither count, read, spell, nor tell the time when shown a watch; this woman had been the mother of two children. She is an 'in-and-out' and when out makes a precarious living by prostitution. The medical officer stated that this woman ought to be permanently detained, but that in his opinion it would be cruel to certify her as a lunatic. Among other cases we saw were two epileptics, both somewhat feeble-mided, a defective blind boy, a deaf and dumb boy with periodic attacks of excitement, and a feeble-minded man whose wife and child were also in the house, all being imbecile, the wife very decidedly so."

Second Poorhouse.

"The second poorhouse had at the time of our visit 185 inmates. We were accompanied by the governor who showed us in all about 100 of the inmates. Of these only eight were apparently weak-minded.

"(1) Female, aged 30 years; had been seven years in the house; is an epileptic and speaks with an imperfect articulation; suffers from chronic hip-joint disease. She conversed intelligently.

"(2) Female, 50 years; has been thirty years in house. She is able to work in the kitchen, but is markedly defective and cannot talk intelligently. Has had an illegitimate daughter who is a lunatic, and a grand-daughter (daughter of the preceding) who is an idiot.

"(3) Male, aged 54; an 'in-and-out.' Found him working in a tailor's shop. He spoke intelligently; told us he had been in an asylum suffering from mental depression.

"(4) Male, aged 43; twice in asylums suffering from mental depression, the result of drink. An 'in-and-out.' Said he was a labourer, but confessed that he had never done much work.

"(5) Female, aged 40; subject to recurrent attacks of mania; has only been in house a few weeks. Is to be certified and removed to an asylum.

Macpher-

III.,
3, c. 2
p. 34,

"(6) Female, aged 21; was reared in poorhouse. As a child she was troublesome owing to her tendency to set things on fire. Was sent out to domestic service, but only remained a few weeks in any one place. Has had an illegitimate child. Afterwards married a man as weak-minded as herself. She does not know where her husband is. Illegitimacy and feebleness of mind in Poorhouses—*contd.*

"(7) Female, aged 58; discharged from an asylum. She is demented and apparently unable to take care of herself.

"(8) Female, aged 44. Has been thirty years in the house; cannot read or write; has had an illegitimate child. She is quite quiet and harmless.

"These cases illustrate the necessity for the permanent detention of the younger female imbeciles. It is a matter of comparative unimportance where they are detained, whether in poorhouses or along with the other classes whose detention has already been discussed. If one may judge from the comparatively small numbers dealt with in the preceding figures there are probably few feeble-minded persons among the ordinary inmates of Scottish poorhouses."

954. The last quotation raises two questions: What is the number of the feeble-minded in poorhouses, and whether it is a matter of comparative unimportance where they are maintained? As to the former, there is no count available except for Glasgow, to which we will refer later on, but the general impression made by the evidence of Mr. Barclay, Dr. Sutherland and Dr. John Macpherson is that the number of them is comparatively large, a number quite sufficiently large to require and to justify special consideration and special organisation. As to the latter, Mr. Barclay's evidence appears to be decisive, for he has a long and intimate knowledge of the condition of parish and combination poorhouses throughout Scotland. These feeble-minded persons, he says, "ought to be detained, not in any institution that we have at present," but in "something of the nature of a labour colony. That is what I have had in my mind for some years"; and speaking of the feeble-minded women, he said: "These women would be quite able for work, if they were only kept separate from the rest of the population." We think, therefore, that the better opinion is that the feeble-minded should not be retained in the poorhouses, but should be provided for and, so far as may be necessary in individual cases, be certified and detainable in institutions of the type of labour colonies. Other accommodation than that provided in poorhouses should be available. Barclay, Vol. III. p. 163. c 1. Sutherland, Vol. III. 24819. Barclay, Vol. III. 23461, 23464, 23468.

955. One more point. It is alleged that the parish councils are often very unwilling to provide for the feeble-minded. Dr. John Macpherson said that he had been informed by several medical men that parish councils bargained about imbeciles before acting on certificates or obtaining certificates for them. It had, however, never come under his official notice, because although the inspector of poor notified to the Board of Lunacy when a case was certified, it was not necessary for him to notify when he had seen a case with a view to certification and had not obtained a certificate. He thought that the refusal of the parish council to act upon intimation or the refusal to certify should be reported to the Board, more especially the former, with a statement of the reasons. The Board might then ask two independent medical men to examine the cases. Inactivity of parish councils in dealing with feeble-minded John Macpherson Vol. III. 21350–21355.

956. But there is further evidence of the inactivity of parish councils in these matters. Dr. Clarkson, the Medical Officer at Larbert, says:— Inactivity of parish councils in relation to treatment. Clarkson, Vol. III. p. 70. c. 1.

"If such a definition were accepted," *i.e.*, those who as children are unable to pass the fourth standard, "there would fall within it in the Burgh of Falkirk twenty-two persons. Twelve of these are females, ten males, and they are distributed throughout all ranks of society, as nearly as I can judge, in proportion to the numbers in each rank. Of the females seven are in the poorhouse, one in the asylum, and the rest live with their relatives. The majority of those in the poorhouse have come there by way of the streets, and several of them have borne illegitimate children, but not one of these children survives. Of those outside one lives with her mother and is known to have had two illegitimate children, and the other three are living with their parents, and are being looked after in a quite unsatisfactory, and indeed dangerous way."

"The existence of these cases is perfectly well-known to the parochial authorities; but they are not interfered with unless dangerous or troublesome, and if they become destitute or are unable to work on account of motherhood they are associated with the dregs of the population in the poorhouse, in spite of the law which provides that no 'person of unsound mind' shall be admitted to such a place."

Inactivity of parish councils in relation to treatment.—*contd.*
Clarkson, Vol. III., p. 70, c. 2.

"Of the ten males the majority are partially supporting themselves by unskilled labour, but three are difficult to control, and lead idle, useless, vicious lives on the streets, where they pick up a livelihood by hawking matches, running messages, and the like."

And of children he writes: "Besides these adults there are ten children of school age. Two of these are in well-to-do families, being quite satisfactorily taught at home, one is in the institution at Larbert, two go to a board school where they are allowed to sit with the crowd they know best and do nothing, while the remaining five are allowed to stay at home and do as they please. The school board ignores them, and as long as their parents can support them, the parish council will have nothing to do with them. Two of them at least would be greatly benefited by education in a special institution. . . . The school boards in the rest of the country," *i.e.*, outside Glasgow, where the education of defective children in special classes has been undertaken by the Board," "ignore such children, and the attendance officers wink at their absence from school as soon as it has been shown that they are incapable of benefiting from the instruction given there. They may be allowed to attend to keep them out of their parents' way, as in the two cases that I know of in the Falkirk schools, but they are generally allowed to stay away on such occasions as the visit of an inspector."

"As the parish councils also ignore the existence of such cases, unless they are very mischievous or troublesome, or so burdensome to the parents that they become chargeable to the rates, their detection and treatment is left to their parents, and these, as a rule, are poorly fitted for the task."

Bruce, Vol. III. 24126.

957. Dr. Bruce, a member of the General Medical Council for Scotland, drew attention to this evil even more definitely. Urged in examination to state that the parish people knew every imbecile child in the place, he insisted that neither they nor the medical men in the district know the cases.

24128.

"I could mention," he said, "a particular case told me by an inspector of poor lately, where a child was treated with the utmost cruelty, and they only discovered that when the poverty became so severe that the inspector of poor was called in. It was only then that they found out that this terrible state of things had been going on."

24130.

It was then put to him that it was "the duty of the inspector of poor, when he got word that there was a person of unsound mind in the parish requiring relief, to send a medical man and get a certificate and follow certain procedure": but here again he insisted that this practice was not carried out either in the case

24131. 24133.

of imbecile children or imbecile adults. The inspector was "quite content to be in the position of not knowing that a particular pauper was imbecile."

Inactivity of parish councils in relation to discharge and provision on discharge.
Sutherland, Vol. III. 24801, 24811.

958. And Dr. Sutherland, a Deputy Commissioner in Lunacy, discussed the question, as it arose at a further stage—when, on the possibility of the patient who had been sent to an asylum being boarded out, the parish council might again intervene. The superintendents of the asylums were not "keen to part with useful patients," he said, and "some of the inspectors were most unwilling to take the trouble to find guardians in suitable parts of the country." The consequence was that there was overcrowding at the asylum and a neglect of the interest of the patients. "If a superintendent has got fifty patients from one parish and he finds that ten of them are capital workers, then he does not

24802.

want to let them go." The superintendents contend that they should keep these workers in order to reduce the cost of management. "But," Dr. Sutherland continues, "my contention is this, that if they let out any men or women who were

24804.

good workers, then they could train others to take their places. If a superintendent has fifty capital workers he will not be so ready to trouble himself to train other fifty to take their place. Now, in justice to patients and parishes I think there should be a regular cycle going on. The result is that a parish having a number of good workers in an asylum who could be boarded out is mulcted in cost in order that another parish which has few or none of these may be proportion-

24805.

ately benefited. . . . You cannot employ them all because you do not have the employment. Many of the jobs are jobs for which they do not care. Those who are in the cook-house, laundry, and workshop like it because they get things to encourage them to work. My own idea is this, that if they let go these productive patients they would soon get others to take their place."

The committee of the asylum, have, under the Scottish system, nothing to do with the matter. One body, the district lunacy board, builds the asylums and equips them, while another, the parish council, finds the patients and provides the maintenance. The committee of the parish council by their minute settle who should be boarded out: they control the discharge of unrecovered patients. The interests of both should be, but are not, the same. "Whether representatives of parish councils on district lunacy boards would alter matters I do not know," Dr. Sutherland says. There is not, as in England, an asylum committee with authority to deal with these matters. And the continuing interest of the parish council in the patient is practically nil. "There are hundreds of inspectors of poor who see their patients once, convey them to the asylum, shake hands with them, and never see them again. Nothing, in many cases, is done until the General Board of Lunacy sends a Commissioner to make inquiry when an asylum gets overcrowded and to see if there are any patients fit to be boarded out."

Inactivity of parish councils in relation to discharge and provision on discharge —*cont.*

Sutherland, Vol. III., 24808.

Spence, Vol. III., 20919, 20925, 20934, 20935.

Sutherland, Vol. III., 24810.

And then the process is that in the presence of the inspector of poor a list is made out. "The inspector has got this list, and he is now going to set about and find guardians in suitable parts of the country. Of course it means a great deal of trouble to him, and some of the inspectors are most unwilling to take that trouble. That is specially so in the case of those inspectors whose sole duties are not confined to the parish work, but who have many other things to do and to whom this kind of work becomes a secondary consideration."

Sutherland, Vol. III., 24811.

959. We conclude that the parish councils and the inspectors of poor are inclined to overlook "those poor persons who," in the words of the preamble of the Poor Law Act of 1845, "from weakness or facility of mind . . . are unable or unfit to take charge of their own affairs;" that for those persons more suitable provision than that now generally available in the poorhouses should be forthcoming; and that, in so far as they are placed in asylums, there is a lack of endeavour on the part both of the superintendents of asylums and of the parish councils, to provide for them suitably on the recognised Scottish system of boarding-out, or what we have termed friendly guardianship in private dwellings. This raises the wider question of the sufficiency of the Scottish system to which we will refer later.

General conclusion as to the Poor Law in relation to the mentally defective.

III.—Mentally Defective Children and Young Persons.

960. The Education of Defective Children (Scotland) Act 1906 enables school boards, if they think fit, to make special provision for the education of children who, not being imbecile, and not being merely dull or backward, are by reason of mental defect incapable of receiving proper benefit from the instruction in the ordinary schools, and also for children who, not being idiots or imbeciles, are unfit by reason of severe epilepsy to attend the ordinary schools. There are eight special classes for such children in Glasgow and three in Govan. Elsewhere such education as they may receive is given them in the classes of the elementary schools or in their homes, or at two institutions for the education of imbecile children, those at Baldovan and Larbert.

Special Classes for "defective" children.

Information supplied by the Scotch Education Department.

961. It may be taken as proven that in the ordinary elementary schools feeble-minded children receive no proper attention or education. The two questions for settlement therefore are: whether the system of special classes should be extended throughout Scotland and, if so, under what conditions; and how far institutional education is necessary on the lines of the schools at Baldovan and Larbert or otherwise?

Leslie Mackenzie, Vol. III., 23311, 23391, and p. 154, c. 2.

962. Inquiry in Edinburgh showed that in 600 school children six were marked "defective" by the teacher and sixty-eight marked "dull." "In Dundee out of a 1,000 children inspected nine were found defective and eighty-seven dull." Of the six Edinburgh cases, Dr. Leslie Mackenzie, Medical Member of the Local Government Board for Scotland, says: "probably only two were in the strict sense defective or feeble-minded. In most of them the vision and hearing were abnormal." Of the nine Dundee cases, "specific disease was present in one or two." With these figures he compares the returns of schools in Zürich and Wiesbaden. In the former, out of 2,625 children were found "twenty-one cases of moderate mental weakness, thirteen of advanced mental weakness, four cretins, two imbeciles, and two of other forms of mental abnormality." In the latter of 1,043 children admitted, thirty-six were found suffering from some form of mental affection or epilepsy. Thus at Zürich the percentage of mental defect was 1·6, at Wiesbaden, 3·4; but Dr. Mackenzie does not consider that the amount of mental impairment in these

Proportion of defective children in elementary schools.

Leslie Mackenzie, III., p. 153, c. 2; III., p. 154, c. 1.

Proportion of defective children in elementary schools—*contd.*

towns is greater than with us, but that the examination is more thorough-going. If this be so, the results of the investigation above mentioned may be considered to indicate a more satisfactory state of things than really exists; and that the returns of the medical investigation in regard to children in the elementary schools of Birmingham (1·12), Manchester, Chorlton and Prestwich (1·24), Dublin (1·19), are not likely to be excessive. The English areas taken together showed a percentage of ·79 per cent. of mentally defective among the school children on the rolls. The number of school children on the rolls in Scotland for the year ended 31st August, 1907, was 813,695; and if this evidently moderate percentage were considered applicable to them, there would be 6,429 mentally defective children amongst the school population. The Scotch Education Department state that there are twelve schools where classes for defective children have been established, with a total of 746 children on the roll; one of these schools, however, viz., that at Dundee, is for cripple and invalid children. We might, on that basis therefore, anticipate that about 5,683 mentally defective children would require attention or provision.

Vol. VI., p. 59, col. 19, and p. 75, col.

Vol. VI., p. 59, col. 19.

Urquhart, Vol. III., 24494 to 24496.

963. At Perth Dr. Urquhart, Physician to the James Murray Royal Asylum, Perth, found that out of 3,759 children in elementary schools there were thirty-two or about 0·9 per cent. who were "either feeble-minded or very dull and backward and who were not properly placed in those elementary schools."

Mentally defective children and their education. Thomson, Vol. III., p. 209. c. 1.

964. Dr. Thomson, one of the physicians to the Royal Hospital for Sick Children in Edinburgh, approached the question from an entirely different point of view—that of the children as seen in out-patient visiting or at a dispensary. He met with a large number of mentally defective children, he said, and had been strongly impressed with the difficulty that the parents of such children generally had in getting assistance. "When a mentally defective child occurred in a family and required skilled instruction or removal to an institution for training or special care, the difficulties were in most cases practically insuperable." He had seen this in many instances. There are many mentally defective children among the respectable poor as among other classes, for whom no outside help was desirable, "but for a large number there was a crying need for outside help of some sort." This need was due, he had found, to reasons such as the following:

"(a) *On the Child's Account.*

1. *Unkindness at home*, as in the case of the illegitimate (or other) children of bad women.
2. *The impossibility of getting liberty* in their home surroundings for healthy occupations and exercise and fresh air.
3. *The impossibility of getting training* at home that will occupy their energies and turn them from mischievous into innocent and happy channels.
4. *Inadequate protection* from the injuries inflicted on them by unscrupulous persons.

(b) *On the Parent's Account.*

1. *Too exacting demands on their time and energy on* the part of an idiot child who causes an unjustifiable interference with their earning a livelihood and with the training of their other children.
2. *The constant anxiety caused to the parents* by a child's living in the home when circumstances make it impossible to keep him or her under safe control. (Mischief; injury to younger children; fire-raising; injury to child himself in a fit; dangers of immoral conduct, etc.)

I may illustrate what I mean by referring shortly to some classes of these cases that are often met with in practice."

Thomson, Vol. III. p. 209, c. 1 and 2.

965. In the case of young children "who are completely idiotic, who do not know their own mother's touch, who often take frequent fits, or scream continuously night and day when they are not asleep, . . . it is at present absolutely impossible" for the poor to obtain the admission of the child to any custodial institution. Equally in the case of "imbecile children, who are altogether unfit for ordinary school lessons, but were able to go about freely. At home they go steadily downwards, and learn all sorts of undesirable ways, besides interfering greatly with the work of the house. . . . Yet they could not be allowed to live on the streets without a certainty of rapid deterioration"; for them "institutional accommodation in Scotland is altogether inadequate." Their parents would seldom have the influence to secure their admission to Larbert by election, and if they tried to get admission through the parish council, great difficulties are often met with:

"Sometimes when the case is a dangerous one and the parents are destitute, the child is removed more or less promptly. If the parents are respectable working people, however, it is much more difficult, because the authorities generally demand so large a proportion of their entire income, that the proposal is regarded as prohibitive and the negotiations promptly brought to an end."

966. For epileptic children also there was no adequate provision. The elementary school could not provide education for them. They would have very greatly benefited by being sent to a colony or to some such institution. For "returned institution cases," there was also no provision. They "have been discharged from a training institution either because they have been there for the statutory five years" of residence allowed under the terms of the voting system, "or because they are past eighteen years old, and when they come home they often are found in a miserable state in their homes. During their absence their place in the home had been filled up; the other children were unused to their ways and were inconsiderate to them," and they miss the regulated institution life. Also the class of weak-minded girls passed puberty, who were healthy and more or less normal in appearance, required supervision. They could work, but could not be trusted to take care of themselves in society.

Mentally defective children and their education—*contd.*
Thomson, Vol. III., p. 210, c. 1.

967. The only institutions for mentally defective children are those of Larbert and Baldovan. They are licensed by the Board of Lunacy, under the Lunacy Acts, and are managed on the lines of idiot asylums in England. At Larbert about a fifth of the inmates are private pupils for whom their relatives pay £40 to £100 a year; a fourth are elected by the subscribers, and the rest are sent by the parish councils who have to pay £30 a year, exclusive of clothing, for each case. The elected children remain for five years unless they are re-elected for a second period on the ground that they are specially hopeful pupils. Other children remain so long as they are paid for, or until the age of eighteen. No statutory certificate is required. A single medical certificate is required by the school authority of the institution in private and election cases, to the effect that the patient is of unsound mind and is likely to benefit; and in parish cases two medical certificates are necessary and the consent of the Board of Lunacy to the child's admission.

The institutions for imbecile children.
Lunacy (Scotland) Act, 1862 Sec. 7.
Clarkson, Vol. III. p. 70. c. 2

968. The results are not satisfactory. Of 801 patients who had been discharged, "only forty-two were, in the opinion of the superintendent, able, partially or wholly, to maintain themselves on dismissal, and we know of only four that are certainly maintaining themselves without supervision." Fourteen of the forty-two are employed in the institution, and make themselves very useful, but they could not obtain employment outside. "The rest of the forty-two are doing useful work for small wages and so are partially maintaining themselves."

Clarkson, Vol. III., p. 71. c. 1.

Dr. Clarkson, Medical Officer of the Scottish National Institution for the Education of Imbecile Children at Larbert, Stirlingshire, was not satisfied as to the condition of 517 patients who had been handed over to relatives. It seemed to him very undesirable that they should live henceforward without any other supervision. It was difficult to trace them; but he knew that a good many were either dead or in asylums. They knew of three girls who had had illegitimate children. Sixty-five of them were under the charge of parish councils, and were entrusted to their parents simply to save expense. The conclusion which he submitted to us was, that the applications for special teaching or care should not be left entirely to the parents:—

Clarkson, Vol. III. p. 71, c. 1.

"If the parents do not act, and if the child is not so mischievous as to be dangerous to others, or so helpless as to overburden its mother, and make her apply for relief from the rates, no steps are obliged to be taken for its education or subsequent care. In consequence of this the educational institutions are filled by large numbers of ineducable cases. These require only to be kept clean and warm and to be fed, and this could be done much more cheaply in some such additions to asylums as the Glasgow Parish Council have at present at Woodilee, or perhaps even better in one or two large establishments specially erected for the purpose."

If the two institutions for imbecile children were freed from the encumbrance of having to maintain and teach a large number of ineducable children, they would probably between them be able to provide all the accommodation required for the educable imbeciles in Scotland.

Clarkson, Vol. III. p. 71, c. 1 and c. 2.

969. Dr. Sutherland's experience of 100 cases of children educated for five or six years in these institutions coincided with this opinion. "In most of the cases the institution did no more, perhaps less, than capable parents, if they were kept at home, or a good Scotch housewife would have done, if they were boarded-out, at half the cost. It was not the fault of the two institutions; they were not suitable cases for them."

Sutherland, Vol. III., p. 239. c. 1.
Bruce, Vol. III., 24097.

Many imbeciles not suitable for stay in Lunatic Asylums and poorhouses.

Ireland, Vol. III., 24033, 24037.

970. Nor as the children grow up are they suitable for permanent care in lunatic asylums or poorhouses. Dr. Ireland, who was for some years Medical Superintendent of the Larbert Institution, said that, in order to be a proper place for an imbecile, the poorhouse would require to be a very small house and the matron a very benevolent person. "I have seen imbeciles in poorhouses: they were clothed and fed and perhaps kept clean enough, but they were neglected and nothing was done to amuse or employ them." "There was no special treatment at all"; and the sane inmates would have a right to complain at their being associated with them. As to their suitability for admission to lunatic asylums, Dr. Ireland said: in them "the more intelligent learn all manner of tricks; as for the helpless ones, they are apt to be cuffed and beaten and pushed about. I have seen very peaceable imbeciles who have been trained in establishments, and when they were in lunatic asylums they became like wild beasts in a year or so."

24028.

Difference of views as to continuous supervision and after-care.

971. At this point we come to a marked difference of opinion on the part of the witnesses. As we have seen, a large number of imbecile or feeble-minded children go to no special school, for there are no such schools in Scotland except at Glasgow and Govan; but as soon as the obligation to train or educate feeble-minded children is publicly accepted, the true conditions of the problem appear. Those who are trained can seldom take an adult's place in the world and wholly, or in great part, support themselves. They can never become mentally normal. They are always in need of protection, and under supervision they are able to work usefully in the grooves of routine. Hence one obligation leads to another. At eighteen they may be trained to a certain point, but they fall away under the pressure of life and are often found in poorhouses or prisons or living uncontrolled and disreputable lives. One view of this dilemma is that there should be, according to the requirements of the particular individuals and their circumstances, supervision or, if need be, segregation with or without some kind of detention, so that their downfall may be prevented. The other view, which is held with various modifications, is that they should be assisted by training or education in special classes and possibly to some extent in institutions, but that at the age of eighteen public responsibility in regard to them should cease, unless on the ground of neglect, destitution or malfeasance they once more become chargeable to the community or require the intervention of the local authority. It is indispensable to decide this question in one sense or the other, if any intelligible policy in regard to the feeble-minded is to be adopted. We will therefore set out the evidence on the point very shortly on the part of those who desire a minimum of interference and supervision.

Spence, Vol. III., 21085–21086.

972. Eighteen, it is admitted, is an age arbitrarily fixed. Large numbers of the feeble-minded after the period of schooling and adolescence disappear for the moment, and a great many come back again to official cognisance. But "so long as they show themselves fit for home life, are under the guardianship and

21088. control of respectable relatives, and are not a source of annoyance to the public, there would not be the slightest excuse for interference with them on the part

21090. of the State." We "would not be justified in shutting up a harmless imbecile on the theory that he might do something wrong." The parish council pass a

21092. minute discharging the child or young person to private care, and they are presumably satisfied with the conditions of the discharge. That, in general, appears to be all that is necessary. Nevertheless it is allowed that the

21093. protection thus afforded may be inadequate, and that "no doubt on perfectly reliable authority" it is stated, that "some cases are not properly protected; weak-minded girls and people like that," and finally the policy is accepted,

21126. that those, and those only, should be protected who can be shown to need protection.

This, it appears to us, admits the general principle of supervision; but before commenting on it, we would set down the opinions of other witnesses.

John Macpherson, Vol. III. p. 30. c. 2, p. 31. c. 1. 21288.

973. At present only comparatively few imbecile children are sent to Larbert or Baldovan. It is proposed that it "should be compulsory on parish councils to deal with feeble-minded children in the same way as lunatics are now dealt with." Then at eighteen they would go back to their homes, or be boarded out, or be placed in asylums for ineducable children like that attached to the establishment at Woodilee. Thus utilised, the present system, it is argued, would serve

Macpherson, Vol. III., 21284.

all purposes. But this is all that should be done. When the children had passed through the school period, though at fifteen or sixteen they seemed on diagnosis "likely to commit crime," they should not be kept under certificate and detained "unless they were neglected and showed marked mental defect." That they would be almost certain to become harmful to the community would not justify detention; but that such persons should go into the world unprotected would do so. Here again a condition of continuing supervision is admitted —a state of unprotectedness.

Difference of views as to continuous supervision and after-care.—*contd.*

21285-21287.

974. Another witness went further. He submitted a definite proposal, subject to reservations. He thought that these young persons should be kept longer under tutelage—to eighteen or so, and that they should go out under certain directions and conditions; that the register of them should be kept by the chief constable of the district and the inspector of poor of the district, so that should they turn up subsequently as paupers or offenders, reference may be made to the register. But all this should be done, subject to the proviso that no such provision should be used so as to compel people to go into institutions if they could be provided for otherwise. If there was a fair chance of their being looked after decently in their own homes, they should be let go until they did something to bring them into the hands of the State again, or until their friends considered that they ought to be under care. Probably in the course of time some 50 per cent. would come into institutions, and they might be certified, *mutatis mutandis*, as lunatics are certified.

Carswell, Vol. III., 21964-21983.

Cf. Leslie Mackenzie, Vol. III. 23276-23281.

Here machinery is suggested for the after-recognition of the feeble-minded. Those would be specially supervised or provided for in regard to whom there was no fair chance of their being looked after decently in their own homes; but those who had such a fair chance would be registered as well as the others.

975. Another witness considered that there should be a proper census of all children, and that the school board should come in and decide as to whether a defective child should be sent to be trained or not. Thus here, besides the after-school register, a before-school census is suggested.

Bruce, Vol. III., 24110, 24123, 24124.

976. Lastly, Dr. Clouston would link the methods for dealing with the feeble-minded into one system. He would have special classes, and in the cases of young women would, on their leaving school, board out some—about a third—and segregate others. The feeble-minded would be graduated according to their feeble-mindedness and their tendencies in life. Some would be boarded out, some go to asylums, some to special educational institutions like Larbert. A certain number would be provided for at home. "I would weed them out as soon as the education or schooling process is done, say, when they reach the age of fifteen; and then after proper investigation they would be kept in the institution, or sent into the country. It is a question of proper organisation."

Clouston, Vol. III., 24170, 24180, 24196, 24286, 24315.

24204.

977. Our conclusion from this evidence is that it necessitates the acceptance of a policy such as we have sketched as applicable to England. The ground of our recommendations for the record of cases at the school period, either with a view to the special class, so far as it may be suitable, or with a view to the alternative or subsequent use of "colonies" or homes, or friendly guardianship, or certification, and, so far as it proves to be necessary, detention, is the absolute necessity both on personal and public grounds of protecting the mentally defective who would otherwise continue to be as unprotected, and often as neglected, as they are at the present time. Those who can be cared for and trained at home with their parents or guardians it is not proposed to remove; those who can be properly provided for without certification and detention would be known and as far as possible kept in sight; those for whom detention appears to be necessary would be certified and detained. All the present methods of aid and care would be turned to account. There would be no question of the transference of all those who are mere imbecile or feeble-minded to institutions, or of simply adding to the provision now forthcoming in Scotland two or three more asylums, and thus of meeting present difficulties by the single method of additional institutional accommodation. The aim would be to place at the disposal of the authority responsible for the care of the mentally defective much more varied

Wider scheme of control and supervision required.

Spence, Vol. III. 20947.

Wider scheme of control and supervision required—*contd.*

means for dealing with them and supervising them—the special class, the special home, supervision while remaining in the family, removal from the family for training or on account of neglect, residence in a voluntary training home, supervision without certification, with certification without detention, with certification and detention, boarding-out, the farm colony, and so on. By the adoption of observation wards, boarding-out and the six months certificate in cases of temporary or incipient mental disorder there is an elasticity in the Scottish administration of mental defect, which is lacking in England. But there is in our opinion room for much further adjustment and expansion in dealing with individual cases; and accordingly we recommend that *mutatis mutandis* a scheme of control and supervision similar to that recommended by us in regard to England be adopted in Scotland.

Spence, Vol. III., p. 12, c. 1.

Spence, Vol. III., p. 10, c. 1 and c. 2, 20903, 20917-20926.

978. Another question. The board of a district asylum has no part or responsibility directly or indirectly in the discharge of recovered or unrecovered patients from asylums. They may know that the superintendent is keeping patients in the asylum who could rightly be boarded-out as unrecovered, or who could work outside under friendly guardianship; but they have no voice in the matter; it is outside their province. The parish council, on the other hand, who, in the capacity of a Poor Law authority, is maintaining the pauper lunatic (and the vast majority of the patients are, technically at least, pauper and not private patients), subject to the approval of the medical superintendent, "have the power of passing a minute for the discharge of unrecovered patients." Thus, apart from the question whether such minutes are or are not merely the formal endorsement of a discharge advised by a superintendent, the board of the district asylum itself have no control over the use which is made of the institution of which they are nominally the managing body—the most important question of all in the internal administration of an institution. Such an imperfection of control on the part of the district board must, we think, tend to the perpetuation of the evils to which Dr. Sutherland has called our attention. In England the asylums have suffered from an accumulation of cases, unsuitable to continuous asylum treatment, for which provision could not be made by friendly guardianship or otherwise. In Scotland the exit from the asylum is not thus hampered, and yet by reason of the system of management, unnecessarily as it would seem, the asylums remain overfull. These and other considerations have led us to recommend that in the case of mentally defective persons dealt with by the local authority no transfer, except as mentioned in the proviso below, shall take place from one institution or home to another or from an institution or home to private care or *vice versa* without the authority of the local authority and subject to their approval as to the selection of the institution or private care to which the mentally defective person is to be transferred, and the Board of Control shall make such regulations as may appear to them necessary in relation to the several classes of cases for reports of transfers being made to them, and for the granting or withholding of their consent, provided always that the Board of Control may order the transfer of any particular case where it appears to the Board that such transfer is desirable. This would not weaken the legitimate control of the superintendent, but, rather, it would fortify it.

Sutherland, Vol. III., 24810, *et seq.*

Recommendation XXI.

Charles Macpherson, Vol. III., 21594, 21602.

Clouston, Vol. III., 24301-24305, p. 202, c. 1 and 2.
John Macpherson, Vol. III., p. 30, c. 1.
Charles Macpherson, Vol. III., p. 21594.
(but Cf. Clouston, Vol. III., 24216).
Sutherland, Vol. III., p. 242, c. 1. and c. 2; p. 244, c. 1 and c. 2.

979. Further, in Scotland, as the evidence shows, there are many non-certified imbecile or feeble-minded persons who require protection and supervision. The Asylum and Poor Law authorities do not at present succeed in dealing satisfactorily with all classes of the mentally defective. The parish authorities do not always intervene when they should, and in the case of children are slow to intervene even in grave cases. They have at their disposal no sufficient and suitable provision for imbeciles. The asylums for the insane contain many congenital imbeciles,—probably as many as 14 per cent. The system of boarding-out, or friendly guardianship, approved on all hands, is held in check by the needless retention of patients in the asylums. Chronic patients, "senile and paralytic broken-down people," are accommodated in the asylums, for whom other provision should be made in "asylum hospitals" or elsewhere; there is also an accumulation of ineducable cases in the training schools for imbecile children. Throughout there is a need of revision and readjustment, in order that the care of the mentally defective may be brought definitely under one authority and provided for, not within the terms of Lunacy Acts, which were

not intended to be applied to the wants of the feeble-minded or imbecile class and are not, in fact, applicable to that class, but under conditions which more recent science and a greater sense of public responsibility may suggest.

IV.—Other Classes of the Mentally Defective.

980. The necessity for the introduction of changes in the administration for the care of the mentally defective is emphasised in the case both of offenders, who are punished by short sentences and are repeatedly committed for constantly recurring offences, and of inebriates. The evidence on this point is similar to that submitted to us in regard to England, and our recommendations must in principle be the same. Recidivists and inebriates. Recommendations XXXVIII. and XL.

981. In regard to youthful offenders, the evidence of Mr. Gulland, M.P., proves the necessity for a change. At present they are dealt with much as they now are in England (*see* Chapter XXII.). "A larger proportion of feeble-minded children find their way into police courts than ordinary children." Mr. Gulland, who was a member of the Edinburgh School Board from 1900 to 1906, says : Youthful offenders. Gulland, Vol. III., p. 187, c. 1.

"By the terms of the Youthful Offenders Act, 1901, intimation is made to the Clerk of the School Board of all offenders under fourteen years of age. He directs the attendance officer to visit the schools to see whether these children have been regular attenders, and he also intimates to the headmaster the name of the child with the nature of the offence and its punishment. For the year to 31st August, 1905, there were reported to the Edinburgh School Board 475 cases, being nineteen girls and 456 boys. These cases are supposed to be taken separately from the ordinary criminals, but as a matter of fact they are a great deal too much associated with them. Some of the offences are sufficiently serious, but many are of the nature of playing football on the streets. I have gone through a number of these papers and am struck with the sentences pronounced. In many cases the punishment is a fine of one shilling or six hours in the cells. A boy with poor parents cannot find the shilling, and he spends six hours in a cell. On emerging therefrom he receives a glass of milk and a bun, and returns to school to become a hero with his comrades, but having begun his career as a criminal. Especially in the case of the feeble-minded this is disastrous."

982. The suggestion Mr. Gulland makes is that the school board should sit as a tribunal for cases of first offence among children and should be empowered to order a minor punishment that would be suitable for the offence. We think that the better plan would be that in cases in which appearance or circumstances suggest feebleness or defect the court should have at its disposal adequate medical help in deciding whether the child is or is not mentally defective, and should refer the case especially to the school authorities and notify it to the Board of Control, so that suitable preventive action may, if possible, be taken. Gulland, Vol. III. p. 187, c. 1. Recommendation XL.

983. "When we come to the class of delinquents who are, though intellectually apparently intact yet morally feeble-minded, we are dealing with a class never contemplated by the lunacy laws. . . . It is not too much to say that some weak-minded offenders pass most of their time in gaol." These words sum up the position of prisoners of this class. In 1903 there were 1,333 prisoners in Scotland who had been convicted fifty times and oftener ; 982, fifty to 100 times ; twenty-eight, 200 to 300 times. Dr. Sutherland estimates the number of habitual offenders in Scotland, who are feeble-minded, that is, the "feeble-minded among police drunkards, petty offenders, prostitutes and vagrants," at 2,500 approximately. Their offences vary, but they are not "criminals" in the right interpretation of that term. "Owing to mental incapacity, mental warp, lack of skill and daring, they are not permitted to join the ranks of the criminal aristocracy and professionals who live by plunder. Yet they are a costly nuisance, and cause vast trouble to the different authorities through whose hands they frequently pass." An examination of sixty-five short sentence female prisoners, of whom thirty-one in the Edinburgh prison had had not less than ten previous convictions and thirty-four in the Glasgow prison who had had not less than thirty previous convictions proved that not less than 60 per cent. of the whole number were mentally abnormal. The entire uselessness of these repeated convictions and detentions is admitted ; and it follows that in these circumstances recurrent offenders, and indeed other offenders also, who on medical examination are ascertained to be feeble-minded and criminally irresponsible, should be dealt with primarily rather as mentally defective persons than as offenders. Accordingly some, if they are insane, we think, should be "Weak-minded" prisoners. John Macpherson, Vol. III. p. 32. c. 1. Crombie, Vol. III. p. 253. c. 1., p. 256. c 1., p. 258. Sutherland, Vol. III. p. 245. 24827, 24843. Sutherland, Vol. III. p. 241, c. 1. John Macpherson, Vol. III. p. 32. c. 2.

Weak-minded prisoners—*contd.*

sent, as Dr. John Macpherson proposes, to asylums, and others to a special asylum, which should have no prison element in it at all, and should be built upon the village type with a central hospital for treatment and observation. Macpherson Vol. III. p. 33. c. 1.

Powers of Criminal Courts to deal with mentally defective offenders.

984. We have had no evidence laid before us with regard to the question whether it is desirable that the powers of criminal courts should be enlarged so as to enable them to deal more satisfactorily with mentally defective persons who cannot at present be certified as "lunatic." We are consequently not in a position to make positive recommendations. But we suggest that our recommendations on this subject in the English part of our report should be considered by the Secretary for Scotland.

Recommendation XL.

Mentally defective prisoners to be sent to suitable institutions.

985. Incidentally another point may here be mentioned. Under Sec. 89 of the Lunacy Act of 1857, which has for a long time been in disuse, a prisoner who during confinement is found to be lunatic may be removed to an asylum and there retained after the close of his sentence, "until it shall be duly certified to one of His Majesty's principal Secretaries of State that such person has become of sound mind." Mr. Crombie, Secretary and Inspector of the Prison Commission for Scotland, thus states the case. He is asked by Dr. Dunlop: "We have heard a great deal about Sec. 89; the witnesses have been fairly unanimous in approving of it. You can tell us its working from a practical point of view?" He replies: "We have had only one case, a case in 1903, of a man who was a pest to society in a small burgh in the north. The parochial medical officer refused to certify him as insane on discharge from prison. The next time he was in the hands of the police the procurator fiscal reported to the sheriff that the parish medical officer declined to certify him, and the sheriff then, under Sec. 89, ordered an inquiry into the prisoner's mental condition. He was certified insane to the Secretary for Scotland, and was ordered to be transferred to an asylum. After being detained there for two and a half years, he was reported to be sane. On the matter being referred to the Secretary for Scotland, he ordered the man's discharge." The medical officer, it is admitted, had refused several times to certify the man, although he was known to have "such attacks of acute mania as required two or three attendants days on end." One difficulty in the section is that it entails a division of authority; and a simpler process would suffice for ensuring that prisoners who are accounted insane should not be set free on the termination of their sentences. Another difficulty is that while a prisoner the insane person is paid for by the State: when he has been discharged the cost of his maintenance should fall on the parish council, but the Act of 1857 does not settle this point expressly. Besides Section 89 of this Act there is in the Criminal and Dangerous Lunatics Amendment Act, 1871, a section (No. 6) which refers to similar cases. It provides for the detention of insane prisoners in lunatic asylums for the remainder of their sentence. This section should, we think, be put in operation in conjunction with Section 89 above quoted, and extended to mentally defective persons.

Cf. John Macpherson, Vol. III. p. 31. c. 2, 21386.

Cf. Spence, Vol. III. 20863-20869.

Crombie, Vol. III. 24896, 24897, 24910, 24912.

986. We recommend that Section 89 of the Lunacy (Scotland) Act of 1857 be brought into regular use for dealing with cases of mentally defective persons in prison, and that it be amended so as to make it clear that the charge for the maintenance of such prisoners in institutions other than prisons shall fall on the funds of the local authority liable for their maintenance, unless in his discretion the Secretary for Scotland direct otherwise. We recommend further that the sixth Section of the Criminal and Dangerous Lunatics Amendment Act, 1871, be retained and extended to cases of mentally defective persons.

Recommendation XXXIX.

Mentally defective inebriates.

987. Next of inebriates. The Inebriates Acts, 1879–1900, are not in all respects found to be satisfactory.

Dr. John Cunningham, Medical Officer to the Girgenti Home for Inebriates, states that mental enfeeblement is the cause of inebriety. The majority of inebriates admit that they began the use of alcohol at from sixteen to thirty years of age. The largest number of patients still come from the lower grades of society; they have been "in and out" the poorhouse for years; the majority have been confirmed inebriates from ten to twenty years. Of twenty-nine inmates discharged from the Girgenti Home for Inebriates belonging to the Glasgow Corporation, eight had relapsed, five were in poorhouses, four had been

John Cunningham, Vol. III. p. 227. c. 1. p. 228. Motion, Vol. III. 21771, 21776. Henderson, Vol. III. 23610, 23611. Clouston, Vol. III. 24364-24369.

lost sight of or there were no particulars obtainable in regard to them; nine may be, and certainly five are, doing well; two have died; and one was "mentally and physically" unfit. The results are not very encouraging; inebriety is not treated at an early stage as a disease; persons who are "unwilling to admit that they are habitual drunkards, although they are speedily reducing themselves and their families to starvation, yet keep out of the hands of the police" and are not now detainable; and the cost is considerably in excess of that of maintenance under the Poor Law. Mentally defective inebriates—*contd.* Motion, Vol. III. 21773.

988. These conditions are very similar to those which we have sketched in the case of England and Wales; and we recommend that, as in England, there should be separate institutions for the better and more hopeful cases and for "the weak-minded imbecile patients and those who watch every opportunity for escaping, display fearful exhibitions of temper, and require the same close attention as inmates of a lunatic asylum." Further, mentally defective inebriates should, like other mentally defective persons, come under the cognisance of the General Board of Lunacy. "Ins-and-outs," whether alleged to be habitual drunkards or not, should in our opinion be examined with a view to ascertaining whether or not they are mentally defective. Cunningham, Vol. III., p. 229, c. 1 & 2. Vol. III., p. 347. Draft Bill to amend the Inebriates Acts, 1879 to 1900. Recommendation XXXVIII.

989. In Scotland as in England the increase of feeble-minded aged people in the asylums is noticed. Dr. Carswell says that in "the last five years in Glasgow parish the number of persons sent to the asylum for the first time at ages fifteen to forty-five has been equal to a proportion of about 8 per 10,000 persons living at these ages, and there is no indication of any tendency to increase, whereas the proportion of persons over forty-five sent to the asylum for the first time has been about 13 per 10,000, and there is a distinct tendency upwards." Dr. Clouston says that at the Royal Edinburgh Asylum the number of patients over sixty, year by year, has more than doubled in thirty-two years; the mean age of patients has gone up by three years, the death-rate risen 46 per cent., the recovery rate fallen 33 per cent.—all from this cause. The increase is in cases of a kind of mental feebleness "certified as technical insanity and sent to mental hospitals, that is, the senile and paralytic broken-down people among the poor." His "chief objection to them is that they take up bed and nursing which should be reserved for curative purposes;" and they account for the "apparent increase of insanity of late years." They often improve—becoming more quiet by night and day after a few months; and he suggests that they might then be sent to poorhouse hospitals, which would be cheaper. Dr. Carswell proposes that more provision should be made for them, "and, if possible, outside asylums." Senile feeble-minded or dements. Carswell, Vol. III., p. 64. c. 2. Clouston, Vol. III., p. 202. c. 1 and 2. Cf. Spence, Vol. III., 20966, 20967. Carswell, Vol. III., p. 64, c. 1.

For this class also, as in England, the conditions of assistance have to be reconsidered and steps taken to prevent the curative institution, the modern asylum, being turned to other purposes.

V.—Certification and General Administration.

990. We have referred to the very useful system of observation wards which have been introduced into Scotland (par. 706); to the introduction of the Villa Asylum at Kingseat and Bangour, now also adopted in England; to the utility, economy, and extent of the plan of boarding-out, which we have recommended for general adoption in England (par. 693), and to the special certification for six months or less of patients as suffering from incipient mental disease (par. 713)—a very useful procedure for treating cases for which admission to an asylum may prove unnecessary or inexpedient. To the methods of certification we have also referred at some length (par. 717). We have to discuss them further, however, in relation to the question of the certification of the various classes of mentally defective persons. Cf. Vol. III., Part II., p. 307 *et seq.* Copies of the General Reports on three specially licensed houses. Spence, Vol. III., 20894. Clouston, Vol. III. p. 202. c. 1., 24253. Sutherland. Vol. III. 24797.

991. The Scottish medical certificate requires the two medical men, who certify with a view to detention by order of the Sheriff, to state on soul and conscience "that the said A. B. is a lunatic (*or* an insane person, *or* an idiot, *or* a person of unsound mind) and a proper person to be detained under care and treatment." Facts indicating insanity observed by the medical person and similar facts communicated to him by others have to be entered in the grounds of the opinion. Statutory certificates. Schedule (D) Lunacy (Scotland) Act, 1857.

Statutory certificates—*contd.*

Schedule (G) Lunacy (Scotland) Act, 1857, and Schedule (A) and Sec. 13; Lunacy (Scotland) Act, 1866.

Also Vol. III., p. 297.

992. The only other statutory certificate, except the certificate of the superintendent or medical attendant for continued detention (Schedule A.—Lunacy (Scotland) Act, 1866), is the "six months" certificate in Schedule G. of the Act of 1857, by which a duly qualified medical person may "certify on soul and conscience that C. D. is afflicted [*state the nature of the disease*], but that the malady is not confirmed, and that I consider it expedient, with a view to his recovery, that he should be placed [*specify the house in which the patient is to be kept*] for a temporary residence of [*specify a time not exceeding six months.*]" This certificate refers to "lunatics received into any private house," as now regulated under Section 13 of the Act of 1866, though the word "lunatic" does not appear in the form itself. Any person suffering from a mental malady which is not confirmed, and for which temporary residence in a private house is expedient, may be included in it. It thus broadens out the field of "lunacy," while the plan of the certificate is not unlike that which we propose below—a general qualifying term "mentally defective" with the entry of the class of malady which in the particular instance comes within that term.

Administrative certificates.

Lunacy (Scotland) Act, 1857, Sections 3 and 9, and Lunacy (Scotland) Act, 1866, Section 18.

993. Besides these two statutory certificates there are several that are administrative, and owe their validity to the general powers of the Board as appointed "for the superintendence and care of asylums and lunatics." The certificates and forms, and information relating thereto, will be found in the Appendix to Vol. III. of the evidence: Part I., p. 283.

Vol. III., p. 283.

994. To mentally defective paupers the word "lunatic" is generally applied. When application is made to the General Board of Lunacy to grant sanction for the residence of a pauper lunatic in a private dwelling specially licensed or otherwise, a statement from the inspector of poor and certificates from two medical persons are required. In these certificates the formula of the certificate of the

Vol. III., p. 285.

Act of 1857 has to be followed: that A. B. is lunatic, *or* insane person, *or* idiot, *or* person of unsound mind, and facts observed or communications as to the patient's insanity or idiocy have to be stated.* For this the order of the sheriff is not necessary; the approval of the General Board of Lunacy suffices. And removals

Vol III. p. 287.

from an establishment other than an asylum to a private dwelling, and from a private dwelling to an establishment, or from one private dwelling to another, are sanctioned by the Board on the application of the inspector of poor without further medical certificates, until the patient is visited by one of the Board's officers.

Vol. III., p. 291.

995. In the case of private patients the form of application to the General Board of Lunacy (Form F. 2) to sanction the reception of a private patient into a private dwelling, specially licensed or otherwise, states that the patient "is of unsound mind, and a proper person for residence in a private dwelling." And

Vol. III., p. 292.

the single medical certificate that accompanies the statement states that the person is of unsound mind and the facts stated as the grounds for the certificate indicate *insanity*. In the case of pauper patients, for whose reception into the lunacy wards of a poorhouse the sanction of the Board is required, the medical person (Form C.) certifies that he believes the patient to be of unsound

Vol. III., p. 304a

mind and a proper person to be in the lunatic wards. In "emergency" asylum certificates (Form A.) the same phrase, "of unsound mind," is used.

Vol. III., p. 293.

996. "On liberation on trial or probation of a lunatic," the single medical certificate "reports and certifies with respect of the patient's mental state" without specification of the actual malady by name. It is signed by the asylum superintendent as his authority for the liberation of the patient; and the superintendent at the same time "subjoins a statement of particulars of the circumstances in which it is proposed to place the said patient." And towards the close of the period of probation the inspector of poor has "*To transmit to the Board a medical certificate to the effect either that the patient* (1) *is recovered, or* (2) *is still of unsound mind.*"

Vol. III., p. 294.

* The certificate of the Act of 1857 refers in the required statement of facts to facts "indicating insanity." In the administrative certificate, insanity and idiocy are separated as the two sub-divisions of "lunacy."

997. In their provisions for the reception into private dwellings of private patients, maintained out of private funds, the Board use the terms *insane person*, or *person of unsound mind*, as representing those who may reside in a private dwelling without an order of the sheriff or the sanction of the Board "with relatives or others who receive no remuneration for the patient's maintenance." Administrative certificates.—*contd* Vol. III. p. 296, cols. 1 and 2.

998. In the case of patients under curatory (*see* pars. 749 to 752 and 982), the Board recognise both lunatics and persons whose mental derangement does not amount to lunacy—"every person to whom a *curator bonis* has been appointed by the Court of Session on account of *mental imperfection, whether such mental imperfection does or does not amount to 'lunacy'* as defined" by the form of certificate in Schedule D. of the Act of 1857. And notice of the admission and departure of a boarder in a private dwelling with special licences, *not being a lunatic*, has to be given within three days as in the case of a lunatic. Vol. III. p. 297, c. 2. Vol. III. p. 297, c. 2.

999. In the Criminal and Dangerous Lunatics Amendment Act, 1871, the term *lunatic* in the title is used as identical with the word *insane* in the text.

1000. Our consideration of these statutory and administrative certificates may be summed up thus: General conclusions as to certification.

We have first the statutory definition of the medical certificate of 1857, which we have just quoted, "that the said A.B. is a lunatic (*or* an insane person, *or* an idiot, *or* a person of unsound mind) and a proper person to be detained under care and treatment." In conjunction with this we have the interpretation of Sec. 3 of that Act: "the word 'lunatic' shall mean and include any mad, or furious, or fatuous person, or person so diseased or affected in mind, as to render him unfit in the opinion of competent medical persons to be at large, either as regards his own personal safety and conduct, or the safety of the persons and property of others, or of the public." The words "insane person," "idiot," and "person of unsound mind" which are in the medical certificate are not here specifically defined. By presumption, therefore, they were all held to be different forms of lunacy, as described above. Subsequently the Lunacy Amendment Act of 1862 repealed the interpretation clause of the Act of 1857 and substituted an interpretation clause drawn more closely in accordance with the words of the certificate—namely, "'lunatic' means a person certified by two medical persons to be a lunatic, an insane person, an idiot, or a person of unsound mind.'" The clause is indeed actually only a repetition of the terms of the certificate, excepting the words "and a proper person to be detained under care and treatment." The individual terms, "lunatic," etc., are not defined, and presumably they are all taken as verbal variations of the word "lunatic"—a view which the general feeling of medical practitioners and the public would appear to confirm. Statutory certificates. Lunacy (Scotland) Act, 1857. Schedule (D). Lunacy (Scotland) Act, 1857, Sec. 3. Spence, Vol. III. p. 8. c. 1. Lunacy (Scotland) Act, 1862, Sec. 1. John Macpherson, Vol. III. 21377, 21378. Leslie Mackenzie, Vol. III. 23375. Russell Vol. III. p. 180. c. 1.

Lunacy (Scotland) Act, 1862, Sec. 1.

But the definition of the Act of 1862 has, it should be added, another drawback also. It, as the above quotation shows, "includes every person *certified* by two medical persons to be a lunatic," etc. Thus, wherever in the text of the Scottish Lunacy Acts the word "lunatic" occurs, prior certification is implied though the circumstances may be such that no formal certification can have taken place. This clearly suggests the necessity for an alteration of the present form of certificate on other and different grounds. See Summary of the Scottish Law and Practice regarding Lunatics, &c. Appendix Vol., V., p. 7.

The words of the administrative certificates are those of the Act of 1857 in the case of the pauper, with the alteration that in the statement of facts "insanity" and "idiocy" are taken as two classes of lunacy; "of unsound mind" in the case of the private or pauper patient, when the former is admitted to a private dwelling, or the latter to the lunacy wards of a poorhouse; "of unsound mind" also in the "emergency" case; "lunatic" and "unsound mind," both taken as equivalent, in a case of liberation; "insane" or "person of unsound mind" in the certificate for reception to a private dwelling. It is evident that all these terms, except in the one context to which we have referred, and in which "insanity" and "idiocy" are differentiated, are but verbal variations of the word "lunatic"; and they do not mean different classes. The word "imbecile" is not found in the forms of certificate or in the definitions in the Acts. Nothing, indeed, is said in the Act of 1862, Section 7, the section which allows the General Board of Lunacy to "grant licences to charitable institutions for imbecile Administrative certificates. Lunacy (Scotland) Act, 1862, Sec. 7.

General conclusions as to certification—*contd.*

children without fee," of any statutory certificate being required on the admission of such children to institutions. But by the regulations of the Board in the case of pauper children application has to be made to sanction the reception of imbecile children into institutions for their training, and the two medical certificates which are required in order to obtain that sanction must state that the certifying medical persons "believe the said child to be of unsound mind, to be capable of deriving benefit from training and treatment in the institution, and to be in a fit state of bodily health for removal thereto." The "imbecile" is thus classed as "unsound in mind," a phrase elsewhere used as equivalent to insane or lunatic. The regulation in the case of "curatory" patients exceeds the terms of the Lunacy Acts and recognises as under the General Board of Lunacy persons who are not even under a "six months" certificate, as suffering from an unconfirmed mental malady, but who suffer from mental imperfection that does not amount to lunacy.

Spence, Vol. III., 21145.
John Macpherson, Vol. III., 21378.
Spence, Vol. III., 20837.

Spence, Vol. III., p. 12, c. 2.

We have thus one definition which treats as equivalents to "lunatic," "insane person," "idiot," or "person of unsound mind," and another definition that treats "imbecile" also as equivalent to this last term "person of unsound mind."

1001. We think that it will be generally admitted that this is not satisfactory. The new class of feeble-minded which is now generally recognised as different in grade from the "imbecile" is excluded. The class "imbecile" is in a doubtful position, being certified as "of unsound mind;" and the term "idiot" in the Scottish Act would not now be accepted as coming even administratively under a class termed "lunatic." Thus both in accordance with the sense of public opinion and the general desire to institute some better and more distinctive classification the word "lunatic" is now inappropriate. We accordingly propose that some other more general and more acceptable word be substituted for it.

The form of certificate suggested.

1002. In our recommendations in regard to England we have recommended the use of the word "mentally defective" and submitted variations falling within that term, not merely verbal variations, but variations which on administrative grounds we have thought serviceable. The Scottish Board of Lunacy, as we have seen, has in its administrative certificates adopted the verbal variations of the Scottish Act for different purposes; the pauper lunatic is lunatic or idiot; or in some circumstances of unsound mind; the private lunatic is of unsound mind; the private lunatic who is boarded-out is insane or of unsound mind; the imbecile child is of unsound mind; the curatory patient passes outside the range of lunacy, though he be certified; he stands as an exception and may be certified as suffering from "mental imperfection" only. He may be considered nearer the position of persons dealt with under Sec. 116 (*d*) and (*e*) of the English Lunacy Act of 1890. Our suggestion is to assume such a broad word as the above, not "mentally imperfect" but "mentally defective" as the general term, and to limit the certificate to that, with a reference to the particular class—one of the several categories entered in the instructions at the back of the certificate. In all other ways we would leave the form of the certificate as it stands at present (*see* paragraph 958). This proposal has met with one criticism, but it will in our opinion remove many great difficulties.

Recommendations III. and IV.

1003. The criticism is that drawn from Dr. Clouston and Dr. John Macpherson. Dr. Clouston is asked :—

Clouston, Vol. III., 24331, 24332, 24333.

"When dealing with imbeciles, is there anything to be gained by very fine distinctions of imbeciles into various classes? We have had presented to this Commission a series of definitions which are practically the definitions given in Dr. Mercier's handbook on insanity. You know these definitions; are they of any practical value at all?—They are all very interesting, but I would not say that they are workable. They are exceedingly interesting. Probably every scientist has to go through the stage of constructing definitions.

"These definitions have been before the profession for ten years?—Yes.

"But they have not been universally adopted?—No. When I was younger I used to be rather fond of definitions. I have now largely given them up."

Clouston, Vol. III., 24176.
Clouston, Vol. III., 24337.

And as an interpretation of the present statutory certificate of the Lunacy Act of 1857, Dr. Clouston said "the only definition of insanity in this country is that a case is certified by two doctors." "'Certifiable' is absolutely conditioned by the two words 'care and treatment.' I would say of any case, no

Clouston, Vol. III., 24337—*contd.*

matter whether it were a case of weak-mindedness or a case suffering from gross delusions, that if it did not require care or treatment, it was not 'certifiable.'" Dr. John Macpherson dealt with the same question, but with a difference. He recognised that "as a matter of fact, what is known as non-certifiable insanity existed and differed only in degree from certifiable insanity;" and that "the requirement of treatment" "decided the action of the authority who moved for certification." The "basic test" of certification was thus, he thought, to be found in the phrase of the certificate "a proper person to be detained under care and treatment." He thought, however, that "for clinical purposes and purposes of administration, after the person was taken charge of divisions of mental defect into classes were useful, and that the classification of the Royal College of Physicians was probably on that account an excellent one. But as tending to introduce a division between the various grades of mental defect he would deprecate its introduction into Scotland, at any rate; that is to say if that were to be its tendency." Yet even if the phrase "and a proper person to be detained under care and treatment" be "the basic test" of certification, even in this "liberality about certification," there must be some central word by which the particular province of the administration which is in question is defined and restricted. By the Scottish Act this word is "lunatic," with its verbal variations. It might be "of unsound mind." Our recommendation is that it should be "mentally defective," and that instead of merely "verbal variations" there should be a statutory recognition of general classes which actually come under that term, in such a manner as to conduce to better practical administration. The latter part of Dr. Clouston's contention—the requisite breadth of certification—is thus met; but apparently not the former—the alleged inutility of definitions of general classes. "Definitions are not workable," he practically says. But, as we have shown, in point of fact, there must be some definition; the general word "lunacy," on the definition of which the Scottish Act depends, is a definition and workable; and the word which we suggest, "mentally defective," in the same way necessitates a definition, namely, the statement of the various classes that, as we propose, should come under the supervision of the central authority. And, if we may judge from the evidence which has been submitted to us, this definition, too, is workable. Further, experience proves the necessity of recognising the difference between the several classes of mental defect. If all are called "lunatic," there is a disinclination to consider persons who are "feeble-minded" or "imbecile" as "lunatic" and to certify them as such; and rightly, for no one would suggest that the malady in these two cases is exactly the same, or that the treatment of the feeble-minded would be the same as that of the "lunatic," as that word is usually understood, whereas a certificate filled up for the "feeble-minded," for instance, suggests both a difference in mental conditions and a difference in treatment. At present in Scotland the statutory certificate requires that the person afflicted be certified as "lunatic, insane, idiot, or of unsound mind," words which suggest four different classes, but all of which except one—idiot—are used both administratively and popularly as applicable to one class only—the lunatic. Hence an admitted disinclination to certify. We think, therefore, that there is good reason for not being content with some broad general term only, but that it is useful to show that such a term has relation to various classes of mental defect, for which differences in administration, supervision and treatment are recognised as necessary. These classes would be of service as Dr. John Macpherson said, "for clinical purposes and purposes of administration," and except in that sense there is no evidence to show that they would "introduce a division between the various grades of mental defect."

The form of certificate suggested—*contd.*

Recommendation IV.

Clouston, Vol. III., 24331-24333.

John Macpherson, Vol. III., 21313.

Recommendations I to IV.

1004. We accordingly recommend that in the form of certificate which is now in use in Scotland the words that define the mental defect be altered, but that the certificate remain otherwise as it stands at present. In this way a wider range of mental defect would be recognised than under the present certificate. And consistently with this change we recommend that there be one central authority for "the general protection and supervision" of all mentally defective persons and for the regulation of the various methods adopted for their treatment and maintenance, and the institutions, private dwellings, or families where they are maintained; and that the central authority be not a General Board of Lunacy, but should adopt some more general title indicative of the larger

scope of the work which would now devolve on it; also that an Act be passed amending the Scotish Lunacy Acts and bringing them, with provisions for the mentally defective generally, into one legislative measure.

Question of the sufficiency of the present system of providing for the mentally defective.

1005. We have now to turn to a difficult question—the sufficiency of the Scottish system, as it now stands, to provide for the mentally defective of all classes. Our conclusion was that there were some not unimportant shortcomings in the present administration; that there was on the part of the parish councils a disinclination to deal with cases, for which provision might be made under the law as it is now interpreted and applied; that there was a want of unity between the administration of the District Boards of Lunacy and that of the parish councils; and that this led to want of economy in the use of asylum accommodation for persons who might be otherwise treated, and, generally, to divided interests and responsibility. If, as is alleged and as we are led to believe, this state of things prevails, the alternative lies before us of making such recommendations as would tend to promote greater activity and the recognition of a larger responsibility on the part of the parish councils, or of making recommendations which would have for their object the transference of responsibility to some other body.

Possibility of developing the Parish Council system.

1006. Now it is obvious that though the administration of the Lunacy Acts, so far as they refer to pauper lunatics, is part of the recognised work of the parish councils, these councils are mainly engaged and interested in the administration of poor relief; and the duty of ascertaining who are mentally defective and for whom provision should be made and in what manner is a different and special department of work. But it may be argued that in Scotland the administration of poor relief and, in connection with pauper lunacy, the administration for the care of the mentally defective is so inextricably fused into one that no transfer of the duties of caring for the mentally defective to any other body, whose sole business and concern they should be, can be carried out successfully. In that case, in the new circumstances that have now arisen—namely, the necessity of dealing not only with persons certifiable under the Lunacy Acts, but with other classes of persons who cannot now be so certified—it is a question whether any supplementary proposals can be advocated which would lead to greater attention being paid to these cases and would in some measure meet the difficulties which we have mentioned. If then the present system be retained, by which the parish councils maintain the mentally defective, settle who should be boarded-out and control the discharge of unrecovered patients, we would suggest: (1) That there should be inquiry made by the General Board of Lunacy in regard to the number and the nature of cases of mental defect in the several parish areas or the districts of the District Lunacy Boards, and especially in regard to the cases of persons who are mentally defective but who do not now come under the Lunacy Acts; (2) that there be a system of notification of all cases of mental defect by local authorities to the General Board; and (3) that the Board be authorised to enforce a proper treatment of all these cases by the parish council from the point of view of maintenance and by the District Board from that of suitable provision. The General Board have already a similar power under Sec. 18 of the Lunacy (Scotland) Act of 1862, By that section, if a parish council "after requisition by the Board, shall refuse or neglect for twenty-one days after such requisition to provide for the removal of a pauper lunatic to an asylum, house, or lunatic ward of a poorhouse, the Board may take such measures as may be necessary for the removal . . . and the whole expenses . . . shall be recoverable by the Board . . ." This power is applicable to "lunacy" cases only under the present law; it might, we suggest, be extended to all other cases of mental defect.

The Lunacy (Scotland) Act, 1866, Secs. 9, 10, 11.

The Lunacy (Scotland) Act, 1862, Sec. 18.

Development of the District Boards of Lunacy recommended. Recommendation VII.

1007. The other method of administration which we recommend and which in our opinion would best meet the difficulties to which we have alluded is the extension of the powers of an existing administrative body in such a way that it should become the sole local authority in each district for dealing with the mentally defective, providing for them and maintaining them. In Scotland the local authority under the Inebriates Acts, 1879 to 1900, is the council of any county or burgh; but, so far as our evidence goes, it does not seem that the proposal has ever been made that the council of the county or burgh should

become the local authority for lunacy or mental defect, acting in connection with a Statutory Committee as in England. Indeed, the more recent suggestions for the revision of the Inebriates Acts include a clause for allowing to parish councils the same powers for the establishment and maintenance of an inebriate reformatory as the county councils and burghs now possess. It cannot well be proposed, therefore, that these bodies should be the local authorities for the care of the mentally defective in Scotland.

Development of the District Boards of Lunacy recommended—*contd.*

Copy of Inebriates Amendment (Scotland) Bill. Vol. III. p. 347.

1008. For lunacy purposes Scotland is at present divided into the following Districts, each district being under a District Board of Lunacy :—

Counties from which the different Districts are formed.	Lunacy Districts arranged geographically.
Shetland	1. Shetland District.
Orkney	2. Orkney do.
Caithness	3. Caithness do.
Inverness, Nairn, Ross, and Sutherland,	4. Inverness do.
Elgin	5. Elgin do.
Banff	6. Banff do.
Aberdeen	7. Aberdeen County, consisting of all the parishes of Aberdeenshire, except Aberdeen City Parish.
	8 *Aberdeen City, consisting of the parish of that name.
Kincardine	9. Kincardine District.
Forfar	10. Forfar District, consisting of all the parishes of Forfarshire, except Dundee Combination.
	11.*Dundee District, consisting of the parish of Dundee Combination.
Perth	12. Perth District.
Stirling, Dumbarton, Linlithgow, & Clackmannan	13. Stirling do.
Fife and Kinross	14. Fife and Kinross District.
Edinburgh and Peebles	15.*Edinburgh District, consisting of the parish of Edinburgh.
	16.*Leith District, consisting of the parish of Leith.
	17. Midlothian and Peebles District, consisting of the remaining parishes of Midlothian and of the county of Peebles.
Haddington	18. Haddington District.
Roxburgh, Berwick, and Selkirk	19. Roxburgh do.
Lanark	20.*Glasgow do. (Consisting respectively of the parishes of the same names.)
	21.*Govan do. (Consisting respectively of the parishes of the same names.)
	22. Lanark do. Consisting of remaining parishes of Lanarkshire.
Renfrew	23. Renfrew do. Consisting of parishes of Renfrewshire, including entire parishes of Cathcart and Eastwood, which are partly within Lanarkshire.
Argyll	24. Argyll do.
Bute	25. Bute do.
Ayr	26. Ayr do.
Dumfries, Kirkcudbright, and Wigtown	27. Dumfries do.

* In these cases the parish council acts also as the District Lunacy Board. All are large urban parishes.

1009. These District Boards were established "with a view to the erection of asylums for the reception and care of pauper lunatics," and they have to provide requisite accommodation for the district subject to proceedings that may be taken against them by the General Board of Lunacy, if they fail to do so. The specified expense of providing this accommodation is apportioned by the General Board upon the landward parts of counties and upon the burghs respectively within such districts, and the necessary assessment is made and collected by the county and burgh authorities. The expenses of a District Board where there is no district asylum are met out of the county general assessment, and by each burgh, as the case may be. As the above list shows, the Districts are already mapped out on very satisfactory geographical lines for administrative purposes. These districts may be altered or varied by the Board "on the

Lunacy Act, 1862, Sec. 9. Prisons Act, 1877, Secs. 61, 62. Lunacy Act, 1857, Secs. 53, 54, 55.

Lunacy Districts (Scotland) Act, 1887, Sec. 1.

Development of the District Boards of Lunacy recommended—*contd.*

application of the commissioners of supply of any county interested, or the magistrates of any burgh interested, or the parish council of any parish or combination interested"; and the Board, "where any such altered or varied districts shall consist of one parish only or combination, may, if they think fit, appoint the parish council of such parish to be the District Board of such district," subject to the sanction of the Secretary for Scotland; and the Board have also other large powers of regulation, subject to the same sanction. In Scotland the counties are of very unequal size and the population is largely drawn to a few urban centres, but sparsely distributed over the country generally. Hence neither county nor burghal areas taken by themselves are suitable divisions for the supply of accommodation or provision for the mentally defective. The districts of the District Boards, on the other hand, may be adjusted to meet the needs both of urban, rural and mining districts, the county, or a group of counties, or the burgh, as may seem best. These Boards are also, as we have seen, already responsible for the supply of asylum accommodation for "lunatics," and their expenses are a charge on the district. It would appear, therefore, that the responsibility of providing directly or indirectly for all classes of the mentally defective, as well as for "lunatics," might rightly devolve upon them.

Spence, Vol. III. 21179.

Their power of appointing visiting committees of asylums might be exercised; and might be utilised in the case also of other institutions, "colonies" or boarding homes or other institutions, supported by them, for the care of the mentally defective in their districts, for they might have power to contract with any Poor Law or other public authority, public or voluntary agency or private persons, as they might deem it advisable, a power that might be freely exercised and, though, if it were thought well, the arrangements for boarding-out might be left in the hands of the parish councils, they, instead of the parish councils, might be made responsible for settling which patients should be boarded-out on their leaving asylums or other institutions and which should not. Further, the charges for maintenance in cases of mental defect might be removed from the smaller area of the parish to the larger area—as it usually is—of the District Board. This would be fairer to parishes which have a low assessment, as in many landward parts of the districts, and it would remove one obstacle in the way of a sufficient treatment of patients, the charges for whose care and maintenance must in many instances be comparatively heavy, and certainly larger than they would be in the case of paupers who are in receipt of ordinary indoor relief. To provide more effectually and economically for the smaller classes of mentally defective persons ample powers of combination might be given to the District Boards—a course which is in our opinion much more satisfactory than, as has been suggested, to make the General Board of Lunacy, the chief inspecting and supervising body of the country, itself also the provider and manager of institutions for these classes. Thus the administration for the care of the mentally defective would devolve entirely on the District Boards and be dissociated from the administration of the Poor Law.

Recommendation VII.

1010. Accordingly we recommend: "That under the proposed Amending Act for the Care and Control of the Mentally Defective, the District Board of Lunacy—to be called the District Board for the Care of Mentally Defective Persons—be the Local Authority, and be required by Statute directly or by contract with other authorities or persons to make suitable and sufficient provision for the care and control of the mentally defective in their area in institutions, houses or homes, in observation or reception wards, or by 'boarding-out,' or in any other way of which the Board of Control shall approve."

Recommendation IX.

In making this recommendation we fully realise that, as we have also recommended, it will be necessary for the local authorities—the District Boards—to appoint a specially qualified medical officer or officers to assist them. Also, in order that economy may be considered and that there may be no breach of continuity in the local administration, we recommend that the statutory duties

Recommendation VIII.

of the Inspectors of Poor with regard to lunatics be extended to all cases of mental defect, and that the services of Inspectors of Poor be, by arrangement, placed at the disposal of the District Boards.

Grants in aid.

1011. In Scotland a fixed contribution of £90,500 is made by the State towards the cost of maintenance of pauper lunatics under Section 22 (5) of the Local

Government (Scotland) Act, 1889. This is supplemented by a further fixed contribution of £25,000 under Section 2 of the Education and Local Taxation Account (Scotland) Act, 1892. In allocating the grant all expenditure over 8s. a week is excluded, expenditure under and up to 8s. is treated as "admissible expenditure", and the grant is apportioned upon such expenditure so much per £ as far as it will go. The State contribution for the year 1905–1906 was equal to about 3s. 3¼d. per week for each patient, however provided for, for whose maintenance a sum was paid equal to or exceeding 8s. a week. The effect of the grants in Scotland is similar to that in England; and we recommend the adoption of the method of financial aid proposed by Lord Balfour of Burleigh, Sir Edward Hamilton and Sir George Murray, as we have in the case of England, but, failing that scheme, we recommend a continuance of grants from the Exchequer in accordance with the second and alternative recommendation which we have made.

Grants in aid.—*contd.*
Spence, Vol. III., p. 13, c. 1.
Barclay, 23437–23440.
Spence, Vol. III., 20982–4, 20992–5, 21151 21163.
Russell, Vol. III., 23769.
Cf. pp. lxxv.–lxxvi., the 49th Report of the Commissioners in Lunacy for Scotland.
Recommendations XIII., below, and XLI as to England and Wales, above.

If the changes which we propose were made, the grants from the State, under whatever plan they were allocated, would go to the local authority—the District Lunacy Board for the care of the mentally defective—and not to the parish council. The District Board would maintain its patients and would therefore receive the grants direct, instead of as at present, the District Lunacy Boards charging the actual costs against the parish councils, and the parish councils receiving the grants in rebate of that cost.

1012. It would appear that the cost of asylums in Scotland has been in some instances excessive, as in the case of Woodilee and Bangour. It may be a question whether, with a view to economy, the plans and specifications for asylums should not be submitted to the Secretary for Scotland, following the English usage. We recommend that the accounts of the local authority which makes provision for the accommodation of mentally defective persons, should be audited by a Government auditor. The specifications for tenders and contract prices should be examined by the Board of Control. Whatever other changes may be made, we think that this recommendation should, in any case, be made applicable to all District Boards of Lunacy.

Excessive expenditure and audit.
Motion, Vol. III., 21678.
Cf. p. lxv., the 49th Report of Commissioners in Lunacy for Scotland.
Recommendation VI.
Recommendation XIV.

1013. We understand that the Judicial Factors Act of 1880 covers all the classes which are mentioned in our Recommendation III. But if it does not, it should, we think, be extended. It would then, if it does not already do so, serve the purpose of the amendments which we propose should be made in the law of England by the extension of the principle of Sec. 116 (*d*) and (*e*) of the Lunacy Act of 1890 to all these classes. "By the Judicial Factors Act of 1880 the power of appointing judicial factors in cases of estates the yearly value of which does not exceed £100 was extended to the Sheriff Courts in Scotland." By the procedure in force, "a petition is presented to the court by either the *incapax* himself, his relations, or, failing relations, any parties interested." We think that the local authority should have power to petition for the appointment of a judicial factor in these cases, if the relatives do not act; they should also be enabled to petition the court on the request of the relatives and to act for them. To the valuable provisions of the Scottish law for supervising and controlling the estates of persons found by the court to be incapable of managing their own affairs or of giving instructions for their management we have referred at length in Chapter XXXVI.

Benefits of curatorial management should be extended.
Guthrie, Vol. III., 24649.
Brown, Vol. III., p. 41, c. 2.
Sutherland, Vol. III. 24849.
Brown, Vol. III. p. 42. c. 2. 21482.
Recommendation XLI.

In a communication addressed to us by the General Board of Lunacy attention is drawn to Section 81 of the Lunacy (Scotland) Act of 1857, which authorises the Board, if "they have reason to believe that the property of any person detained or taken charge of as a lunatic is not duly protected by being placed under the management of a judicial factor . . . to report in writing to the Lord Advocate; and it shall be competent for the Lord Advocate . . . to make application to the Court of Session . . . to cause the matter to be investigated, and to appoint a judicial factor to such lunatic, with a view to the proper care and protection of his property." "This section," the Board state, "is expressed in such terms as to render it inapplicable to many cases where protection is required." We think it should be revised in the amending Act which we propose, and in which the benefits of the section should be extended to all the classes which come under Recommendation III.

See Summary, Vol. III., p. 328c.
Recommendation XLI.

V.—Certification and General Administration.

Administrative powers of Board of Control.

Recommendation VI.
Spence, Vol. III. p. 9. c. 1.
Lunacy (Scotland) Act, 1857, Sec. 9.
Lunacy Act, 1890 (England and Wales), Secs. 230 to 238.

1014. In Recommendation VI. we make several suggestions in regard to administration which chiefly concern details and respecting which there is, we believe, general agreement. We are of opinion that the General Board of Lunacy should have the same powers of superintendence, management, direction and regulation in the case of Royal asylums as they have under Sec. 9 of the Lunacy Act of 1857, in the case of public, private, and district asylums. To make this change is to follow a precedent that has been found to work well in England; and it seems to us essential, if the whole provision made for the mentally defective in Scotland, including the imbecile and feeble-minded, is to be effectually controlled.

Further, it appears to us that the fifty-first section of the Lunacy (Scotland) Act of 1857 should apply to all asylums, and not to district asylums only. The General Board of Lunacy would then have power to require that in the case of Royal hospitals all plans should be submitted to them, and passed by them, just as in the case of district asylums. This, too, appears to us important, if the care of all classes of the mentally defective are to come under one authority, and the institutions for their maintenance are to be used, extended, and adjusted for their several needs.

On similar grounds, we are of opinion that the General Board should have power to regulate the number of patients of each sex who may be admitted to Royal and to district asylums alike.

Paying patients.
Spence, Vol. III. p. 9. c. 1.
Recommendation XII.

1015. Also we think that district asylums and any other institutions that may in the future be established for the care of the mentally defective should be authorised to supply accommodation to poorer patients at fixed prices, so that the number of so-called pauper patients may not be indefinitely and unnecessarily extended.

Private patients.
Spence, Vol. III. p. 11. c. 2.

Spence, Vol. III., 21005-21008.

Recommendation XX.

1016. In regard to private patients, we are of opinion that Sec. 14 of the Lunacy (Scotland) Act of 1866 should be strengthened. It enacts, that "if any occupier or inmate of any private house shall keep or detain therein without the order of the sheriff or sanction of the Board any person as a lunatic although not for gain beyond the period of one year, and the malady is such as to require compulsory confinement to the house, or restraint or coercion of any kind, such occupier or inmate shall intimate the case to the Board, and shall state the reasons which render it desirable that such lunatic should remain under private care . . ." We recommend that this section should be amended so that all mentally defective persons, and not merely "lunatics," should be included in it. Moreover it would appear desirable when amending the section to provide that notification of the case to the Board should be required within a much shorter period than one year—if, indeed, it should not be required at the outset of the detention; so that notification should be necessary, not only when there is "compulsory confinement" or "restraint or coercion of any kind," but altogether apart from such conditions; and so that the Board should be able to intervene if there is any ground for believing that the patient is neglected or cruelly treated.

Protection of female patients in institutions for the mentally defective.

See Summary of certain points, etc. Vol. III., p. 328c.

Recommendation XLII.

1017. The question as to the protection of female patients in asylums from sexual abuse is summed up in the Statement of the General Board of Lunacy:—"Recent cases have shown that sexual intercourse between an attendant or other person in or near an asylum, whether an employee of the asylum or not, is not under certain circumstances legally regarded as 'abuse' in the sense of Section 99 of the Act of 1857. On the other hand, the provisions of Section 5, Subsection (2) of the Criminal Law Amendment Act, 1885, have been found inapplicable, because the patient, though insane, was not a congenital 'imbecile or idiot' in terms of that Act." The General Board of Lunacy suggest an amendment of the Lunacy Acts so as to provide for the protection of female patients from sexual abuse by anyone knowing the patient to be such. We think that the amendment suggested should extend to all institutions and places in which mentally defective women are maintained.

Removal from the Poor Roll.

1018. In regard to the present law affecting parish councils, it has been pointed out to us in evidence, on behalf of the General Board of Lunacy, that the order of the Board for the removal of a lunatic to an institution is sometimes evaded by the removal of the lunatic from the poor roll.

Graham's Poor Law and Parish Councils Acts, 1897, p. 151. Spence, Vol. III. p. 12, c. 1, and p. 18.

Under Sec. 30 of the Poor Law (Scotland) Act of 1845 the parish council hold at least two meetings in every year at which they revise and adjust the roll of paupers and their allowances. Generally speaking, "Any person disabled from working either by age or by mental or bodily infirmity, and widows or deserted wives who are burthened with infant children, and children under fourteen, are entitled to relief from the parish, who will have recourse against any relatives who may be liable in law to support the applicants." Parochial relief granted to a pauper lunatic results in the name of the lunatic being placed on the roll and on the name being registered in the register of the General Board of Lunacy. If the recipient of relief were a lunatic living in his own family this would hold good equally. In such cases it may be reported to the Board that the lunatic—as for instance, a female of child-bearing age living with her own relations—is insufficiently protected or is cared for in a manner which does not meet with the approval of the Board's officials. The Board would then remonstrate, and if their remonstrances were ineffectual, they would order the removal of the lunatic to an institution. If the relatives object to this they can evade the order by removing the patient from the poor roll. All that it is necessary for them to do with that object is to apply to the parish council and to undertake full responsibility for the maintenance and care of the patient; and the parish council will then grant them a minute for the removal of the patient's name from the roll. The whole purpose of the Board is thus frustrated, with, sometimes, very bad results indeed. We would advise (1) that the parish council be not entitled to remove the name of a lunatic from the roll without notifying the case to the General Board of Lunacy beforehand, so that the Board may be able to intervene, if they so desire; and (2) that the Board in cases of neglect or insufficient care have power to remove the patient to an institution on an order from the sheriff to that effect.

See Forms Vol. III. p. 283, *et seq.*

The definition of a "house" in the Scottish Lunacy Acts.

Lunacy (Scotland) Act, 1857, sec. 3.

Spence, Vol. III., p. 11, c. 2.

1019. Another question turns on a definition. It, like other points which we have raised, confirms us in our view of the necessity of remodelling the Scottish Lunacy Acts. In Section 3 of the Lunacy (Scotland) Act 1857 the word "house" is defined as "any house in which a single lunatic is kept under an order of the sheriff." But the procedure of petition to a sheriff for the committal of a patient to a house has fallen into disuse. By Section 14 of the Lunacy (Scotland) Act 1866 a person may be detained in a "private house" as a lunatic, with the sanction of the General Lunacy Board, as well as by the order of the sheriff. Hence in these cases the former procedure, which is both simpler and more economical, has come to be the only method in force. But not only is this the case. There is no other definition of the word "house" in the Acts. Thus an important provision made in Section 99 of the Act of 1857, so far as it refers to houses is practically nullified. By that provision "if any superintendent, inspector, officer or servant or other person employed in any public, private or district asylum or *house in the terms of this Act* or otherwise, having the care of any person detained as a lunatic patient under this Act, shall wilfully maltreat, abuse or neglect any person so detained to the injury of such person . . . he is liable to punishment." But the word "house" bears here the formal interpretation of the Act of 1857, now altogether out of date; and it does not apply to the numerous private dwellings in which, not by order of the sheriff, but by the sanction of the Board, so many patients in Scotland are now boarded out.

Lunacy (Scotland) Act, 1857, sec. 99.

Recommendation XLIII.

We recommend accordingly: That the definition of the word "house" in Section 3 of the Lunacy (Scotland) Act of 1857 be repealed, and that in the proposed amending Act the following definition be substituted for it; namely, "the word 'house' shall mean a private dwelling, whether it be specially licensed or not."

Settlement.

Lunacy (Scotland) Act, 1857, sec. 75.

1020. In regard to settlement, by Sec. 75 of the Scottish Lunacy Act of 1857, "The residence of any pauper lunatic in any district asylum shall be deemed to be the residence of such lunatic in the parish legally chargeable with the maintenance of such lunatic." We think that this rule should be extended and should apply to the residence of all mentally defective persons in any institution, hospital, establishment, or home licensed for the accommodation, maintenance, care, treatment, education, training or control of any of the classes of mentally defective persons.

Recommendation XV.

Franchise.
Motion, Vol. III., p. 52, c. 1. 21846-21850.
Spence, Vol. III. p. 14, c. 2.
Local Government (Scotland) Act, 1894. Secs. 10 (1), 23 (2), and 27 (1); and Burgh Police Act, 1892, Sec. 31.

1021. Mr. Motion, Inspector of Poor, Glasgow, states that "Every case of lunacy taken over by the parish council pauperises the sufferer except in the case of a dependant wife or child." The right to the franchise in Scotland depends on the payment of rates. In the case of a dependant wife or child this question cannot arise; the head of the family pays the rates. Therefore if he becomes a recipient of poor relief, thus ceasing to be an independent ratepayer, he loses the franchise; but if his wife or child receive relief, he does not lose the franchise. In Scotland, therefore, no special provision for preventing the loss of the franchise, local or parliamentary, in the case of a ratepayer whose mentally defective dependant receives relief is necessary.

VI. Epileptics.

Establishment of epileptic colony homes.
Clouston, Vol. III. p. 200, c. 2.

Ireland, Vol. III. p. 194. c. 1., 23998.
Thomson, Vol. III. 24410.
Motion, Vol. III., 21825, 21826, Vol. III., 21691.
Henderson, Vol. III. 23613, 23614.

1022. There are no sufficient statistics of sane epileptics in Scotland. Dr. Clouston states that "51 per cent. of all epilepsy comes on before fourteen years of age and 95 per cent. before twenty-five. This shows its definite relationship to the developmental period of the brain." Dr. Ireland considers that half the epileptics are sane—a rather optimistic estimate. He suggests a total of the number of epileptics, but it is evidently based on an insufficient count. As in some of the unions in England (*see* Chapter XLII.), so proposals have been submitted to "the general committee of the parishes of Edinburgh, Glasgow and Govan in connection with the erection of suitable homes for epileptics throughout the country." These homes would be for pauper epileptics only, and would take over the epileptics who are now in the poorhouses, which it is admitted are quite unsuitable for them.

Preamble (1). Recommendation XXXVII.

1023. Suitable provision for epileptics is entirely wanting. We think that colony homes should be established for them apart from the Poor Law, and that the homes should be provided for mentally defective epileptics by groups of district boards according to generally ascertained requirements. As regards epileptics not mentally defective, for whom it is thought the demand for provision would be small, we have recommended that the local authority should be authorised to consider and deal with these cases and to provide for their accommodation and maintenance, care, treatment, education, training and control, and with regard to them should have the powers referred to in Recommendations VIII–XVI (inclusive), and in Recommendations XXV–XXXVI (inclusive), so far as may be necessary.

VII.—Glasgow and the Mentally Defective.

The Medical Investigators' Reports as to Glasgow.

Vol. VI., p. 369.

1024. Glasgow in its arrangements for the care of mentally defective persons stands apart from the rest of Scotland, and we have thought it well to consider and report upon it separately. In Glasgow, too, but not in other parts of Scotland, has a medical investigation been made in regard to the number and distribution of mentally defective persons there resident. To this inquiry we will now turn. At Glasgow it was not undertaken, as elsewhere, by a single medical investigator appointed specially for the purpose, but by Dr. Chalmers, the Medical Officer of the City of Glasgow, Dr. Oswald, the Physician Superintendent of the Royal Asylum at Glasgow, and Dr. Carswell, the Certifying Physician in Lunacy for the Glasgow Parish Council and Examiner of Defective Children for the Glasgow School Board, assisted by a corps of eight medical men, "all of them practitioners of standing and some of them having had earlier experience in co-ordinated inquiry." It was thus made practically by the officers of the local authorities with other local assistance.

The area of the medical investigation.
Vol. VI. p. 369, and Tables pp. 69, 73, 55.

1025. The area selected for the investigation was purely urban. It corresponded with the area of the Glasgow School Board, and of the municipality prior to the extension of the boundaries in 1891. The population within it was 623,829 according to the Census of 1901; and the general result of the investigation was to find that in this population 1,614 persons, or ·26 per

cent., fell under some one or other of the mentally-defective classes in the schedule of inquiry. This is a very remarkable result. The figure is considerably less than the number in any of the large towns in England or Ireland, except Hull with Sculcoates, and Cork. The percentages elsewhere run from ·42 (Belfast), ·45 (Manchester), ·50 (Stoke-upon-Trent), ·55 (Birmingham), up to ·84 (Dublin). In Cork the percentage is ·27, and in Hull and Sculcoates it is returned at ·20.

The area of medical investigation—*contd.* Vol. VI., p. 369, and Tables pp. 69, 73, 55.

(1) Poor Law Institutions.

1026. In Glasgow, then, we are dealing with a city which, judged by other standards, is singularly free from mental defectiveness.

To the several groups in the schedule of investigations we will refer in turn. First then, in reference to the Poor Law :—

Poor Law institutions and outdoor relief.

Mr. Motion, the inspector of poor to the parish of Glasgow, stated that in that parish on May 15th, 1906, the number of paupers relieved was 11,418 with 5,258 dependants. Of these there were in poorhouses 3,642 paupers with 282 dependants, while the lunatic poor "in asylums and institutions for imbeciles" was 1,709, together with 438 in private dwellings. Thus of the total paupers in the parish, including dependants, 2,147, or 13 per cent., were certified under the Lunacy Acts. At the time of the medical investigation it was ascertained that (apart from the certified insane or imbeciles) of 4,031 inmates in the institutions of the Glasgow parish, 399 were mentally defective or epileptic, representing a ratio of 9·9 per cent.*

Twelfth Report of the Local Government Board for 1906, pp. 340, 341.

If we may judge by the figures of other cities, these figures represent approximately the number that one might fairly expect to find in an urban poorhouse and poorhouse hospital, though local conditions and habits in particular towns sometimes affect numerical results very greatly.

Vol IV., p. 59, col 16, and Table IV., p. 69, col. 16.

Mr. Motion stated that the position of the inspector of poor in reference to the care of the mentally defective was as follows :—

"The inspector of poor is the administrative officer of the parish council; while the parish council is the only local authority responsible for mentally defective persons, whether children or adults, and whether the defect is congenital or acquired. The inspector is responsible for finding accommodation for all such cases, and this may be done in either of four ways :—(1) By committal to the lunatic asylum; (2) to lunatic wards of poorhouses; (3) by boarding-out in private dwellings in the country, and (4) in imbecile institutions. In Scotland, the parish takes up and deals with all persons requiring relief either from poverty, destitution, illness, or insanity; under which latter head we include imbeciles, idiots, and feeble-minded persons, where their parents or guardians are unable to continue to take care of them, or provide for them in a proper manner.

Motion, Vol. III., pp. 51 and 52.

"While certified lunatics cannot be admitted to ordinary poorhouses the parish of Glasgow is peculiar in having had for several years, at Barnhill Poorhouse, observation wards to which doubtful cases of insanity and cases of *delirium tremens* could be sent for a limited period. This experiment was so satisfactory that, on the erection of our eastern district hospital, a separate block to accommodate fifty patients was provided entirely for mental cases of a similar description. These wards, opened in June, 1904, have been of the greatest service in preventing cases being sent to the asylums.

"The parish medical officers, including our certifying physician in lunacy, determine whether each applicant is lunatic or not, and, according to their certificates, each case is afterwards classified for our different institutions if indoor relief is required. Every case of lunacy taken over by the parish council pauperises the sufferer, except in the case of a dependant wife or child."

1027. Mr. Henderson, the Governor of the Barnhill Poorhouse at Glasgow, in which, it is clear, a very low class of population is received, furnished us with some evidence in regard to the indoor poor at Barnhill, which supplements the above figures in some measure. He submitted tables showing that of 5,588 males admitted in the ordinary wards of the poorhouse in 1905, 4,444 or 79·5 per cent. came from the "models," and only 1,144 or 20·5 from private houses; that 5,334 or 95·5 per cent. drink, and that only 254 or 4·5 per cent. do not drink,

Henderson, Vol. III., p. 168, c.l.

* This figure, it will be understood, excludes 113 children and adults in the Govan Combination Poorhouse of Merryflats and sixty-six children in Larbert Institution. It refers, therefore, not to the Poor Law institutions in the whole area selected for investigation, but to those which are in part of that area only, namely, in the Parish of Glasgow (Vol. VI., p. 375).

Poor Law institutions and outdoor relief—*contd.*

and that 51·1 had been in prison. These figures indicate that the persons admitted to the poorhouse are to a large extent of the lowest grade in the city. Further, in February, 1906, there were in the poorhouse 104 men and 113 women who were, in Mr. Henderson's opinion, feeble-minded or epileptic. They were "persons who certainly were giving indications of weakness of mind," but the medical officer to whom the list was submitted said "that not half a dozen of them could be certified," though he agreed that they were feeble-minded; and "probably," Mr. Henderson stated, "there were a great many more in the house." The number of paupers in the poorhouse on the night of March 31st was 2,047: males, 1,264; females, 783; and the 217 feeble-minded and epileptic persons counted among the inmates in February give 10 per cent. as the number of feeble-minded in the poorhouse population, a figure almost the same as that of the medical investigators.

Henderson, Vol. III., p. 169.

Henderson, Vol. III., p. 171.

Henderson, Vol. III., 23555, 23627-23629.

Henderson, Vol. III., p. 171.

Henderson, Vol. III. 23623, 23626, 23598.

Vol. VI., p. 376.

Of all the mentally defective who are receiving indoor relief in the city poorhouses the Glasgow investigators report most satisfactorily: "The mentally defective," they state, "receive adequate accommodation and care, and where structural arrangements render it possible they are segregated or distributed throughout the wards as seems most desirable, and they are quite under control.'

Mentally defective children.

Motion, Vol. III., 21736, 21741, 21744.

1028. Of the children who are insane, idiot or feeble-minded, the Glasgow Parish Council sends to the home at Larbert sixty-eight, and to that at Baldovan nineteen cases, while thirty-two are sent to the children's asylum connected with the asylum at Woodilee. Accommodation for 250 defective children was required, Mr. Motion considered, in an institution, not in an asylum.

Vol. VI., p. 380.

Of these, too, the Glasgow investigators report most satisfactorily: "The children," they say, "receive such ordinary elementary education and industrial training as they are fitted for. They are well cared for and are completely under control; the management successfully directs considerable attention to providing the condition of a happy life for these children."

Vol. VI., p. 380.

Of the boarded-out children it was not possible to make investigation. The clerk of the parish council stated, however, that the number of mentally defective among them was small.

Mentally defective persons in receipt of outdoor relief.

1029. In regard to persons in receipt of outdoor relief, a list of persons who might be considered mentally defective was obtained from the Poor Law authorities, and these were examined at their houses. The report of the Glasgow investigators in regard to the cases they noted as defective, twenty-one in all, is not so entirely satisfactory: "They (these cases) range from the imbecile who can do nothing to the sane epileptic who cannot get enough employment owing to the recurrence of his malady. The feeble-minded form half of this group. Some of them do light work, others only loaf. The one of unsound mind is a sailor and lies in bed all day. He is suspicious and has delusions, so that his wife is much afraid of him. He should be in an asylum. One of the feeble-minded women is the mother of an imbecile on the list."

Vol. VI., p. 380.

"Ins and-Outs."

Henderson, Vol. III., p. 169.

1030. In the course of the evidence the Glasgow witnesses drew our attention specially to the "ins-and-outs." Of 6,538 men, 3,318 women, and 192 children, 993 were admitted three times during the year 1905, 512 four times, 290 five times, 164 six times, and so forth; and it was alleged that the bulk of these "ins-and-outs" were mentally defective persons who could not be certified as "lunatics" and should be detained compulsorily in poorhouses or labour colonies. The following are one or two cases of this kind which are cited as typical:—

Motion, Vol. III., p. 53, c. 2.

Motion, Vol. III., 21706.

"Record 4–53–106. J. M., 69, painter, nineteen re-applications of which twelve were from 5, Paul Street, where wife and family resided; and seven from Glasgow Cross 'Houseless.' Certified seven times lumbago, catarrh four; rheumatic pains, two; able-bodied, six. Applied first in 1879, and since then has made 202 reapplications, and wife twenty-four. He has been a few times in asylum and prison.

Motion, Vol. III., p. 52, cols. 2.

"Record 3–70–239. W. M., 45, labourer, single, fourteen reapplications; from Drygate Model, four; Night Asylum, four; Portugal Street, one; McAlpine Street Model, one; and four times 'Houseless.' Certified catarrh, four; rheumatics, three; diarrhœa, two; and able bodied, five; applied first in October, 1884, and has made 135 reapplications up till May 15th, 1905.

"Record B4–318. J. M., 45, weaver, single, thirteen reapplications; twice from Salvation Army Home; once each from Cumbernauld, Campsie, Kirkintilloch, and Kilmarnock; twice from Duke Street Prison; and five times 'Houseless.' Certified alcoholism, four; debility, four; footsore, two; bronchitis, three; applied first in September, 1885, and up till May 15th, 1905, she has been considerably over two hundred times chargeable in poorhouse and has been over eighty times in prison for drunkenness and immorality. She has also been in the asylum." "Ins-and-Outs." Motion, Vol. III., p. 52, c. 2.

Unfortunately on this question the report of the investigators throws no light.

1031. Taking these classes in turn—the mentally defective in the poorhouses, the mentally defective children, and the "ins-and-outs," we are of opinion that for the mentally defective who form a considerable part of the population of the poorhouses, provision other than that now available should be made. We do not think that the accommodation provided at Stobhill or Barnhill is suitable as a permanent abode for mentally defective persons generally. Better and more suitable provision could, we think, be made as economically elsewhere. Of the mentally defective who are not "insane," about half (seventy-two) are in the Poor Law hospital at Stobhill, and the other half (seventy-six) at the Barnhill Poorhouse. The maintenance of inmates per head per week in an urban poorhouse is stated to be 5s. 3¼d., and in a large hospital such as Stobhill, 10s. 9½d. The charge for maintenance in a colony where there was no large expenditure on an educational staff should for some classes of the mentally defective not exceed 6s. 4d. per week, the sum now payable by the Glasgow Parish Council for children sent to the Home attached for uneducable children to the asylum at Woodilee. The outlay on the land and buildings also would be much lower than £340 a bed, the sum paid for the Woodilee Home; it should not, we think, exceed or much exceed, £100 per bed. The mentally defective in poorhouses. Motion, Vol. III., 21752, 21755–6, 21681, 21684. Motion Vol. III., 21678.

1032. Next, in regard to the mentally defective children; for these we think that provision should be made outside the poorhouses. Mentally defective children in poorhouses. John Macpherson, Vol. III. p. 30, c. 2.

1033. Lastly, in regard to the "ins-and-outs" who are mentally defective: these, it is clear, belong to the lowest classes of the population. They represent, indeed, in connection with the poorhouses the problem which the "short-sentence" offenders represent in connection with the prisons. Probably they are, in fact, to a large extent, members of the same class who find themselves sometimes in poorhouses, sometimes in prisons, and sometimes in asylums. We think that if possible these cases where there are signs of mental defect, should be examined on the first admission and suitably dealt with; and that certainly on a second or third return to the poorhouse they should be carefully examined and, subject to medical certificates and the order of the sheriff, detained in suitable "colonies" or houses, as may prove best in the particular case. For this and other purposes, possibly, some of the vacant accommodation in poorhouses could be utilised by arrangement, for while the urban poorhouses are crowded, the rural houses, as in many parts of England, have a good deal of vacant accommodation. "Out of a total billet accommodation in Scotland of somewhere about 16,000 there are 3,000 vacant beds." Later on, when records in regard to mentally-defective children are available and preventive action becomes possible, these cases would not recur, and hence probably would not form so large a part of the pauperism of the parish. Mentally defective amongst "Ins-and-Outs." Barclay, Vol. III., p. 163, c.1. Motion, Vol. III., 21765.

1034. The number of feeble-minded women in the maternity wards of poorhouses is exceptionally small. The Governor of the Barnhill Poorhouse, where there is no recognised maternity ward, reported that there were practically no feeble-minded women among those who there gave birth to illegitimate children, and the medical investigators confirm this view. In the various maternity wards of Glasgow during three months there were, they report, sixty-nine confinements, but "none of the mothers were in any way mentally abnormal." Dr. Clouston considered the statement as to the Barnhill Poorhouse "very unusual" and thought that "if other masters of poorhouses were taken to corroborate it, it would not be confirmed." But we have no supplementary evidence on the point. In the case however, of thirty-six unmarried feeble-minded women in the Poor Law institutions of Glasgow, it was ascertained that twenty-four had had no children, but twelve had had each one or more children; which appears to Maternity Wards. Henderson, Vol. III. 23630, 23635, 23639, 23645. Barclay, 23519. Vol. VI., p. 379 Clouston, Vol. III., 24214 5. Vol. VI., p. 378.

Barclay, Vol. III., 23522, 23454–23459, 23524.

support the evidence of Mr. Barclay, the General Superintendent of Poorhouses for the Local Government Board, that though fewer women now resorted to poorhouses for their confinements the class of unmarried women who did so was sufficiently large to call for some regulation. The regulation which he suggested was that "women who come in for the second time should be examined by an expert in mental disease."

(2) Mentally Defective Children.

Mentally defective children in schools.

1035. The report of the medical investigators shows that there were in attendance at the public elementary schools in 1906 at the time of inspection 88,170 children, of these 634 or 7·19 per 1,000 were found to present some degree of mental defect. The number of the estimated school population on the roll in 1906 was 114,568, and the total number of mentally defective children found in this population, including both children attending school and children at home was 724 or 6·3 per 1,000. Merely backward children were excluded from the count. "The children in attendance are drawn from the well-to-do middle classes with ample comforts at one end of the scale and from the homes of the poorest class at the other."

Vol. VI. p. 370. Cf. col. 19 of the Table, Group A. p. 59, and Table III. p. 75, col. 17, Vol. VI., p. 372.

Vol. VI., p. 372.

There are seven * special schools or classes—with 272 children on the roll and 225 in attendance. "If the degree of defect appears to amount to imbecility the case is reported by the school board to the inspector of poor who, in most cases, provides for the child by its removal to an imbecile institution. No difficulty has ever arisen between the two authorities with respect to the care of such children; and if, as occasionally though rarely happens, the parents refuse to allow an imbecile child to be taken into an imbecile institution, such lapse of care is never due to remissness on the part of either the school or parish authority."

Clarkson, Vol. III., 22037–22039.

Equally satisfactory is the investigators' report as to the schooling:—

Vol. VI., p. 373.

"It appears to the reporters that the school board of Glasgow is making adequate provision for the education of the mentally defective children of school age within their area. The results attained are satisfactory, and a moderate extension of present arrangements would seem to meet the requirements."

Of the children at home, except as to the possibility of some of the children attending the special schools or classes, the report is equally good:—

Vol. VI., p. 373.

"The idiots and the imbeciles in this list are in most instances housed at their own homes but some of them live with friends or with people who have undertaken the care of them. They are being adequately attended to so far as the circumstances of each family permit. In no case was there evidence of neglect or ill-treatment. Some of the children are unable to attend because of some associated physical disability such as paralysis, but others might be in school attendance."

Results of "Special Classes."

1036. The results of the special classes do not, however, appear to be better in Glasgow than elsewhere. No doubt the education in cleanliness and manners is of great importance, but there is, as elsewhere, a large number who will never be able to support themselves wholly or in part; as Dr. Carswell said: "I should be surprised if the number of children who passed through the special schools and ultimately become self-supporting reaches 20 per cent." Of thirty-seven children who are mentally defective and were taken off the roll 1901–1906 three were sent on to the school for imbeciles at Larbert, seven were at home unable to work; one is boarded-out, the parents being admitted to the poorhouse; one has been sent back to a Roman Catholic school; one has been imprisoned for assaulting his mother; one has died, five have been drafted into ordinary schools, and five are working. Classification in the special classes is difficult, and to meet this as far as may be possible, it is suggested that a teacher should not have more than twelve to fifteen children under her charge. Boarding schools are required; but these, it is suggested, should be placed under the Board of Lunacy. In the majority of cases the children are removed from school by their parents immediately on reaching the age of fourteen years; and it is reported that, if the children could have two years more training in an industrial school or colony they could make their own way in the world. On all hands it is agreed that after-care in some form is necessary.

Monteagle, Vol. III. p. 263, c. 1 and 2.

* It appears from a letter received by the Commission from the Scotch Education Department, that on March 14th, 1908, there were eight such schools in Glasgow and three in Govan.

1037. The close alliance between the school board, as the education authority, and the parish council, as the local lunacy authority, appears to work well in Glasgow; yet it is clear that as the obligation of dealing with the various classes of mentally defective persons is more seriously and completely undertaken there must be a large extension of provision other than special schools, both for children of school age, and for young persons; and this, we think, will entail reconsideration of many arrangements. The medical investigators write:— Necessity for "after-care." Vol. VI. p. 396.

"It is suggested that further powers are required:—

(1) To enable children to be kept in special schools till sixteen years of age.

(2) To segregate where necessary in farm and handicraft colonies those obviously unfitted to become self-supporting thereafter.

It is not suggested that all those requiring teaching in special classes in school require this after-care; for there would be eliminated:—

(1) Those who had improved so greatly that home treatment might be tried.

(2) Those for whom their parents could provide suitable environment and private supervision.

(3) Those obviously so weak-minded or imbecile that nothing short of asylum or institutional treatment would be of use; those, in fact, who are non-educable.

Some, however, will still remain for whom the farm or handicraft colony appears to offer an opportunity of amelioration or betterment."

They suggest also that the present policy of the school board of Glasgow should be continued, namely, to extend their present special class accommodation so that ultimately all known mentally defective children should be accommodated therein, and this, in their opinion, with careful classification, would meet with presently existing needs. Further, they desire that:— Vol. VI. p. 397,

"There should be compulsory power to retain suitable children at school till the age of sixteen (and where possible it seems desirable that children who are subject to epilepsy should on account of the well-known mimicry of childhood be kept apart from others), and the years from fourteen to sixteen devoted to a cultivation of whatever aptitude for special occupation has been shown by the pupil." Vol. VI. p. 398.

And they report:—

"There is undoubted need of further provision for defective children after they leave school. It is believed that such should take the form of colonies—farm and handicraft—and that with them should be combined a carefully arranged boarding-out system, by which young girls would be placed on probation with suitable mistresses, and young men on farms or at other simple labour. Vol. VI. p. 398.

"Sufficient evidence has come out in this inquiry to show that every possible means should be taken to prevent the production of offspring by such defectives.

"Power should be obtained to compel the attendance by defective children in defective classes, and also to separate them in colonies, though it is believed that in many cases such power would not have to be enforced."

1038. Our view is that the number of mentally defective children who are suitable for special classes throughout the period from the age of five to sixteen is comparatively small, and that therefore there should be in the hands of the local authority ample power to deal with cases in the various ways in which intervention may seem desirable during that period. The special classes will in this way, as we have said elsewhere, become part of a general system for the care of mentally defective children, and their relation to the education supplied by the school boards will thus be greatly modified. For this reason we think it better that the local authority for the care of the mentally defective should be the advisory body in regard to the treatment of these children from the outset, in communication and co-operation with—in Scotland—the medical officer of the school board; and we recommend that the former body may, if it thinks fit, come to some such terms as are suggested in Recommendations XXIX.–XXXI., by which, while the general responsibility for the care of the children remains vested in themselves, the special schools or classes required for the children may, under contract, be provided by the school authority. From a comparatively early period of life, it is evident, the local authority will have to provide accommodation for the care, treatment and training of the children in institutions or homes, the supply and organisation of which would not conveniently devolve on the education authority. While, therefore, by arrangement or contract children suitable for special classes remained under the educational care of the school board, so long as the local authority for the care of the mentally defective thought it desirable, children for whom these classes were considered unnecessary or insufficient, would be provided for by the local authority entirely,

Necessity for one local authority to be responsible for the care, etc., of mentally defective persons.

Recommendation XXIV.

Recommendations XXIX–XXXI.

John Macpherson, Vol. III., 21361 to 21364.

Necessity for one local authority to be responsible for the care, etc., of mentally defective persons—*contd.*

if they needed institutional or other similar aid. The local authority would decide which of the various methods of care and treatment at its disposal would be most suitable for each individual case. For one case the special class might be suitable up to the age of sixteen or longer, for another it might not.

Wardship.

Vol. VI. p. 398.

1039. The necessity for after-care is, as we have said, admitted on all sides. As the medical investigators say: "Sufficient evidence has come out in this inquiry to show that every possible means should be taken to prevent the production of offspring by such defectives;" and compulsory powers are, in their opinion, necessary to enforce the attendance of defective children in defective classes and also to separate them in the colonies. To this we assent. But it appears that in order to exercise the control required for such a purpose, in not a few cases, in which the parents are altogether unsuitable for training or for taking care of their mentally defective children, some kind of wardship is indispensable. Otherwise, when the child is older and may be turned to account for gain, there would be nothing to prevent unscrupulous parents or guardians from withdrawing the child, very much to its detriment and possibly to its ruin. Some other means of protection must therefore be provided, and we recommend accordingly an extension of the curatorial system, not on the basis of the preservation of property, but on that of the safeguard of the person.

Recommendation XVI.

(3) Other Groups of Mentally Defective.

Mentally Defective Persons in Common Lodging Houses, etc., etc.

1040. A day count of sixty-three common lodging-houses, including the larger "models" and having a total bed accommodation for 9,768 persons, led to thirteen males and three females who were mentally defective being found there. The provision of common lodging-houses in Glasgow is exceptionally extensive, and consists more than elsewhere of tenements built for a rather low class of working men. The statistics in regard to these houses and tenements cannot well be compared, therefore, with those of other towns, though generally in the actual "common lodging-house" class the cases of mental defect appear to be few. The "models" contain a considerable number of persons of a low class, who find their permanent abode there, and among them it is said, are, to a large extent, the "ins-and-outs," of whom it was stated to us that very many were mentally defective. Yet according to the statistics this does not seem to be the case, and they suggest that the number of the mentally defective among the "ins-and-outs" in Glasgow has been somewhat over-estimated. In any case the small number of persons returned as mental defectives in this large population of the lowest classes is very remarkable, and shows how exceptional is the position of Glasgow. This is confirmed by two other entries in the schedule. There were at Glasgow no returns reported from "other sources"; while at Stoke-on-Trent there were seventy-eight, at Birmingham ninety-five, and at Manchester 232. Also, though there are in Scotland no special institutions for idiots apart from Larbert and the children's buildings of the Woodilee Asylum, who are paid for by the Poor Law authorities, there are no persons entered as idiots resident in lunatic asylums, as against three in Stoke, ten in Birmingham, and fifty-four in Manchester. And the number of the weak-minded in prison was comparatively low also; at Glasgow thirty-five out of 1,075 seen; of feeble-minded in Stoke thirty-three out of 169; in Birmingham forty-four out of 403; in Manchester 139 out of 1,048.

RECOMMENDATIONS AS TO SCOTLAND.

CHAPTER XLV.

PREAMBLE.

It has appeared to the Commissioners desirable that this short preamble should be prefixed to their Recommendations. The following are points which should be borne in mind in reference to the Recommendations as a whole:—

(1.) It is not intended that the maintenance at public expense of the mentally defective, or of epileptics not mentally defective, should be extended to those who either at their own cost or at that of their relatives or friends can be otherwise suitably and sufficiently provided for.

(2.) It is intended that all existing powers relating to "insane" persons as defined in the Court of Session Act, 1868, or to "lunatics" as defined in the Lunacy (Scotland) Act, 1862, Sec. 1., should be preserved and extended to all classes of mentally defective persons, as defined in Recommendation III.

(3.) The three methods of oversight, certification, and detention are recommended as available for the mentally defective; they will be applied subject to statutory safeguards and at the advised discretion of a responsible Committee. According to the different classes, for some oversight will suffice, for others certification, and for others certification with an order for detention. The aim of the scheme is the application of particular methods suitable for the cases of different persons, not the general adoption of any one method exclusively. We have described these methods either in this Report or in our Report as to England and Wales above.

See paragraphs 372 683–754, 763.

In conclusion we would sum up our Recommendations as to Scotland as follows:—

Recommendation I.

That the General Board of Lunacy in Scotland undertake the general protection and supervision of all mentally defective persons, and the regulation of the provision made for their accommodation and maintenance, care, treatment, education, training and control, and that it be designated the Board of Control and its members Commissioners of the Board of Control.

Central Authority for the protection and supervision of the mentally defective.

Recommendation II.

Amending Act for the care and control of the mentally defective.

That consistently with the above Recommendation and in view of the alterations in administration and procedure suggested below, the necessary changes be made in the Lunacy (Scotland) Acts, 1857, 1862 and 1866, the Criminal and Dangerous Lunatics (Scotland) Amendment Act, 1871, the Prisons (Scotland) Act, 1877, and the Lunacy District (Scotland) Act, 1887, and that such new statutory provisions as may be required for bringing the complete scheme into operation should be embodied in an amending Act for the care and control of the mentally defective.

Recommendation III.

Classes of persons supervised by the Board of Control.

That the statutory use of the word "lunatic" be discontinued; that the term "Hospital" be substituted for the word "Asylum"; and that the term "mentally defective" be defined in the proposed amending Act for the Care and Control of the Mentally Defective, as comprising the classes of mentally defective persons who are placed under the general protection and supervision of the Board of Control and are set out below:—

See paragraph 563.

(1) "Persons of unsound mind," *i.e.*, persons who require care and control owing to disorder of the mind and are consequently incapable of managing themselves or their affairs, and are not included in Classes (2), (3), (4), (5), (6), (7), (8), and (9), below.

(2) "Persons mentally infirm," *i.e.*, persons who, through mental infirmity, arising from age or from the decay of their faculties, are incapable of managing themselves or their affairs.

(3) "Idiots," *i.e.*, persons so deeply defective in mind from birth or from an early age that they are unable to guard themselves from common physical dangers, such as in the case of young children, would prevent their parents from leaving them alone.

(4) "Imbeciles," *i.e.*, persons who are capable of guarding themselves against common physical dangers, but who are incapable of earning their own living by reason of mental defect existing from birth or from an early age.

(5) "Feeble-minded," *i.e.*, persons who may be capable of earning a living under favourable circumstances, but are incapable from mental defect existing from birth or from an early age: (*a*) of competing on equal terms with their normal fellows; or (*b*) of managing themselves and their affairs with ordinary prudence.

(6) "Moral Imbeciles," *i.e.*, persons who from an early age display some mental defect coupled with strong vicious or criminal propensities on which punishment has little or no deterrent effect.

(7) "Epileptics," *i.e.*, persons who, being epileptics, are also mentally defective.

(8) "Inebriates," *i.e.*, persons who, being inebriates, are also mentally defective.

(9) "Deaf and Dumb" or "Blind," *i.e.*, persons who, being deaf and dumb or blind, are also mentally defective.

Recommendation IV.

See Paragraphs 1000-1004.

Form of Certificate.

That the form of the medical certificate under the Lunacy (Scotland) Acts be amended so that (1) the words "mentally defective" take the place of the words "a lunatic, or an insane person, or an idiot, or person of unsound mind"; (2) there be printed on the back of the certificate the definitions of mentally defective persons referred to in Recommendation III.; (3) that the medical person state in a note to the form within which class, in his opinion, the mentally defective person comes.

Recommendation V.

Annual Report of Board of Control.

That the Annual Report issued by the Board of Control should include particulars of methods of treatment for mental defect in Scotland and elsewhere, accounts of new results of medical science and progress in regard to the proper care and supervision of the several classes of defective persons, with the necessary statements of expenditure, plans, etc., etc., and that economy in construction and management of institutions should be a question considered and reported upon by the Board from year to year in their Annual Report.

Recommendation VI.

See Paragraphs 1014.

Powers and duties of the Board of Control.

That the Board of Control have, amongst others, the following powers and duties, viz.:—

(1) To regulate the action of the Local Authorities in the execution of their duty in dealing appropriately with mentally defective persons in accordance with Recommendation IX.

(2) To inspect the ordinary wards of all poorhouses, and to draw the attention of the local authorities to cases of mentally defective paupers who, in their opinion, should be transferred from the ordinary wards of poorhouses to suitable places, and if necessary, to order that such transfer be made.

(3) To superintend, manage, direct and regulate all institutions for the mentally defective in the same manner as provided under Section 9 of the Lunacy Act of 1857 in the case of private and district asylums.

(4) To require the submission of plans of all institutions for the mentally defective in the same manner as is now required of district asylums under Section 51 of the Lunacy Act of 1857, and to decide from their expert point of view, with such architectural assistance as may be necessary, whether they are *prima facie* suitable for the purpose intended and involve no unreasonable expenditure.

(5) To regulate the number of patients of each sex who may be admitted to any institution for the mentally defective.

Recommendation VII.

See Paragraphs 1007-1010.

Local Authority to make provision, etc., for care and control of mentally defective persons.

That under the proposed amending Act for the care and control of the mentally defective, the District Board of Lunacy to be called the District Board for the Care of Mentally Defective Persons be the Local Authority, and be required by Statute directly or by contract with other authorities or persons to make suitable and sufficient provision for the care and control of the mentally defective in their area in institutions, houses or homes, in observation or reception wards, or by "boarding-out," or in any other way of which the Board of Control shall approve.

Recommendation VIII.

Duties of Inspectors of Poor.

That the statutory duties of the Inspectors of Poor with regard to lunatics be extended to all cases of mental defect, and that the services of Inspectors of Poor be, by arrangement, placed at the disposal of the District Boards for the care of the mentally defective.

Recommendation IX.

Medical officer to be appointed by the local authority.

That subject to the approval of the Board of Control, the District Board for the care of the mentally defective appoint a specially qualified medical officer or officers to assist them in the care and control of the mentally defective in their area, on the understanding that the internal management of Institutions should remain in the hands of the Superintendents in charge of them, subject to the supervision and authority of the District Board.

Recommendation X.

Duty of Local Authority to receive requests as to provision and to report to Board of Control in case of refusal of requests.

That it shall be the duty of the local authority to supervise the execution by the Inspector of Poor of his statutory duties to mentally defective persons; to receive from parents and others requests for the provision of care and control of mentally defective persons of whom they have charge; and on the receipt of such requests it shall be the duty of the local authority, after making all necessary enquiries, to arrange for the admission of those mentally defective persons into suitable institutions or houses or into suitable private care; and in the event of the local authority failing to provide such care for any such case it shall be a duty of the local authority to report the fact that they have not acted on such request, and the reasons for not so acting, to the Board of Control.

Recommendation XI.

Discretion of Local Authority as to method of dealing with particular case.

That subject to the Regulations of the Board of Control it shall be at the discretion of the local authority to deal with mentally defective persons on whose behalf they deem that intervention on their part is necessary as they shall think best in the individual case, either registering the case only, or having it certified also, or taking steps for its certification and detention, or placing it in an institution or home or house or boarding it out under private care, or leaving it to the care of its parents or guardians with or without the appointment of a friendly visitor (Cf. Recommendation as to England and Wales, LI.), or placing it in the licensed ward of a poorhouse, or taking any other measures that seem to them desirable.

Recommendation XII.

Local Authority may, on payment, provide for non-pauper cases.

That the local authority may, subject to the regulations of the Board of Control, provide accommodation on suitable payments for mentally defective persons who might be fully and sufficiently provided for otherwise at their own charges or at the charges of their relatives or friends.

See Paragraph 1015

Recommendation XIII.

See paragraph 1011.

Exchequer grant payable to local authorities.

That substantial financial assistance be granted from the Exchequer to the local authorities for the care and maintenance of mentally defective persons and epileptics not mentally defective, on the lines suggested in Recommendation XL. to XLII. as to England and Wales.

Recommendation XIV.

See paragraph 1012.

Audit of accounts of Local Authority.

That the accounts of the local authority which makes provision for the accommodation of mentally defective persons be audited by a Government Auditor and that the specifications for tenders and contract prices be examined by the Board of Control.

Recommendation XV.

See paragraph 1020.

Time of residence in any institution for the mentally defective not to count for acquisition of settlement.

That the residence of any pauper mentally defective person in any institution, hospital, establishment, or any home licensed for the accommodation, maintenance, care, treatment, education, training or control of any of the classes of mentally defective shall be deemed to be the residence of such mentally defective person in the parish chargeable with the maintenance of such mentally defective person.

Recommendation XVI.

See paragraph 1039.

Cases under twenty-one not under suitable parental or other control, etc.

That it is desirable that in the case of persons under twenty-one years of age for whose care and control any local authority is required to make suitable and sufficient provision, and who, in its opinion, are not under suitable parental or other control, and are not receiving suitable training, or are cruelly treated, or otherwise neglected, the local authority have power to resolve that until the child reaches the age of twenty-one the rights and powers of the parent or guardian vest in the District Board, subject to such conditions and appeal as may seem necessary (Cf. Recommendations as to England and Wales, XLIX. to LI.)

Recommendation XVII.

Inquiry as to number of mentally defective persons.

That with a view to facilitate the work of the local authority in the first instance it shall be its duty in pursuance of regulations to be laid down by the Board of Control to ascertain as far as possible the number of mentally defective persons for whom it is liable to provide, either by its medical officer or by a well qualified medical man appointed for the purpose.

Recommendation XVIII.

Report as to recurrent cases of unsound mind.

That it shall be the duty of medical officers who are in charge of asylums for persons of unsound mind, receiving houses and reception wards, to report to the local authority for special consideration the cases of persons who are repeatedly certified and admitted and repeatedly discharged, or who are in such a mental condition as would be likely to occasion their relapse under the stress of life, with a view to care and control being exercised in regard to them, if desirable, in some other and more effectual manner; and in cases of doubt whether the patient should or should not be discharged there may be an appeal to the Board of Control on the question and the decision of the Board shall be final.

Recommendation XIX.

Notification of mentally defective persons.

That it be the statutory duty of the medical officers of school boards, of the parish councils, of the governors of poor-houses, the inspectors of poor, the medical officers of prisons, the police, and the managers of any reformatories for inebriates or any charitable, religious or voluntary institutions or societies, or any naval or military authorities, to notify to the Board of Control and to the local authority all cases of mental defect which come to their knowledge in the course of duty and appear to fall within Recommendation III. above, provided always that the Secretary for Scotland may, on special grounds to be stated in the Annual Report of the Board, by regulation exempt any particular authorities from the fulfilment of this duty.

Recommendation XX.

Private patients not kept for gain.

That Section 14 of the Lunacy (Scotland) Act, 1866, be extended so as to cover all cases of mentally defective persons. *See* paragraph 1016.

Note.—The Lunacy (Scotland) Act, 1866, Section 14, above referred to is as follows:—

"If any occupier or inmate of any private house shall keep or detain therein, without the order of the Sheriff or the sanction of the Board, any person as a lunatic, although not for gain, beyond the period of one year, and the malady is such as to require compulsory confinement to the house, or restraint or coercion of any kind, such occupier or inmate shall intimate the case to the Board, and shall state the reasons which render it desirable that such lunatic should remain under private care; and if the Board shall have reason to believe or suspect that any lunatic, or any person treated as a lunatic, whose case has thus been intimated to them, or of whose case no such intimation shall have been made, has been subjected to compulsory confinement to the house, or to restraint or coercion of any kind, at any time beyond a year after the commencement of the malady, or has been subjected to harsh and cruel treatment, it shall be lawful for the Board, with consent of one of Her Majesty's principal Secretaries of State, or of Her Majesty's Advocate for Scotland, to authorise and empower any one or more of the members thereof to visit and inspect such lunatic or person detained as a lunatic, and to make such inquiry respecting his treatment as to such member or members may seem fit; and if on such inquiry it shall appear that such person is a lunatic, and has been so for a space exceeding a year, and that compulsory confinement to the house, or restraint or coercion of any kind has been resorted to, or that he has been subjected to harsh and cruel treatment, and that the circumstances are such as to render the removal of such lunatic to an asylum necessary or expedient, it shall be lawful for the Board to apply to the Sheriff, under a procedure similar to that followed in the cases of dangerous lunatics, and the Sheriff, on being satisfied that the person is lunatic, and has been so for more than a year, and is subjected to compulsory confinement, or to restraint or coercion of any kind, or to harsh and cruel treatment, shall issue his order for the transmission of the lunatic to an asylum, and his detention therein until such time as the Board shall sanction his discharge; and the Sheriff shall grant decree for the expenses of the inquiry and procedure, and also for the maintenance of the lunatic in the asylum, against the parties legally liable for the maintenance of such lunatic."

Recommendation XXI.

Transfer from one institution to another, or to private care, or *vice versa*.

That in the case of mentally defective persons dealt with by the local authority no transfer, except as mentioned in the proviso below, shall take place from one institution or home to another or from an institution or home to private care or *vice versâ* without the authority of the local authority and subject to their approval as to the selection of the institution or private care to which the mentally defective person is to be transferred, and the Board of Control shall make such regulations as may appear to them necessary in relation to the several classes of cases for reports of transfers being made to them, and for the granting or withholding of their consent, provided always that the Board of Control may order the transfer of any particular case where it appears to the Board that such transfer is desirable. *See* paragraph 978.

Recommendation XXII.

Medical Officer, honorary or paid, for every institution.

That every institution or home for the care of the mentally defective shall be licensed, and every licensed institution for the care of the mentally defective shall through its committee of management appoint an honorary or paid medical officer as a condition of its licence, who shall give such attendance as may be directed by the Board of Control.

Recommendation XXIII.

That the Education of Defective Children (Scotland Act), 1906, be amended so that the provisions of that Act shall no longer apply to mentally defective children or to epileptic children so afflicted by severe epilepsy as to be unfit to attend ordinary public elementary schools.

Amendment of Education of Defective Children (Scotland) Act, 1906.

Recommendation XXIV.

See paragraph 1038.

That the local authority be under statutory obligation to provide for the manual and industrial and other training of all mentally defective children who come under Classes (3) to (9) inclusive, in Recommendation III., except such children who have not otherwise been properly and suitably provided for.

The local authority to be responsible for education of mentally defective children.

Recommendation XXV.

That the School Boards place at the disposal of the medical officer of the local authority the register and roll of children who are of age to attend school, and notify to him any cases of children of that age who are thought to be mentally defective, as defined in Recommendation III., and that the medical officer of the local authority, after consultation with the medical officer of the School Board, report all such cases to the local authority with a view to action being taken.

School Board to submit attendance register of children and notify mental defectives to medical officer of local authority.

Recommendation XXVI.

That the local authority, in making their arrangements under the above Recommendation, shall provide facilities for enabling any parent who is of opinion that his child ought to be dealt with under the proposed new Act to present such child to the medical officer of the local authority to be examined, although he may not have been required so to do by the local authority, and any local authority failing to provide such facilities shall be deemed to have acted in contravention of the proposed new Act.

Examination of alleged mentally defective child by medical officer of local authority.

Recommendation XXVII.

That the medical officer of the local authority, if he is of opinion that any such child is mentally defective as defined in Recommendation III., shall report to the local authority to that effect.

Report of medical officer of the local authority.

Recommendation XXVIII.

That it shall be the duty of the parent of any child who may be required by the medical officer of the local authority to attend for the purpose of examination, to cause such child to attend with that object, and any parent who fails to comply with such requirement shall be liable, on summary conviction in a Sheriff Court, to a fine not exceeding five pounds, or in default of payment to imprisonment not exceeding sixty days.

Duty of parent to cause child to attend medical examination.

Recommendation XXIX.

School Board to be under statutory obligation to contract with the local authority as to existing special schools or classes.

That where a School Board has made provision for the education of mentally defective children by special classes in public elementary schools or by boarding-out or by establishing schools:— *See* paragraph 1038.

(1) The classes or schools or the arrangements for boarding-out children shall pass under the control of the Board of Control and shall not remain under the control of the Education Department.

(2) The school authority shall be under statutory obligation in the case of special schools or classes previously certified by the Education Department to contract with the local authority for the education of such mentally defective children as the local authority may deem it advisable to educate in that manner.

(3) The school authority shall be under statutory obligation in the case of mentally defective children boarded-out subject to the regulation of the Education Department, to transfer to the local authority any contracts that they may have entered into in regard to such children.

(4) The school authority shall be under statutory obligation in the case of schools established for mentally defective children and previously certified by the Education Department, if the local authority so desire, to transfer such schools to the local authority at a price to be agreed upon, or failing that by arbitration, or to contract with the local authority for the education of mentally defective children in these schools, and to carry on the schools in order to fulfil the terms of the contract made with them.

Recommendation XXX.

The local authority to pay for children admitted as mentally defective in special schools or classes already established.

That in regard to special schools or classes now in existence under the Education of Defective Children (Scotland) Act, 1906, the children admitted to these classes as mentally defective be paid for by the local authority.

Recommendation XXXI.

Establishment of new special schools or classes, institutions or homes

That subject to the approval and regulations of the Board of Control special schools or classes and institutions or homes, residential or other, necessary for the education of the mentally defective may hereafter be established either by the local authority or by the School Board at the request of the said local authority, and the local authority shall have full power to transfer children from schools or classes to institutions or homes, or *vice versa*, as in the interests of the children they think necessary, or to board out children, if necessary, near a special school or class.

Recommendation XXXII.

The local authority to pay for children kept for observation purposes in existing or future special schools or classes, institutions or homes.

That children, in regard to whom it is a matter of uncertainty whether they are mentally defective or not, may be placed on a special probationary list and retained for such period as may be considered necessary in a special class, school, institution or home for the mentally defective for purposes of observation, until it is decided whether such children should be adjudged mentally defective or merely dull and backward; and that the cost of their maintenance while in such class or school under probation be paid for by the local authority.

Recommendation XXXIII.

Periodical examination of children in special schools and classes.

That the local authority shall arrange for the frequent and periodic examination of the mentally defective children in special schools or classes, with a view to determining whether they should continue in such classes, or whether their education should be otherwise provided for.

Recommendation XXXIV.

Transfer of a child no longer mentally defective from care of the Local Authority to the care of the School Board.

That in the case of any child of school age who has been dealt with by the local authority as mentally defective, it shall be the duty of the medical officer, at any time, if the child, in his opinion, is not mentally defective, to report the case to the School Board, on whom the education of the child will from that date *ipso facto* devolve.

Recommendation XXXV.

Duty of parents to provide for education, instruction or training of mentally defective child.

That the duty of a parent under the Elementary Education Scotland Acts to provide elementary instruction for his child shall, in the case of any child coming within classes 3 to 9 of Recommendation III., include the duty to cause the child to attend a class or school, or to reside in any home or institution for the instruction or training of the mentally defective, from and up to such age as in the interest of the child may, on the report of their medical officer, seem necessary to the local authority, whether this instruction or training be provided by the School Board in contract with the local authority or by the local authority itself; and a parent shall not be excused from this duty by reason that a guide or conveyance is necessary.

Recommendation XXXVI.

Guides and conveyances for children attending special schools, etc.

That in the case of children who, in the opinion of the local authority, cannot be trained suitably except at a special school or class, the local authority shall provide guides or conveyances if, in the judgment of the local authority and its medical officer, the children without this provision would be unable to attend the school or class in question.

Recommendation XXXVII.

Epileptics not mentally defective.

See Paragraph 1023.

That the Board of Control be empowered to register, inspect, and report on all institutions or houses for the care of epileptics not provided for as mentally defective, and to regulate the same if they form part of an institution for the mentally defective, and that the local authority be authorised to consider and deal with the cases of these epileptics and to provide for their accommodation and maintenance, care, treatment, education, training and control, and with regard to these epileptics shall have the powers referred to in Recommendations VIII.—XVI. (inclusive), and in Recommendations XXV. to XXXVI. (inclusive) so far as may be necessary.

Recommendation XXXVIII.

See Paragraphs 987–988.

The Inebriates Act.

That as it appears that many mentally defective cases are at present dealt with in Scotland under the Inebriates Acts, it is desirable that those Acts be amended so far as may be necessary in order to make it clear that the local authorities shall be under the obligation of dealing with such inebriates as are mentally defective.

Recommendation XXXIX.

Mentally defective prisoners to be sent to suitable institutions.

That Section 89 of the Lunacy (Scotland) Act of 1857 be brought into regular use for dealing with cases of mentally defective persons in prison, and that it be amended so as to make it clear that the charge for the maintenance of such prisoners in institutions other than prisons shall fall on the funds of the Local Authority liable for their maintenance, unless in his discretion the Secretary for Scotland direct otherwise; and that Section 6 of the Criminal and Dangerous Lunatics Amendment Act, 1871, be retained and extended to cases of mentally defective persons.

See Paragraphs 98 986.

Recommendation XL.

Criminal mentally defective persons.

That the attention of the Secretary for Scotland be drawn to the Recommendation No. LXXXVII., made by the Commission in regard to criminally mentally defective persons in England and Wales.

See Paragraph 98

Recommendation XLI.

Extension of the Judicial Factors Act.

That the Judicial Factors Act, 1880, be extended to cover all classes of mentally defective persons as defined in Recommendation III., unless on consideration it is decided that it already applies to all these classes; that Section 81 of the Lunacy Act of 1857 be amended so as to make it effective for protecting the property of mentally defective persons, and that it be provided that, either at the request of the relatives or friends of the mentally defective person or on the failure of the relatives or friends to take action, the local authority may present a petition under the said Act, as "next friend" of the mentally defective person.

See Paragraph 101

Recommendation XLII.

Protection of female patients.

That for the better protection of mentally defective female patients the Lunacy (Scotland) Act, 1857, Section 99, and the Criminal Law Amendment Act, 1885, Section 5, Sub-section (2), be amended.

See Paragraph 101

Recommendation XLIII.

Alteration of definition of the word "house."

That the definition of the word "house" in Section 3 of the Lunacy (Scotland), Act of 1857 be repealed, and that in the proposed Amending Act the following definition be substituted for it; "the word house shall mean a private dwelling, whether it be specially licensed or not."

See Paragraph 101

THE ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED.

PART XIII.

IRELAND.

CHAPTER XLVI.

Reference to the Commission.

1041. Under our original reference which included Ireland, we were empowered "to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded, or defective persons not certified under the Lunacy Laws; and in view of the hardship or danger resulting to such persons and the community from insufficient provision for their care, training, and control, to report as to the amendments in the law or other measures which should be adopted in the matter, due regard being had to the expense involved in any such proposals, and to the best means of securing economy therein."

Extended reference as to England and Wales.

1042. Our extended reference, which, however, related to England and Wales only, enabled us to enquire into the constitution, jurisdiction, and working of the Central Lunacy Authorities, and to advise whether any other system of supervising all mentally defective persons should be adopted.

General principles of our Report as to England and Wales applicable to Ireland.

1043. We are of opinion that the general principles which underlie the conclusions at which we have arrived with regard to the mentally defective classes in the rest of the United Kingdom, should be adhered to in Ireland, although there are important local differences in Ireland which would make it essential that in some matters of detail the methods of treating the problem there, should be different.

Advisability of strong Central Authority.

1044. Although we are debarred by the limitations of our original reference in relation to Ireland from definitely recommending the establishment of one Central Authority for the supervision, protection, and oversight of the accommodation and maintenance, education and training, care, treatment and control of all mentally defective persons, we would earnestly call attention to the recommendations of the Report of the Committee appointed by the Lord-Lieutenant of Ireland on Lunacy Administration (Ireland) [C. 6434] which was issued in 1891. We would suggest that the inspectors of lunatics in Ireland, together with the Lord Chancellor's Registrar in Lunacy, should form the nucleus of the Central Authority.

Recommendation VI.

Report of Committee on Lunacy Administration in Ireland, 1891. C. 6434, p. 67.

1045. The Report referred to used the term "lunatic" throughout "in a generic sense, to cover all forms of unsoundness of mind, whether congenital or acquired, including, for example, idiots and imbeciles as well as maniacs, melancholics and dements." The Committee, in fact, used this term "lunatic" as equivalent to the term "mentally defective," used by us. They made a careful and prolonged enquiry into the question of Lunacy Administration in Ireland, and arrived at the same conclusion as we have done with regard to England and Wales, as to the need of the establishment of a strong Central Authority to deal with all classes of mental defect, and our evidence shows that the general problem in Ireland is essentially the same as in England and Wales, and that the need of a strong central control is as necessary in Ireland as in England. In Ireland we only find two inspectors of lunatics with comparatively limited powers, and it is obvious that these inspectors, even though strengthened by the addition of the Lord Chancellor's Registrar in Lunacy, would need additional help if their work is to include the supervision of all classes of mentally-defective persons as suggested by us. This additional help might be secured by the appointment of inspectors from time to time as the business increased, to work under the direction of the Central Authority.

Evidence heard by Commission in Ireland.

1046. We visited Dublin and Belfast in March, 1906, and inspected numerous institutions in the localities, including the Stewart Institution for Imbeciles, etc., and heard the evidence of the chief officials of the Government Departments concerned, and of others having experience of the classes referred to in our reference.

Appointment of Irish Medical Investigators.

1047. We appointed medical investigators to make a thorough enquiry into the number of mentally defective persons and epileptics in three urban areas, viz., Dublin, Belfast, and Cork, and in one rural area, viz., Galway, in the hope that we might be able, from the results obtained in these districts, to form at least a rough estimate of the whole number of mentally defective persons and epileptics in Ireland, and the provision that it would be necessary to make for their accommodation.

Appointment of Irish Honorary Assistant Commissioners.

1048. In connection with our investigations in Ireland, the Secretary of State for the Home Department, at the request of our Chairman, and with the assent of the Lords' Commissioners of His Majesty's Treasury, on July 17th, 1906, appointed Sir George Plunkett O'Farrell, M.D., Inspector of Lunatics in Ireland and Mr. Joseph Mooney, J.P., to be Honorary Assistant Commissioners. We have had the advantage of the aid of these gentlemen in preparing our scheme as to Ireland, and they are in full accord with our proposals.*

Personal Investigation by Commissioners as to local conditions in Ireland.

1049. In September, 1906, we formed two parties, each party being accompanied by one of the Honorary Assistant Irish Commissioners, to make as close a study as time would permit of local conditions. One party travelled for three weeks through the North of Ireland, and the other for the same period through the South of Ireland. During that period, we interviewed a large number of persons who had special knowledge of the local conditions, and visited thirty-five schools, thirty-two workhouses, and ten asylums, besides prisons, reformatories, etc.

The Poor Law in Relation to Mentally Defective Persons.

Unsuitability of Poor Law Authorities as authorities to deal with mentally defective persons.

1050. In our Recommendations regarding England and Wales we have definitely recommended that there should be only one Central Authority dealing with the supervision, etc., of all classes of mentally-defective persons, and only one local authority in each area, viz., the county council or county borough council, which should be responsible for the provision of accommodation, etc., for their care and treatment, and that these duties should not be imposed on any Poor Law Authorities.

Unsuitability of Poor Law Authorities in Ireland to deal with mentally defective persons.

Vice-Regal Commission Report on Poor Law Reform, 1906. Cd. 3202. paragraph 155, p. 39.

1051. In the case of Ireland, the evidence given before us and the opinions expressed during our visit, no less than our own personal observation and that of our medical investigators, convinced us that the case for the removal of all mentally defective persons in Ireland from the care and control of the Poor Law Authorities is absolutely overwhelming. We would refer, also, to the recent Report of the Vice-Regal Commission on Poor Law Reform in Ireland issued in October, 1906, which recommended :—

> (1) That all lunatics, idiots and other cases of mental disease in Irish workhouses, should be removed therefrom; and
>
> (2) That the Auxiliary Lunatic Asylum system ought to be extended for the reception of all chronic and harmless lunatics who are now in workhouses.

Recommendations XVIII. and XXX.

With these recommendations we concur, although we are of opinion that certain patients might be allowed by the county council or county borough council, as the local authority responsible for the care and control of mentally defective persons, to remain with the guardians, temporarily at any rate. All these cases would be paid for by the local authority, and be under its supervision. A patient ought to be removed at any time if the local authority considered that the accommodation provided was no longer suitable for it.

Opinions of witnesses as to unsuitability of Workhouse Accommodation for mentally defective persons.

O'Farrell, Vol. III., 22081, p. 78, col. 1.

1052. At least seventy witnesses before the Vice-Regal Commission on Poor Law Reform in Ireland recommended that all lunatics should be transferred from workhouses to asylums, and no evidence was given in favour of a continuation of the present system. The evidence given before us was equally unanimous.

Sir George O'Farrell, Inspector of Lunatics and Lunatic Asylums in Ireland, says the condition of the idiots and imbeciles in workhouses is, with few exceptions, deplorable. He gives the following striking instances of the benefits

* *See* Memorandum, p. 472, *post.*

resulting from the removal of certain individual cases from the workhouse to one of the large district asylums, an institution which, though far preferable to a workhouse, is unnecessarily expensive and by no means well adapted for the detention and treatment of many of these cases.

Opinions of witnesses as to unsuitability of workhouse accommodation for mentally defective persons – *contd.*

"*A.McD.* (imbecile); age 25. Admitted 1–2–1898, in a strait jacket. Duration of attack three weeks. Medical certificate states that she refused to take her food, threatened to strike, stripped off her clothes, beat the attendants and other patients.

"1–2–98. Dull, stupid, disinclined to talk, looks about in a vacant way, takes food fairly well. O'Farrell Vol. III., p. 78, c. 1.

"3–2–98. Takes food well, not speaking or answering questions.

"4–2–98. To-day employed at needlework, and taking food well (three days after admission).

"1906. The patient works well. Is a happy, restless person with no impulsive symptoms whatever."

"*A. McA.* (imbecile); age, 22. Admitted 5–7–1898 in a strait jacket. Duration of attack one week. Medical certificate states—strikes attendants, spits at attendants, tears her clothing, and screams. Uses filthy language. Refuses to wear her clothing, and strikes other patients.

"6–7–1898. As patient was brought here in a strait jacket, one must naturally conclude that she has recently been excited and violent. Since admission here, however, she has been fairly quiet. She sits by herself, occasionally she starts laughing very loudly; when questioned she makes long rambling statements having no obvious relation to the questions asked.

"1906. The patient has never caused any trouble since admission, with the exception of attacks of bad temper; she works, is quiet and happy. Very fond of reading. Her sister is also a patient here."

"*M.P.* (idiot); age, 20. Admitted 25–1–1901. Duration of attack two days. Medical certificate states singing and throwing stones around her. Shouting a good deal. Talks nonsense. Tried to strike other patients. Nurse reports her noisy, singing, clapping her hands, struck at attendants.

"1906. The patient, since admission, has always been a quiet little person, who dresses herself well; clean in habits, so much so that she looks after the cleanliness of other patients, taking them to the lavatory when she thinks it necessary. She feeds other helpless patients with a spoon. Never struck any one. Never noisy, and yet can't utter any distinctly formed words other than 'Belfast,' 'Baby,' 'Yes' and 'No.'"

"*L.C.* (idiot); age, 5. Admitted 28–8–1902. Duration of insanity, three months. Medical certificate states patient is continually muttering and singing. Is very noisy and filthy in her habits, attempting to bite the attendants. Spits continually. Speaks only incoherently. Nurse states that patient has repeatedly bitten other patients. Is very filthy in her habits. Is violent and cannot be controlled.

"1906. This patient is a happy and cheerful child, who runs about laughing everywhere. Cannot speak at all, further than 'Tommy,' and 'Money.' Is not clean in habits, but has never attempted to bite anyone or ever caused the slightest trouble."

Sir George O'Farrell goes on to say that the Poor Law should not be allowed to deal with mentally defective persons, but that it would be better to bring them all under one system of control and administration. O'Farrell, Vol. III., 22096.

Mr. Edmund Bourke, General Inspector of the Local Government Board in Ireland, says that it is only too obvious to anyone who has had an opportunity of inspecting them that Irish workhouses, under existing management, are most unsuitable places for the accommodation of persons of unsound mind, and that the condition of the latter at present housed in these establishments is in many instances disgraceful. Mr. Bourke considers, however, that healthy, able-bodied people who are feeble-minded, but able to work, might be left in the workhouse, being probably just as happy there as they would be anywhere else, and possibly the quieter senile dements; but that children should be taken away in every case. Bourke, Vol. III., 22319, p. 90, col. 2. Bourke, Vol. III., 22354-6.

It will be remembered that, in the case of England and Wales, we have recommended that the local authority for the care and control of mentally defective persons should have power to contract with other authorities and persons for the reception of suitable cases, and this power, which we also recommend to be given in Ireland, would no doubt be resorted to in order to meet such cases as Mr. Bourke suggests, but the question of the suitability of the case to be so dealt with in the first instance, the adequacy of the accommodation to be provided, and the advisability of the continuance of so dealing with the particular case would be one for the judgment of the local authority for the care and control of the mentally defective. Recommendation as to England and Wales, XLII. Recommendation as to Ireland, XXX.

Mr. Bourke points out that, in his view, all mentally defective persons should be put under the care and control of the county council, as the local authority, and under the Inspectors of Lunatics, as the central authority, excluding the Local Government Board from any responsibility as to their care and control. Bourke, Vol. III., 22444-7.

Opinions of witnesses as to unsuitability of workhouse accommodation for mentally defective persons —*contd.*

Sir Christopher Nixon, Bart., M.D., Ex-President of the Royal College of Physicians in Ireland, says :—

Nixon, Vol. III, 22555, p. 103, col. 2.

"No doubt some reasons may be urged for a retention of a part of this class in the workhouse, such, for instance, as the usefulness of some in doing work, the harmless nature of the mental defect, the proximity to home associations, etc., etc. But, on the other hand, the association of these defectives with the sane is objectionable, and it has upon both a depressing influence; there is the danger of persons who are unable to look after themselves being neglected; there is the danger of the outbreak of violence towards their own class or to others, against which there is no provision, and there is the important question of expense, as persons of this class require special nursing and care."

Nixon, Vol. III., 22570.

Sir Christopher Nixon goes on to say that the evils of the present system constitute a crying grievance, and that anyone who goes through the workhouses of Ireland, and sees the wretched, unprotected way in which these people are dealt with, must admit that it is one of the evils which specially calls for redress.

Courtenay, Vol. III., p. 113, col. 1.

Dr. E. Maziere Courtenay, Inspector of Lunatics and Lunatic Asylums in Ireland, points out that the greater number of congenitally defective classes are to be found at present in workhouses, although there are not any legal provisions for their care there, nor any power to detain them. They are only there as paupers. Their surroundings, he says, are most unsuitable and no attempt has been made to segregate them from other demented cases, or to classify, train or instruct them, and in most cases there is no one to look after them, except, perhaps, a pauper assistant. Dr. Courtenay points out that the Reports of the Inspectors of Lunatics in Ireland contained numberless instances of particular cases in workhouses, especially of imbecile children, suffering directly from the want of proper accommodation, care and training suitable to their needs. We append a few extracts from these Reports :—

Courtenay, Vol. III., p. 113, col. 2.

"There is one very intelligent boy living on the male side who, in England or Scotland, would certainly be sent to a training school for weak-minded or epileptic children, and where, no doubt, he would be able to learn a trade, and contribute towards the cost of his maintenance. The condition of many children of this class in Irish workhouses is peculiarly lamentable—growing up, as they do, in association with adult lunatics, and without any attempt to train them in habits of industry and order."—(51*st Report*, p. 198.)

"The remaining female is an idiotic child, whose habits, no doubt, could be improved, and who could derive benefit from training in one of those idiot schools which exist nowadays in most civilised countries, but which, unfortunately, notwithstanding the hopes held out many years ago, have never been established in Ireland."—(52*nd Report*, p. 205.)

"S.A. is an imbecile, who suffers from epileptic seizures. She is kept constantly in bed, as the authorities are afraid of the danger of her being injured by fire during a seizure.

"Cases of this kind are better treated in a special institution, and it is recognised that confinement to bed tends to the frequency of epileptic seizures, and to the further physical and mental deterioration of such cases."

"The fourth case (M. L.) is the girl whom the guardians some time ago were anxious to transfer to the county asylum at Antrim. She is described as a congenital imbecile, but it would seem rather that her imbecility was consequent on disease of her nervous system in early life, as her mother states that she was a bright child and able to attend school up to seven years of age, when her legs became weak. She is now quite imbecile, her lower limbs are completely paralysed, and the muscles wasted and in a state of spastic rigidity. Her hands, which are also wasted, were enclosed in sewn-up sleeves, as the medical officer states that if her hands were left free she would

p. 114, col. 1.

pick the quilt, and put the frayed portions into her mouth. She is described as sleeping badly, and as having frequent screaming fits during the night, thus disturbing the other inmates of the infirmary ward. There were nits in her hair."—(54*th Report*, p. 192.)

"One man—a degraded imbecile—was dressed in petticoats, and had his hands tied, owing to his mischievous habits. Such a case should be removed to the asylum, where he would receive proper care. He certainly cannot be properly treated here."—(54*th Report*, p. 202.)

The following extract from the 55th Report shows the unsatisfactory condition of the accommodation provided in a particular workhouse, and it is by no means an isolated instance :—

The 55th Report of the Inspectors of Lunatics (Ireland) 1906, pp. 197-198.

"The living rooms are cheerless in the extreme, the only furniture consisting of fixed benches, forms, and a few dilapidated armchairs, without any of those surroundings which are in all countries now considered essential to the contentment and well-being of the insane, such as books, pictures, and other objects of interest and amusement.

"The wretched yards afford little means of exercise. On the female side these yards are used for drying the clothing soiled during the previous night.

"The men sleeping in the dormitories upstairs are dangerously situated as regards escape in case of fire. In the event of such an outbreak, the only chance of escape is by a narrow wooden staircase. If this exit were cut off by smoke or flames, these inmates must certainly perish. The same remarks apply to the dormitories occupied by the boarders.

"No improvement appears to have been made in the service of the meals, as regards the supply of knives and forks. At least dishes might be given to hold the potatoes, instead of having them thrown in heaps on the table."—(55*th Report*, pp. 197 and 198.)

Norman, Vol. III., p. 117, c. 1.

Dr. Conolly Norman, Resident Medical Superintendent of Richmond District Lunatic Asylum, Dublin, comments on the inadequacy and unsuitability of the present system as follows :—

Opinions of witnesses as to unsuitability of workhouse accommodation for mentally defective persons — *contd.*

" In the workhouses there is no classification among these people, no attempt at education and little or no effort to improve defective habits. All these things are impossible owing to the conditions of existence. There is no staff for teaching, and a very small and insufficient staff, if any, for ordinary supervision. Old and young, low class idiots, high grade imbeciles, chronic dements, and cases of senile decay, are placed together promiscuously. The results are undoubtedly not satisfactory. The period of life when education might be possible passes away ; bad habits are confirmed and become ineradicable."

Dr. Conolly Norman then gives the following instances to illustrate what can be done under better conditions :—

Norman, Vol. III., p. 117, cols. 1 and 2.

" The condition of affairs in district asylums is better as regards general discipline, but hardly better as regards education. In large institutions receiving all classes of the insane, it is impossible to give to the education of idiots and imbeciles that minute attention, that skilled care, that laborious patience, which is required. Nevertheless we do something. Enough is done to show, even in our own experience alone, how much could be done under proper conditions. I recall at the moment four striking cases at present under care in my asylum : (1) A boy, aged fifteen, illegitimate, utterly neglected and uneducated, sufferer from birth-palsy, commonly tractable, but liable to violent fits of senseless passion. He has been taught to be tidy, he has been taught to read and write, he is able to make himself useful in the weaving shop although the movements of one arm are very limited. (2) A lad with hydrocephalic head and choreiform movements ; though clean, had apparently little other intelligence. An old patient who had been a schoolmaster took a fancy to this boy and undertook to teach him. He made him commit to memory an immense amount of miscellaneous information, and even taught him to read, though imperfectly. (3) An epileptic idiot aged about ten years on admission, at times tranquil, at times very intractable after the manner of epileptics : absolutely ignorant. Taught to read, taught to sew : usefully employed in tailor's shop. (4) A young man suffering from right infantile cerebral hemiplegia with certainly complete word-deafness and probably deafness to all sounds. Certain indications showed that the case was not merely one of idiocy by deprivation, as might indeed have been inferred from the obvious and extensive defect in the cerebral mantle. Nevertheless this man has been taught a tolerably extensive system of signs and has learned to be useful in the weaving shop, reeling thread with his only available hand. I do not speak particularly of such cases as that of a microcephalic and epileptic idiot, absolutely incapable of being taught the meaning or relation of numbers, who yet has been taught to work a sewing machine in the tailor's shop, for I suppose such cases are common enough in other asylums."

1053. We append herewith the extracts from the Report of Dr. Dawson, our Medical Investigator in Dublin, on the Lunatic and Epileptic Wards there. We have personally visited these wards and most thoroughly endorse the remarks of Dr. Dawson as to the unsatisfactory condition in which they are.

Reports of Irish Medical Investigators as to unsuitability of workhouse accommodation for mentally defective persons. Vol. VI., p. 420.

" *The Lunatic and Epileptic Wards* require fuller consideration, and those of the North and South Unions must be dealt with separately, especially as the Inspectors of Lunatics state that they constitute respectively about the worst and the best workhouse departments of their class in Ireland.

" In the *North Union Workhouse* the lunatics and sane epileptics are mixed together in the same departments. The male department, which was occupied by seventy-five insane patients and nine sane epileptics on the occasion of my investigation, consists of five wards of varying size, a day-room, and an airing-court. Three of the five wards are over-crowded, only one is properly lighted, and two of the principal ones are so gloomy as to suggest rather a second-rate stable than a dormitory, the windows being small and placed high. The larger and worse of these only allows 43 square feet floor-space and 526 feet cubic capacity for each patient, as against the 54 square feet and 648 cubic feet which has been laid down as the minimum for dormitories occupied by cases of this class. Many of the beds are boxes filled with loose straw, for ease in changing in the case of dirty patients. The high-sided bedsteads in the epileptic wards are constructed with a sharply angular iron top-rail certainly dangerous to a patient in a seizure.

" The wards are used to some extent as day-rooms, the day-room, where meals are taken, being entirely too small, and also dark, while a good deal of the floor space is occupied and the light obscured by a loom and other machinery, which, however, I understand is to be removed.*

" The airing-court, where the eighty-four patients take exercise, measures about forty-two by eleven paces, and a considerable portion is occupied by a grass-plot railed off to prevent access. It is surrounded on all sides by buildings and high walls.

" The lavatory accommodation consists of three small basins and one bath filled by hand, and used also for washing sheets. (The Protestant ward, with ten beds, has another bath sometimes available and one water-closet.) There are four self-flushing closets, in bad order and inconveniently placed. Night-chairs and buckets are used in some of the wards at night.

" The attendance consists of a trained ward-master and another paid man and some sane inmate assistants in the daytime, and one paid but untrained attendant and an inmate assistant at night. Considering the numbers and the awkward position of the wards, no effective supervision can be exercised, and it speaks well for the intelligence and care of the small staff and particularly of the ward-master that the patients are in as good order and as free from accidents as

* This room has been sometimes used at night as a dormitory for casuals.

Report of Irish Medical Investigators as to unsuitability of workhouse accommodation for mentally defective persons —*contd.*

Vol. VI., pp. 421-422.

they are. That it is not entirely due to the nature of the cases is shown by the fact that, as I am informed, assaults have occurred among the epileptics resulting in the imprisonment of some of them.

" The corresponding female department, containing 118 insane patients and ten sane epileptics, consists of six wards used both as dormitories and day-rooms, there being no proper day-room at all. They are even more over-crowded than those in the male lunatic department, not one being of sufficient size for the numbers, and are no better in other respects. The lavatory accommodation consists of a number of tin basins and two baths (the latter better equipped than in the male department), and there are eight water-closets. The attendance consists of two paid day attendants and one paid night attendant, assisted by sane inmates, and here again it must be said that the condition of the patients reflects much credit on the staff, though of course it is quite impossible for the latter to do more than attend to physical wants.

" It should be stated that the female airing-court is much larger and more cheerful than the men's, though still too small for the numbers using it.

" In the workhouse of the *South Union* matters are better, though far from entirely satisfactory. In the first place the lunatics and epileptics are placed in separate departments, the lunatics occupying certain structures of wood and of corrugated iron which were erected respectively to cope with a cholera epidemic about seventy years ago and to deal with one of small-pox ten years back.

" The *male* lunatics, sixty-six in number when visited, occupy six good wards, well lighted, ventilated and warmed, and not over-crowded ; but a ward occupied by the workers, one of whom was defective, is not so satisfactory. The day-room accommodation is fair as to space, though dark and cheerless, and crossed by dangerous roof-ties, and the meals are taken in a separate room. Lavatory accommodation is fairly sufficient and in good order. The airing-court is, however, entirely too small, measuring sixty-three paces long by nineteen wide, and largely occupied by a grass-plot.

" In the *female* lunatic department, containing 144 inmates (one a boy of six), as well as two feeble-minded ward maids, there are also six wards. Two of these are good and two passable though rather dark, but the best is quite too large for a single ward, measuring 139 feet in length. The remaining two wards are unsatisfactory, being too low (7 feet 6 inches at the sides), badly ventilated and heated, and greatly over-crowded—in fact one is the worst large ward in this respect in either workhouse, allowing only 37½ square feet floor-space and 280 cubic feet to each inmate. In addition, unprotected roof-ties cross these two wards at frequent intervals, 7 feet 6 inches from the floor, affording a series of ready-made gallows for suicidal patients. Many of the patients are confined to bed, but a large number are able to go about, and for these the only day-room (in which also meals are served) measures 59 feet long by 15 feet 8 inches wide and only 7 feet 6 inches high at the eaves, is insufficiently lighted, and rather comfortless. There is plenty of space in the two airing-courts, but shelter is insufficient, and the court for the healthy is overlooked by the houses of a neighbouring street. The lavatory accommodation consists of three baths, eight water-closets out of doors in the healthy division, and three indoors in the sick division. In the wards above commented on there is only night-chair accommodation at night. The staff on the male side consists of two paid male attendants by day and two by night, and twelve sane inmate assistants, six by day and six by night. On the female side there are two trained nurses by day and two by night, with two untrained day nurses, assisted by a number of sane inmates, and considering the numbers the condition of the patients and the wards reflects credit on the staff. Of course it is possible only to attend to the physical needs of the patient (though some are employed in useful work), and violent cases have to be mechanically restrained pending their removal to the district asylum.

" Little that is good can be said for the *sane epileptic* departments, however. The *male* department, with twenty-three patients, consists of two wards dark, cheerless, stable-like and over-crowded, and a room for meals, shared with patients suffering from syphilis and skin diseases, who have also to pass through the epileptic yard on the way to their own. There is no day-room, the patients using the bath-house in winter for that purpose. The sanitary accommodation is sufficient and in fair order. The only yard used by these patients is concreted, and measures no more than thirty-two paces long by an average breadth of about ten and a half paces, but is provided with good shelter.

" The *female* department is even worse in some respects. The forty-four patients are housed in two large wards, quite too low (7 feet 4 inches at sides), rough, ill-lighted and cheerless, and both over-crowded. There is no day-room, and meals are served in the wards. The yard is larger than the male yard, but roughly gravelled, and the walls of the bounding buildings are supported by fourteen buttresses with dangerous sharp angles. There are three closets, which are also used by forty ordinary infirm (who also share the yard)—eighty-four in all—and the same applies to the lavatory accommodation, consisting of one bath, and wooden troughs to accommodate four at a time. The epileptic wards are only part of a large infirm department containing altogether 215 inmates, and the paid staff for the whole consists of two day nurses and one night nurse, so that the epileptics are practically left to the healthy inmate ward maids, four night and four day. The condition both of wards and patients, male and female, was quite as good as could be expected."

Vol. VI., pp. 504-506.

Dr. Mills, our Medical Investigator in the rural districts of Galway, as a result of his inspection of seven workhouses coming within the area, expresses in his Report a strong opinion as to the unsuitability of the accommodation and the want of proper care and training for the mentally defective in these workhouses.

1054. Dr. Courtenay, when giving evidence in 1906, said: "At the present time there are approximately 3,230 lunatics (including idiots and imbeciles) maintained in the Irish workhouses." But these inmates are not detained under any legal authority or certificate; they are maintained merely as paupers, and, although classified as insane and kept in "imbecile" wards, there is no statutory authority for their detention. These inmates have decreased very much of late years and are, by degrees, being transferred to district asylums. We recommend that they should all come under the care and control of the local authority, which will deal with all mentally defective persons and be responsible for their maintenance. The local authority may, however, with the consent of the Central Authority, enter into a contract with the guardians to maintain such cases on behalf of the local authority where the accommodation can be made suitable and adequate for the particular cases concerned.

Statistics as to mentally defective persons in Poor Law Institutions or receiving outdoor relief. Courtenay, Vol. III., 22642, p. 110, col. 2. Recommendations XVIII. and XXX.

The following Table giving the proportion per cent. of the total number of the insane under care in different institutions in each quinquennial period since 1890 shows the gradual transfer of the insane from workhouses to asylums:—

TABLE SHOWING THE PROPORTION PER CENT. OF THE TOTAL NUMBER OF THE INSANE UNDER CARE IN DIFFERENT INSTITUTIONS, IN EACH QUINQUENNIAL PERIOD SINCE 1880. Courtenay, Vol. III., p. 110, c. 2.

Year.	Proportion per cent. of total number under care.		
	In District Asylums.	In Workhouses.	In Private Asylums, &c.
1880	67	27	6
1885	69	25	6
1890	71	24	5
1895	73	22	5
1900	77	18	5
1904	81	14	5

The following return of the numbers transferred from workhouses to district asylums each year since 1890 shows the increased percentage of workhouse cases in the admissions:—

TABLE SHOWING THE ADMISSIONS TO DISTRICT ASYLUMS DURING EACH OF THE YEARS FROM 1890 TO 1905, AND, OF THESE, THE NUMBERS ADMITTED AND RE-ADMITTED FROM WORKHOUSES. Courtenay, Vol. III. p. 111.

Year.	Total Number of admissions.	Admissions from Workhouses.			Percentage of Workhouse admissions to total admissions.
		1st admissions.	Re-admissions.	Total.	
1890	3,095	306	90	396	12·79
1891	3,010	297	84	381	12·66
1892	3,181	329	94	423	13·30
1893	3,207	349	89	438	13·66
1894	3,229	376	84	460	14·25
1895	3,216	413	75	488	15·17
1896	3,329	459	89	548	16·46
1897	3,285	435	111	546	16·62
1898	3,469	500	134	634	18·28
1899	3,549	542	125	667	18·79
1900	3,546	621	105	726	20·47
1901	3,572	602	117	719	20·13
1902	3,947	757	122	879	22·27
1903	3,950	685	125	810	20·51
1904	3,910	905	105	1,010	25·83
1905	3,772	666	93	759	20·12
Total	55,267	8,242	1,642	9,884	17 88

1055. Our medical investigators, however, found in the areas investigated 1,963 mentally defective children and adults in the Poor Law institutions in these areas, of whom they estimated no less than 1,243 "need provision." An analysis of these Reports shows that those "needing provision" comprise 225 senile dements, 426 uncertified "persons of unsound mind," 43 idiots,

See page 438 below, Group B., col. 9.

See also paragraph 1094 below.

Statistics as to mentallydefective persons in Poor Law institutions or receiving outdoor relief—*contd.*

130 imbeciles, 179 feeble-minded, 95 defective children, and 145 sane epileptics. From these returns it might be estimated that in the whole of Ireland we should expect to find about 5,975 mentally defective children and adults of the various grades of mental defect at present in Poor Law institutions, who "need provision." *See* page 44 below, Grou B., col. 3.

Our medical investigators also found fifty-six mentally defective children and adults in the areas investigated in receipt of outdoor relief, of whom they return thirty-four as "needing provision." An analysis shows that the thirty-four cases comprised two senile dements, eleven uncertified "persons of unsound mind," six idiots, seven imbeciles, one feeble-minded, and seven sane epileptics. From these returns it may be estimated that in the whole of Ireland we should expect to find about 163 mentally defective children and adults at present in receipt of outdoor relief, "needing provision." *See* page 462 below, Group C., col. 9.

See page 44 below, Grou C., col. 3.

See also paragraph 1094 below.

The Law and Procedure in Ireland relating to Certified Lunatics.

Some certified as well as uncertified cases of mental defect included in reference.

1056. We are empowered by our reference to consider the existing methods of dealing with :—

(*a*) Idiots and epileptics.

(*b*) Imbecile, feeble-minded or defective persons not certified under Lunacy Laws.

As regards Class (*a*), some are at present certified under the Irish Lunacy Laws, and others are not so certified ; those not so certified, like those in Class (*b*), are either at large or detained as paupers in workhouses, though not certified.

Proportion of idiots and epileptics detained under ordinary lunacy certificates. 56th Report Inspectors of Lunatics (Ireland) (1907), p. ix.

1057. We have dealt with those mentally defective persons who are detained in Poor Law institutions. But there are 19,306 persons confined in district asylums of whom a certain proportion are idiots or epileptics, and these idiots and epileptics clearly come under our reference. There are also a certain proportion of such cases amongst the 845 persons detained in private asylums and institutions for the insane in Ireland. Before considering the case of these mentally defective persons (other than those in Poor Law institutions already dealt with), who are not at present certified in any form, it is necessary, therefore, to consider as briefly as possible the law and procedure in Ireland as to admission of certified patients into asylums.

Institutions for "lunatics" (including certain idiots and epileptics).*

Courtenay, Vol. III., p. 110., c. 1.

1058. Lunatics are received and detained in Ireland under statutory and under medical certificates in :—

(1) District asylums.
(2) Auxiliary asylums.
(3) Licensed houses.
(4) Lunatic hospitals.
(5) Workhouses, under the 9th section of 38 & 39 Vict., c. 67.
(6) As single patients.

District Asylums. Act for the Establishment of Asylums for Lunatic Poor (Ireland), 1821, Sec. 2.

1059. District asylums, originally erected and maintained under 1 & 2 Geo. IV., c. 33, and subsequent Acts, were, on the passing of the Local Government Act of 1898, handed over to the county councils, by whom such institutions are now erected, managed, and maintained. The authority in this respect is exercised by a committee of the county council, and where the asylum is for two or more counties, by a joint committee of members from each county, fixed in proportion to the number of patients therefrom. A district asylum may be for one, or more than one county, or for a county borough and a county or counties. Under the 84th section of the Local Government Act, in each lunatic asylum there shall be a resident medical superintendent, and at least one assistant medical officer, whose salaries cannot be fixed or altered without the concurrence of the Lord-Lieutenant.

Local Government (Ireland) Act, 1898, Sec. 84.

The establishments are supported out of the county-at-large rate, and the patients therein are maintained out of the same fund, with a maximum Government contribution of 4s. per head per week, from the Local Taxation Account (as long as it can bear such contributions), save in cases where the lunatic is possessed of means for his own support, or has friends who contribute towards his maintenance. The net average cost per head, calculated on the gross expenditure, including repayments of loans, in these establishments for the year ending 31st March, 1906, amounted to £28 14s. 10d.

56th Report of Inspectors of Lunatics (Ireland), 1907, p. 33.

* There are also 162 criminal lunatics detained in the Central Criminal Asylum, Dundrum (56th Report, Inspectors of Lunatics, Ireland 1907, p. ix.]

There is no law of settlement in Ireland, and when a lunatic is sent to an asylum he becomes chargeable to the county or borough in which he was arrested or resided. No general power exists to remove a lunatic from one asylum to another.† When a lunatic is admitted to an asylum he must remain there, whether he belongs to the district or not. The local authorities complain bitterly of this in some cases—for instance, in cities or places where wandering lunatics are prone to congregate, such as large seaport towns. There is no arrangement for the transfer of patients from one asylum to another, as provided for in Sec. 65 of the English Lunacy Act, 1890. We considered that it was essential to our scheme in England and Wales to recommend that a system of settlement by counties should take the place of the settlement by unions in mentally defective cases. We think that some system of county settlement would be equally necessary in Ireland. It would no doubt be possible for the draftsman of the new Act to insert the necessary provisions to alleviate the grievance complained of as to the congregation of mentally defective persons in certain districts.

District Asylums—*contd.*

Lunacy Act, 1890. Sec. 65.

Recommendation as to England and Wales, XLVI.

Recommendation as to Ireland, XXXIV.

Under Sec. 9 (6) of the Local Government (Ireland) Act, 1898, the county council, through their Asylums Committee may—and if the Lord-Lieutenant requires, shall—make regulations for the management of their asylum, and amongst other matters, for the admission and care of private patients, and we advise the continuance of that power of making provision for paying patients.

Local Government (Ireland) Act, 1898, Sec. 9 (6).

1060. Under the 76th section of the Local Government Act of 1898, power is given to county councils to take over a workhouse or other suitable building to provide an auxiliary asylum for the reception of chronic lunatics, who, not being dangerous to themselves or to others, are certified by the medical superintendent not to require special care and treatment in a fully equipped asylum, and such auxiliary asylum may either be a separate asylum or a department of the district asylum. For the patients maintained in these establishments, only 2s. per head per week is paid out of the Local Taxation Account.

In only one case as yet have the provisions of the section been brought into operation, viz., at Youghal, where an old industrial school has been converted into an auxiliary to the Cork Asylum, for the reception of about 400 chronic and harmless insane, taken partly from the district asylum, and partly from the workhouses of the county.

Auxiliary Asylum.

Local Government (Ireland) Act, 1898, Sec. 76.

1061. Licensed houses are regulated under the provisions of 5 & 6 Vict., c. 123. Licences to keep these houses are obtained from the Justices in Quarter Session and may be revoked by the Lord Chancellor on the recommendation of the Inspectors of Lunatics. No provision is, however, made in the Act for framing regulations for the government of licensed houses, such as is made by Sec. 226 of the English Lunacy Act, 1890, nor is there any statutory provision for the reception of voluntary boarders. In our Recommendations we advise that the licensing and regulation of these houses should be entrusted to the Commission.

Licensed houses.

Private Lunatic Asylums (Ireland) Act, 1842, Secs. 3, 4 and 5.

Lunacy Act, 1890, Sec. 226.

Recommendations IX. and X.

1062. Lunatic hospitals, supported partly by private charity, and partly by endowment, are referred to in Sec. 49 of the Act 5 & 6 Vict., c. 123, but there are no statutory regulations for their management as laid down in the English Lunacy Act, Secs. 230–237. Indeed, the only section (49) dealing with them, exempts them from the provisions of the Act, except as regards visitation, inquiries, and due certification of the patients therein. In our Recommendations we advise that these lunatic hospitals should be licensed, regulated and inspected by the Commission.

Lunatic Hospitals.

Private Lunatic Asylums (Ireland) Act, 1842, Sec. 49.

Lunacy Act, 1890, Secs. 230–237.

Recommendations IX. and X.

1063. Under the provisions of 38 & 39 Vict., c. 67, Sec. 9, power is given to the managing committee of an asylum (with the consent of the Local Government Board and the Inspectors of Lunatics) to enter into a contract with the guardians of any Poor Law union for the maintenance in the union workhouse of chronic lunatics, not being dangerous, who may have been received into a district asylum. This section corresponds with Sec. 26 of the English Lunacy Act. In Ireland it has not been found to work satisfactorily, owing to the

Workhouses under Private and District Lunatic Asylums (Ireland) Act, 1875.

† Convicts are transferred from the Central Asylum, Dundrum, on expiration of sentence under 38 and 39, c. 67, Sec. 12. Transfers are also made in the following circumstances. Following the Local Government Act, 1898, many county boundaries were changed. The Irish Law officers advised that patients should be transferred from one district asylum to another if the part of the county from which they came was transferred to another county.

Lunacy Act, 1890, Sec. 26. 56th Report, Inspectors of Lunatics, Ireland, 1907, p. ix.

division of responsibility. Only four district asylums have taken advantage of the provisions of this section, viz., Antrim, Belfast, Ennis, Londonderry, and only 110 patients in all are thus maintained. [*N.B.*—These are in addition to the lunatics, idiots and imbeciles in the workhouses not under any certificate.]

Single Patients under control of the Lord Chancellor. Privtae Lunatic Asylums (Ireland) Act, 1842, Sec. 36.

1064. Single Chancery patients in unlicensed houses are under the care of the Lord Chancellor, and do not come under the supervision of the inspectors except when they are directed to visit them by the Lord Chancellor. In cases not under his Lordship's jurisdiction, where the patient is kept for profit, Sec. 36 of the Act 5 & 6 Vict., c. 123, lays down that an order and medical certificates are required, as on admission to a licensed house. Copy of such order and medical certificates must be forwarded to the Inspectors of Lunatics within three months of the date of reception of the patient (unless he or she has meanwhile returned to his or her own home), and afterwards, on 1st January of each year, two medical certificates describing the then actual state of mind of the patients must be furnished to the Inspectors.

Admission of Lunatics (including certain idiots and epileptics) into Institutions under certificates. O'Farrell, Vol. III., p. 75.

A. (*Procedure for Admission to District Asylums.*)

1065. The procedure for admission to public asylums in Ireland differs altogether from that in England, as the initiative does not rest in Ireland with the local Poor Law authorities, save as regards cases actually in union workhouses. The necessary action must be taken by a relative or friend of the lunatic, and, as this involves the payment of a fee to the certifying medical practitioner, and of the necessary cost of removal, it represents a serious bar, in the majority of cases, owing to the poverty of the parties concerned. The greater number of admissions to district asylums are effected under the 10th section of the Act 30 & 31 Vict., c. 118, called the Dangerous Lunatics Act. Under the provisions of this section, the alleged lunatic is arrested on the affidavit of a relative or of the police, and brought before two justices, and on its being proved that such person was discovered under circumstances denoting a derangement of mind, and a purpose of committing some crime for which, if committed, such person would be liable to be indicted, the justices shall call to their assistance the nearest dispensary medical officer, and if he certifies that such person is a dangerous lunatic or idiot, the justices direct his transfer to the asylum, which is carried out by the police. He is treated as a criminal as regards his removal to the asylum.

Criminal and Dangerous Lunatics Act, 1867. Sec. 10.

Under this procedure the fee of the dispensary medical officer is paid out of the local rates, and the actual conveyance of the lunatic to the asylum being carried out by the police, the relatives are relieved of all expense. The result is that this Act, which was intended only to apply to a very limited class of dangerous cases, is utilised in the great majority of cases, *e.g.*, in 1904, of 3,910 admissions no less than 2,396 were considered as "dangerous lunatics" under the Act mentioned. When we were visiting asylums in Ireland, in some instances we found children detained as "dangerous lunatics," the chief evidence of the "dangerous lunacy" being stated to be a tendency to throw stones in the streets, or similar trivial offences. These cases, no doubt, needed care and control, but it is somewhat startling to find them confined as "dangerous lunatics," being in the words of 30 & 31 Vict., c. 118, Sec. 10, "apprehended under circumstance denoting a derangement of mind and a purpose of committing some crime for which, if committed, such person would be liable to be indicted."

Criminal and Dangerous Lunatics Act, 1867, Sec. 10.

The existing accommodation for lunatics in many parts of Ireland is admittedly insufficient. The asylums authorities are compelled by law to receive patients committed under the Dangerous Lunatics Act, and, being overcrowded with these cases, often make this an excuse for refusing cases certified under the ordinary Lunacy Form. The cases certified under the ordinary Lunacy Form are therefore often not dealt with by the authorities, but are allowed to drag on their existence in circumstances of great neglect. We are convinced that in Ireland the want of a procedure at public cost, and suitable for all classes of mentally defective persons, whether dangerous or not, is a matter which urgently needs correcting, and we accordingly deal with the matter in Recommendation LVI. below.

Recommendation LVI.

B.(*Procedure for Admission to Licensed Houses and Lunatic Hospitals.*)

1066. (1) The Lord Chancellor may order the admission of any person as the result of an inquisition in lunacy. The procedure is, in practice, only resorted to in the case of persons of some means. The Inspectors of Lunatics are not concerned with lunatics so found, as they are under the jurisdiction of the Lord Chancellor and are under the care of special medical visitors.

Admission of Lunatics (including certain idiots and epileptics) into Institutions under certificates —*contd.*

(2) Under 5 & 6 Vic., c. 123, Sec. 14, persons are received into licensed houses and lunatic hospitals under an Order and two medical certificates.

Private Lunatic Asylums (Ireland) Act, 1842, Sec. 14.

The Order differs from that in use under the English Lunacy Act, in that there is no reference to any judicial authority. There is no special urgency order, but under Sec. 15, sanction is given for the admission on one medical certificate, provided that the special circumstances which have prevented the patient being visited by two medical practitioners are stated, and that the second certificate is signed within fourteen days. The medical certificates differ also from those in use in England, in that there is no obligation to give particulars of the facts indicating insanity observed either by the medical practitioner or by others. All that is laid down is that the certificate shall be in accordance with the forms given in the Act, and shall be signed by two duly registered medical practitioners, not being in partnership, who shall have visited the patient not more than seven clear days previously, and the certificate shall be signed on the day on which the examination took place, and shall state that the patient is insane and a proper person to be confined. Under Sec. 16, notice of the admission of a patient, with copy of the Reception Order, has to be sent to the office of the Inspectors of Lunatics within two clear days, in the case of private patients. In the case of rate-paid patients such notice must be sent after two and within seven clear days. This latter regulation is laid down in the statutory rules for the management of district asylums.

Sec. 15.

Sec. 16.

1067. The Acts governing the lunacy system in Ireland are scattered through statutes from 1821–1901. In some cases they contain provisions which are not in accordance with modern ideas on the subject. They do not ensure the proper admission of the insane to any institution, nor do they adequately safeguard the public against the suspicion that cases are unnecessarily detained in these institutions. The necessity for an amending and a consolidating Act was dwelt on by the Committee on Irish Lunacy Administration appointed by the Lord-Lieutenant in 1890, and the scheme of such legislation was sketched out by that Committee.

Consolidating and amending Lunacy Act essential.
Courtenay, 22642, p. 109, col. 1.
Report of Committee on Lunacy Administration in Ireland, 1891. C. 6434.

1068. This Committee considered that it would not serve any useful purpose to endeavour to enumerate the defects of the existing Irish statutes, but that a new Lunacy Law, modelled on the English and Scotch statutes, should be enacted as more properly representing the opinions which now prevail as to the care and treatment of lunatics; and it specially recommends that the procedure under Secs. 13 and 15 to 22 of the Lunacy Act, 1890, should be kept in view when considering fresh lunacy legislation in Ireland with regard to dangerous lunatics.

Committee of 1891 reported in favour of modelling Irish Lunacy Statute on English and Scotch Statutes. C. 6434, pp. 40–41.

Lunacy Act, 1890, Secs. 13, 15–22.

1069. The Report of this Committee proceeds on lines almost identical with those adopted by us with regard to England and Wales.

Scheme of the Committee of 1891 as to Ireland in complete uniformity with our scheme for England and Wales.

As regards the Central Authority, the Committee call attention not only to the necessity of a strong Central Authority for Ireland, but are also in favour of this authority being entrusted with the supervision of Chancery lunatics. We have recommended a similar course in our Report as to England and Wales.

C. 6434, pp. 49–52.

As regards the local authorities, the Report, being issued before the Local Government (Ireland) Act, 1898, could not anticipate the creation of the county councils and the utilisation of these bodies for the care and control of lunatics, and the references to local authorities in the Report were, therefore, necessarily to the existing board of governors appointed by the Lord-Lieutenant.

The Local Government (Ireland) Act, 1898, Sec. 9, however, transferred the business of the boards of governors to committees of the county councils, who must "properly manage and maintain every lunatic asylum for their county, and may appoint and remove the officers (subject to the concurrence of the Lord-Lieutenant as regards medical officers), and regulate the expenditure."

Local Government Act, 1898, Sec. 9 (5).

Scheme of the Committee of 1891 as to Ireland in complete uniformity with our scheme for England and Wales—*contd.*

1070. This difference as to local administration in Ireland from that in England and Wales having been eliminated by the Local Government (Ireland) Act, 1898, we are of opinion that the general principles of our Report as to England and Wales may be equally applied in the case of Ireland, and in recommending that this should be done we are fortunate in finding ourselves in complete agreement with previous Commissions and Committees who have inquired into the subject.

Management and Administration of property of mentally defective persons. Recom. LXXIV. Lunacy Regulation (Ireland) Act, 1871, sec. 68.

1071. The powers vested in the Lord Chancellor by virtue of the King's Letter have from time to time been supplemented, both in England and Ireland, by statutory provisions enabling summary orders as to property to be made without inquisition in a limited class of cases. By the Lunacy Act, 1890, this summary jurisdiction was largely extended as to England. As mentally defective persons (not proper subjects for inquisition) dealt with under our scheme may often be possessed of property requiring protection or administration, we recommend that the powers conferred by Section 68 of the Lunacy Regulation (Ireland) Act, 1871, should be extended to the property (irrespective of amount) of every mentally defective person, as defined in Recommendation IV., or that a procedure should be instituted analogous to that provided by the English Lunacy Act, 1890, relating to management and administration, and that the same should be applicable to all mentally defective persons as defined in Recommendation IV.

The Number of Idiots, Imbeciles, and Feeble-minded in Ireland and the Provision made for them.

Number of Idiots, Imbeciles and Feeble-minded in Ireland, and provision for them. Rainsford, Vol. III, p. 95, col. 2.

1072. According to the Census Returns of 1861, there were 7,033 idiots in Ireland, being in a proportion of one to 825 of the population. Of this large number 5,675 were at large, 934 in workhouses, 403 in various county asylums, and twenty-one were in prisons.

According to the Census in 1901 there were 5,216 idiots in Ireland, of whom 3,272 were at large, 1,181 were in workhouses, and 763 in asylums. Rainsford Vol. III. p. 97, col. 2

Vol. VI., p. 76.

If we turn to our Irish Medical Investigators' Reports we find that in a total population investigated of 927,755 we have 1,527 idiots, imbeciles and feeble-minded persons, of whom 983 are returned as "needing provision."

The 983 cases "needing provision" in the areas investigated, comprise 115 idiots, 451 imbeciles, and 417 feeble-minded. Of these cases, eighty-seven are at present in public elementary schools, 352 are in Poor Law institutions, fourteen are in receipt of outdoor relief, and the remainder, in most instances, at large. From these returns it might be estimated that in the whole of Ireland we should expect to find 580 idiots, 2,185 imbeciles, and 2,006 feeble-minded "needing provision." In addition to these, according to the Census of 1901, there are 763 idiots, certified cases in asylums.

See pp. 438 and 439 below.

See also paragraph 1094 below.

As regards the existing accommodation in Ireland, we have shown that the accommodation for these cases in workhouses is absolutely unsuitable; that the provision for those in asylums, though more suitable is by no means ideal, and is unnecessarily expensive; while of the cases "at large" although a minority may be suitably provided for at home, there is ample evidence to show that in the majority of the cases the unfortunate patient at home is even in a worse plight than the patient in the workhouse.

Cf. Table VI., Vol. VI., p. 76.

With the exception of the Stewart Institution for Imbeciles at Palmerstown, which is entirely supported by charitable donations, and only provides for 103 inmates, there is absolutely no special provision in Ireland at the present time for probably 64 per cent. of the uncertified idiots, imbeciles and feeble-minded, or for the majority of the 763 certified idiots in asylums as returned in the Census, 1901.

The Number of Epileptics in Ireland and the Provision made for them.

1073. On December 31st, 1904, there were in all the Irish asylums 1,120 cases (621 males and 499 females) suffering from epilepsy. This class is much less numerous proportionately in Irish than in English asylums, as the following comparative Table shows :— Number of epileptics in Ireland and provision made for them. O'Farrell, Vol. III., p. 77.

Yearly average of the total number of patients admitted to English Asylums during the five years (*) 1899–1903, inclusive.			Of the total number of patients admitted to English Asylums during the five years (*) 1899–1903.			Proportion (per cent.) to the total of the yearly average number of patients admitted to English Asylums during the five years (*) 1899–1903.		
			Yearly average of the number of Epileptics.			Epileptics.		
M.	F.	T.	M.	F.	T.	M.	F.	T.
10,160	10,574	20,734	920	671	1,591	9·1	6·3	7·7
	Similar	particulars	regarding	Irish Asy	lums for	the year	1904.	
2,230	1,925	4,155	99	67	166	4·4	3·5	4·0

1074. As above shown, the proportion of epileptics in English asylums is almost double the proportion in the Irish asylums, and the result of our personal inquiries in Ireland also convinced us that epilepsy was much more infrequent generally in Ireland than in England.

The results of our medical investigations in Ireland give a total of 509 sane epileptics, of whom 306 are stated to need provision, or about 60 per cent. The 306 cases in the areas investigated stated to "need provision" comprised twenty-two children in public elementary schools, 145 persons in Poor Law institutions, seven in receipt of outdoor relief, and the remainder presumably at large. These occur in a total population of 927,755. From this calculation it would appear that in the whole of Ireland there would probably be somewhere about 1,471 sane epileptics "needing provision." The investigation, however, was made mainly in urban areas, and having regard to the smaller proportion of sane epileptics found in the one rural area investigated, it is probable that the number of sane epileptics "needing provision" in Ireland, would not much exceed 1,200. Vol. VI., pp. 76, 77. *See* pp. 438 and 439 below, col. 7. *See* also paragraph 1094 below.

1075. The Report of the Vice-Regal Commission on Poor Law Reform in Ireland, 1906, stated that of the 463 sane epileptics in the workhouses, 131 were kept in lunatic wards. Our medical investigators found 157 sane epileptics in the Poor Law institutions in their areas. From this it might be expected that there would be 758 sane epileptics in Poor Law institutions throughout Ireland. The Commission recommended that separate institutions should be provided for these inmates, and suggested that the disused workhouses should be made available. The Commission further recommended that these institutions should be supervised by the Inspectors of Lunatics, and that the management of the institutions should be similar to that of lunatic asylums. Sane epileptics in workhouses. Cd. 3202, p. 41. *See* p. 438, Group B, col. 7, below.

1076. This Commission was merely considering the provision necessary for the cases of sane epileptics then in workhouses in Ireland. We, however, have to contemplate the provision which would be necessary for about 1,200 sane epileptics, and highly desirable for possibly half of the 1,120 insane epileptics in Irish asylums. In other words, we have to consider the possibility of making provision for about 1,800 persons afflicted with epilepsy. Probable provision necessary for epileptics in Ireland.

1077. The border line between sanity and insanity in the cases of epilepsy which are so pronounced as to need accommodation at all, is so fine that probably one institution for epileptics needing accommodation would suffice, arrangements as to separation into the two classes of sane and insane being made within the institution, and for the transfer from the one class to the other class within the same curtilage as occasion required. Sir George O'Farrell considered that there would be no objection to dealing with various classes of mentally defective persons on the same estate, and that epileptics might be provided for in an epileptic block on the villa colony system. Cf. Connolly Norman, Vol. III., 22811. O'Farrell, Vol. III., 22146.

(*) The figures in the case of the Irish asylums are given for the one year (1904) and *not* the average of five years.

The Number of Epileptics in Ireland and the provision made for them.

Opinions of Medical Investigators as to provision for sane epileptics. Vol. VI., p. 447.

1078. Our Medical Investigators in Ireland made the following remarks on the question of provision for sane epileptics. Dr. Dawson, our Medical Investigator in Dublin, says :—

"It has been seen that all the epileptics, even in the special wards of the South Union Workhouse, were not sane. Still a considerable proportion of sane epileptics would have to be provided for, as many are at large who would be better in institutions, even though mild and infrequent seizures do not always prevent epileptics from earning their living. The Vice-Regal Commission has recommended (Report, Vol. I., 164) that sane epileptics should be kept in separate institutions, and that two disused workhouses should be reserved for them. Probably there would be less objection to the use of old workhouses for this purpose than for the insane, but unless the recommendations of the Commission (which include the abolition of workhouses as such) be carried out generally, there may be difficulty in securing sufficient accommodation in this way, especially as many more epileptics will have to be provided for than the 463 who are stated in the above Report to have been in the workhouses of Ireland on March 11th, 1905. In any method of providing for epileptics, the necessity for land on which they, especially the males, can be kept employed at the outdoor labour essential to their proper treatment must be borne in mind, and, in view of the tendency of epilepsy to lead to mental aberration, facilities for the transfer of such cases to asylums if required should be provided. On the whole, the colony system seems to promise best, but if this be too expensive the adoption of measures based on the recommendations of the Vice-Regal Commission may be approved, provided that there is sufficient land attached to the workhouses."

Dr. Graham, our Medical Investigator in Belfast, whose untimely death we regret to recall, says :—

Vol. VI., p. 472.

"The numbers of sane epileptics requiring further provision will strike one forcibly. Many intelligent and often skilled operatives are becoming unremunerative, and burdens on the community, owing to the increasing difficulty of obtaining suitable work in the city manufactories. These, instead of being drafted into workhouses or other institutions, should be placed in suitable colonies possessing facilities for various types of employment, thus making them in part, if not wholly, self-sustaining. The advisability of associating with the adult sane epileptics in these colonies the severer types of sane epileptic children, who could have opportunities for physical development and education in useful trades, will appeal to those who are opposed to a multiplicity of institutions."

Dr. FitzGerald, our Medical Investigator in Cork, says :—

Vol. VI., p. 492.

"The provision of suitable care for the sane epileptic, who is, wholly or in part, dependent, seems highly advisable. A colony with a large farm attached and fitted with facilities for the carrying on of various industries should be provided."

Vol. VI., p. 515.

Dr. Mills, our Medical Investigator in Galway, says :—

"Many of the sane epileptics are in a condition needing urgent relief, and this could bes be provided on the lines of Bielefeld in Germany or Sonyea in New York. A central institution for epileptics in Ireland, worked on the most approved modern lines, seems to me to be much required, and the activity of the English county councils and philanthropic bodies, in their care of the epileptic, stands in need of much emulation in Ireland."

Offer to make provision for epileptics.

1079. In connection with the steps to be taken to make this provision, we have received the following communication :—

Copy.

Philanthropic Reform Association,
188, Great Brunswick Street, Dublin.
November 1st, 1906.

The Chairman of the Royal Commission on the Care and Control of the Feeble-minded, Westminster, S.W.

Dear Sir,—I am directed by the Committee of above to draw your attention to the fact that the Countess of Meath offered some years ago the sum of £5,000 to provide a Home for sane epileptics in Ireland. Owing to the difficulty of maintaining such a Home when established it has not been found practicable up to the present to accept Lady Meath's offer, which is still open. The Committee hope that the recommendations made by your Commission will include provision for the maintenance of inmates in such a Home. If this maintenance were provided the £5,000 could be used.

Yours faithfully,
(*Signed*) Etta Tolerton.

Conditions under which offer to make provision for epileptics might suffice.

Recommendation XXIX.

1080. As we have already said, we are of opinion that one epileptic colony for Ireland might meet the needs of those epileptic cases which require accommodation, with a view to their proper care, control and treatment. Those cases which are "mentally defective" could be separated from those who are thought to be sane, but both could be provided for in the same colony and under the same management. The county councils could, in combination, under our scheme agree to maintain such a colony, and as regards the initial capital outlay, which would necessarily be heavy, a building grant from the Treasury would no doubt be required. The generous offer of the Countess of Meath would form a valuable nucleus of the fund required, but it could not be expected to cover more than a small proportion of the cost involved.

1081. As regards the mentally defective epileptics, there are at present in Irish asylums 1,120 such cases. Many of these are acutely insane, and are properly and best treated where they are. Probably only one-half of them (if so many) would be suitable for transfer to a colony. The transfer of such cases to a colony would possibly prove to be economical to the county council, and of undoubted advantage to the patients. The Recommendations we make as to Treasury contributions towards maintenance of all mentally defective cases would, of course, apply to such cases in the colony.

Mentally defective epileptics. O'Farrell, Vol. III., p. 77.

Recommendations XXVIII-XXXV.

1082. As regards the sane epileptics, of whom we estimate there are about 1,200 needing such provision (inclusive of those at present in workhouses), many of these cases, if so pronounced as to need permanent care, would probably sooner or later drift into the mentally defective class. Experience has proved this in the case of the famous Craig Colony for Epileptics in America. As regards the sane cases, however, which were sent by the guardians, which would appear to form nearly one-half of the total, the guardians have at present to maintain them at considerable expense and great inconvenience to the working of the institution. Any expense on their behalf incurred by the Committee for the care of the mentally defective would be merely transferred expenditure.

Sane epileptics.

See paragraph 1074 above.

See pages 438 and 439 below, col. 7.

1083. Over and above the epileptics in workhouses there would remain about an equal number considered to be sane, though needing provision, most of whom are at present at large. These cases are not "pauper" cases, and it is probable that they would be able to contribute in money, to some extent at least, towards their maintenance; if they were not in such a position, the fact that they had been able to maintain themselves outside without needing the assistance of the Poor Law would seem to show that the value of their labour within the colony would go at least some way towards the expense of their maintenance. We recommend that the Committees for the care of the mentally defective be authorised to consider and deal with cases of sane epileptics and to provide for their accommodation, and maintenance, care, treatment, education, training and control, and with regard to these epileptics shall have the powers referred to in Recommendations XXII.–XXIV (inclusive), XXVII. and XXVIII., XXXII.–XXXV. (inclusive), XXXVII.–XXXIX. (inclusive), and in Recommendations from LVIII.–LXIV. (inclusive), so far as may be necessary. The powers contained in the following general recommendations as to the mentally defective are also specifically applied to epileptics not mentally defective, viz., Preamble (1), Recommendations XXIX., XXX., LXX. and LXXI. The Recommendations we make as to Treasury Contributions towards the maintenance of mentally defective persons apply equally to cases of sane epileptics for whom provision is made by the Committees.

Recommendation LXVIII.

The Condition of Mentally Defective Children in Ireland.

1084. We find that the mentally defective children (*see* the table below) in the public elementary schools number ·44 in Belfast, ·33 in Cork, 1·19 in Dublin, 1·18 in Galway, indicating an approximation between Dublin, the large urban district with its mixed population, and the rural district, the seven Galway unions. The differences in these figures may to some extent be attributed to differences in the methods of investigation adopted. Everywhere (compare Columns 7 and 10) these children are quite unprovided for, and are in urgent need of proper care and supervision.

Condition of mentally defective children in public elementary schools in areas investigated by our Medical Investigators.

Belfast.
Vol. VI., pp. 456–458.

1085. Dr. Graham, our Medical Investigator in Belfast, thus comments on the conditions prevailing in the elementary schools there :—

Of the "twenty-nine imbeciles" among the school population it is said that "these children are apparently sent to school more as a sort of day nursery than to be educated. The majority are quiet and obedient, but cannot be depended on when teased by other children. . . . Their habits are degraded, and they often make themselves extremely offensive to their more sensitive companions. Of the defective children (forty-eight males and eighty-one females): "Some display marked aberrance of conduct, such as pilfering from other children and from their own homes. Others are quite unmanageable and a great source of irritation to their teachers, as well as a bad example to other scholars. Of the feeble-minded, three in number, two were boys eighteen years of age, one a cretin, one odd, and the third, a boy of seventeen, greatly deformed, was sent to school to 'keep him out of mischief.'" "As regards the presence of idiots or imbeciles in a public school for the purpose of education, there can be no question whatever as to its futility and worthlessness, not to speak of its undoubted cruelty in many instances."

And of the schools themselves, "the poorest counties in Ireland," the Commissioners of National Education state, "are better off in this respect than a city which prides itself on its wealth, enterprise and progress." To illustrate this two instances are given :—

"My own observation supports this statement to its fullest extent. One school which I visited had a small classroom for infant children, on opening the door of which I was compelled to stand back to permit a clearing away of what cannot be described in less terms than a stench. Greatly to my surprise I found this room literally packed with infants up to six years of age, as tightly as the small benches could admit them, while others were crowded over the floor up to the teacher's feet. In order to make my inspection I had to step over two rows of children after the teacher had vacated her place, as there was not standing room for both of us. There were from fifty to sixty children present, with one small window partially open for ventilation!"

"In a classroom belonging to another school which was almost full of boys, there is no window which opens, and the only ventilator is a broken pane of glass. The teacher merely stared in amazement on my suggesting to her that one of her boys with a few stones should be permitted to rectify matters by opening up a couple more panes. The odour was simply unbearable."

There is thus in Belfast the double evil—schools whose insanitary conditions would in all normal conditions be productive of lowered vitality and ill-health, and the retention in such schools of mentally defective children who, while they cannot there themselves be educated, are a source of trouble and annoyance to those who can be.

Dublin.
Vol. VI., p. 416, and Vol. VI., p. 41.

1086. The investigation in Dublin disclosed unsatisfactory conditions of school accommodation, which suggest a comparison with Belfast. But a distinctive feature of it was an examination of the relation between the schools in which children of a different social status were taught, and the amount of mental defect in the several grades of schools. Thus :—

—	Number of Schools.	Child Population of Schools passed under review.	Mentally Defective.	Total Percentage of Mentally Defective.

C: attended chiefly by the children of temporary labourers, street dealers, and even lower classes -	75	16,117	288	1·78

Galway Unions.
Vol. VI., p. 504.

1087. In the Galway Unions, Dr. Mills attributes the very large percentage of mentally defective children to the causes that affect the population generally —the stock depleted by emigration, the hard and anxious life, and the "unceasing toil in which the children participate from an early age," the unwholesome and sometimes insufficient food, and "the greatly increased number of persons who become parents after an attack of insanity."

1088. An analysis of the results of our medical investigations in Ireland shows that of the total number of mentally defective persons in these areas, viz., 5,247, no less than 1,588 are mentally defective children under sixteen years of age. Of this number (1,588), 1,387 are "defective" children, that is, defective as defined in the Elementary Education (Defective and Epileptic Children) Act, 1899, Sec. 1, viz., children who "by reason of mental (or physical*) defect are incapable of receiving proper benefit from the instruction in the ordinary public elementary school, but are not incapable by reason of such defect of receiving benefit in such special classes or schools as are in this Act mentioned." The total number of 1,588 mentally defective children found in the areas comprises the 1,387 "defective" children as above plus 201 children who are either insane, idiots, imbeciles, feeble-minded, or sane epileptics.

Number of mentally defective children in Ireland and absence of provision for the same.

See pp. 438 and 439 below col. 6.

It would thus appear that in the whole of Ireland we might expect to find 7,580 mentally defective children, or over one-third of the total mentally defective persons (other than certified persons of unsound mind), which we estimate at 25,415. But whereas we estimate that about 66 per cent. of the whole mentally defective population found require provision, in the case of the "defective" children we estimate that at least 94 per cent. of these "need provision." This greatly increased percentage of cases requiring provision amongst the children is due to the fact that there is absolutely no suitable provision for such children in Ireland; whereas in England, at present, a large number of children are dealt with, to some extent at least, under the Elementary Education (Defective and Epileptic Children) Act, 1899.

Vol. VI., p. 77, cols. 18 and 21.

1089. It has to be remembered that in Ireland, even ordinary elementary education for children is only compulsory in municipal boroughs or towns under Commissioners, or in adjoining parts to which the Education Act has been applied by the Commissioners of National Education after inquiry and with the consent of the local authority, or in other districts where the Act is applied on the resolution of the county council.

The Law as to Education in Ireland. Irish Education Act 1892, Sec. 15.

In places where the Act is so applied, it was proposed by a Bill, presented to Parliament on behalf of the Government in 1905 and 1906, to extend similar provisions to those of the English Elementary Education (Defective and Epileptic Children) Act, 1899 to Ireland, but the Bill was withdrawn on each occasion. We have not recommended, in the case of England and Wales, that this Act should continue to apply to mentally defective children or to epileptic children so afflicted by severe epilepsy as to be unfit to attend ordinary public elementary schools, and we think that the alternative scheme recommended by us as to the care and control of such children is equally applicable to Ireland, and we recommend its adoption there accordingly. There are not, however, in Ireland local school authorities in every district, such as exist in England. The Irish National School system is under the control of the National Educational Commissioners, and the only local authority is the manager, usually a clergyman, with limited administrative functions.

Irish Education (Afflicted Children) Bill, 217, 1906.

Recommendations LVII-LXIV.

1090. Under our scheme, the county council or county borough council of each locality will become the authority responsible for making suitable and sufficient provision for the accommodation and maintenance, care, treatment, education, training, and control, of all mentally defective persons irrespective of age, but it is not intended that the maintenance at public expense of the mentally defective should be extended to those who either at their own cost, or at that of their relatives or friends, can be otherwise suitably and sufficiently provided for (*see* Preamble (1) to Recommendations below). These authorities can make such provision either themselves or by contracting with other local authorities, where they exist, or with managers or others as may appear to them desirable. In cases where the county council provides for such cases by contract with others, the council is responsible for the provision being suitable and adequate for the individual case, not only at the time when the child is sent, but during the continuance of the contract.

Provision to be made by local Authorities. Recommendation XVIII.

Preamble (I.) to Recommendations.

Recommendation XXX.

The General Position in Ireland as regards Mentally Defective Persons compared with Great Britain.

1091. The position in Ireland is even more grave than in England and Wales, or in Scotland. As regards the insane, the figures of the census years from 1871–1901 show the advancing proportion of the insane to the general population in Ireland, England, and Scotland, respectively. The following Table shows

The position in Ireland as to insane persons.

* For the purposes of this enquiry only mental defect is included.

the proportion per 10,000 of the population of the insane in each of the three countries :—

Matheson, Vol. III., p. 126.

TABLE SHOWING THE PROPORTION PER 10,000 OF THE POPULATION ENUMERATED AS INSANE IN IRELAND, ENGLAND AND SCOTLAND, AT THE CENSUSES OF 1871, 1881, 1891, AND 1901 RESPECTIVELY.

Census Years.	Ireland.	England.	Scotland.	Census Years.
1871	30·49	30·39	33·97	1871
1881	35·58	32·53	38·54	1881
1891	45·04	33·58	38·41	1891
1901	56·18	40·78	45 37	1901

Courtenay, Vol. III., p. 114, col. 2.

1092. The actual numbers of the insane in the three countries were as follows :—

1881	18,413	84,503	14,397	1881
1891	21,188	97,383	15,462	1891
1901	25,050*	132,654†	20,291	1901

The position in Ireland as to mentally defective persons (other than certified lunatics).

1093. As regards the mentally defective (other than certified lunatics), the position of Ireland, whether as regards the probable number of all cases, or of those in urgent need of provision, is again shown by the following Table to be even more unsatisfactory than is the case either in England and Wales or in Scotland. In this Table are stated : (1) the number and the percentage of the mentally defective in the population of the total areas investigated in England, Scotland, and Ireland ; and (2) the number and percentage of such persons, as estimated proportionally to the population at large in the several countries. The limitations to be considered in relation to such a proportional estimate are obvious. It can be taken only as an estimate.

1.	Population of areas investigated. 2	Total mental defectives reported. 3	Percentage: col. 3 on col. 2. 4	Total population England and Wales, Scotland and Ireland. 5	Number of mentally defective proportionate to population. 6

Scotland (Glasgow) -	623,829	1,614	·26	4,472,103	11,627
Ireland - - -	927,755	5,247	·57	4,458,775‡	25,415

Vol. VI. page 52.

1094. In the following Table are set out the number and percentage of those for whom, in the opinion of the medical investigator, provision is required. They represent "an estimate of the number of persons at the present time urgently in need of provision, either (1) in their own interest, or (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal. These are not included, but only such cases as are, in the opinion of the investigator, improperly, unsuitably, or unkindly cared for, and who, by reason of particular habits and characteristics, are a source of danger to the community in which they live."

Vol. VI., p. 52.

Supplement to 54th Report of Inspectors of Lunatics, Cd. 3126, p. 23.

* With regard to the numbers of insane in institutions in Ireland, it may be noted that an investigation made by the Inspectors of Lunatics some years ago showed that there were almost 1,500 cases, *i.e.*, about 7 per cent. of the total number resident, who could be classed as "returned emigrants." In some district asylums the numbers who have developed insanity elsewhere than in Ireland are relatively large. In Castlebar Asylum, for instance, 11 per cent. of the entire population may be put in this class, those who have returned from the United States forming the bulk of these cases.

† In 1901, in the Occupiers Census Schedule the term "feeble-minded" was substituted for "idiot." This has destroyed the comparability of these figures with those of previous Censuses. The term is one which it is obviously difficult to define, and it is not easy to estimate the true value of the increased numbers resulting from the change. (*See* Tatham. Vol. I., p. 269, col. 2).

‡ 1891 Population of Ireland, 4,704,750.

The General Position in Ireland as regards Mentally Defective Persons compared with that in Great Britain.

1095. Thus Ireland, unhappily burdened as it is with its comparatively undue proportion of certified persons of unsound mind, is found to be in a similarly unfortunate position as regards its proportion of mentally defective persons other than those of unsound mind, and what is even more serious, in view at any rate of its poverty, it is also confronted with a similarly undue proportion of cases in urgent need of provision. Outside the institutions for lunatics and the workhouses there seems to be in existence no provision for mentally defective persons, with the exception of the one small, though admirable, institution, the Stewart Asylum for Imbeciles at Palmerstown, which can, at present, only provide for 103 cases. As regards epileptics, the generous offer of the Countess of Meath, supplemented possibly by other philanthropists and by grants from the Treasury or local authorities, for the provision of further buildings, land, and equipment, would seem to afford a reasonable chance of a solution of this part of the problem. The maintenance of the persons therein can be provided for from public sources, as we have explained above (paragraphs 1080–1083). As regards mentally defective persons generally, there is urgent need for an extension of the one existing institution, the Stewart Institution, and for the establishment of similar voluntary institutions. There is no doubt that several institutions would be required even when the Stewart Institution had been enlarged to its utmost capacity, and, if necessary, they should be established by the local authorities.

The position in Ireland as to mentally defective persons (other than certified lunatics) —*contd.*

Pars. 1080–1083.

1096. Although we recommend that a statutory obligation should be imposed on the local authorities in Ireland, as in England and Wales and Scotland, to provide suitable and sufficient provision for the accommodation and maintenance, care, treatment, education, training and control of all mentally defective persons, we feel glad, in the peculiarly distressing conditions of Ireland, to be able to believe that the co-operation of religious denominations and private persons will in the first instance in all probability assist the local authorities, to some extent at least, in the provision of such accommodation. The initial capital outlay, even though substantially contributed to by the Treasury, is the great difficulty ; the maintenance of the institution when started and the inmates to be sent thereto would, we think, be a charge which might well be borne by the local authorities, aided as they would be by a substantial Treasury Grant.

Voluntary aid to local authorities in providing accommodation. Recommendation XVIII.

1097. We quote below certain extracts from the evidence of Sir Christopher Nixon, M.D., Ex-President of the Royal College of Physicians of Ireland. We earnestly hope that his anticipations may be realised. It is only by such aid to the public provision that may be possible that we can expect the problem to be effectually dealt with in Ireland. We have seen for ourselves in Ireland many of the admirable voluntary institutions which owe their origin to charitable sources, such as the Stewart Institution for Imbeciles, and the splendid work done and institutions provided by the religious Sisterhoods and by the Christian Brothers, and so on.

Possibility of voluntary aid being forthcoming.

Some of our members have also visited the colony for mentally defective persons at Ursberg in Bavaria, under the charge of Sisters of the Congregation of St. John, referred to by Sir Christopher Nixon, of which colony they speak very highly. The devotion of the Sisters to that work, and the admirable results achieved, cannot fail to arouse enthusiasm in anyone who has been fortunate enough to visit the colony.

Appendix, Vol. V., p. 309.

Sir Christopher Nixon thus describes the possibilities of achieving like results on a large scale in Ireland :—

"I would be very slow to believe that in Ireland the springs from which flowed such helpful sustenance for many objects worthy of sympathy and support, have dried up. It is easy to refer to a number of institutions, largely subsidised by private benevolence : the Institution for the Deaf and Dumb, that for the Blind, the O'Brien Institute, the Stewart Institute for Imbeciles and Epileptics, the various reformatory and industrial schools, our metropolitan and provincial hospitals, are instances in point. Would not an institution for the feeble-minded attract substantial public support ? . . . . I confess, however, that to me the ideal institution for dealing with the defectives would be the establishment of a large colony under the charge of some religious Order such as has been established in Ursberg, Bavaria, the work and organisation of which has been so fully described by Dr. Alfred Eichholz. This colony, under the charge of the Sisters of the Congregation of St. John, provides for the care of 752 mental defectives, 111 blind, eight deaf mutes, and 145 epileptics. The colony is self-contained, and provides for its own needs by its own industry. It is unnecessary that I should repeat what is so fully described by Dr. Eichholz, but I should like to endorse his words as specially applicable in a country like Ireland, which can point to the good results effected by religious Orders in ministering to the wants of its population You have striking instances of this in the educational work undertaken by the religious Sisterhoods of Mercy and Charity, in the work done by the Christian Brothers in primary and intermediate education, in their care of the deaf and dumb, and in reformatory schools : in the care of the insane undertaken by the Brothers of St. John of God, and by the French Sisters of Charity. If any of these

Nixon, Vol. III. 22555, p. 104, c.

Possibility of voluntary aid being forthcoming—*contd.*

Orders, or Orders of a like kind, could be prevailed on to take charge of a colony for the feeble-minded, such as exists in Ursberg, the problem of dealing with defectives in Ireland would be solved. Whether this problem be viewed from the religious, or simply the practical worldly aspect, the result is the same, and I heartily subscribe to the view of Dr. Eichholz when he says that 'Though the State may go far to solve the problem of its feeble-minded, even to endowing colonies such as Ursberg, it may yet feel grateful when voluntary effort steps in, for it is doubtful whether public money alone could ever command the self-sacrifice which such an undertaking demands.'"

Eichholz, Vol. I., p. 209, c. 2. App. Vol. V., p. 308.

It should be pointed out, however, that this institution is not self-supporting, as grants are received from outside sources.

Recommendation XXIX.

1098. As regards the maintenance of inmates in these institutions, the grant, under our Recommendation, to be made by the Treasury to the county councils would enable the local authorities to recoup themselves to a large extent for the charges involved. The crucial difficulty is as to the initial capital outlay. We are glad to call attention to the following extract from the Report of the Royal Commission on the Blind, etc., 1889 [(C. 5781, Pars. 764, 827–8.)] as to the possibility of such institutions being started in Ireland.

Royal Commission on Blind, etc., Report 1889, C. 5781.

Paragraph 764. Archbishop Walsh's Memo. Question 8.

His Grace Archbishop Walsh, when asked: "Do you think that any religious Order in Ireland could be found to undertake the industrial training of the deaf and dumb, and blind in schools analogous to the Artane Industrial School, or the education of the educable class of imbeciles?" replied, "No misgiving need be entertained on this score. As regards the Catholic side of the question—and of course on this point I can speak only for the Catholic side—our resources in this respect are practically unlimited."

Paragraph 827. Archbishop Walsh's Memo. Question No. 13.

On Archbishop Walsh being asked the question: "As there is no denominational institution for the education of Roman Catholic imbeciles or idiots, should such institution be started previous to any grant being given from Imperial sources?" he replied "that he did not think it would be unreasonable on the part of the State to require that the institution should be in the first instance established."

Paragraph 828. Archbishop Walsh's Memo. Answer No. 13.

He also added: "I assume that help would be given to the promoters, either in the form of a building grant or of a loan repayable on easy terms. I have no doubt that in the event of a definite arrangement being made, such as I have now indicated, the institution could be established on a very efficient footing without delay. As regards buildings, I would suggest that some of the existing workhouses might be made use of for the purposes. Some reconstruction, no doubt, would be necessary to remove the depressing and prison-like aspect of those establishments. But the cost would be trifling compared with that of building new institutions. I understand that many of our existing workhouses can be dispensed with."

Report of the Royal Commission on the Blind, etc., 1889, par. 828.

Necessity for provision at public expense for the mentally defective.

1099. The possibility of such provision being made in some instances by voluntary effort does not, however, affect our Recommendation XVIII., which provides that the final responsibility for making provision shall rest with the committees of the local authorities for the care of the mentally defective. Whilst recognising that help might be confidently looked for from religious orders, and to a lesser extent from other voluntary sources, we think that, as stated elsewhere, without generous State aid it will be practically impossible in Ireland to deal with the problem of providing adequately for the mentally defective.

Summary of the existing accommodation for mentally defective persons, and suggestions as to fresh accommodation required.

Summary of the existing accommodation for mentally defective persons, and suggestions as to fresh accommodation required.

1100. We now proceed to summarise the existing accommodation for the various classes of mentally defective persons and the provision which would probably be needed for each class:—

(a) *Idiots, Imbeciles and Feeble-Minded.*—There is no special provision for these cases at present outside the asylums and workhouses (with the exception of the 103 cases maintained in the Stewart Institution).

From an analysis of our Medical Investigators' Reports as to the numbers in the areas investigated it might be estimated that in the whole of Ireland there would be 624 idiots, 2,811 imbeciles, and 4,013 feeble-minded, of whom 580 idiots 2,185 imbeciles, and 2,006 feeble-minded would, it is estimated, "need provision."*

See paragraph 1072.

Probably three or four mentally defective institutions and a large extension of the Stewart Institution would suffice for these and those coming under (c) below, so far as those coming under (c) required institutional care. The total of classes (a) and (c), needing provision might be expected to reach 6,331.

(b) *Epileptics.*—There is no provision at present for epileptics except in workhouses and asylums.

* For meaning of "needing provision" *see* paragraph 1103.

Summary of Existing Accomodation for Mentally Defected Persons, and Suggestions as to Fresh Accommodation Required.

There are at present about 1,120 epileptics in asylums, and an estimated number of about 1,200 sane epileptics needing provision (758 of whom are estimated to be in workhouses at present). In other words, accommodation is urgently required for 1,200 epileptics and highly desirable for a proportion (possibly one-half) of the 1,120 epileptics at present in asylums. These numbers make it probable that one colony for the whole of Ireland would suffice.

Summary of the existing accommodation for mentally defective persons, and suggestions as to fresh accommodation required—*contd.*

See paragraphs 1074-1076.

(c) **Defective Children.*—There is no provision for educating or training these children in Ireland.

See pages 438-439, col. 6, and paragraph 1088 above.

We estimate that there are 6,688 such children in Ireland, of whom 6,242 need some provision.

O'Farrell, Vol. III., p. 77.

Of these 6,242, although training in day schools might possibly suffice for 75 per cent., it is probable that at least 25 per cent., or 1,560, of them would require institutional care, and these might be provided for in a separate block of the institutions alluded to in (a) above.

Cf. Kerr, Vol. I., page 435, col. 1.

See pages 438-439, cols. 1 and 2.

(d) *Uncertified "Persons of Unsound Mind"* (including senile dements).—There would appear to be 1,824 of this class in the areas investigated. We should estimate, therefore, that there would be about 8,900 of this class in Ireland, of whom rather less than half, or about 4,300, would need provision. But by far the larger number of these are in workhouses at present. In fact, from our medical investigators' reports, we should expect to find generally in Ireland about 82 per cent. of the "senile dements" and about 57 per cent. of the "uncertified" persons of unsound mind in workhouses.

At the same time, it must be noted that as regards more than half of the senile dements in workhouses our medical investigators appeared to be satisfied with the suitability of workhouse accommodation for them, whereas as regards the uncertified persons of unsound mind they were of opinion that two-thirds of them ought to be more suitably provided for.

1101. An extension of the auxiliary asylum system as recommended by the Vice-Regal Commission on Poor Law Reform, 1906 (Cd. 3202), would provide more suitable accommodation for those who needed to be removed from the workhouses. Those whom the county council, as the local authority for the care and control of all mentally defective persons, thought fit to allow to remain in the workhouses would be kept there under the supervision, protection and oversight of the county council for so long a time as the county council, advised by its medical officer, deemed advisable; and, of course, at the expense of the county council, who would contract with the guardians as to the payments to be made in respect of these cases.

Extension of the Auxiliary Asylum System

Vice-Regal Commission on Poor Law Reform, 1906. [Cd. 3202.]

Writing of Youghal Auxiliary Asylum, the recent Vice-Regal Commission on Poor Law Reform in Ireland states:—"One could not compare favourably with the Youghal Auxiliary Asylum even the best or rather the least objectionable of lunatic wards in workhouses, and the insane inmates of workhouses would undoubtedly gain immensely by a transfer to such an institution as Youghal." When it is remembered that the Vice-Regal Commission visited every workhouse in Ireland, as well as the auxiliary asylum, it must be admitted that their views are entitled to the greatest consideration.

Report of the Vice-Regal Commission on Poor Law Reform, paragraph 152, p. 37.

1102. Since no grant is given from the Local Taxation Account for the maintenance of the insane detained in workhouses, it remains that on financial and humanitarian grounds it would be advisable to remove the insane from workhouses even under the present conditions of the grant. We append the following extract from the Inspectors of Lunatics recent report on the Youghal auxiliary asylum:—

Fitzgerald Cork, Vol. VI. p. 491.

"This establishment continues to afford excellent accommodation for chronic and harmless insane. The wards were in good order. The bedding was good and kept in excellent order. The dinner was served in the dining room with proper order and decency. Having regard to the number of old and helpless patients in the institution the percentage of employment must be considered most creditable."

1103. The following table shows the total number of mentally defective persons, excluding certified lunatics, found by our Medical Investigators in the areas investigated, classified under the different groups, and arranged according to the different grades of mental defect. It also shows the number of such persons of each grade of mental defect in the areas investigated whom the Medical Investigators considered were "needing provision," *i.e.*, "persons at the present time urgently in need of provision, either (1) in their own interest; or (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal; these are not here included, but only such cases as are, in the opinion of the investigators, improperly, unsuitable, or unkindly cared for, or who, by reason of particular habits and characteristics," are a source of danger to the community in which they live."

Table showing Mentally Defective Persons (excluding certified lunatics) found and needing provision in areas investigated.

* For meaning of "defective" children" see paragraph 1088 above.

TABLE SHOWING THE NUMBERS OF MENTALLY DEFECTIVE PERSONS (EXCLUDING CERTIFIED LUNATICS) IN THE AREAS INVESTIGATED BY THE MEDICAL INVESTIGATORS ACCORDING TO CLASS AND GROUP, AND THE NUMBERS NEEDING PROVISION IN EACH CLASS AND GROUP.

Summary of the Existing Accommodation for Mentally Defective Persons, and Suggestions as to Fresh Accommodation Required.

| | | |

Finance.

Grant for buildings and of maintenance.

Recommendation XXIX.

1104. The local conditions in Ireland are undoubtedly so serious, and the poverty of the country so pronounced that we are of opinion that substantial assistance in the way of a maintenance and building grant from the State, is not only justifiable, but essential, if proper provision is to be made for the large number of mentally defective who are in most urgent need of it.

56th Report Inspectors of Lunatics, pp. ix, xiv. and 33.

There were on January 1st, 1907, about 21,856 "insane" maintained at the public expense in Ireland. Of these 18,566 are in district asylums, maintained at an average cost per head, calculated on the gross expenditure including repayments of loans, of about £28 15s. per annum; 3,128 in workhouses, mostly "chronic" lunatics not under certificate (*see* Par. 1063 *above*), at a cost of about £18 12s. 3d. per head per annum*; 162 in the Central Criminal Lunatic Asylum, Dundrum, at a cost of about £43 per head per annum. The total cost of those already provided for is therefore about £598,957 per annum.

Report of the Royal Commission on Local Taxation, Cd. 1068, page 14.

The Royal Commission on Local Taxation in their Report on Ireland, 1902 [Cd. 1068] proposed a new grant for "the provision of asylum accommodation for pauper lunatics and imbeciles." The Report stated that this course of action "would afford substantial relief to the ratepayers, in respect of the local service which is more national in its character than any other, and would be a powerful agent in securing efficient administration and reform, which are urgently required in the poverty-stricken districts of the West."

Comparison between England and Ireland as to rateable and assessable value and requirements.

1105. In round figures the population of Ireland (1901) is 4,457,000 and the rateable value is £15,200,000 or £3 8s. 2d. per inhabitant. But three-fifths of the value is agricultural land, and the "assessable value," in the sense of the English Agricultural Rates Act, that is taking into account land at only one-half of its value and other property in full, is £2 10s. per inhabitant, whereas the average assessable value in England and Wales is over £5 per inhabitant.

The Report of the Royal Commission on Local Taxation, Cd. 1068, p. 21.

Thus it would appear that England is twice as rich in locally taxable ability as measured by this test in proportion to population.

After making every allowance for defects of valuation, it remains true that Ireland is much poorer than England in general, and parts of the west reach extreme depths of poverty, 10s. "assessable value" per inhabitant being about the minimum in any union, as compared with £2 10s. in England.

The average rural rates in Ireland are higher in the £, perhaps by one-third, than in England or Scotland, while the general ability of the average rural ratepayer is certainly less in Ireland than in either of the other countries.

Recommendation XXIX.

1106. We are of opinion that the above facts as to the financial position show that the ratepayers of Ireland could not possibly provide the institutions which, as shown in our Report, will be necessary, unless they receive a substantial building grant-in-aid in addition to a grant for maintenance, etc. We find that Ireland has fifty-six insane out of every 10,000 of its population as compared with forty insane in England. We find that ·57 per cent. of the population

Vol. VI., pp. 73, 55.

of Ireland were mentally defective (other than the certified insane), as against ·46 per cent. in England. Moreover, what is even more serious, in view of the additional expense necessarily involved, we find that 66 per cent. of the mentally defective (other than the certified insane) population in Ireland, is urgently in

Vol. VI., pp. 77, 65.

need of provision as against 44·45 per cent. of such mentally defective population in England.

---

* On April 1st, 1908, the Local Government Board of Ireland supplied the following information. "The figures in the Board's last Annual Report at pp. 551–2 which may be taken as the cost of relief in workhouses are as follows :—

	£
In-maintenance and clothing	456,474
Salaries and rations of officers	204,307
Medicines and medical and surgical appliances	10,861
Other expenditure connected with poor relief, less that discharged by loans	125,909
Total	797,551

The numbers relieved during the year represent a daily average of 42,850 persons, and this divided into the cost given above works out at £18 12s. 3d. per head."

1107. The principles on which we suggest that substantial assistance should be granted by the State to aid local authorities (*see* Recommendation XXIX. below) are laid down in Part VIII. of our Report as to England and Wales (Chapter XL. *above*).

Principles on which State grant should be given.

1108. It is impossible to make any close estimate as to what would be the cost of making more suitable provision for the number of mentally defective persons estimated as *needing such provision at the present time in Ireland.

Basis on which estimate as to cost of provision for mentally defective persons needing it may be made.

Everything must depend on the nature of the provision required, and that can only be determined in individual instances, as and when they come before the local authorities.

We have indicated in Preamble (4) to our Recommendations below, three methods of treatment as available. It is obvious that the method of detention is the most expensive, and we do not anticipate that this would be necessary in more than a certain percentage of the cases.

In considering the figures in the Table below it will be noted that the large increase in the suggested probable cost over that at present prevailing is mainly due to two causes :—

(1) Out of a total of 16,789 persons, no less than 4,077 at present involve no direct cost to the public for maintenance, etc.

(2) Out of the remainder of the 16,789 persons (viz., 12,712), no less than 5,796 are mentally defective children for whom no special provision is made at the present time, other than that of the ordinary elementary schools.

The provision for these two classes accounts for no less than £133,886 out of a total suggested increase of £176,075.

In the Table appended we have classified the mentally defective persons "needing provision" under the various groups, in accordance with the arrangement pursued in the case of our medical investigations. We have not, however, alluded to Group J (Idiots in Idiot Asylums) or to Group L (Inmates of Inebriate Homes). The only Idiot or Imbecile Asylum in Ireland is the Stewart Asylum near Dublin and the inmates therein are not in "need of provision." There is a State inebriate reformatory at Ennis for 54 inmates, and a certified inebriate reformatory at Waterford for 30 inmates. Our Medical Investigators, however, found no mentally defective inebriates amongst the inmates coming from the areas investigated.

Vol. III. p. 80, col. 1.

Report of Inspector of Inebriates (Ireland) 1906. p. 5.

* For meaning of "needing provision" *see* paragraph 1103 above.

TABLE SHOWING COST OF MAKING PROVISION FOR MENTALLY DEFECTIVE PERSONS ESTIMATED TO NEED IT IN THE WHOLE OF IRELAND.*

CLASS	How Provided for at present.	Number Needing Provision.		Present Cost.		Estimated Cost of More Suitable Provision.		Increase or Decrease of Future over Present Expenditure.				Remarks as to Basis on which the Cost of making more suitable Provision for Cases in the Areas investigated is estimated.
		In Areas Investigated.	In Whole of Ireland (Estimate)	In Areas Investigated.	In Whole of Ireland (Estimate)	In Areas Investigated.	In Whole of Ireland.	In Areas Investigated.		In Whole of Ireland (Estimate).		
								Increase.	Decrease.	Increase.	Decrease.	
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)
				£	£	£	£	£		£		
Group A (Children in Public Elementary Schools)	Public Elementary Schools	1,169	*5,796*	3,346	*16,591*	10,938	*48,444*	7,592	—	*31,853*	—	The cost in ordinary elementary schools in Ireland is about 2*l.* 17*s.* 3*d.* per head per annum. (73rd Report National Education in Ireland, p. 33.) Of the 1,169 needing provision, 888 were insane, idiots, imbecile, or feeble-minded, and their future cost is estimated at 29*l.* per head per annum, the cost at the Stewart Idiot Asylum (Vol. III., p. 335). The remainder of the 1,169 cases, viz. 1,081, are estimated for at 10*l.* per head per annum, the cost at Special Schools in England.
Group B (Children and Adults in Poor Law Institutions)	Workhouses, etc.	1,243	*5,975*	22,135	*111,209*	31,948	*153,557*	9,813	—	*42,348*	—	The inmates of workhouses cost about 18*l.* 12*s.* 3*d.* per head per annum (see footnote p. 460 above). The cost of more suitable provision is estimated as follows: 225 senile dements at 10*s.* per week; 426 uncertified "persons of unsound mind," at 28*l.* 15*s.*, the present asylum cost (56th Report, Inspector of Lunatics, Ireland, p. 33); 173 idiots and imbeciles estimated at 29*l.* per head per annum, the cost at the Stewart Idiot Asylum; 274 feeble-minded and defective children, estimated at 20*l.* per head per annum (Dendy, Vol. I., p. 42, *Q.* 824 and footnote); 145 sane epileptics at 9*s.* per week (see paragraph 703 above).
Group C (Children and Adults in Receipt of Outdoor Relief)	—	34	*163*	122	*587*	929	*4,454*	807	—	*3,867*	—	The cost of outdoor relief divided by the daily average number on outdoor relief works out at 3*l.* 12*s.* per head per annum (35th Report, Local Government Board (Ireland), p. xiii.). The cost of more suitable provision is estimated as follows: 2 senile dements at 10*s.* per week; 11 uncertified "persons of unsound mind," at 28*l.* 15*s.* per annum, the present asylum cost; 13 idiots and imbeciles at 29*l.* per annum; 1 feeble-minded at 20*l.* per annum; 7 sane epileptics at 9*s.* per week.
Group D (Persons known to Sanitary Authorities)	Not provided for at public expense	8	*38*	Nil.	*Nil.*	222	*1,046*	222	—	*1,046*	—	The cost of more suitable provision is estimated as follows: 3 uncertified "persons of unsound mind," at 28*l.* 15*s.*, the present asylum cost; 4 idiots at 29*l.* per annum; 1 feeble-minded at 20*l.* per annum.
Group E (Persons relieved by Medical Charities	Not provided for at public expense	35	*168*	Nil.	*Nil.*	845	*4,057*	845	—	*4,057*	—	The cost of more suitable provision is estimated as follows: 3 senile dements at 10*s.* per week; 6 uncertified "persons of unsound mind," at 28*l.* 15*s.*, the present asylum cost; 3 idiots and imbeciles, at 29*l.* per head per annum, the cost at the Stewart Idiot Asylum; 9 feeble-minded and defective children, at 20*l.* per annum; 14 sane epileptics at 9*s.* per week.

Group F (Persons known to General Practitioners)	Not provided for at public expense	61	*293*	Nil.	*Nil.*	1,549	*7,442*	1,549	—	*7,442*	—	The cost of more suitable provision is estimated as follows: 10 uncertified "persons of unsound mind," at 28*l.* 15*s.*, the present Asylum cost; 20 idiots and imbeciles, at 29*l.*, the cost at the Stewart Idiot Asylum; 13 feeble-minded and defective children, at 20*l.*; 18 sane epileptics, at 9*s.* per week.
Group G (Children and Adults in various Charitable Institutions and Common Lodging Houses, Training Homes and Reformatory and Industrial Schools	Not provided for at public expense, except as to 14 cases in the areas investigated in Reformatory and Industrial Schools at a cost of about 8/- per week per head	100	*480*	291	*1,393*	2,330	*11,184*	2,039	—	*9,791*	—	The cost of making more suitable provision is estimated as follows: 1 senile dement at 10*s.* per week, 11 uncertified "persons of unsound mind" at 28*l.* 15*s.*, the present Asylum cost; 20 idiots and imbeciles at 29*l.*, the cost at Stewart Idiot Asylum; 60 feeble-minded and defective children at 20*l.*, 8 sane epileptics at 9*s.* per week.
Group H (Other Sources)	Not provided for at public expense	465	*2,228*	Nil.	*Nil.*	11,588	*55,523*	11,588	—	*55,523*	—	The cost of making more suitable provision is estimated as follows: 14 senile dements at 10*s.* per week, 52 uncertified "persons of unsound mind" at 28*l.* 15*s.*, the present Asylum cost; 172 idiots and imbeciles at 29*l.* the cost at the Stewart Idiot Asylum; 168 feeble-minded and defective children at 20*l.*, 59 sane epileptics at 9*s.* per week.
Group I (Known to the Police)	Not provided for at public expense	195	*937*	Nil.	*Nil.*	5,029	*24,174*	5,029	—	*24,174*	—	The cost of making more suitable provision is estimated as follows: 5 senile dements at 10*s* per week, 32 uncertified "persons of unsound mind" at 28*l.* 15*s.*, the present Asylum cost; 80 idiots and imbeciles at 29*l.*, the cost at the Stewart Idiot Asylum, 49 feeble-minded and defective children at 20*l.* per annum; 29 sane epileptics at 9*s.* per week.
Group K (Inmates of Prisons)	Prisons	156	*749*	4,544	*21,814*	3,708	*17,788*	—	836	—	*4,026*	These *qua* prisoners are already chargeable to the State while in prison at 29*l.* 2*s.* 6*d.* per head, per annum (Report of General Prisons Board, Ireland, 1906, p. 68), but it is impossible to say for what periods they would actually be detained. The present cost is estimated in the Table at the cost per head, per annum, but this cannot be relied on as showing the actual cost incurred in practice on these cases.
												The cost of making more suitable provision is estimated as follows: 5 senile dements at 10*s.* per week, 65 uncertified "persons of unsound mind" at 28*l.* 15*s.*, the present Asylum cost; 77 feeble-minded at 20*l.*, 5 defective children at 20*l.*, 4 sane epileptics at 9*s.* per week.
Totals		3,466	*16,789*	30,438	*151,594*	69,086	*327,669*	39,484	836	*180,101*	*4,026*	
								Net Increase £38,648.		*Net Increase £176 075.*		

* For meaning of "needing provision," *see* paragraph 1103 above.

The moral claim of Ireland to state aid.

1109. The moral claim which Ireland has to Imperial contributions was thus pressed upon us by Sir George O'Farrell :—

O'Farrell, Vol. III., p. 79, c. 1 and 2.

"I submit that Ireland has in this connection a special claim on the Irish Church Surplus, and, if that surplus be now exhausted, then—having regard to the terms of the Irish Church Act, 1869, and the promises given at the time of its passing—provision for the relief of the afflicted classes referred to should be largely made out of Imperial funds. Mr. Gladstone stated that it was written in the Church Bill 'in letters of iron' that the Irish Church Surplus (1st) should be devoted exclusively to Irish purposes; (2nd) that these purposes were the relief of unavoidable calamity and suffering.

"Mr. John Bright, in a historic speech on the second reading of the Bill, expressed this resolution so eloquently that his words deserve recall. He said:—'As to the uses to which these endowments are put. If I were particular on the point as to the sacred nature of the endowments, I should even then be satisfied with the propositions in this Bill—for, after all, I hope it is not far from Christianity to charity; and we know that the Divine Founder of our faith has left much more of the doings of a compassionate and loving heart than He has of dogma. I am not able to give the chapter, or the verse, the page or the column; but what has always struck me most in reading the narrative of the Gospel is how much of kindness and how much of compassion there was, and how much also there was of dealing kindly with all that were sick, with all that were suffering. Do you think it will be a misappropriation of the surplus funds of this great Establishment to apply them to some objects such as those described in the Bill? Do you not think that from the charitable dealing with these matters even a sweeter incense may arise. . . . We can do but little, it is true. We cannot relume the extinguished lamp of reason. We cannot make the deaf to hear. We cannot make the dumb to speak. It is not given to us—

> "From the thick film to purge the visual ray
> And on the sightless eyeballs pour the day."

But at least we can lessen the load of affliction and we can make life more tolerable to vast numbers who suffer.'

"When the Bill was going through Committee, the actual appropriation of the surplus among specified charities was omitted, but Mr. Gladstone stated that the Government bound themselves 'to the principles on which the available residue would be administered.' This clear declaration of intention ran through the debates, and it is embodied in the 68th Section of the Act, which runs as follows:—'Surplus.—68.—And whereas it is further expedient that the proceeds of the said property should be appropriated mainly to the relief of unavoidable calamity and suffering, yet not so as to cancel or impair the obligations now attached to property under the Acts for the relief of the poor: Be it further enacted, that the said proceeds shall be so applied *accordingly* in the manner Parliament shall hereafter direct.'

"Millions of the Irish Church Surplus have been distributed since the passing of the Act; but, so far, none of the surplus has gone to the relief of lunatics or idiots or the other charities to which it was consecrated; and it is difficult for one who is not a lawyer to trace the connection between 'the relief of unavoidable calamity and suffering,' and the grant, for instance, to the National Teachers' Pension Fund of £1,300,000; to Intermediate Education of £1,000,000; to the Department of Agriculture and Technical Instruction of £70,000 a year for fifteen years; or to the Professorial Endowment of the Royal University of £20,000 a year. It is equally difficult to reconcile the principles on which the Bill was recommended to Parliament with the fact that by Section 40 the amounts previously payable out of the Consolidated Fund, or out of moneys provided by Parliament for the endowment of the Presbyterian Church in Ireland (Regium Donum, etc.), as well as those payable to the College of Maynooth, were compounded for the capital value of the interest which they represented, and such capital value was paid out of the Church surplus in relief of the Imperial taxpayer. I submit that these provisions show the reasonableness of the demand that the Imperial taxpayers who were thus relieved should now provide the money required for the relief of unavoidable calamity."

O'Farrell, Vol. III 22244.

1110. Sir George O'Farrell suggested that the money should be used for building purposes in these words :—

"I may say that this Church SurplusFund, which represented a sum, Mr. Gladstone said, of £311,000 a year, was dedicated to the feeble-minded, among other classes of people in Ireland needing relief, people subject to what was called in the Bill, 'unavoidable calamity and suffering.' It was dedicated in the most solemn way, and we got a most solemn Parliamentary promise that this £7,000,000 or £8,000,000 of money should be given to the struggling charities of Ireland. As a matter of fact the surplus has been devoted to a great many objects since the passing of the Act, but not one shilling has come to any of the bodies which were ear-marked as its most just application. I should think we have a claim for anything remaining of it, that this money should be devoted to building for such classes as the feeble-minded. Then I think also we should get a capitation grant for their maintenance. The ratepayers of Ireland are so poor that they cannot afford to start, or entirely maintain, separate charitable institutions. I think we have reached the limit of our tax-bearing capacity as regards institutions, and that we must get very substantial relief from the State if they are to be provided at all."

1111. As regards the granting of a loan repayable on especially easy terms, we think that the point should be carefully considered with a view to as generous treatment as possible being meted out. If the Report of the Vice-Regal Commission on Poor Law Reform, 1906 [Cd. 3202] be carried out there would probably be a large number of disused workhouses available, but even in this event the cost of the alterations necessarily involved would be considerable, and the need for a grant towards the alterations of buildings and the acquisition of lands, or for the granting of a loan repayable on easy terms, would be none the less pressing. In addition to the institutions which will be absolutely necessary if proper provision is to be made for the mentally defective persons in urgent need of provision, it should be remembered that the provision for a large number of mentally defective children, even outside an institution, will be a new and costly charge. The number left, even after institutional treatment had been provided in those cases where it was absolutely essential, would alone involve considerable additional expense when we remember that the only provision made for them at present is in the ordinary elementary schools.

Possibility of State Loan on easy terms.

1112. The general principles which underlie our Report as to England and Wales are applicable to Ireland. and may be briefly stated :—

General principles of our Report as to England and Wales applicable to Ireland.

(1) *Central Authority.*—That the same central authority which deals with "lunatics" should deal with all classes of mentally defective persons. To carry this out effectually in Ireland it would be necessary to have a strong central authority. Being empowered by our extended reference as to England and Wales we have definitely recommended this there. In the case of Ireland, we are debarred by the limited nature of our original reference from definitely recommending any change in the central supervising authority, *i.e.*, of the Inspectors of Lunatics and Lunatic Asylums. We desire, however, to again call attention to the Recommendations of the Committee on Lunacy Administration in Ireland, 1891 [c. 6434] which are in complete conformity with the principles underlying our Report, and to express our opinion that it would be essential that there should be in Ireland a strong Central Authority dealing with all classes of mentally defective persons. The supervising authority could then see that a plan of settled action was established between the various agencies brought into contact with mentally defective persons, whether, for instance, in prisons, reformatories, workhouses, inebriate homes, schools or voluntary institutions, so that they did not pass from one authority to another, helped or detained a little at each, but permanently cared for at none.

Committee on Lunacy Administration in Ireland, 1891. [C. 6434.]

(2) *Local Authority.*—That the same local authority which is responsible for the provision of accommodation for "lunatics" should also be required by Statute to make suitable and sufficient provision for the accommodation and maintenance, care, treatment, education, training and control of all classes of mentally defective persons, and that one Statutory Committee of the Council should exercise its powers in respect of all mentally defective persons (including those at present called "lunatics").

(3) *Amendment and Extension of Lunacy Law and Procedure.*—That the existing Lunacy Law and Procedure should be amended and adapted so as to enable it to cope with the new conditions.

(4) *System of Care and Control.*—That a system should be created by which the various classes of mentally defective persons can at an early age be brought into touch with some friendly authority, trained and as far as need be supervised during their lives, in co-operation with their relations when that is to their advantage, and, when it is desirable, detained and treated in some measure as wards of the State.

RECOMMENDATIONS AS TO IRELAND.

CHAPTER XLVII.

PREAMBLE.

In so far as we are empowered by our Reference, we recommend, and in so far as we are not so empowered, for reasons stated in our Report, we suggest, as follows :—

It has appeared to the Commissioners desirable that this short preamble should be prefixed to their Recommendations. The following are points which should be borne in mind in reference to the Recommendations as a whole :—

(1) It is not intended that the maintenance at the public expense of the mentally defective or of epileptics not mentally defective should be extended to those who, either at their own cost or at that of their relatives or friends, can be otherwise suitably and sufficiently provided for.

(2) The words "Institution" or "Home" are used, in these Recommendations, in the widest sense to include all establishments in which mentally defective persons are maintained wholly or in part at the expense of the rates or taxes, or at the charges of charitable endowments or voluntary contributions, and not for private profit.

(3) A "House" in these Recommendations means a place in which two or more mentally defective persons are maintained for private profit.

(4) The three methods of oversight, certification, and detention, are recommended as available subject to statutory safeguards, and at the advised discretion of a responsible Committee. According to the different classes, for some oversight will suffice, for others certification, and for others certification with an order for detention. The aim of the scheme is the application of particular methods suitable for the cases of different persons, not the general adoption of any one method exclusively. We have described the methods in our Report as to England and Wales.

See paras. 372, 683–754, and 763 above.

(5) Save as in the following Recommendations otherwise expressly provided, such Recommendations are not intended to apply to persons of unsound mind so found by inquisition.

A—THE CENTRAL AUTHORITY.

(Recommendations I to XVII.)

RECOMMENDATION I.

The single central authority.

That there be one central authority for the general protection and supervision of mentally defective persons and for the regulation of the provision made for their accommodation and maintenance, care, treatment, education, training and control, and that such central authority shall undertake the general supervision and inspection of persons of unsound mind so found by inquisition, and shall see that the orders of the Lord Chancellor regarding the residence, accommodation and maintenance of such persons, are duly carried out.

NOTE.—This includes the supervision and inspection of Chancery mentally defective persons as suggested by the Committee on Lunacy Administraton in Ireland, 1891 (Cd. 6434, p. 49). The Registrar in Lunacy as representing the Lord Chancellor's Jurisdiction would be made an *ex officio* member and Chairman of the Central Authority (*see* Recommendation VI).

RECOMMENDATION II.

Act for the care and control of the mentally defective.

That, consistently with the above Recommendation and in view of the alterations in administration and procedure suggested below, the Lunacy (Ireland) Acts, 1821—1901, be remodelled, and that such of the provisions of these Acts as are consistent with the scheme suggested in these Recommendations, together with such new statutory provisions as may be required for bringing the complete scheme into operation, should be embodied in a new Act for the care and control of the mentally defective.

RECOMMENDATION III.

Changes in nomenclature and definition of "mentally defective."

That the statutory use of the word "lunatic" be discontinued, that the term "Hospital" be substituted for the word "Asylum," and that the term "mentally defective" be defined in the proposed Act for the care and control of the mentally defective as comprising the classes of mentally defective persons set out in Recommendation IV.

RECOMMENDATION IV.

Classes of persons supervised by the central authority.

See para. 563.

That there be placed under the general protection and supervision of the central authority:

(1) "Persons of unsound mind," *i.e.*, persons who require care and control owing to disorder of the mind and are consequently incapable of managing themselves or their affairs, and are not included in classes (2), (3), (4), (5), (6), (7), (8), and (9), below.

NOTE.—The term "unsound mind" under this Recommendation might be said to stand as generally equivalent to the word lunatic.

(2) "Persons mentally infirm," *i.e.*, persons who, through mental infirmity, arising from age or from the decay of their faculties, are incapable of managing themselves or their affairs.

(3) "Idiots," *i.e.*, persons so deeply defective in mind from birth or from an early age that they are unable to guard themselves from common physical dangers, such as in the case of young children, would prevent their parents from leaving them alone.

NOTE.—This definition was suggested in evidence before us by the Royal College of Physicians of London.

(4) "Imbeciles," *i.e.*, persons who are capable of guarding themselves against common physical dangers, but who are incapable of earning their own living by reason of mental defect existing from birth or from an early age.

NOTE.—This definition was suggested in evidence before us by the Royal College of Physicians of London.

(5) "Feeble-minded," *i.e.*, persons who may be capable of earning a living under favourable circumstances, but are incapable from mental defect existing from birth or from an early age (a) of competing on equal terms with their normal fellows; or (b) of managing themselves and their affairs with ordinary prudence.

NOTE.—This definition is, with slight verbal alterations, in the form suggested in evidence by the Royal College of Physicians of London to us, assuming, as we do, that the "prodigal" and the "facile" are included within the term.

(6) "Moral Imbeciles," *i.e.*, persons who from an early age display some mental defect coupled with strong vicious or criminal propensities on which punishment has little or no deterrent effect.

NOTE.—This definition is as recommended by the Royal College of Physicians of London, with the deletion of the words in brackets and the substitution in their place of the words "some mental defect coupled with"; "a person who displays from an early age [*and in spite of careful up-bringing*] strong vicious or criminal propensities on which punishment has little or no deterrent effect."

(7) "Epileptics," *i.e.*, persons who, being epileptics, are also mentally defective.

(8) "Inebriates," *i.e.*, persons who, being inebriates, are also mentally defective.

(9) "Deaf and Dumb" or "Blind," *i.e.*, persons who, being deaf and dumb or blind, are also mentally defective.

RECOMMENDATION V.

Title of the central authority.

That the central authority, which would deal with the whole class of mentally defective persons and the divisions of that class, be called "The Commission for the Care of the Mentally Defective," and that the members thereof be called the Commissioners for the care of the Mentally Defective.

NOTE.—In the case of England and Wales we have recommended that the central authority should be called the "Board of Control," but, owing to the fact that there was at one time in Ireland a body, with certain limited functions only, known by that name, we have thought it desirable that the central authority in Ireland should be designated as the Commission for the Care of the Mentally Defective rather than as the Board of Control.

RECOMMENDATION VI.

Constitution of the central authority.

That there be appointed to the post of Commissioners, according to the demands of the business of the Commission, persons who are specially qualified for that post, subject to these qualifications—(1) That the Registrar in Lunacy shall be an ex-officio member and Chairman of the Commission, and shall be paid such extra remuneration as the Treasury may sanction. (2) that with the exception of the Registrar in Lunacy the ordinary salaried members of the Commission shall be qualified medical men.

RECOMMENDATION VII.

Registration and visitation of cases.

That all cases of mentally defective persons dealt with under these Recommendations be registered at the office of the Commission; that the work of the Commission be so arranged as to allow of the frequent personal visitation of mentally defective persons, and that this visitation consist of not less than two visits a year paid to each such person, unless, in view of the circumstances of particular cases or classes of cases, the Commission determines that in regard to them this frequent visitation is unnecessary.

RECOMMENDATION VIII.

Mentally defective persons (including single patients) in private families and charitable establishments.

That in the case of all persons who are mentally defective or alleged to be mentally defective, including single patients, similar provisions to those of the English Lunacy Act, 1890, Section 206, be applied.

NOTE.—Section 206 of the English Lunacy Act, 1890, is reprinted below :—

206.—(1.) If it comes to the knowledge of the Commissioners that any person appears to be without an order and certificates detained or treated as a lunatic or alleged lunatic by any person receiving no payment for the charge, or in any charitable, religious, or other establishment (not being an institution for lunatics), they may require the person by whom the patient is detained, or the superintendent or principal officer of the establishment, to send to them, within, or at such time or times as the Commissioners may appoint, a report or periodical reports by a medical practitioner of the mental and bodily condition of the patient, with all such other particulars as to him and his property as they think fit.

(2.) Any one or more of the Commissioners may at any time visit any such patient and report the result of the visit to the Commissioners, and may exercise, with respect to such patient, all the powers (except that of discharge) given to them as to persons confined in any institution for lunatics, or as single patients.

(3.) The Commissioners may, if they think fit, transmit any reports received by them, or may report the results of any enquiries made by them under this section, to the Lord Chancellor, who may thereupon make an order for the discharge of the patient from the custody in which he is detained or for his removal to an institution for lunatics, or to such other custody as he may think fit, and the expenses properly incurred of carrying any such order into effect and of maintaining the patient, if so removed, shall if the order so directs, be paid by the guardians of the union in which the patient was found, until the authority legally liable for his maintenance has been ascertained; and such guardians shall have the same right to recover any such expenses paid by them against the lunatic and his estate, and the person or authority legally liable for his maintenance as in the case of orders for maintenance under this Act.

(4.) Where an order is made by the Lord Chancellor under this section for removal of a lunatic to an asylum, any justice of the county or borough in which the asylum is may exercise all the authorities conferred upon a justice by this Act, for the purpose of making the lunatic's property applicable to his maintenance and for maintaining him as a pauper.

(5.) All reports and particulars sent to the Commissioners under this section shall be kept by them, and shall be open to inspection only by the Commissioners and the Lord Chancellor, and by such persons as the Lord Chancellor directs.

RECOMMENDATION IX.

Registration, supervision and inspection of institutions or houses.

That the Commission undertake the registration, supervision and inspection of all institutions or houses, as defined in the Preamble, in which mentally defective persons are maintained, and of all arrangements made for their care, and visit all such institutions or houses at least twice a year.

See para. 1062.

RECOMMENDATION X.

Licensing of institutions or houses for mentally defective persons.

That all institutions or houses, as defined in the Preamble, for the care and maintenance of mentally defective persons be licensed solely by the Commission, and be registered at the office of the Commission, and at the office of the Committee of the County Council or County Borough within the area of which they are chargeable for the payment of rates; and that, in view of the special class or classes of mentally defective persons which are to be maintained in the several institutions, the Commission draw up such regulations as may be necessary in regard to the accommodation to be provided in such institutions, due regard being had to economy in outlay and in administration.

See para. 1062.

RECOMMENDATION XI.

Division of Ireland into districts and appointment of Inspectors.

That, if found necessary, Ireland be divided into districts suitable for purposes of supervision and visitation, and that the Commissioners be assisted by Inspectors, who should be qualified medical practitioners.

NOTE.—The division of Ireland into suitable districts and the number of Inspectors required would be matters upon which the Central Authority should advise.

RECOMMENDATION XII.

Duties of Inspectors.

That the duties of the Inspectors either in such districts as shall be assigned to them by the Commission or generally shall be such as the Commission may direct, but shall extend to all classes of persons under the supervision of the Commissioners. Such parts of their Reports as the Commission shall deem to be of public interest or importance shall be published in the Annual Report of the Commission.

RECOMMENDATION XIII.

Qualifications of Medical Commissioners and Inspectors.

That in any appointment of Medical Commissioners or Inspectors, special consideration be paid to the claims of persons who have expert knowledge in regard to the various classes of mental defect mentioned in Recommendation IV., or respecting institutional and other administration.

RECOMMENDATION XIV.

Qualifications of Honorary Commissioners.

That Honorary Commissioners may be appointed for a term of years, but so that a proportion of the number retire in each year, and that in making such appointments consideration be paid to the claims of persons who combine a general interest in the well-being of the mentally defective with special knowledge in regard to some branch of institutional or administrative work, or who have such other qualifications as are likely to be of special service to the Commission.

RECOMMENDATION XV.

Civil Service rule of retirement to apply.

That the tenure of office for Commissioners and Inspectors be that of ordinary civil servants and that the ordinary Civil Service rule of retirement at the age of 65 shall apply to the salaried members of the Commission, to the Secretary, and to the Inspectors, but that in determining the amount of the pension due consideration be paid to the comparatively short tenure of office which, in individual cases, might result in hardship owing to such retirement being enforced.

RECOMMENDATION XVI.

Visitation by single Member of the Commission.

That all duties respecting the visitation of institutions or houses for the care of the mentally defective, unless in the particular instance the Commission decide otherwise, be undertaken by one Medical Commissioner, or by one other Commissioner assisted by a Medical Commissioner or an Inspector, and that except where the Commissioners otherwise decide, a single member of the Commission be authorised to inquire and report in regard to any scheme advanced or any educational, custodial or other arrangement, proposed by any local authority or public or voluntary agency for the aid, support, or benefit of mentally defective persons.

RECOMMENDATION XVII.

Annual Report of the Commission.

That an Annual Report be issued by the Commission which should include particulars of methods of treatment for mental defect in Ireland and elsewhere, accounts of new results of medical science and progress in regard to the proper care and supervision of the several classes of mentally defective persons, with the necessary statements of expenditure, plans, etc., etc., and that economy in construction and management of Institutions should be a question considered and reported on by the Commission from year to year in their Annual Report.

B.—THE LOCAL AUTHORITIES.

(Recommendations XVIII. to XXXVI.)

(a) CONSTITUTION AND DUTIES.

(Recommendations XVIII. to XXIV.)

RECOMMENDATION XVIII.

See paras. 1054, 1090, 1095–1099.

Local Authority to make provision etc., for mentally defective persons.

That the Council of each County and the Council of each County Borough be the local authority under the proposed Act, and be required by Statute to make suitable and sufficient provision for the care and control of the mentally defective in the County or County Borough.

RECOMMENDATION XIX.

Local authority to act through a Committee.

That the local authority shall exercise the powers proposed to be conferred on them under the proposed Act through a Statutory Committee.

RECOMMENDATION XX.

Name of the Committee and transfer of duties of Committees under Sec. 9 of the Local Government (Ireland) Act, 1898.

That the Statutory Committee be called the Committee for the Care of the Mentally Defective and take over the duties of the Committee of the Council of the County or County Borough, as the case may be, under Section 9 of the Local Government (Ireland) Act, 1898.

RECOMMENDATION XXI.

Co-opted members of the Committee.

That the Committee for the care of the mentally defective be constituted so as to include within it by co-option additional members, of whom one at least if possible shall be a woman, who have special experience or knowledge.

RECOMMENDATION XXII.

Powers of local authority delegated to the Committee.

That all matters relating to the exercise by the Council of their powers (under the proposed Act for the care and control of the mentally defective) except the power of raising a rate or borrowing money shall stand referred to the Committee for the care of the mentally defective, and the Council, before exercising such powers, shall, unless in their opinion the matter is urgent, receive and consider the Report of the Committee for the care of the mentally defective with respect to the matter in question. The Council may also delegate to the Committee, with or without restrictions or conditions, as they think fit, any of their powers (under such an Act) except the power of raising a rate or borrowing money.

RECOMMENDATION XXIII.

Duty of Committee to receive requests as to provision and to report to Commission in case of refusal of requests.

That it shall be the duty of the Committee for the Care of the Mentally Defective to receive from parents and others in charge of mentally defective persons requests for the provision of care and control of those mentally defective persons, and on the receipt of such requests it shall be the duty of the Committee, after making any necessary enquiries as to the requirements of the mentally defective persons referred to, to arrange for the admission of those mentally defective persons into suitable institutions or houses or into suitable private care, and in the event of the Committee failing to provide such care for any such case it shall be a duty of the Committee to report the fact that they have not acted on such request and the reasons for not so acting, to the Commission.

RECOMMENDATION XXIV.

Discretion of Committee as to method of dealing with individual case.

That, subject to the Regulations of the Commission, it shall be at the discretion of the Committee, on the report of their Medical Officer, to deal with mentally defective persons on whose behalf they deem that intervention on their part is necessary as they shall think best in the individual case, either registering the case only, or having it certified also, or taking steps for its certification and detention, or placing it in an Institution or Home or House or under private care or family guardianship, or leaving it to the care of its parents or guardians, with or without the appointment of a friendly visitor, or taking any other measures that seem to them desirable.

(b) MEDICAL OFFICERS AND CERTIFYING MEDICAL PRACTITIONERS.

(Recommendations XXV. to XXVI.)

RECOMMENDATION XXV.

Medical officer to be appointed by the local authority.

That on the recommendation of the Committee, and subject to the approval of the Commission, the Council of the County or County Borough appoint a specially qualified medical officer or officers to assist them in the care and control of the mentally defective in the county or county borough, on the understanding that the internal management of institutions should remain in the hands of the Superintendents in charge of them, subject to the supervision and authority of the Committee.

RECOMMENDATION XXVI.

Appointment of certifying medical practitioners.

That in order that there may be a certifying medical practitioner at hand in different parts of the County or County Borough, the Committee divide the area of the County or County Borough into such districts as they may deem suitable, and that the Council of the County or County Borough, on the recommendation of the Committee and subject to the approval of the Commission, appoint in each of these districts the local dispensary doctor or one or more duly qualified medical men to act on behalf of the Committee as a certifying medical practitioner; and that such certifying medical practitioner be paid by the Council by fee for each case examined by him, and his services shall be "a public duty" so as to secure for him the benefit of the Public Authorities Protection Act, 1893. The Commission shall make Rules to be observed in respect of the appointment, and, amongst others, as to the medical qualification, and as to disqualifications from partnership or relationship or personal interest, and as to acting outside a district, and altering districts, and for the appointment of deputies.

(c) JOINT COMMITTEES

(Recommendation XXVII.)

RECOMMENDATION XXVII.

Joint committees of local authorities.

That with a view to promoting a common policy in the treatment and care of mentally defective persons and for the supply of sufficient and suitable accommodation at the least expense, it is desirable that advantage should be taken of Section 9 (7) to (9), of the Local Government (Ireland) Act, 1898.

(c) FINANCIAL ARRANGEMENTS.

(Recommendations XXVIII. to XXXV.)

RECOMMENDATION XXVIII.

Discontinuance of 4s. grant.

That the 4s. grant (Local Government (Ireland) Act, 1898, 61 and 62 Vict., Chap. 37, Section 58 (2) (c)) now payable to the Councils of Administrative Counties and County Boroughs towards the cost of certified lunatics admitted to

asylums, and the 2s. grant now payable to the Councils in respect of chronic and harmless lunatics in auxiliary asylums (Local Government (Ireland) Act, 1898, 61 and 62 Vict., Chap. 37, Section 76 (1)) be discontinued.

That the total cost of the maintenance, care and treatment, education, training and control of mentally defective persons and of the provision of suitable accommodation for them shall be borne by the County and Borough Councils aided by new grants from the Exchequer.

RECOMMENDATION XXIX.

Exchequer grant payable to local authorities.

A.—That substantial financial assistance be granted from the Exchequer to a Council of the County or County Borough for the care and maintenance of mentally defective persons, and of epileptics not mentally defective, and that this assistance be granted by one or other of the following methods, either:— *See* paras 1104-111

(i.) On the method of an annual bloc grant on the principle that the grant be greater or less according to the proportion of the local expenditure to an approved standard of proper and economical expenditure and also greater or less as the assessable value per head of the population of the district is smaller or larger;

or;

(ii) That in addition to the present Exchequer contributions there be paid by the Exchequer to the Councils of Counties and County Boroughs annually a grant based on the number of mentally defective persons, and epileptics not mentally defective, for whom provision is made beyond the numbers provided for on the 1st of January, 1908, and that such grant be the sum which the Commission certify to be equal to one-half of the cost properly incurred by such Councils in respect of such additional numbers of mentally defective persons.

B.—That this bloc grant or this maintenance grant be payable subject to the certificate of the Commission that the local authority has carried out its duties under Recommendation XVIII. satisfactorily, and that in the event of the Commission refusing to give such a certificate an appeal shall lie to the Lord Lieutenant, whose decision shall be final.

See para. 1086.

C.—That in addition to the above grant, whether it is a bloc grant or a maintenance grant, there be provided from the Exchequer annually for a term of years a grant in aid for the provision of necessary accommodation in the manner and in the locality advised by the Commission.

RECOMMENDATION XXX.

Use of grant by local authority, and power to contract with others to supply accommodation.

That, subject to the approval of the Commission, the Council of the County or County Borough, acting through the Committee for the care of the mentally defective, shall be authorised to use whatever grants may be made to them by the Exchequer, in any way they may think best for the well-being of the mentally defective, and epileptics not mentally defective, and may contract with any Poor Law or other public authority, public or voluntary agency, or private person, under such conditions as they may deem advisable, for the care, education, training, or maintenance of any mentally defective persons or of epileptics not mentally defective. *See* paras 1052, 105 1083, 109

RECOMMENDATION XXXI.

That the Commission be provided with such architectural advice and other technical assistance as may be necessary for the efficient execution of the provisions of Recommendation XXXII. 2.

Architectural assistance for Commission.

RECOMMENDATION XXXII.

1. That a local authority proposing to establish, alter, restore, or enlarge buildings, or to purchase or lease any estate or house for the accommodation of mentally defective persons shall send to the Commission all plans, specifications, and estimates, or other particulars which may be considered necessary.

Plans for buildings, and estimates.

2. That the Commission, with such assistance as they may consider necessary (see Recommendation XXXI), shall consider if these plans, specifications, estimates, etc., are such as may be approved by the Lord Lieutenant, and involve no unreasonable expenditure.

3. When the Commission have satisfied themselves that the plans, &c., are suitable for the purpose intended, they shall transmit them to the Local Government Board for report as to whether, subject to public enquiry, they are prepared to sanction the loan required. On receipt of an intimation that the Local Government Board are prepared to recommend a loan the Commission shall submit for the approval of the Lord Lieutenant the plans, &c., and when such approval is signified shall notify the local authority, who shall then make application to the proper authority for the loan.

4. That it be laid down clearly in the Act that plans, &c., shall not be approved which involve unreasonable expenditure.

Recommendation II.

5. The Lord Lieutenant, on the report of the Commission, shall have power to prohibit the use of any parts of buildings for purposes other than those which were approved by him, or which shall be deemed insanitary or unsuitable.

RECOMMENDATION XXXIII.

That the Commission have power to hold a public local enquiry in regard to any plan, scheme, or proposal which has been submitted to them for the care of mentally defective persons.

Public local enquiries by Commission.

RECOMMENDATION XXXIV.

That in view of the following consideration that under Recommendations XVIII. to XXIV. the obligation of dealing with mentally defective persons is imposed on the Committee of the Council of the County or of the

Settlement by counties.

e para. 59.

County Borough, as the case may be, it is desirable that a system of settlement based on residence by Counties and County Boroughs be introduced for the purpose of the administration now proposed.

RECOMMENDATION XXXV.

Time of residence in any institution for the mentally defective not to count for acquisition of settlement.

That residence in any institution, house, hospital, establishment or home licensed for the accommodation, maintenance, care, treatment, education, training or control of any of the classes of mentally defective shall not count as part of the period of residence necessary to the acquisition of settlement.

(d) ANNUAL REPORT.

(Recommendation XXXVI.)

RECOMMENDATION XXXVI.

Annual Report.

That the Committees for the Care of the Mentally Defective shall publish each year an annual report which shall be forwarded to the Commission, and the Commission shall publish such of these reports or such extracts from these reports as they may deem to be of public interest or importance, and in such a form as they may deem advisable; the Commission shall require, and the Committees shall furnish, such statistical and other information as may be required by the Commission or may be considered necessary in order to show the nature and extent of the work of the local authorities.

C.—GUARDIANSHIP AND SUPERVISION.

(Recommendations XXXVII. to XLII.)

(a) PERSONS UNDER 21.

(Recommendations XXXVII. to XL.)

RECOMMENDATION XXXVII.

Cases under 21 not under suitable parental or other control.

That in the case of persons under 21 years of age for whose care and control any Council is required to make suitable and sufficient provision who, in the opinion of the Committee, are not under suitable parental or other control, and are not receiving suitable training, or are cruelly treated or otherwise neglected, and who in the opinion of the responsible Medical Officer of the Committee come within any of the classes (3) to (9) inclusive of Recommendation IV., the Committee may resolve that until the child reaches the age of 21 all the rights and powers of the parent or parents or other person who is the guardian of the child or is liable to maintain the child or has the custody of the child, shall vest in the Committee until the child reaches the age of 21, and thereupon those rights and powers shall so vest. Provided (1) that the Committee may rescind the resolution if they think that it will be

for the benefit of the child that it should be rescinded, or may permit the child to be either permanently or temporarily under the control of the parent or of any relative or of any friend or of any society or institution for the care of children; (2) that a Court of Summary Jurisdiction, if satisfied on complaint made by a parent, or if there is no parent, by the legal—or, if there be no legal, then by the acting—guardian or the near relation of the child, that there was no ground for the resolution, or that it is for the benefit of the child that it should be permanently or temporarily under the control of its parent or guardian, or that the resolution of the Committee should be determined, may make an order accordingly, and the Committee shall comply with any such order; if the order determines the resolution, the resolution shall be thereby determined as from the date of the order, and the Committee shall cease to have the rights and powers of the parent as respects the child; (3) that an appeal from the Court of Summary Jurisdiction to the Quarter Sessions be allowed.

RECOMMENDATION XXXVIII.

That in all cases of mentally defective persons who are under the wardship of the Committee under Recommendation XXXVII., the Committee shall report to the Commission as to their condition when they reach the age of 21, and the Commission shall decide what further steps should be taken in view of the continuance of such persons under care and control.

Cases under wardship of Committee to be reported on at age of 21.

RECOMMENDATION XXXIX.

That in the case of persons under 21 years of age who, in the opinion of the Committee, are under suitable parental or other control, and are receiving suitable training, or are not cruelly treated or otherwise neglected, but in the judgment of the responsible Medical Officer of the Committee come within any of the classes (3) to (9), inclusive, of Recommendation IV., the Committee endeavour to make a voluntary agreement with the parent or guardian for the appointment of a Friendly Visitor who, with the Committee, shall be consulted as to any proposed removal of the person from his or her present residence or any change in regard to his or her education and training or any question of marriage, and generally in regard to any matter that may affect the well-being of the person at the time or in the future, so that the parent or guardian may have the benefit of the advice and co-operation of the Committee and of the Friendly Visitor.

Cases under 21 under suitable parental or other control.

RECOMMENDATION XL.

That any person under 21 years of age who comes within any of the classes (3) to (9), inclusive, of Recommendation IV. may be placed by the parents or guardians or by any person undertaking and performing towards him the duty of a parent or guardian, or by the Committee in any registered institution, or house for the mentally defective, upon the certificate in writing of a qualified medical practitioner, without the intervention of a Judicial Authority, as defined in Recommendation LVI. (sec. 6, i.), and on reaching the age of 21 may, with the consent of the Commission, be retained after he is of full age.

Mentally defective persons under 21 may be placed by parents in institutions on one medical certificate.

(b) PERSONS AFTER 21.

(Recommendations XLI. to XLII.)

RECOMMENDATION XLI.

Petition may be presented by the Committee as next friend in certain cases over 21.

That in the case of persons over 21 years of age for whose care and control any Council is required to make suitable and sufficient provision, who have not been under the wardship of the Committee or dealt with under Recommendation XL. above, and are alleged to be mentally defective as defined in Recommendation IV., the Committee shall deal with the case as they think fit with a view to the proper care, control, and safeguard of the mentally defective person, and may, if they deem it right by one of their officers, make an Urgency Order, present a petition as next friend of the said person, or apply for a Summary Reception Order, under Recommendation LVI. below.

RECOMMENDATION XLII.

Power to allow relation or friend to retain mentally defective person.

That if in the opinion of the Committee and of their Medical Officer it is desirable that any person over 21 years of age who is mentally defective as defined in Recommendation IV., and who might otherwise be taken charge of by the Committee, should be retained under the care of a relation or friend, nothing in the proposed Act shall prevent this.

D.—PROCEDURE IN REGARD TO MENTALLY DEFECTIVE PERSONS.

(Recommendations XLIII to LVII.)

(a) INQUIRY AS TO THE NUMBERS OF DEFECTIVE PERSONS AND NOTIFICATION.

(Recommendations XLIII. to XLIX.)

RECOMMENDATION XLIII.

Inquiry as to number of mentally defective persons.

That, with a view to facilitate the work of the Committee in the first instance, it shall be its duty in pursuance of regulations to be laid down by the Commission to ascertain as far as possible the number of mentally defective persons for whom the Council is liable to provide either by the Medical Officer of the Committee or by a well qualified medical man appointed for the purpose, acting under the supervision of the Medical Officer.

RECOMMENDATION XLIV.

Notification of mentally defective persons.

That it be the statutory duty of the Medical Officers of the Education Authorities, of the Guardians of the Poor, and of the Public Health Committees, the Relieving Officers of Board of Guardians, the Medical Officers of Convict and Local Prisons, and Medical Officers of Dispensary Districts, the Police, and the Managers of Reformatory and Industrial Schools, or of any Homes for Inebriates or any Charitable, Religious or other Voluntary Institutions or Societies, or any Naval or Military Authorities to notify to the Committee all cases of mental defect coming to their knowledge in the course of duty appearing to

come within Recommendation IV. above, provided always that the Lord Lieutenant may, on special grounds to be stated in the Annual Report of the Commission, by regulation exempt any particular authorities from the fulfilment of this duty.

RECOMMENDATION XLV.

That anyone who for profit shall receive to reside as a patient or maintain any person appearing to come within any of the classes of mentally defective persons defined in Recommendation IV. shall within seven days thereafter notify the same to the Commission.

Notification of mentally defective patients received for profit.

RECOMMENDATION XLVI.

That it shall be the duty of Medical Officers who are in charge of Institutions for persons of unsound mind, Receiving Houses, and Reception Wards, to report to the Committee for special consideration the cases of persons who are repeatedly certified and admitted and repeatedly discharged, or who are in such a mental condition as would be likely to occasion their relapse under the stress of life, with a view to care and control being exercised in regard to them, if desirable, in some other and more effectual manner; and in cases of doubt whether the patient should or should not be discharged there may be an appeal to the Commission on the question, and the decision of the Commission shall be final.

Report as to recurrent cases of unsound mind.

NOTE.—As to Receiving Houses and Reception Wards, see Recommendation LII.–LV.

(b) ADMISSION, CONTINUANCE ORDERS, TRANSFERS AND DISCHARGES.

(Recommendations XLVII. to LII.)

RECOMMENDATION XLVII

That as a condition of its licence every institution or house for the care of the mentally defective shall through its Committee of Management appoint an honorary or paid Medical Officer who shall give such attendance as may be directed by the Commission.

Medical Officer, honorary or paid, for every institution

RECOMMENDATION XLVIII.

(1) That at least once in every year there be a revision by the Committee of all cases of mentally defective persons who are being dealt with by them, and that any changes made be reported to the Commission; and that the certificate of the medical officer of the institution shall, under regulations to be made by the Commission, and subject to the approval of the Committee and the Commission, suffice for the continuance of residence of the mentally defective person in the institution.

Annual revision of mentally defective cases in institutions.

RECOMMENDATION XLIX.

That in the case of mentally defective persons dealt with by the Committee no transfer, except as mentioned in the proviso below, shall take place from one institution or home to another, or from an institution or home to private care or *vice versa* without the authority of the Committee and subject to their approval as to the selection of the institution or private care to which the mentally defective person is to be transferred,

Transfer from one institution to another or to private care and *vice versa* only to take effect with consent of Committee.

and the Commission shall make such regulations as may appear to them necessary in relation to the several classes of cases for reports of transfers being made to them, and for the granting or withholding of their consent, provided always that the Commission may order the transfer of any particular case where it appears to the Commission that such transfer is desirable.

RECOMMENDATION L.

Discharge of persons from institutions.

That in the case of discharges of mentally defective persons from institutions into which persons coming under classes (2) to (9), inclusive, have been admitted, the discharge may, if the Committee think fit, be ordered by the Committee on the certificate of the Medical Officer of the institution; and, if the Medical Officer of the institution be of a contrary opinion to that of the Committee in regard to the discharge, there shall be an appeal to the Commission, whose decision shall be final. The Regulations of the Commission to be made under Recommendation XLIX shall embody directions as to the principles on which discharges shall be ordered.

RECOMMENDATION LI.

Notification to the Committee and Commission of all admissions, transfers, etc.

That under regulations to be made by the Commission all admissions, transfers, continuance orders, discharges and deaths be at once reported to the Commission and to the Committee for the care of the mentally defective.

(c) RECEIVING HOUSES OR RECEPTION WARDS.

(Recommendations LII. to LV.)

RECOMMENDATION LII.

Receiving Houses or Reception Wards to be established.

That for the reception and observation and temporary treatment of cases of mental defect the Committee, under regulations to be made by the Commission, shall provide or contract with others to provide such Receiving Houses or Reception Wards in various parts of their area as may be necessary; and that such Receiving Houses or Reception Wards be exclusively used for that purpose and be licensed by the Commission and placed under the management of the Committee; and that they be available not only for poor persons but also, on payment, for persons who might be fully and sufficiently provided for otherwise at their own charges or at the charges of their relations or friends.

RECOMMENDATION LIII.

Statutory obligation on certain public authorities to provide accommodation for Receiving Houses or Wards on request of the Council of the County or County Borough.

That there be a statutory obligation imposed on public authorities within the area of the County or County Borough, such as Boards of Guardians and District and Borough Councils, on the request of the Council of the County or County Borough, to provide the necessary accommodation for Receiving Houses or Wards on such terms as may be arranged between them; and that in case of a difference of opinion between the Council of the County or County Borough and the other authority in respect of the necessity for such provision, or of the expediency of using any existing building for such purpose, there shall be an appeal to the Lord Lieutenant, provided that in the case of any building provided, or to be provided under the authority of the Local Government

Board, it shall be the duty of the Local Government Board, after inquiry, to determine if the building should be provided or used for the proposed purpose, and, if so, upon what terms; and the decision of the Board shall be final.

RECOMMENDATION LIV.

That in the case of all mentally defective persons taken to a Receiving House or Reception Ward it shall be necessary for the Medical Officer or one of the Medical Officers of the Committee, or a certifying medical practitioner, to attend at the Receiving House or Reception Ward, and act as one of the certifying medical officers.

Cases in Receiving Houses, etc., to be seen by Medical Officer representing the Committee.

RECOMMENDATION LV.

That under any immediate certificate or order that the Commission under its regulations may require, any person alleged to be mentally defective, as defined in Recommendation IV., may be at once admitted to a Receiving House or Reception Ward on application made either by the person himself or on his behalf, subject to the approval and order of the Medical Officer in charge, and (except in cases of payment under Recommendation LII.) all necessary expenditure for the maintenance of such persons shall be borne by the Committee. And further, that the Medical Officer in charge of the Receiving House or Reception Ward shall at once on the admission of such person report the fact to the Medical Officer of the Committee with a view to such sufficient action being taken on their part, as, in their opinion, the case may require.

Applications for admission of mentally defective persons to Receiving House.

(d) MODIFICATIONS OF THE LUNACY (IRELAND) ACTS, (1821-1901), AND STATUTORY REGULATIONS THEREUNDER.

(Recommendation LVI.)

RECOMMENDATION LVI.

ee para. 065.

That the procedure for authorising the admission of persons into Institutions or Houses and their detention therein be as follows:—

RECEPTION OF LUNATICS.

Reception Orders on Petition.

1.—(1.) Subject to the exceptions in this Act mentioned, a person, not being a person of unsound mind so found by inquisition, shall not be received and detained as a mentally defective person in an institution or house for mentally defective persons or as a single patient, unless under a reception order made by the judicial authority hereinafter mentioned. A relative of the person applying for an order under this section or of the mentally defective person, or of the husband or wife of the mentally defective person, shall not be capable of making such order.

Private patients not found persons of unsound mind by inquisition to be received only under order of judicial authority.

(2.) The order shall be obtained upon a private application by petition accompanied by a statement of particulars and by two medical certificates on separate sheets of paper.

2.—(1.) The petition shall be presented, if possible, by the husband or wife or by a relative of the alleged mentally defective person. If not so presented it shall contain a statement of the reasons why the petition is not so presented and of the connexion of the petitioner with the alleged mentally defective person, and the circumstances under which he presents the petition.

Petition for reception order.

(2.) No person shall present a petition unless he is at least twenty-one years of age and has within fourteen days before the presentation of the petition personally seen the alleged mentally defective person.

(3.) The petition shall be signed by the petitioner and the statement of particulars by the person making the statement.

(4.) Notwithstanding anything contained in this section the Committee of any Council of a County or County Borough for the care of the mentally defective, may authorise its Medical Officer or one of its Medical Officers to present a petition as next friend of the alleged mentally defective person in any case where the Committee deems it advisable so to do, either at the request of the relatives or in consequence of any failure for any reason on the part of any

husband, wife, or other relative of the alleged mentally defective person so to present a petition, and where the Committee is advised by its Medical Officer or one of its Medical Officers that such petition ought to be presented.

Procedure upon petition for a reception order.

3.—(1.) Upon the presentation of the petition the judicial authority shall consider the allegations in the petition and statement of particulars and the evidence of mental defect appearing by the medical certificates, and whether it is necessary for him personally to see and examine the alleged mentally defective person, and if he is satisfied that an order may properly be made forthwith, he may make the same accordingly; either directing the admission of the mentally defective person to a particular institution or house which the petitioner, his relative, or friend may desire, or failing that which, in his opinion, on the evidence submitted to him or his personal knowledge, is suitable for the admission of the said person, or directing the admission of the mentally defective person to an institution or house suitable for his proper care and control, as may be decided by the Committee for the care of the Mentally Defective, or if not so satisfied he shall appoint as early a time as practicable, not being more than seven days after the presentation of the petition, for the consideration thereof; and he may make such further or other enquiries of or concerning the alleged mentally defective person as he may think fit. Notice of the time and place appointed for the consideration of the petition (unless personally given to the petitioner) shall be sent to the petitioner by post in a prepaid registered letter addressed to him at his address as given in the petition.

(2.) The judicial authority, if not satisfied with the evidence of mental defect appearing by the medical certificates, may, if he thinks it necessary so to do, visit the alleged mentally defective person at the place where he may happen to be. And the order shall contain a statement that the patient has or has not been personally examined by such judicial authority.

(3.) The petition shall be considered in private, and no one except the petitioner, the alleged mentally defective person (unless the judicial authority shall in his discretion otherwise order), any one person appointed by the alleged mentally defective person for that purpose, and the persons signing the medical certificates accompanying the petition, shall, without the leave of the judicial authority, be present at the consideration thereof.

(4.) At the time appointed for consideration of the petition the judicial authority may make an order thereon or dismiss the same, or, if he thinks fit, may adjourn the same for any period not exceeding fourteen days for further evidence or information, and he may give notice to such persons as he thinks fit of the adjourned consideration, and summon any persons to attend before him.

(5.) Every judicial authority and all persons admitted to be present at the consideration of any petition for a reception order, or otherwise having official cognisance of the fact that a petition has been presented, except the alleged mentally defective person and the person appointed by the alleged mentally defective person as aforesaid, shall be bound to keep secret all matters and documents which may come to his or their knowledge by reason thereof, except when required to divulge the same by lawful authority.

Dismissal of petition.

4.—(1.) If the petition is dismissed, the judicial authority shall deliver to the petitioner a statement in writing under his hand of his reasons for dismissing the same, and shall send a copy of such statement to the Commission and shall also, where the alleged mentally defective person is detained under an urgency order, send notice by post or otherwise, to the person in whose charge the alleged mentally defective person is, that the petition has been dismissed.

(2.) Any judicial authority making or refusing a reception order, shall, if so required by the Commission, give to them all such information as they may require as to the circumstances under which the order was made or refused.

(3.) The Commission may communicate such information as they think proper, on the dismissal of the petition or the release of the alleged mentally defective person, to him or to any person who may satisfy them that he is a proper person to receive the information.

(4.) If after a petition has been dismissed another petition is presented as to the same alleged mentally defective person, the person presenting such other petition, so far as he has any knowledge or information with regard to the previous petition and its dismissal shall state the facts relating thereto in his petition, and shall obtain from the Commission at his own expense, and present with his petition, a copy of the statement sent to them of the reasons for dismissing the previous petition, and, if he wilfully omits to comply with this sub-section, he shall be guilty of a misdemeanour.

Right of mentally defective person to be examined by judicial authority.

5.—(1.) When a mentally defective person has been received as a private patient under an order of a judicial authority, without a statement in the order that the patient has been personally seen by such judicial authority, the patient shall have the right to be taken before or visited by a judicial authority, other than the judicial authority who make the order, unless the medical officer of the institution or house, or, in the case of a single patient his medical attendant, within twenty-four hours after reception, in a certificate signed and sent to the Commission, states that the exercise of such right would be prejudicial to the patient.

(2.) Where no such certificate has been signed and sent, the manager of the institution or house in which the patient is, or the person having charge of him as a single patient, shall, within twenty-four hours after reception, give to the patient a notice in writing of his right under this section, and shall ascertain whether he desires to exercise the right; and if he, within seven days after his reception, expresses his desire to exercise the right, such manager or person shall procure him to sign a notice of such desire, and shall forthwith transmit it by post in a prepaid registered letter to the judicial authority, who is to exercise the jurisdiction under this section, or to the justices clerk of the petty sessional division or borough, where the mentally defective person is, to be by him transmitted to such judicial authority, and the judicial authority shall thereupon arrange, as soon as conveniently may be, either to visit the patient or to have the patient brought before him by the manager or person as the judicial authority may think fit.

(3.) The judicial authority shall be entitled, if he desires so to do, to see the medical certificates and any other documents, upon the consideration of which the reception order was made, and shall after personally seeing the patient send to the Commission a report, and the Commission shall take such steps as may be necessary to give effect to the report.

(4.) For the purposes of this section the jurisdiction shall be exercised by any judicial authority having authority to act in the place where the person received is, and not being the judicial authority who made the reception order: and arrangements shall for that purpose from time to time be made amongst themselves by the persons having such authority as aforesaid.

(5.) If any manager of an institution or house for mentally defective persons, or any person having charge of a single patient, omits to perform any duty imposed upon him by this section, he shall be guilty of a misdemeanour.

Judicial authority defined.

6.—(1.) The powers of the judicial authority under this Act shall be exercised by a justice of the peace specially appointed as hereinafter provided, or a judge of county courts, or resident magistrate.

(2.) Every judicial authority shall, in the exercise of the jurisdiction conferred by this Act, have the same jurisdiction and power as regards the summoning and examination of witnesses, the administration of oaths, and otherwise, as if he were acting in the exercise of his ordinary jurisdiction, and shall be assisted, if he so requires, by the same officers as if he were so acting, and their assistance under this Act shall be considered in fixing their remuneration.

(3.) A judge of county courts and a resident magistrate shall not be required to exercise any powers under this Act so as to interfere with or delay the exercise of his ordinary jurisdiction.

Appointment of justices to make reception orders.

7.—(1.) The justices of every county and quarter sessions borough, shall annually appoint out of their own body as many fit and proper persons as they may deem necessary to exercise the powers conferred by this Act upon the judicial authority. In making such appointments the justices of every county shall have regard to the convenience of the inhabitants of each petty sessional division thereof.

(2.) The annual appointments under this section shall be made by justices of a county at their Michaelmas quarter sessions, and by justices of a borough at special sessions to be held in the month of October.

(3.) If in any year such appointments are not made, it shall be lawful for the Lord Chancellor, by writing under his hand, to make the same; and if, on any representation made to him that the number of justices so appointed for any county or borough is at any time insufficient, the Lord Chancellor is satisfied that such representation is well founded, he shall have power to appoint, by writing under his hand, any other justices of such county or borough to act, until the next Michaelmas quarter or special sessions, with the justices so appointed.

(4.) If in the case of a borough or place not having a separate quarter sessions, representation is made to the Lord Chancellor that public inconvenience is likely to result, unless power is given to the justices of such borough or place to exercise the powers conferred by this Act upon the judicial authority, it shall be lawful for the Lord Chancellor, from time to time, with or without a fresh representation, to appoint, by writing under his hand, one or more of the justices of such borough or place to exercise during such time as the Lord Chancellor thinks fit the powers aforesaid, together with any other specially appointed justices acting therein.

(5.) In the case of the death, absence, inability, or refusal to act of any justice appointed under this section the justices of the county or borough, or the Lord Chancellor, as the case may be, may appoint a justice to act in his place. Such appointment may be made by justices of a county at any quarter sessions, and by justices of a borough at special sessions to be held at the same time as any quarter sessions.

(6.) All appointments of justices under this section shall be recorded by the clerk of the peace of the county or borough, or in the case of a borough or place not having a separate quarter sessions, by the clerk of petty sessions, and it shall be the duty of every such clerk to publish the names of the justices so appointed in each petty sessional division of the county and otherwise for the information of all persons interested. In the case of quarter sessions boroughs, the clerk of petty sessions making the appointment shall forthwith notify the same to the clerk of the peace of the borough.

URGENCY ORDERS.

Urgency orders.

8. (1.) In cases of urgency where it is expedient, either for the welfare of a person alleged to be a mentally defective person, or for the public safety, that the alleged mentally defective person, should be forthwith placed under care and treatment, he may be received and detained in an institution or house for mentally defective persons, or in a receiving house or reception ward, or as a single patient upon an urgency order, made (if possible) by the husband or wife or by a relative of the alleged mentally defective person, accompanied by one medical certificate.

(2) An urgency order may be signed before or after the medical certificate.

(3) If an urgency order is not signed by the husband or wife or by a relative of the alleged mentally defective person, the order shall contain a statement of the reasons why the same is not so signed and of the connection with the alleged mentally defective person, of the person signing the order, and the circumstances under which he signs the same.

(4.) No person shall sign an urgency order unless he is at least twenty-one years of age and has within two days before the date of the order personally seen the alleged mentally defective person.

(5.) An urgency order may be made as well after as before a petition for a reception order has been presented. An urgency order, if made before a petition has been presented, shall be referred to in the petition, and if made after the petition has been presented, a copy thereof shall forthwith be sent by the petitioner to the judicial authority to whom the petition has been presented.

(6.) An urgency order shall remain in force for seven days from its date; or if a petition for a reception order is pending, then until the petition is finally disposed of.

(7.) An urgency order shall have subjoined or annexed thereto a statement of particulars.

(8) Notwithstanding anything contained in this section the Committee of any Council of a County or County Borough for the care of the mentally defective may authorise its medical officer or one of its medical officers to make an urgency order as next friend of the alleged mentally defective person in any case where it deems it advisable so to do, either at the request of the relatives, or in consequence of any failure on the part of any husband, wife or other relative of the alleged mentally defective person so to make an urgency order and when the Committee is advised by its medical officer or one of its medical officers that such urgency order ought to be made.

SUMMARY RECEPTION ORDERS.

Mentally defective persons not under proper care and control or cruelly treated or neglected.

9.—(1.) Every constable, relieving officer or medical officer of a union, or representative of the Committee of any Council of a County or County Borough for the care of the mentally defective, who has knowledge that any person within the district or parish of the constable, relieving officer, medical officer of a union or the Committee, who is not wandering at large, is deemed to be a mentally defective person and is not under proper care and control, or is cruelly treated or neglected by any relative or other person having the care or charge of him, shall within three days after obtaining such knowledge give information thereof upon oath to a justice being a judicial authority under this Act.

(2.) Any such justice, upon information on oath of any person whomsoever, that a person not wandering at large, is deemed to be a mentally defective person and is not under proper care and control, or is cruelly treated or neglected as aforesaid, may himself visit the alleged mentally defective person, and shall, whether making such visit or not, direct and authorise the Medical Officer, or one of the Medical Officers of the Committee of the Council of the County or County Borough for the care of the mentally defective, or a certifying medical practitioner, to visit and examine the alleged mentally defective person, and to certify his opinion as to his mental state, and the justice shall proceed in the same manner so far as possible, and have as to the alleged mentally defective person the same powers, as if a petition for a reception order had been presented by the person by whom the information with regard to the alleged mentally defective person has been sworn.

(3.) If upon the certificate of the medical practitioner who examines the alleged mentally defective person, or after such other and further inquiry as the justice thinks necessary, he is satisfied that the alleged mentally defective person is a mentally defective person, and is not under proper care and control, or is cruelly treated or neglected by any relative or other person having the care or charge of him and that he is a proper person to be taken charge of and detained under care and treatment, the justice may, by order, direct the mentally defective person to be received and detained in any Institution, or Receiving House, or Reception Ward, home, or house for mentally defective persons for not more than fourteen days, and the constable, or relieving officer, medical officer of a Union, or representative of the Committee, upon whose information the order has been made, or any constable whom the justice may require so to do, shall forthwith convey the mentally defective person to the Institution, home, or house or Receiving House or Ward named in the order, and the Medical Officer of the Committee of the County or County Borough for the care of the mentally defective shall, within the said fourteen days, ascertain to what Institution or house the mentally defective person may most suitably be admitted and shall, with the approval of the Committee, have him admitted to that Institution or house.

Mentally defective person wandering at large to be brought before a justice.

10.—(1). Every constable and relieving officer who has knowledge that any person wandering at large within the district or parish of the constable or relieving officer is deemed to be a mentally defective person, shall immediately apprehend and take the alleged mentally defective person, or cause him to be apprehended and taken before a justice.

(2.) Any justice, upon the information upon oath of any person that a person wandering at large within the limits of his jurisdiction is deemed to be a mentally defective person may by order require a constable, relieving officer of the district or parish where the alleged mentally defective person is, to apprehend him, and bring him before the justice making the order, or any justice having jurisdiction where the alleged mentally defective person is.

Mentally defective person wandering at large brought before a justice may be sent to receiving house, institution or house for mentally defective persons.

11. The justice before whom an alleged mentally defective person wandering at large is brought under this Act shall call in a medical practitioner, and shall examine the alleged mentally defective person and make such inquiries as he thinks advisable, and if upon such examination or other proof the justice is satisfied that the alleged mentally defective person is a mentally defective person, and was wandering at large, and is a proper person to be detained, and if the medical practitioner who has been called in signs a medical certificate with regard to the mentally defective person the justice may by order direct the mentally defective person to be received and detained in the Receiving House or Reception Ward, or other Institution or House for mentally defective persons named in the order, for not more than fourteen days, and the relieving officer or constable who brought the mentally defective person before the justice, or any constable who may by the justice be required so to do, shall forthwith convey the mentally defective person to such Receiving House or Reception Ward or other Institution or House for mentally defective persons, and the Medical Officer of the Committee of the County or County Borough for the care of the mentally defective shall, within the said fourteen days, ascertain to what institution or house the mentally defective person may most suitably be admitted, and shall, with the approval of the Committee, have him admitted to that institution or house.

Power to examine alleged mentally defective person at his own abode or elsewhere.

12. Where, under this Act, notice has been given to, or an information upon oath laid before a justice that a person wandering at large within the limits of his jurisdiction is deemed to be a mentally defective person, such justice may examine the alleged mentally defective person at his own house or elsewhere, and may proceed in all respects as if the alleged mentally defective person had been brought before him.

Suspension of removal under reception order.

13.—(1.) A justice making an order for the reception of a mentally defective person otherwise than upon petition, in this Act called a "summary reception order," may suspend the execution of the order for such period not exceeding fourteen days as he thinks fit, and in the meantime may give such directions or make such arrangements for the proper care and control of the mentally defective person as he considers proper.

(2). If a medical practitioner who examines a mentally defective person as to whom a summary reception order has been made, certifies in writing that the mentally defective person is not in fit state to be removed, the removal shall be suspended until the same or some other medical practitioner certifies in writing that the mentally defective person is fit to be removed, and every medical practitioner who has certified that the mentally defective person is not in a fit state to be removed shall, as soon as in his judgment the mentally defective person is in a fit state to be removed, be bound to certify accordingly.

Removal of mentally defective person to Receiving House or Reception Ward in urgent cases.

14. If a constable or relieving officer, is satisfied that it is necessary for the public safety or the welfare of an alleged mentally defective person with regard to whom it is his duty to take any proceedings under this Act, that the alleged mentally defective person should, before any such proceedings can be taken, be placed under care and control, the constable, relieving officer or overseer may remove the alleged mentally defective person to the receiving house or reception ward, and the master of the receiving house or reception ward shall receive and relieve and detain the alleged mentally defective person therein, but no person shall be so detained more than three days, and before the expiration of that time, the constable, or relieving officer, shall take such proceedings with regard to the alleged mentally defective person as are required by this Act.

Temporary removal of mentally defective person to Receiving House or Reception Ward under order of justice.

15.—(1.) In any case where a summary reception order might be made, any justice, if satisfied that it is expedient for the welfare of the mentally defective person, or for the public safety, that the mentally defective person should forthwith be placed under care and control, and if it appears to him that there is proper accommodation for the mentally defective person in the receiving house or reception ward may make an order for taking the mentally defective person to and receiving him in that receiving house or reception ward.

(2). In any case where a summary reception order has been made, an order under this section may be made to provide for the detention of the mentally defective person until he can be removed.

(3.) An order under this section shall not authorise the detention of a mentally defective person in a receiving house or reception ward for more than fourteen days, after which period such detention shall not be lawful, except in accordance with the provisions of this Act as to the detention of mentally defective persons in receiving houses or reception wards.

(4.) An order under this section may be made by any justice having jurisdiction in the place where the mentally defective person is.

RECEPTION ORDER BY TWO COMMISSIONERS.

Commissioners may send mentally defective person to an institution or house for mentally defective persons.

16.—(1.) Any two or more Commissioners may visit a mentally defective person who is in a house or institution, not registered as an institution, for the care and maintenance of such persons, or any mentally defective or alleged sane epileptic in a registered institution or house for epileptics, and may, if they think fit, call in a medical practitioner.

(2.) If the medical practitioner signs a medical certificate with regard to the mentally defective person, and the Commissioners are satisfied that the person is a mentally defective person, and a proper person to be detained, they may by order direct the mentally defective person to be received in an institution or house for mentally defective persons or a Receiving House or Reception Ward, and the relieving officer of the district or any constable who may by them be required to do so shall forthwith convey the mentally defective person to such institution or house for mentally defective persons or to a receiving house or reception ward.

(3.) The said Commissioners in such cases shall communicate with the Medical Officer of the Committee of the County or County Borough Council, or one of the Medical Officers of the Committee; or a certifying medical practitioner, and it shall be the duty of that officer to arrange for the reception of the mentally defective person in an institution, or house or receiving house, or reception ward, registered as suitable for the admission of such persons within the County or County Borough.

FORM A.

FORMS.

Order for the reception of a mentally defective person, to be made by the Judicial Authority appointed under the Act for the Care and Control of the Mentally Defective, Judge of County Court, or Stipendiary Magistrate.

I the undersigned, E.F., being a Justice for , specially appointed under the Act for the care and control of the Mentally Defective on the petition of C.D. of [1]

in the matter of A.B., a mentally defective person accompanied by the medical certificates of G.H. and I.J. hereto annexed, and upon the undertaking that the said C.D. do visit the said A.B. personally or by some one specially appointed by the said C.D. once at least in every six months, while under the care and control under this order [authorise you to receive the said A.B. as a patient into your

Hospital, Institution, Registered House or Home] [2] or [authorise the Committee for the Care and Control of the Mentally Defective in the County of , or in the County Borough of to place the said A.B. as a patient in such Hospital, Institution, Registered House or Home, as they may think best in view of this order and the certificates that accompany it].

And I declare that I have [or have not] personally seen the said A.B. before making this order.

(*Signed*) E. F.,
A Justice appointed under the above mentioned Act
[or the Judge of the County Court of
or a Stipendiary Magistrate].

To [4]

[1.] Address and description.

[2.] To be addressed to the medical superintendent or superintendent of such hospital, institution, or registered house or home selected; *or* to be addressed to the Committee for the Care and Control of the Mentally Defective for the county or county borough.

[3.] Here the name of the medical superintendent or superintendents; *or* the name and address of the committee of the county or county borough.

FORM B.

Certificate of a Medical Officer of the Committee for the care of the Mentally Defective of the Council of the County or County Borough, or of a Certifying Medical Practitioner, or of a General Medical Practitioner.

In the matter of A.B. [1] in the County or County Borough [2] of [3] a person alleged to be mentally defective.

I, the undersigned, C.D., do hereby certify as follows:

1. I am a person registered under the Medical Act, 1858, and I am [the Medical Officer of the said Committee] or [a Certifying Medical Practitioner appointed by the said Committee] or [in the actual practice of the Medical profession].

2. On day of , 19 , at [4] in the County or County Borough [5] of

[separately from any other practitioner] [6], I personally examined the said A.B., and came to the conclusion that he is mentally defective within the meaning of Section of the Act for the Care and Control of the Mentally Defective; and that he requires care and control accordingly.

3. I formed this conclusion on the following grounds, namely —

(*a*) Facts indicating mental defect ascertained by myself during [observation] [7] and

examination [8] namely:—

(*b*) Facts communicated by others: [9]

4. In my opinion the said A. B. comes within the class of mental defect defined in sub-section of section of the Act for the Care and Control of the Mentally Defective (see back).

[*If an urgency certificate is required it must be added here. See subjoined form.*]

5. The said A.B. was [or was not] in my opinion, in a fit condition of bodily health to be admitted or removed to such a Hospital, Institution, Registered House or Home as is suitable for

persons of mental defect coming under Clause of Section of the Act [10].

6. I give this certificate, having first read the sections of the Act of Parliament printed on the back.*

Dated (*Signed*) C.D. of [11]

* The schedule printed on the back would be as follows:

(1) Extract from Section 317 of the Lunacy Act, 1890, incorporated in the Acts for the Care and Control of the Mentally Defective.

Any person who makes a wilful misstatement of any material fact in any medical or other certificate or in any statement or report of bodily or mental condition under this Act, shall be guilty of a misdemeanor.

(2) Section of the Act for the Care and Control of the Mentally Defective containing the definitions of classes of mental defect (as defined in Recommendation IV.)

[1.] Insert residence of patient.

2.] County or county borough as the case may be.

3.] Insert profession or occupation, if any.

[4.] Insert place of examination, giving name of street, with number or name of house, or should there be no number the Christian and surname of occupier.

[5.] County or county borough, as the case may be.

[6.] Omit this where only one certificate is required.

[7.] "Observations include any observation of the patients at times other than the examination, for instance, at a Receiving House or Reception Ward.

[8.] If the same or other facts were observed previous to the time of the examination, the certifier is at liberty to subjoin them in a separate paragraph.

[9.] The names and Christian names (if known) of informants to be given, with their addresses and descriptions.

[10.] Strike out this clause in case of a private patient whose removal is not proposed

[11.] Insert full postal address.

FORM C.

Statement Accompanying Urgency Order.

I certify that it is expedient for the welfare of the said A.B. [or for the public safety, *as the case may be*] that the said A.B. should be forthwith placed under care and control.

My reasons for this conclusion are as follows: [*State them.*]

E.—EDUCATION AND TRAINING.

(Recommendations LVII. to LXIV.)

RECOMMENDATION LVII.

The Committee for the care of the mentally defective to be responsible for training, and education if necessary, of mentally defective children.

That the County Council or County Borough Council, as the case may be, acting through its Committee for the care of the mentally defective, be responsible for the manual and industrial and other training of all children who come under Classes (3) to (9) inclusive, in Recommendation IV., except such children who have not otherwise been properly and suitably provided for.

See pars. 1084–10

RECOMMENDATION LVIII.

Managers of National Schools or Education Authority to submit attendance register of children and notify mental defectives to Medical Officer of the Committee.

That the Managers of National Schools or the Education Authorities place at the disposal of the Medical Officer of the Committee the register and roll of children who are of age to attend school, and notify to him any cases of children of that age who are thought to be mentally defective, as defined in Recommendation IV., and that the Medical Officer of the Committee, or one of the Medical Officers of the Committee, after consultation with the Medical Officer of the Managers or of the Education Authority, report all such cases to the Committee with a view to action being taken under Recommendations XXXVII. or XXXIX.

RECOMMENDATION LIX.

Examination of alleged mentally defective child by Medical Officer of Committee.

That the Committee, in making their arrangements under the above Recommendation, shall provide facilities for enabling any parent who is of opinion that his child ought to be dealt with under the proposed Act to present such child to the Medical Officer of the Committee, or one of the Medical Officers of the Committee, or a certifying medical practitioner, to be examined, although the parent may not have been required so to do by the Committee, and any Committee failing to provide such facilities shall be deemed to have acted in contravention of the proposed Act.

RECOMMENDATION LX.

Report of Medical Officer of the Committee.

That the Medical Officer of the Committee, or one of the Medical Officers of the Committee, or a certifying medical practitioner, if he is of opinion that any such child is mentally defective as defined in Recommendation IV., shall report to the Committee to that effect.

RECOMMENDATION LXI.

Duty of parent to cause child to attend medical examination.

That it shall be the duty of the parent of any child who may be required by the Medical Officer of the Committee to attend at the place arranged for the purpose of examination, to cause such child to attend with that object, and any parent who fails to comply with such requirement shall be liable, on summary conviction, to a fine not exceeding five pounds.

RECOMMENDATION LXII.

Transfer of a child no longer mentally defective from care of the Committee to the care of Managers or the Education Authority.

That in the case of any child of school age who has been dealt with by the Committee as mentally defective, it shall be the duty of the Medical Officer, at any time, if the child, in his opinion, is not mentally defective, to report the case to the Managers of the National School of the district or the Education Authority, on whom the education of the child will from that date *ipso facto* devolve.

RECOMMENDATION LXIII.

That the duty of a parent under Section 1 of the Irish Education Act, 1892, to provide elementary instruction for his child shall, in the case of any child coming within classes 3 to 9 of Recommendation IV., include the duty to cause the child to attend a class or school, or to reside in any home or institution for the instruction or training of the mentally defective, from and up to such age as in the interest of the child may, on the report of their Medical Officer or one of their Medical Officers, seem necessary to the Committee, whether this instruction or training be provided by the Managers of National Schools or the Education Authority in contract with the Committee or by the Committee itself; and a parent shall not be excused from this duty by reason that a guide or conveyance is necessary.

Duty of parents to cause mentally defective child to attend for instruction or training.

RECOMMENDATION LXIV.

That in the case of children who, in the opinion of the Committee, cannot be trained suitably except at a special school or class, the Committee shall provide guides or conveyances if, in the judgment of the Committee and its Medical Officer or one of its Medical Officers or of a certifying medical practitioner, the children without this provision would be unable to attend the school or class in question.

Guides or conveyances to be provided.

F.—CRIMINAL MENTALLY DEFECTIVE PERSONS.

(Recommendations LXV. to LXVII.)

RECOMMENDATION LXV.

I. That in cases which may be determined summarily, and in which a court of summary jurisdiction is of opinion that the person charged is mentally defective, the court may adopt any of the following courses:—

Criminal mentally defective persons. Summary Jurisdiction.

(1) The court may remand the person charged to a receiving house or reception ward or other institution maintained or controlled by the Committee, or to the custody of an officer of the Committee, or, if in the particular case it appears necessary, to prison.

(2) The court may adjourn the hearing of the charge, pending the report of a medical officer of the Committee, and it may subsequently adjourn the case *sine die*, if on the certificate of the medical officer it makes a summary reception order for the reception of the accused person in a suitable institution which is under the committee's control.

See Recommendation LVI.

(3) After conviction any officer or representative of the Committee, may, on their behalf, become a surety for the offender, and in that case the court may bind him over to come up for judgment at some future time, or when called upon.

(4) After conviction, the court instead of sending the offender to prison, may on the report and certification of the medical officer, or one of the medical officers of the Committee, or a certifying medical practitioner order his reception under a summary reception order in any institution that the Committee may determine, being maintained by the Committee or under its control.

Recommendation LVI.

(5) After conviction the court, instead of sending the offender to prison, may accept recognisances from a surety or sureties on his behalf, on condition that he remains under the control of the Committee until they discharge him.

Procedure on committal for trial

II. That in cases triable by indictment, justices, if satisfied that the person charged is mentally defective, shall have power when committing for trial to accept recognisances on behalf of the committee from any officer or other representative of the committee, or to order the accused to the custody of the committee, instead of to prison, until the trial takes place.

Cases tried at Assizes and Quarter Sessions.

III. That in cases tried at assizes and quarter sessions the court shall in regard to mentally defective persons including persons of unsound mind, have the powers referred to above in I (3), (4), (5).

IV. That in cases tried at assizes and quarter sessions the court should be empowered to direct that the accused be submitted to examination, and if necessary, certification, notwithstanding that he has been acquitted of the offence charged, if, in the opinion of the court, it is desirable that his mental condition should be ascertained with a view to provision being made for his care.

Duty of police in cases of apparent mental defect or recurrent short sentences.

V. That in cases of apparent mental defect or recurrent short sentences which are brought before the courts, the police should be under statutory obligation to apply to the Commission, and to the committee for the care of the mentally defective, for any information they may have with regard to the person charged, and to lay the same before the court.

RECOMMENDATION LXVI.

Mentally defective persons under sentence or order of detention.

That subject to the approval of the Lord Lieutenant, any officer having in custody any person under sentence, or order of detention, shall at any time during detention hand over such person if certified to be mentally defective to the care of the Committee responsible for him, and it shall be the duty of the Committee to maintain that mentally defective person in a suitable institution.

RECOMMENDATION LXVII.

Discharge from Institutions.

That the consent of the Lord Lieutenant be necessary for the discharge from any institution maintained by or under the control of the Committee of any person dealt with in accordance with the procedure proposed in Recommendations LXV. and LXVI.

G.—MISCELLANEOUS.

(Recommendations LXVIII. to LXXIV.)

RECOMMENDATION LXVIII.

Epileptics not mentally defective.

That the Commission be empowered to register inspect and report on institutions or houses for the care of epileptics not provided for as mentally defective, and to regulate the same if they form part of an institution for the mentally defective, and that the Committees for the care of the mentally defective be authorised to consider and deal with the cases of these epileptics and to provide for their accommodation and maintenance, care, treatment, education, training and control, and with regard to these epileptics shall have the powers referred to in Recommendations XXII.-XXIV. (inclusive), XXVII. and XXVIII., XXXII.-XXXV. (inclusive), XXXVII.-XXXIX. (inclusive), and in Recommendations from LVIII. to LXIV. (inclusive), so far as may be necessary.

See Paras 1082, 1083

RECOMMENDATION LXIX.

The Inebriates Acts.

That as it appears that mentally defective cases to a large extent are at present dealt with under the Inebriates Acts, it is desirable that those

Acts should be amended so far as may be necessary to make it clear that the Committees shall be under the obligation of dealing with such inebriates as are mentally defective.

RECOMMENDATION LXX.

Avoidance of disabilities.

That a person who has received for any mentally defective, or epileptic, though not mentally defective, member of his family any assistance towards the accommodation and maintenance, care, treatment, education, training and control of such member of his family at the expense of any rate, shall not by reason thereof be deprived of any franchise right or privilege or be subject to any disability or disqualification.

RECOMMENDATION LXXI.

Contributions by parents.

That where the Committee incur any expense in respect of any mentally defective person the parent or guardian or other person who is liable to maintain or has the actual custody of such person shall be liable to contribute towards this expense a weekly sum such as may be agreed upon between the Committee and the party or parties so liable, or in default of agreement, as may, on the application of the Committee or the party or parties so liable, be settled by a Court of Summary Jurisdiction, and any sum so agreed upon or settled may without prejudice to any other remedy, be recovered by the Committee as under Section 25 of the Irish Reformatory Schools Act, 1868, and that this Recommendation shall apply to any persons who are epileptic though not mentally defective.

NOTE.—Section 25 of the Irish Reformatory Schools Act, 1868, is as follows :—

Provisions in case of Default in Payment by Parents.

"In case default be made for the space of fourteen days in payment of any sum of money which may have become payable by such parent or step-parent under any such Order, such sum of money shall in every such case be levied upon the goods and chattels of the defendant by distress and sale thereof; and if it shall appear to the said Justices, on confession of the defendant or otherwise, or if it shall be returned to the warrant of distress, in any such case that no sufficient goods of the party against whom such warrant shall have been issued can be found, it shall be lawful to the Justices or Magistrate to whom such return is made, or for any other Justice of the Peace for the same county, riding, division, liberty, city, borough, or place, by his warrant as aforesaid, to commit the defendant to the House of Correction or common goal for any term not exceeding ten days, unless the sum to be paid, and all costs and charges of the distress, and of the commitment and conveying of the defendant to prison (the amount thereof being ascertained and stated in such commitment), shall be sooner paid."

RECOMMENDATION LXXII.

Accounts of Boroughs relating to the mentally defective, to be audited by Local Government Board.

That the accounts of boroughs relating to the care and control of the mentally defective, including the accounts of asylums, should be audited by the Local Government Board auditor, and that the specification for tenders and the contract prices in all institutions for the mentally defective should be examined by the Commission, or be investigated by the Local Government Board auditor and form part of his report to the Local Government Board.

RECOMMENDATION LXXIII.

Protection of mentally defective persons under existing law as to sexual crimes, etc.

That the Lord Lieutenant and the Lord Chancellor have their attention called to the Evidence before us on the subject of the protection of mentally defective persons against sexual crime and immorality, and be invited to consider whether the existing law provides adequate protection for such persons.

RECOMMENDATION LXXIV.

Management and Administration of property of mentally defective persons.

That the powers vested in the Lord Chancellor by section 68 of 34 & 35 Vict., c. 22, be extended to the property (irrespective of amount) of all mentally defective persons, as defined in Recommendation IV., or that a procedure should be instituted analogous to that provided by the English Lunacy Act, 1890, relating to management and administration, and that the same should be applicable to all mentally defective persons as defined in Recommendation IV.

See para 1071.

NOTE.—Section 68 of the Lunacy Regulation (Ireland) Act, 1871, is as follows:—

> "Where it is established to the satisfaction of the Lord Chancellor intrusted as aforesaid that any person is of unsound mind and incapable of managing his affairs, and that his property does not exceed two thousand pounds in value, or that the income thereof does not exceed one hundred pounds per annum, the Lord Chancellor intrusted as aforesaid may, without directing any inquiry under a Commission of Lunacy, make such order as he may consider expedient for the purpose of rendering the property of such person, or the income thereof, available for his maintenance or benefit, or for carrying on his trade or business; provided, nevertheless, that the alleged insane person shall have such personal notice of the application for such order as aforesaid as the Lord Chancellor shall by general order to be made as after mentioned direct."

CONCLUDING PARAGRAPHS AND SIGNATURES TO THE REPORT.

We have now set out in separate sections of our Report our opinion on the matters submitted for our consideration so far as they relate to England and Wales, to Scotland, and to Ireland respectively; and we have appended to each section a detailed statement of our Recommendations.

We desire to record our great indebtedness to our Secretary, Mr. H. B. N. Mothersole, Barrister-at-Law, whose services have been of very material assistance to us in our work. His legal qualifications, and the wide knowledge which he has acquired of the subject-matter of our investigation, together with the ability and tact which he has shown in arranging for the provision of evidence and in dealing with the other business of the Commission, have greatly facilitated our task.

All which we humbly submit to your Majesty.

MEMORANDUM BY HONORARY ASSISTANT IRISH COMMISSIONERS.

So far as the Recommendations in this Report affect Ireland we are in full accord with them.

(Signed) GEO. PLUNKETT O'FARRELL.

JOSEPH MOONEY.

Honorary Assistant Commissioners.

MEMORANDUM BY MR. C. E. H. CHADWYCK-HEALEY, C.B., K.C.

Although I have expressed my concurrence with the Report as a whole, I desire to add that I am not satisfied that it would be expedient to withdraw the question of the degree of mental responsibility in criminal cases from the verdict of a jury and to leave that question to the Court, except where an order of a probationary character, such as we have recommended where possible, is made by a Court of Summary Jurisdiction, or a higher Court.

If the prisoner was in fact irresponsible when he committed the offence, that fact should, in my opinion be so found, and by a jury. If he was only "partly responsible" the question whether his mental condition had, or had not any relation to the crime should equally, I think, be determined by a jury.

In view of the possibility that now obtains of an appeal in criminal cases it does not seem to be prudent to run the risk of obscuring the issues. Moreover, it is doubtful to my mind whether possible confinement for remedial purposes for an indefinite period in this class of cases should be left to the decision of the Secretary of State without the assistance of the verdict of a jury based on evidence upon which an appeal might lie to the Superior Court.

The finding of a jury upon the evidence, with the assistance of the judge, would leave the latter free to impose a sentence, either: (1) punitive; or (2) remedial or curative; or (3) partly punitive and partly remedial.

(Signed) C. E. H. CHADWYCK-HEALEY.

MEMORANDUM BY MR. C. E. H. HOBHOUSE, M.P.

I have signed the Report, being in general agreement with my colleagues as to the necessity for dealing with the difficult problems which surround the control of the feeble-minded. The present arrangements are neither satisfactory nor sufficient. I cannot, however, be held as subscribing to the details—administrative, legislative, or financial of their proposals. My continuous absence in India for a considerable portion of the time when evidence was taken and the Report discussed, has prevented me from following with the necessary attention either principles or details during the later stages of our inquiry.

(Signed) C. E. H. HOBHOUSE.

MEMORANDUM BY F. NEEDHAM, ESQ., M.D.

Although I thoroughly agree with the Recommendations generally, I desire to express my dissent from the proposal in Recommendation XVI. that the Assistant-Commissioners should have specific districts assigned to them in which they should reside.

In my opinion they should be placed, as respects their work, under the unfettered direction of the Board of Control who should allot to them from time to time districts in which they should discharge such duties as were required of them, but in which they should not necessarily reside.

If these new officials are, as is suggested, to be qualified to discharge, if required, all the duties of Commissioners except that of central administration they should possess, and have continued opportunities of acquiring, varied experience such as one district only would be unable to afford them. They should be able to compare district with district and institution with institution and in virtue of this wide experience be qualified to give valuable advice and assistance to lunacy officials whether in asylums or elsewhere.

Moreover, the Recommendation would be needlessly expensive, for if the country were divided into districts to each of which an assistant Commissioner was allotted, many more appointments would have to be made than would be required while the new work was only growing.

I am also unable to concur in the desirability of Recommendation XXI., which brings the Commissioners of the Board of Control within Civil Service limits of retirement at the age of sixty-five. I am also unable to concur with the similar Recommendation XV. as to Ireland.

It would, in my opinion, greatly circumscribe the area of selection by almost necessarily excluding a large proportion of the medical superintendents of asylums, who alone have long and wide practical experience of this special form of institutional administration.

If appointed when of ripe experience, say at fifty years of age (and it must be remembered that men are not usually appointed medical superintendents at an early age) they would not be able, in their years of office, to earn pensions at all equal to those to which a continuance in the asylum service would usually entitle them. They would not therefore be likely to become candidates. Even at present, without the age restriction, this difficulty has frequently prevented the applications of eligible men.

In their absence the Commission must consist largely of men with much less experience than those whom it became their duty to supervise and without adequate practical acquaintance and familiarity with the administration of institutions for the mentally defective. Its expert consultative value and status would, therefore, suffer materially.

It must be remembered that assistant medical officers of asylums take no necessary share in their administration however highly skilled they may be in the treatment of their patients.

I am strongly of opinion that the Lunacy Commission or Board of Control should be left in its present comparatively independent position, and that its members should not be appointed by the Head of any State Department which is more or less practically subject to the control of the public as voters.

(Signed) F. NEEDHAM.

MEMORANDUM BY DR. DONKIN DR. DUNLOP, THE REV. H. N. BURDEN, MR. W. H. DICKINSON, DR. C. S. LOCH, AND MRS. PINSENT.

We are of opinion that the members of the Board of Control should be appointed by and directly responsible to the Secretary of State for Home Affairs.

MEMORANDUM BY J. C. DUNLOP, ESQ., M.D.

It is with great regret that I find myself unable to express unqualified concurrence with all stated in the Commission's Report, and find it necessary to write this memorandum expressing dissent from some of the Commission's conclusions and Recommendations. But before stating and explaining the differences of opinion, I desire to record that I am in entire agreement with much in the Report, including some of the principal Recommendations, among which I may mention the urgent necessity of legislation to secure that proper care and control be provided for certain classes not at present habitually provided for under the lunacy laws, the necessity in England of strengthening and unifying the central authority for the supervision and inspection of mentally defective persons whose liberty is in any way interfered with, the increase of medical inspection of institutions for the care and treatment of mentally defective persons, and the diminution of legal inspection of such institutions, the introduction into England of greater elasticity of method of dealing with mentally defective persons after certification, and the limitation of relief at public cost to those mentally defective persons who are not, and who cannot be, efficiently cared for by their relatives or guardians. With these and other principles I agree, and it is mostly as to the method of giving practical effect to them that I am at variance with the majority of the Commission.

In this memorandum I shall endeavour to explain my views on subjects on which I differ in opinion from the majority, and which subjects, by being incorporated in the Recommendations appended to the Report, are of importance. I find it necessary to entirely disassociate myself from the Commission's Recommendations applicable to Scotland, and shall state at some length my views as to what alterations of the lunacy law in Scotland are necessary to give effect in that country to the general principle that proper care and control be provided for all mentally defective persons whose condition is such as to require care and control.

English Recommendations.

Certification and Definition.—I am in agreement with the majority of the Commission that some changes in the procedure of certification and some changes of nomenclature will be necessary for the success of the general scheme, but there are two alterations suggested in the Commission's Recommendations with which I cannot agree.

The first of them is in the Commission's Recommendation LXVIII. which advises an amendment of Section 6 (1) of the Lunacy Act, 1890, by which the judicial authorities would be given some discretionary power as to the method of disposal of mentally defective persons ; and the second is in the Commission's Recommendation LXX., which suggests some alterations of the statutory form of certificate, including the insertion in that certificate of an expression of opinion as to the nature of the mental defect from which the alleged mentally defective person suffers.

The amended Section 6 (1) would read thus : " Upon the presentation of the petition the judicial authority shall consider the allegations in the petition and statement of particulars and the evidence of mental defect appearing in the medical certificates, and whether it is necessary for him personally to see and examine the alleged mentally defective person ; and, if he is satisfied that an order may properly be made forthwith, he may make the same accordingly either directing the admission of the mentally defective person to a particular institution or house which the petitioner, his relative, or friend may desire or failing that, which in his opinion, on the evidence submitted to him or his personal knowledge, is suitable for the admission of the said person or directing the admission of the mentally defective person to an institution or house suitable for his proper care and control,

as may be decided by the Committee for the Care of the Mentally Defective, etc." The unamended Section 6 (1) of the Lunacy Act, 1890, runs : " Upon the representation of a petition the judicial authority shall consider ——— and if he is satisfied that an order may properly be made forthwith, he may make the same accordingly." The wording of the amended clause is somewhat ambiguous, as the words, " or failing that " which occur in the middle of the clause, and which limit the discretionary power, have two possible interpretations ; acording to one interpretation, the interpretation intended by the Commission, these words imply that the discretionary power is only to be exercised by the judicial authority when the petitioner fails to name an institution or house in the petition ; but according to the other interpretation, an interpretation which I fear is very possible, the words imply that the judicial authority may order the admission of the mentally defective person to an institution of his own selection, or to one subsequently selected by the Committee, when he fails to be satisfied that he may make the order as petitioned for; or in other words the judicial authority in all cases by declaring himself dissatisfied may overrule the petitioner's selection of an institution, and order the admission of the mentally defective person to an institution other than the one named in the petition.

I disagree with the clause whichever way it may be interpreted, as I hold the giving of such discretionary power to justices of the peace is both unnecessary and undesirable. In the case of a " private " patient, a mentally defective person who will be supported and paid for privately, it is inconceivable that a responsible petitioner would ever fail to name the institution or house in the petition, or that he would willingly leave the selection to the wisdom of a justice of the peace or to the wisdom of a county council committee, and when the responsible petitioner has selected an institution for the care and treatment of his afflicted relative, which selection includes the selection of the medical man to whose care the afflicted relative is to be entrusted, and named the institution in the petition, interference by a justice of the peace as to that selection would be simply intolerable. I hold that a person who provides for the care and treatment of an afflicted relative is entitled to the selection of the institution in which his afflicted relative is to be treated, and to the selection of the medical practitioner by whom the afflicted relative is to be treated, and I fail to see any reason why the discretion should be taken from that person and given to a justice of the peace. I am of opinion that when dealing with private cases the naming of the institution in the petition should in the future be as necessary as it has been in the past, and that the power of the judicial authority in the future as in the past should be limited to granting or refusing the order as petitioned for.

In the case of "public" cases, cases which will be paid for out of public funds, I consider the discretionary power equally undesirable. In those cases it is conceivable that the petitioner, an official of the county council committee, may not name the institution, and consequently whichever way the clause be interpreted the justice of the peace might have power to hand over the afflicted person to the committee to be placed in any institution which that committee may subsequently select, and such an order would to a great extent deprive those mentally defective persons of the safeguard of having a judicial sanction to the method of treatment decided for them by the local authority. Were the clause interpretated as meaning that the justice could overrule the committee's selection of an institution in all cases such interference on the part of the judicial authorities, more especially as justices of the peace need not be experts in mental therapy, would be as intolerable in " public " cases as the interference of justices of the peace in the disposal of " private " cases.

I accordingly dissent from the recommendation of the Commission that the above named discretionary power, however interpreted, should be given to the judicial authorities, and hold the opinion that in the future as in the past the function of the judicial authority in this matter should be limited to the granting or refusing of an order as petitioned for

The incorporation of a statement by the certifier in the certificate regarding the nature of the defect according to a certain series of definitions is suggested in the Commission's Recommendation LXX. With that suggestion I disagree, holding that such a statement is both unnecessary and undesirable, and that the definitions themselves are so faulty as to be useless for practical purposes.

The essential points for a certifier to consider, and on which to express opinion, are two, the existence of mental defect and the requirement of care or protection or control.

These two points will be as essential in the future as they have been in the past, for it is on them, and on them alone, that the question of granting or refusing a detention order will depend, and any addition to them, such as an expression of opinion as to the nature of the defect, would not only tend to mask the two cardinal points, but would tend to make the certificate more into something of the nature of a clinical note than a responsible opinion as to the requirements of the sufferer. More than that, a full and complete diagnosis of a case of mental defect is a matter which cannot always be made at the time of examination for the purpose of certificate, for not only is the time for observation often limited, but the history of the case is not always available. For instance, a certifier may examine a case and satisfy himself that it is a case of dementia, blunting of the intellect, and readily recognise that it is a case requiring care and control, but without a history it would be frequently impossible for the certifier to satisfy himself whether such a case was one of acquired dementia or one of imbecility, and without such decision he could not place the case in its proper category, and according to the Commission's scheme of certification could not complete the certificate.

The definitions themselves are faulty in several respects, but as I advise their omission from the statutory certificate on other grounds, a full criticism is probably unnecessary. I would, however, point out that they are faulty in that the classification is a cross one, in some depending on the cause of the defect, in others on the duration of the defect, and in others on concomitant symptoms; that some of the differences between the classes are such as would be inapplicable in practice, for instance, the ability to earn a living is the suggested difference between an imbecile and a feeble-minded person, and that difference cannot be used as a test in one very important group of cases, namely, children of school age; and another great fault in the definitions is the use of such undefined and ambiguous terms as "earning a living," being "epileptic," or "inebriate," no indication being given of what "earning a living" means, or of the severity of the epilepsy, or the degree of inebriety, which would exclude a mentally defective person from one class, and include him in another. Several witnesses of great experience have criticised a series of definitions very similar to what the Commission suggest; Sir James Crichton-Browne did so, so did Dr. John Macpherson, and so did Dr. Clouston. Crichton-Browne, 6010. Macphers on, 21314. Clouston, 24331.

Having indicated my reasons for dissenting from the use of the definitions included in the Commission's Recommendations, or any such series of definitions, it remains for me to express an opinion as to how the desired object, the removal of a certain conventional restriction of the application of the lunacy certificate, can be best brought about. The Commission recommends that the use of the word "lunatic" in the certificate should be abolished, and the term "mentally defective" used in its place; with that I agree, and with that Recommendation I think it necessary that the term "mentally defective" should be carefully defined, making the term so comprehensive as to include all varieties of mental defect and exclude all possibility of a statement ever being made that a person is mentally defective and requiring care and control, but uncertifiable by reason of the nature of the mental defect not being included in the definition. Such a definition might be constructed as follows: "The term 'mentally defective' shall be applicable to all persons afflicted with mental defect; whether that defect be congenital or acquired; whether it be due to disease, or to age, or to any other cause; whether it be acute or chronic; whether it be curable or incurable; and whether it be such as might be described as lunacy, or idiocy, or unsoundness of mind, or imbecility, or feeble-mindedness, or by any other term indicating mental unsoundness, or mental disorder, or mental incapacity, or mental infirmity." Such definition would, I think, serve the purpose well, it would remove all doubt as to the applicability of the certificate to all classes of mentally defective persons, and it would do so without raising the difficulties inherent to a system of definition by classes as advised in the Commission's Recommendations. I hold that such a definition would be an assistance to the certifier, while a definition by classes would be a difficulty to him.

These remarks indicate my dissent, either total or partial, from the Commission's Recommendations regarding England, III., IV., VIII., X., XLIX., LI., LII., LIII., LIV., LVI., LVII., LXII., LXVIII., LXIX., LXX., LXXI., LXXV., LXXVII., LXXXV., and from Paragraph (4) of preamble.

Care of Certified Mentally Defective Persons by Local Authorities.—I am in agreement with the majority of the Commission in holding that with an extended use of the certificate there must be greater elasticity of method of dealing with certified mentally defective persons, but take exception to the Commission's Recommendation XXXIV., which refers

to this matter, because in my opinion that Recommendation advises as methods of care and control methods which provide neither care nor control, and because the Recommendation gives little if any indication of what should be the approved methods of relief of certified persons. The Recommendation referred to states: "That subject to the Regulations of the Board of Control it shall be at the discretion of the Committee to deal with mentally defective persons in whose behalf they deem that intervention is necessary as they shall think best in the individual case, either registering the case only, or having it certified also, or taking steps for its certification and detention, or placing it in an institution or home or house or under private or family guardianship, or leaving it to the care of its parents or guardians with or without the appointment of a friendly visitor, or taking any other measures that seem to them desirable."

The first method of care and control advised by the Commission is simple registration. I dissent from such advice, as I utterly fail to see how simple registration can provide care and control in a practical form, and I hold that the acknowledgment of simple registration as an authorised means of relief would provide local authorities with an ever-ready excuse for failing to provide practical relief for necessitous cases.

The next method advised by the Commission is registration combined with certification. From this I also dissent, as I fail to see how previous certification can convert registration into practical relief, and I also fail to see what useful purpose could be served by such certification, or how the expense of such useless certification could be justified.

The third method advised by the Commission, and the all-important one, is certification followed by an order of detention and by maintenance in an institution or otherwise, but from this Recommendation I also dissent, my reason being that it is too vague, and gives too little indication of what suitable provision should be. The nature of the necessary provision is a matter about which many witnesses have spoken, it is a matter of great practical importance, and consequently I shall indicate what, in my opinion, the nature of the provision should be, or in other words, indicate my opinion as to what are the justifiable and proper methods of providing for the requirements of certified mentally defective persons.

Without the least doubt asylums such as now exist for the treatment of acute insanities and for the safe custody of dangerous lunatics, will be as necessary in the future as they have been in the past, but assuming that the certificate will be more freely used, and that a greater variety of case will be certified, it is reasonable to anticipate that those asylums will not be suitable for the reception and treatment of all certified mentally defective persons in future.

Special asylums will be required. For the proper treatment of mentally defective children special asylums of the nature of imbecile training institutions will be required so will special asylums of the nature of labour colonies for reception and treatment of mentally defective adults whose condition is such as not to require the more elaborate treatment of an ordinary asylum, and who will be benefited by work rather by idleness. In populous districts other special asylums may be found to be both economical and desirable, as for instance special asylums for senile dements, for mentally defective habitual offenders, for epileptics, and for habitual inebriates. There would appear to be no reason why some of these special asylums should not be provided in separate and specially licensed portions of workhouses, and by using them doubtless some economy would be affected. The special asylums I refer to have been spoken of by witnesses under a great variety of names: labour colonies, boarding-schools, intermediate asylums, asylum annexes, and homes for permanent detention, are some of the terms which have been used; all of them may be included under the general term special asylum, and all of them are justifiable methods of treatment of certified mentally defective persons.

The establishment of observation wards, or reception houses, is another most desirable and necessary form of provision for mentally defective persons. The Commission in Recommendation LXIV., advises the establishment of them, and with that Recommendation I agree.

A properly regulated system of the boarding-out of mentally defective persons is also a method of giving relief to mentally defective persons which is desirable. Recommendation XXXIV., quoted above, refers to it in general, though not in specific, terms. For such a system to be satisfactory it must be properly controlled, and the patients must be

efficiently inspected, but the Recommendation gives no indication of how these two requisites are to be fulfilled, and is therefore in my opinion faulty. There are two systems of boarding-out which secure proper control and inspection, the one is the congregate, or colony, system, as in force in France, Belgium and Holland, and the other is the segregate system, as in force in Scotland. Both of them are such as might be used in England, and I am of opinion that both of them might be included in the permissible methods of dealing with mentally defective persons after certification. Such systems of boarding-out are very different from the unsatisfactory system of boarding-out "quarterly" lunatics as at present practised in England, and on which Dr. Cunningham Brown gave very clear, important, and condemnatory evidence. Cunningham Brown, 8964–9145.

The remaining method of dealing with mentally defective persons suggested in the Commission's Recommendation XXXIV., is after certification to leave the case "to the care of the parents or guardians with or without the appointment of a friendly visitor." Leaving a case to the care of the parents or guardians would either be not providing for the case at all, or it would be boarding-out the case under the care of the parents or guardians. If it were the former, the local authority would be doing nothing for the case, and the appointment of an inspector by the local authority, even though styled a friendly visitor, would be nothing short of inquisitorial interference. If it were the latter, the appointment of a friendly visitor, or special inspector, would be unnecessary, as the case, being a boarded-out one, would be otherwise inspected.

The use of so-called special classes is another practical method of relief for mentally defective persons of young age. Their educational value may be small, but they are of value in that they are of the nature of day nurseries, where the children are cared for, cleaned, often fed, and taught manners and other conventional matters. As day nurseries they give practical relief for a certain number of hours daily, and thus are a practical method of dealing with mentally defective persons. The question of the compulsory establishment of these classes I shall discuss later.

I accordingly disagree with the Commission's Recommendation XXXIV., and hold that the methods by which local authorities should provide for mentally defective persons should be the following—

(1) Treatment in ordinary asylums.

(2) Treatment in special asylums, including—

(*a*) Imbecile training institutions.

(*b*) Working asylums, or labour colonies.

(*c*) Asylums for the care of special classes of mentally defective persons, including senile dements, epileptics, inebriates, and mentally defective habitual offenders.

(3) Treatment in observation wards or reception houses.

(4) Treatment by boarding-out.

(5) Treatment in "special classes" or day nurseries.

Notification.—Being of opinion that the duties of the local authorities in respect of mentally defective persons should be strictly limited to the cases of those mentally defective persons who are not suitably provided for privately, and who thereby become a charge on the local authority, I cannot agree with the principle advised in Recommendation LVI., that there should be a system of compulsory notification of mentally defective persons to the local authority by certain officials of public and charitable institutions independent of any requirement on the part of the mentally defective persons of public assistance. Were the notification limited to those cases which require public assistance, as in Section 13 (1) of the Lunacy Act, 1890, I would be in agreement with the Recommendation, but as the Recommendation contains no such limitation I cannot agree with it. It is most desirable that all mentally defective persons whose surroundings are such that they require care and treatment should be reported or notified to the local authorities, but I see no useful purpose to be gained by the notification of other mentally

defective persons, even though they may go to some charitable institution for advice or assistance. I accordingly express dissent from the Commission's Recommendation LVI.

Local Authority.—I express no individual opinion as to the desirability of the transfer of the duty of granting relief to mentally defective persons from the Poor Law authorities to the county councils, but I desire to express my dissent from the Commission's Recommendation XCVI., which advises that the duties of the Metropolitan Asylums Board relative to the care of mentally defective persons should be transferred to the London County Council, as I am of opinion that in some ways the Metropolitan Asylums Board would be the better local authority of the two for this purpose. My reasons for holding this view are two, the one being that the institutional care of the mentally defective is a matter closely akin to other duties of the Board, such as the institutional care of persons suffering from other disease, and the second being that the Board has proved itself to be a progressive and efficient local lunacy authority. It is the only local lunacy authority in England which has established a training school for imbecile children, and the only local lunacy authority which has established a special asylum for the relief of senile dements. I may also point out that the Metropolitan Asylums Board in other sections of their work deal with both non-pauper as well as with pauper cases, they do so in their infectious diseases hospitals, and that the retention of the Board as the local mentally defective authority in London would not cross the general principle advised by the majority of the Commission, that the relief of mentally defective persons in England should be separated from poor relief.

Education of Mentally Defective Children.—The Commission in Recommendation LXXII. advises that the Elementary Education (Defective and Epileptic Children) Act, 1899, should no longer apply to mentally defective and epileptic children, and in Recommendation LXXIV. advises that the provision of manual and industrial and other training of all mentally defective children, including idiots and imbeciles, should be a statutory duty imposed on county councils acting through their committees for the care of the mentally defective, and in subsequent Recommendations partly explain how these Recommendations may be given effect to. These two recommendations imply two changes, the one a transfer of the duty of caring for mentally defective children from one local authority, the education authority, to another local authority, the authority for the care of the mentally defective ; and the other the conversion of what was an optional duty applicable to selected children only, into a compulsory duty applicable to all mentally defective children, no matter the degree of the defect or the educability of the children. I do not dissent from the first of the two proposed changes, the transfer, but I do dissent from the second of the proposed changes, that making the provision of training, or education, of mentally defective children of all grades a public duty, because in my opinion the advantages which would be gained are not sufficient to justify the enormous cost which would be involved.

Educational facilities for mentally defective children under the above-quoted Act may be either in boarding schools or in special day schools. The equivalent of the former are anticipated by the general scheme of the Commission and might be provided in terms of Recommendations XXVIII. and XXXIV., and definitely so were my suggestions as to methods of providing for mentally defective persons given effect to. The transfer of the duty of providing such would be necessary for the carrying out of the Commission's general scheme. The urgent want of such institutions, no matter whether they be styled boarding schools, or imbecile training institutions, or idiot asylums, has been very clearly proven in the evidence laid before the Commission, and there can be no doubt but that the institution of such asylums for the care, treatment, training, and control of those mentally defective children who are not properly cared for at home is a most desirable, and indeed necessary, change of the lunacy law.

But the provision at public cost of training, or education, for mentally defective children of all grades, is quite another matter, and is one with which I cannot agree. In my opinion to give practical effect to such a Recommendation it would be necessary to establish special schools or classes of some sort in every district of the country, for without such schools I cannot conceive how the special training, or education, contemplated by the Recommendation can be provided, and holding that opinion I consider that the Commission's Recommendation LXXIV. amounts to a Recommendation that special schools

or classes for the education and training of mentally defective children of all grades should be compulsorily provided in all districts of the country. That special schools are useful I have no doubt, but I hold that there is a limit to their utility. They are not curative, they do not convert mentally defective children into mentally sound adults, it is in exceptional cases only that they make mentally defective children fit to support themselves in after life, and in exceptional cases only do they obviate a requirement of after-care, institutional or otherwise. Were they curative, or did they obviate the necessity for later relief, there would be no doubt but that money spent on them would be well spent, and that the compulsory establishment of them would be economically sound, but failing such advantages I am not prepared to advise a compulsory establishment of them. The Commission's Recommendation which, in my opinion, implies a compulsory establishment of special schools or classes, implies an expenditure which may be roughly estimated at more than half a million of public money annually, and I fail to see any commensurate advantages.

When expressing my opinion as to the justifiable methods of dealing with certified mentally defective persons, I stated that I considered special classes were of considerable value in acting as day nurseries, and thus giving relief for so many hours a day. By so doing, they may obviate in some cases the necessity of the more expensive institutional relief, and thus may be economically sound. But this argument in favour of special schools cannot apply to rural districts where the number of mentally defective children must be small, and where no economy would arise from their establishment, for almost certainly a few defective children could be cheaper and more efficiently dealt with by placing them in institutions than by establishing a special school with its expensive teaching staff for their daily care. Allowing that special schools are economically sound and of value in districts where mentally defective children exist in considerable numbers, but not economically sound in districts where mentally defective children exist in small numbers only, it follows that a compulsory establishment of those schools might be justifiable in the larger urban districts, but could not be justifiable in the less populous rural districts.

I accordingly dissent from the Commission's Recommendations LXXII. to LXXXVI., which, in my opinion, imply the compulsory establishment of special schools in all districts and for all grades of mental defect, and hold the view that their establishment should either be compulsory for large urban areas only, or that their establishment should be optional as under the present Act.

Care of the Property of Mentally Defective Persons.—I take exception to Recommendation X. on the ground of incompleteness. That Recommendation advises that powers and provisions of the Lunacy Act, 1890, relating to the management and administration of the property of lunatics should apply to the property of all mentally defective persons, and I hold that such Recommendation would be quite impractical without a great change of the present legal procedure for bringing the property of lunatics under the care of the court.

The powers and provisions relating to the management and administration of the property of lunatics are stated in Sections 116 to 130 of the Lunacy Act, and are strictly limited to certain classes of lunatics, the classes being defined by Section 116, and dependent on the legal procedure mentioned in that section of the Act. It is by removal of such restriction by definition, and by simplification of procedure, and not by a mere change of nomenclature, that the powers and provisions may be extended to all mentally defective persons whose position is such that the protection of their property is necessary.

Putting aside two exceptional classes of lunatics, those for whom an order for the care of their property was made prior to 1890 and criminal lunatics, there are four classes of lunatics provided for under the 1890 Act, those so found by inquisition, those under detention in an asylum, those whose lunacy is dependent on mental infirmity arising from disease or age, and those whose property does not exceed £2,000 or the income of which does not exceed £100 per annum. These four classes no doubt include the greater number of mentally defective persons whose condition is such as to require that their property be protected by court, but they exclude a very considerable and important class, namely, mentally defective persons whose property exceeds £2,000, or £100 per annum, and who are neither detained nor so found, and whose mental defect is not due to infirmity arising from disease or age. The substitution of the term mentally defective for lunatic in the Act as advised by the Commission cannot be expected to give the neces-

sary protection to the class referred to, but what is required is the introduction of a simple method of obtaining the necessary Order of Court, which method should be applicable to all classes of mentally defective persons, no matter the amount of their estates or the pathology of the defect. Sub-section (*e*) of Section 116 of the Lunacy Act contains such simple procedure as I refer to. It states that the powers, etc., shall apply "to every person with regard to whom it is proved to the satisfaction of the Judge in Lunacy by the certificate of a Master, or by the Report of the Lunacy Commissioners, or by affidavit, or otherwise, that such a person is of unsound mind and incapable of managing his affairs, and that his property does not exceed two thousand pounds in value, or the income thereof does not exceed one hundred pounds per annum." Were the money restriction removed, and the term mentally defective inserted in place of "of unsound mind," a term which according to some has acquired a restricted meaning, that sub-section would be so comprehensive as to include not only the classes named in the remaining five sub-sections, and also every conceivable case where public protection of the property of mentally defective persons is necessary, and, that being so, the retention of the other five clauses would be unnecessary. I accordingly venture to suggest, in order that effect may be given to the Commission's Recommendation X., that a clause be inserted in the proposed Act for the Care and Control of the Mentally Defective to the effect that the powers and provisions of the Lunacy Act, 1890, relating to the management and administration of the property of lunatics should apply to every person with regard to whom it is proved to the satisfaction of a judge of the Chancery Division of the High Court of Justice, by the certificate of a Master, or by the Report of the Commissioners, or by affidavit or otherwise, that such person is mentally defective and incapable of managing his affairs.

I may add that the use of a simple procedure such as that now suggested for use in all cases has stood the test of experience, for many years there has been such a procedure in Scotland, and it has been found to answer well, giving protection to those requiring it, and not leading to any known abuse; that I have reason to assume that the majority of the Commission hold that their Recommendation implies the introduction of a simple method applicable to all cases, and that thus I am not in any serious disagreement in the principle involved; and also that the Commission in the Irish Recommendation LXXIV. advises the introduction in that country of single simple procedure applicable to all classes.

Irish Recommendations.

The Commission's Recommendations regarding the necessary amendments of the lunacy law in Ireland are based on the same principles as the Commission's English Recommendations, and contain most of the suggestions from which I have expressed dissent in the English section of the Memorandum. I do not consider it necessary to again explain my reasons, but desire to express my dissent from the Commission's Irish Recommendations in so far as they include principles I have objected to in the English Recommendations, and which I have discussed in this Memorandum under the following headings:—Certification and Definition, Care of Certified Mentally Defective Persons, Notification, and Education of Mentally Defective Children.

Scottish Recommendations.

I am in complete agreement with the majority of the Commission in holding that in Scotland, as in England, there are some mentally defective persons who at present are not receiving the care, protection and control which their condition necessitates, and that to meet their wants some amendment of the Scottish lunacy law and administration is urgently required. I agree with some of the conclusions expressed in Chapter XLIII. of the Report, the chapter dealing with the Scottish evidence, and with a few of the individual Recommendations, but my views as to the general conclusions to be derived from the Scottish evidence, and as to the general scheme of amendment, are so essentially different from those of the majority of the Commission that I am compelled to disassociate myself from all stated in Chapter XLIII., and from the Commission's Recommendations regarding Scotland, and to separately express my views as to the reasons for amendment, and scheme of amendment.

My principal reason for dissent from the Commission's Recommendations are that I consider them to be much more extreme than are called for, and it will be my endeavour in this Memorandum to show a scheme of amendment which, in my opinion, while being better suited to meet the wants of the neglected classes, is simpler, and does not involve the almost complete reconstruction of the Scottish lunacy administration advised in the Commission's Recommendations. The scheme of amendment which I shall describe is essentially different from that which the Commission advises for adoption in England, but I hold that the differences between the Scottish and English lunacy laws and administrations are so great, that it is quite consistent to advise different schemes of amendment in the two countries. I do not intend to offer any criticism of the Commission's Recommendations, but to limit myself to an explanation of the alternative scheme which I venture to suggest.

Dr. John Macpherson, in his full and carefully considered evidence, states: "The administrative machinery in Scotland is, in my opinion, sufficient for dealing with the care and treatment of all mentally unsound in the country who require care, provided only that some additional means can be organised for bringing more easily within the scope of the machinery certain classes who at present, unfortunately, are more or less neglected," and specifies the classes he refers to. The general trend of all the evidence of the Scottish witnesses has been to support Dr. Macpherson's conclusion, and it is on that principle that I found the scheme which I now suggest. The classes of mentally defective persons which he describes as "more or less neglected" are four in number, and are: (1) Children of unsound mind, using that term as including all mentally defective children; (2) mentally defective delinquents; (3) vagrants, loafers, and ins-and-outs of poorhouses; and (4) inebriates. It may, perhaps, be hardly necessary to consider inebriates as a class by themselves, for, with few exceptions, the neglected ones who require relief by some public authority are included among mentally defective delinquents, or among mentally defective "ins-and-outs," but the evidence about them having been separate from the evidence about the other classes, it is a matter of convenience to retain them in a separate class. Macpherson, 21198

Adopting Dr. Macpherson's classification of the neglected mentally defective in Scotland, I shall consider the classes *seriatim*, and express my views as to the changes of the lunacy law and administration which are required to meet the wants of each. I shall afterwards express my opinion on a few other matters arising from the evidence of other witnesses.

Mentally Defective Children.—Mr. Spence, in describing the Scottish lunacy law, stated that theoretically the duty of parish authorities to provide for the care of mentally defective children is similar to the duty of parish authorities to provide for the care of adult mentally defective persons, but that in practice parish authorities do not look on imbecile children as in quite the same position as adult persons of unsound mind. This opinion may be interpreted as meaning that the Scottish lunacy law is not such as to secure that parish authorities shall provide care and treatment for all necessitous mentally defective children. Dr. Macpherson, in his evidence, corroborates that opinion, for he includes mentally defective children among those mentally defective persons who, "owing to certain legal imperfections of a slight character, and also to certain administrative anomalies, are unfortunately excluded from the operation of the present system." The result of this imperfection of the lunacy law is very evident in the evidence submitted by Dr. John Thomson, who states: "I have been strongly impressed with the difficulty that the parents of such children generally have in getting assistance, however much they may need it, and with the great hardships often suffered on this account by both parents and children;" and the same is also evident in the statement of Dr. Clarkson, who gives an analytical description of the present condition of affairs at Falkirk, and in the Report of the local investigators who describe the present position of affairs in Glasgow. To further show that the parish authorities at present consider the giving relief to imbecile children to be optional and not similar to their duty of providing relief for adult mentally defectives, I may draw attention to a system of bargaining for payment by the parents before relief to imbecile children is granted, such a system being referred to in the evidence of Dr. Thomson, and in that of Dr. Macpherson. Dr. Thomson gives a striking example of such bargaining and of how failure on the part of the parent to pay an impossible sum was the cause of the afflicted child being neglected. (*See* case James B., Question 24381) Spence, 20935. Macpherson, 21198. Thomson, 24381. Clarkson, 21989. Macpherson, 21198. Thomson, 24381.

The first obvious change required to meet the wants of mentally defective children is thus a statutory declaration that the duty of parish councils to provide for the necessary care and treatment of mentally defective persons includes the provision of care and treatment of mentally defective children whose home surroundings are such as to necessitate such care and treatment at public cost. Such a declaration implies no new principle, but only removes any misconception that may exist.

Thomson, 24381.

This suggestion is not intended to imply that it should be a duty of parish councils to provide for all mentally defective children, but is intended to strictly limit the duty to the provision of care and treatment to those children whose home conditions necessitate public relief, and to supplement that suggestion it is necessary to indicate what is meant by that limitation. The question of what are the conditions which necessitate public relief for mentally defective children is a matter dealt with in Dr. Thomson's evidence, and as he has set forth these conditions in a manner which is clear and comprehensive, I cannot do better than repeat them here, and to state my agreement with his opinion. He states the case thus :—

A.—On the child's account.

(1) Unkindness at home, as in the case of the illegitimate (or other) children of bad women.

(2) The impossibility of getting liberty in their home surroundings for healthy occupations and exercise and fresh air.

(3) The impossibility of getting training at home which will occupy their energies and turn them from mischievous into innocent and happy channels.

(4) Inadequate protection from the injuries inflicted on them by unscrupulous persons.

B.—On the parent's account.

(1) The exacting demands on their time and energy on the part of an idiot child who causes unjustifiable interference with their earning a livelihood, and with the training of other children.

(2) The constant anxiety caused to the parents by the child living at home when circumstances make it impossible to keep him or her under safe control (mischief, injury to younger children, fire raising, injury to child himself in a fit, danger of immoral conduct, etc.).

But such a declaration by itself would be insufficient to meet the wants of such children, because at present in Scotland there is an insufficiency of suitable accommodation for their reception and treatment, and it would be necessary to make it a statutory obligation on some public authority to provide the accommodation. There is no likelihood of philanthropic effort meeting the demand.

Spence, 20939. Macpherson, 21198. Motion, 21645, 21738. Carswell, 21884. Urquhart, 24435, 24478. Macpherson, 21198, 21330.

The insufficiency of the present accommodation has been amply attested by many witnesses, including Mr. Spence, Dr. Macpherson, Mr. Motion, Dr. Carswell, Dr. Bruce, and Dr. Urquhart. The present available accommodation consists of two training institutions jointly capable of receiving about 240 cases, and a custodial home for unimprovable cases, which is an annex to one of the Glasgow District Lunacy Board's asylums. The training institutions are both provided by philanthropic effort, the custodial home is the only special institution for the care and treatment of mentally defective children in Scotland provided by public funds.

Motion, 21748.

The amount of necessary provision is a matter dealt with in the evidence of Dr. Macpherson and of Mr. Motion. Dr. Macpherson's opinion is that an enlargement of the two existing training institutions, and the establishment of two additional training institutions, would meet the requirements of the country, and that to begin with 1,000 beds in all should suffice. Mr. Motion estimated the requirement at a higher figure. He stated as his opinion that it would require an institution of 500 beds to meet the requirement of a million of the population, and that is that between 2,000 and 2,500 beds would be required to meet the requirements of Scotland, a figure twice as large as Dr. Macpherson's estimate These estimates are too widely different to found any very definite conclusion on, but

I think the opinions of these two experienced men may be taken as indicating that the requirement will probably be found to be something between a minimum of 1,000 and a maximum of 2,500, and probably nearer the former than the latter figure.

If these necessitous mentally defective children are to be provided for in the same manner that mentally defective adults are at present provided for, it follows that the provision of the necessary accommodation should be a duty of the district boards in the same manner as the provision of accommodation for adult mentally defective persons is a duty of those boards. But there is a practical difference between the provision of institutions for the care of these children and the provision of institutions for the care of adult defectives, and that is that the number to be dealt with is much smaller. Assuming that at the present time Scotland is divided into districts of a size suitable for the establishment of asylums for adults of an economical size, and I know of no reason to doubt that, it does not follow that the districts are suited for the establishment of imbecile training institutions of an economical size. The general trend of the evidence taken in England as well as in Scotland is to the effect that for economical and efficient working institutions should be capable of holding at least 500, and consequently the establishment of imbecile training institutions by each of the twenty-seven district boards would be economically wrong. To obviate that Dr. Macpherson's suggestion, and a suggestion which I endorse, is that these training institutions should be provided, not by the district boards separately, but by them in suitable combination. Probably four such institutions should meet the requirements of the country, and the arrangement of combination of lunacy district boards to establish these four institutions is a matter which well might be entrusted to the General Board of Lunacy, and my recommendation is that it should be so.

The above are the essentials of the scheme which I venture to suggest for ensuring that necessitous mentally defective children are in Scotland provided with the care control and treatment which their condition requires. Their relief should be similar to that of adult mentally defective persons, the institutions being provided for them by district boards, the maintenance of them in the institutions and the selection of suitable means of treatment for them being a duty of the parish councils.

The present mode of admission into imbecile training institutions in Scotland is, in my opinion, such as to meet all the requirements of the situation. There is no statutory order of detention, but when public money is being expended there is a double medical certificate. I see no reason whatever to make any change, an order of detention when dealing with children appears to be quite unnecessary, while the double certificate in a case involving the expenditure of public money is required to safeguard that money, and to secure that it is being spent on suitable cases only.

The present rule in Scotland that mentally defective children should only be allowed to remain in these institutions up to the age of eighteen is, I consider, also sound. The great reason for having the institutional provision for juvenile mentally defectives separate from that for adult mentally defectives is that the latter in many ways is unsuited for the special requirements of young mentally defective persons. But when the children grow up the same reason no longer exists, and the general provisions are as suited for their requirements as they are for the requirements of other mentally defective persons. In advising the continuance of this rule of discharge at eighteen, I do not wish it to be inferred that in my opinion the entire responsibility of parishes to provide care, etc., for congenitally mentally defective persons should cease at that age. My assumption is that the responsibility of the parishes to provide for them at eighteen would be the same as to provide for them at a younger or at an older age, and that if their condition remained such as to require care and treatment at public cost, the parishes would be bound to provide for them in one of the other approved methods, namely, by boarding-out, by placing in an asylum, or by placing in licensed poorhouse wards.

I have in the earlier portion of this Memorandum expressed my opinion as to the utility of special schools for mentally defective children, and how I consider them of value in acting as day nurseries and thus giving relief for a certain number of hours daily, but of little value as educational institutions in any way likely to improve the chances of the mentally defective children becoming self-supporting. These schools in terms of a recent Act have been established in some of the principal towns in Scotland and are serving a useful purpose, and will continue to do so by limiting the number of cases requiring the more expensive institutional relief, and I hold that there is no good reason whatever

for in any way interfering with the present Act. I entirely disagree with the majority of the Commission in advising that the establishment of special schools all over the country should be a duty of district lunacy boards, as is implied by the Commission's Recommendation XXIV. regarding Scotland. I hold that the expense of carrying out that Recommendation would be enormous, and the advantages gained comparatively small.

Macpherson, 21198.
Russell, 23650. Fyfe, 24668. Crombie, 24852. McNaughton, 24963.

Mentally Defective Delinquents.—These form the second group of mentally defective persons described by Dr. Macpherson as at present more or less neglected in Scotland, and that they are so is a fact fully corroborated in the evidence of other witnesses, including Sir James Russell, Sheriff Fyfe, Mr. Crombie, and Dr. McNaughton, and all of them are in a position to have special knowledge of the requirements of the class of mentally defective person referred to. Indeed, the cases described by some of them reveal an extremely sad, if not scandalous, state of affairs. No one can read the cases detailed in the evidence of Dr. Macpherson, and in that of Mr. Crombie, without realising the neglect of this helpless and irresponsible class, and without appreciating the necessity of making some special provision for them.

The repeated presence of these mentally defective persons in prison may be accepted as proof that the machinery for securing the recognition of their condition outside prison is faulty, and the fact that when dealt with in prison on account of their mental defect, and sent to district asylums, they frequently return to prison within a short time is ample proof that the method of dealing with them when their condition is recognised in prison is also faulty. Dr. Macpherson describes the case of a mentally defective person who, in the course of two years, was nine times certified to be insane, and during the same two years was fourteen times sentenced to imprisonment (*see* case R.C., page 31 of Vol. III. of Evidence), and Mr. Crombie describes a case who, in the course of four years, was six times certified to be insane during sentences of imprisonment (*see* case C.K., page 254 of Vol. III.).

The administrative factors which tend to aggravate this present unsatisfactory state of affairs are :—

Crombie, 24852.

(1) The fact that the usual order of detention obtained for the admission of mentally defective prisoners to asylums, that given in terms of Section 6 of the Dangerous Lunatics (Scotland) Act, 1871, is valid only for the period of the sentence, and that at the time of expiry of sentence fresh certificates are required. Many of the mentally defective persons found in prison suffer from the milder forms of mental defect, and it frequently happens that after a few days or weeks of treatment their condition is so far improved as to make the necessary re-certification a matter of difficulty, more especially when that re-certification is not by the prison medical officers, who know something about the histories of the cases, but by the parish medical officers, who may know very little about their histories.

Macpherson, 21198.
Motion, 21785.

(2) There is a prejudice against the presence of these "gaol birds" in asylums which receive for treatment the respectable poor, a prejudice common to the medical superintendents, to the parish and district boards, and to the asylum patients.

(3) The knowledge that certification in prison is frequently useless as a means of securing care and protection of this class of person limits the action of the prison authorities, including the medical officers, to dealing with the more extreme cases only.

Macpherson, 21198, 21335. Motion, 21645, 21785. Carswell, 21858, 21919. Russell, 23650, 23736. Bruce, 24120. McNaughton, 24963, 24972. Clouston, 24349. Urquhart, 24503. Fyfe,;24698. Crombie, 24864.

To correct these obvious faults the necessaries are; (1) separate accommodation; and (2) a special order for detention suited to their special requirements.

A special asylum for the reception and detention of this neglected class of mentally defective persons is the first of these essentials. The provision of such an institution is a change of the lunacy administration in Scotland which has been advocated by many witnesses, including Dr. Macpherson, Mr. Motion, Dr. Carswell, Sir James Russell, Dr. Bruce, Dr. McNaughton, Dr. Clouston, Dr. Urquhart, Sheriff Fyfe, Mr. Crombie and others, and it is a change of lunacy administration which, in my opinion, is essential to the success of any scheme for providing the necessary care and protection for this

presently neglected class of mentally defective persons. The obvious and great advantages of a special asylum for them are: (1) That it could be so regulated to meet the special requirements of this class of person without in any way interfering with the treatment of ordinary pauper lunatics, the discipline would probably require to be stricter than that in an ordinary asylum, and certainly the means of obviating escape would have to be stricter; (2) the power of discharge by the medical superintendent could be restricted without in any way interfering with the power of discharge of all the inmates of an ordinary asylum by the medical superintendent on recovery, a point laid great stress on by Mr. Spence and Dr. Macpherson; and (3) it would meet the presently existing, and perhaps well-founded, objection to admitting these "gaol birds" to ordinary asylums. Spence, 20790. Macpherson, 21339.

There is unanimity of opinion as to the desirability of a central asylum for the reception of these prison cases, but there is a division of opinion as to what authority should be responsible for its establishment and management. Dr. Macpherson's opinion is strongly in favour of management by one of the presently existing public departments, arguing that the duty would be too small to justify the creation of a special department, and by exclusion argues that the General Board of Lunacy is the best suited of the public departments to undertake the new responsibility, and his opinion is supported by the opinions of Mr. Motion, Dr. Carswell, Sheriff Fyfe, and Dr. McNaughton, though these witnesses do not go into the matter in the same detail; but Sir James Russell expresses a very decided opinion against the management of the proposed central asylum being given to the General Board of Lunacy, and strongly advocates the creation of an *ad hoc* board elected by parish councils for the purpose. I have carefully considered both views and satisfied myself that Dr. Macpherson's suggestion is the better one, as I am of opinion that the value of the expert knowledge of the General Board of Lunacy more than fully compensates for any possible disadvantages of adding administrative duties to the present inspectorial duties of that Board, and I accordingly suggest that the establishment and management of the suggested central asylum for the detention of mentally defective delinquents should be a duty of that Board. Motion, 21790. Carswell, 21920. Fyfe, 24699. McNaughton, 24973. Russell, 23650.

While seeing good reasons for advising that these mentally defective delinquents should be cared for and detained in an asylum established and managed by a Government Department, I also see a strong reason why the maintenance of the inmates should not be a charge on the Treasury, for if such were the case there would be an inducement to local authorities to neglect their cases, to let them fall into the hands of the police, and thus to get them cared for at the expense of the Treasury, instead of at local cost. The method of obviating that disadvantage of the scheme is obvious, and is that the cost of the maintenance of the mentally defective persons detained in the suggested central asylum should be a charge on the same authority as it would be if they were detained and treated in district asylums, and that is on parish councils. Such an arrangement would not only remove any possible inducement for parishes to neglect their cases, but would tend to promote the contrary, for the parishes would be in this position, if they cared for their cases themselves they would retain control over them, but if they neglected their cases, if their cases were found in prison and sent to the central asylum, they would still have to pay for them, but would have lost all control over them. The feasibility of such a scheme was put to Mr. Motion, the inspector of poor of the most populous parish in Scotland, a man fully cognisant of parish council opinions in general, and he stated that parish councils "ought to pay for them no matter where they are," and that "parishes would gladly pay for these patients in a State reformatory if they could get rid of them and get them cared for elsewhere!" Local payment to prevent abuse is, in my opinion, as essential a feature of the scheme which I venture to suggest as is the establishment of a special asylum to meet the special requirements of the classes now under consideration. Motion, 21702

The requisite size of a central asylum to meet the present requirements of the country is a matter which is extremely difficult, or indeed impossible, to estimate with confidence, but the matter received, so far as it goes, tends to show that the accommodation need not be very great. Dr. Sutherland estimates that there are in Scotland 2,500 mentally defective delinquents who require special provision, but his estimate is so far in excess of that of others that in all probability it is an over-statement. Dr. Macpherson, from observations made by himself in Edinburgh and Glasgow, assesses the number of mentally defective persons among habitual offenders at about 60 per cent., a figure indicating a total in Scotland of about 750 to 800. Mr. Crombie in his evidence gives the result of an inquiry made in the prisons in 1901, which inquiry showed that eighty-five such persons were found in prison during a period of six months. Dr. MacNaughton states that 4 per Sutherland, 24756. Macpherson, 21198. Crombie, 24852. McNaughton, 29463.

cent. of the prisoners in Perth Prison were such as required special observation as to their mental condition. And the local investigators who examined the prison population of Glasgow for the purposes of this Commission reported that they found thirty-five mentally defective persons, which in round numbers means about 2½ per cent. of the Glasgow prison population. From such widely varying figures I do not care to commit myself to any concise estimate, but I think I may go so far as to express an opinion that an asylum of from 200 to 400 beds should more than meet present requirements, at all events if the present method of sending cases of acute insanity which occur in prison into district asylums be continued.

Vol. VI., page 395.

The other essential for the satisfactory relief of these mentally defective delinquents is that their detention should not be terminable at the discretion of the medical superintendent, but regulated by some higher authority. A precedent for such a mode of detention exists in Section 89 of the Lunacy (Scotland) Act, 1857, and as the procedure described in that section appears to be admirably adapted to meet the wants of this special class of mentally defective persons, I think I cannot do better than suggest its adoption for this purpose. The procedure is quite different from that of an ordinary order for admission to an asylum, it does not require a double medical certificate based on observations some of which must be made at the time of examination, but instead requires a sheriff with the assistance of two medical practitioners to inquire as to the prisoner's mental condition, and to report to the Secretary for Scotland, and he, if satisfied that the prisoner is mentally defective, then orders his detention in the asylum, and the order is effective until such time as the Secretary for Scotland is satisfied that the person is sane, and in a fit state for discharge. This procedure is, I hold, better adapted to the requirements of these mentally defective delinquents than the ordinary order of reception, for while efficiently safeguarding the liberty of the subject, it obviates the technical difficulties of ordinary certification, and ensures that the care and protection provided shall continue as long as it may be required. I may add that this procedure is very similar to that advised for adoption by the Commission in England, for in Recommendation regarding England, LXXXIX., it is suggested that the consent of the Secretary of State for the Home Department should be necessary before the discharge of any mentally defective persons from an institution to which they may have been admitted from a court of justice or from a prison, or from a reformatory. The Commission's English Recommendations go a good deal further in dealing with these mentally defective delinquents than does my suggestion for the efficient dealing with them in Scotland, for the Commission's English Recommendation LXXXVIII., suggests that the detention of these persons should be ordered by the Home Secretary on medical certificate only, and without any judicial inquiry. Whatever may be the case in England I consider a sheriff's inquiry in Scotland would be advantageous, for it would not only more completely safeguard the liberty of the subject, but it would also help to obviate any doubt on the part of the parish councils as to the justification of the cost which would follow the order.

The above scheme for the treatment of mentally defective persons in Scotland, a State asylum, local payment, and detention during the Secretary for Scotland's pleasure, is designed to meet the requirements of those mentally defective persons found in prison whose mental defect is of a chronic or recurring form, but such a procedure is uncalled for in many of the cases of insanity found in prison, cases where the insanity is acute, and in which there is no prolonged history of repeated imprisonment. Experience has shown that the treatment of such acute cases is quite satisfactorily procured by the simpler method of transfer from prison to a district asylum under a warrant in terms of Section 6 of the Criminal and Dangerous Lunatics (Scotland) Act, 1871. In advising the retention of this Section 6 to meet the requirements of these more acute cases, I agree with the suggestion of the majority of the Commission as expressed in the latter part of their Scottish Recommendation XXXVI.

Macpherson, 21198.

There is a suggestion made in Dr. Macpherson's evidence to which I desire to draw attention, even though the matter may be outside the terms of reference to the Commission, and that is that the central asylum for the care and protection of mentally defective delinquents might with advantage be combined with the criminal lunatic asylum and with the State inebriate reformatory. The histories of the inmates of these three institutions may in some respects be different, but the inmates are all similar in that they are all mentally defective and in that they require very similar treatment, and I believe an amalgamation of the three institutions into one larger institution would be both economically and administratively sound.

In describing this scheme for dealing with the mentally defective persons found repeatedly in prison I have purposely avoided expressing any opinion as to whether the class of prisoner to be thus dealt with should include that class who may be described as morally mentally defective. From personal observation in prison I know that the cases who most urgently call for relief are cases who show unmistakable evidence of ordinary mental defect, and I feel sure that if they were cared for the present neglect would almost completely cease. I am not prepared to allow of the existence of pure moral insanity, insanity in which the moral sense is absent or altered, the other senses being intact, my experience being that in all such cases there is some symptom of insanity, or mental defect, over and above the alteration of the moral sense, but I am not in a position to deny that such a form of insanity is possible. However, if in future the existence of a moral insanity is accepted, the now suggested method of providing for the care and the treatment of mentally defective prisoners is such as would fully meet their requirements.

Mentally Defective Poorhouse Inmates.—I use this term to describe the third class of mentally defective person stated by Dr. Macpherson to be at present more or less neglected, and in doing so refer only to the inmates of ordinary poorhouse wards, and not to pauper lunatics in licensed poorhouse wards. The latter I exclude for two reasons, the one being that as they are being dealt with under the lunacy law they are outside the reference to the Commission, the other being that there is no reason to doubt but that they are being properly treated.

In Scotland, treatment in an ordinary poorhouse ward is not one of the authorised methods of dealing with mentally defective persons, and to prevent ordinary poorhouse wards being used for that purpose, every pauper before admission to those wards must be certified by a medical practitioner not to be lunatic or insane, or idiot or of unsound mind. But from the personal observation of the members of this Commission, from the evidence of the witnesses, and from the report of the local investigators, there can be no doubt but that in practice this exclusion of mentally defective persons from the ordinary poorhouse wards fails, and that a very considerable number of mentally defective persons are provided for in these wards. As evidence in support of this contention I may quote that of Dr. Macpherson, Dr. Leslie Mackenzie, Mr. Motion, and Mr. Barclay.

Macpherson, 21198. Mackenzie, 23272. Motion, 21707. Barclay, 23428, 23460.

That mentally defective persons are dealt with in unauthorised manner may be attributed to two facts, the one being that the certificate on admission is faulty, the other being the absence of medical inspection to secure that this, the exclusion, is given effect to. In the certificates of suitability of a pauper for admission to the ordinary wards of poorhouses, there is required a categorical answer to the question: "Is applicant or any dependent 'lunatic, insane, idiot, or of unsound mind,'" and it is pointed out on the certificate that "No person so described can be legally sent to, or received in, a poorhouse, unless it possesses licensed lunatic wards, and then only with the sanction of the General Board of Lunacy." The certificate is intended to exclude certain classes of persons from the poorhouses, but the instruction appended to the certificate indicates how that restriction can be avoided, for the certificate is to be founded on the *description* of the person rather than on the *condition* of the person, and nothing is easier than that to describe mentally defective persons by other than the forbidden terms. I know that course to be adopted, and that persons are admitted into poorhouses who are undoubtedly of unsound mind, but who are not *described* as of unsound mind, but who are *described* as feeble-minded, as weak-minded, or as suffering from mental debility or from mental asthenia, or by some other of the many possible evasive terms.

Barclay, 23428.

The absence of medical inspection in poorhouses is a matter referred to in evidence by Mr. Barclay and by Dr. Leslie Mackenzie, and without some skilled inspection, there can be no assurance that the illegal detention of persons of unsound mind in poorhouses is not taking place.

Mackenzie, 23339. Barclay, 23505.

There can be no doubt but that the ordinary wards of poorhouses are not suitable places for the treatment of mentally defective persons, the obvious objections being:—

(1) The absence of power of detention when the inmate demands discharge.

(2) The hardship which the close association of the sane and insane inmates in the same institution entails on the sane inmates; and

(3) The absence of control by the General Board of Lunacy.

The necessary amendments to secure that the wants of this class of mentally defective person are more fully met in the future than they have been in the past are :—

(1) Efficient medical inspection of poorhouses to ensure that persons of unsound mind (or mentally defective persons, the terms are synonymous) are not admitted or detained in the ordinary wards of poorhouses. The majority of the Commission advise that this duty be imposed on the General Board of Lunacy, and with that Recommendation I concur, that Board doubtless being the most efficient inspectorial authority for the purpose. To make the inspection effective, the Board should have power to order the transfer of mentally defective persons from workhouses into suitable institutions, such as asylums or licensed wards.

(2) An alteration of the form of certificate required before admission of a pauper to a poorhouse, abandoning the present unsatisfactory terminology and replacing it by a comprehensive term applicable to all forms of mental defect.

I do not consider it necessary to advise any new method of dealing with this class of mentally defective person, as I am of opinion that the Scottish lunacy administration is already sufficiently elastic to meet their requirements. The provision of care by treatment in an asylum, or by treatment in licensed wards, or by boarding-out, should meet the requirements of them all. Mr. Motion has suggested labour colonies as a requisite for the proper provision for this class, but I cannot agree with him, as I cannot see any difference between the hypothetical labour colony and certain departments of the Scottish asylums and licensed lunatic wards. The farms attached to the Glasgow District Asylum at Lenzie, to the licensed lunatic wards of New Monkland Poorhouse, are in no way essentially different from the hypothetical labour colony, and as such farms can be provided under the present lunacy administration I see no reason for advancing the establishment of them as a new and separate method of dealing with the insane.

Motion, 21645.

I cannot leave the subject of the treatment of mentally defective persons in the ordinary wards of poorhouse without making some reference to one exceptionally pitiable class referred by several witnesses, and that is mentally defective girls and young women who are unable to care for themselves, whose mental weakness is taken advantage of by unscrupulous men, and who irresponsibly become the mothers of families when they are both unable and unfit to take charge of children. From the evidence submitted there is no reason to suppose that this class of case is frequent, but that it exists is undoubted, and its existence is a very strong argument in favour of making some change such as these now suggested to secure that all mentally defective paupers are efficiently protected. In my opinion the above suggested amendments would efficiently meet the requirements of this class. The recorded cases are practically all poorhouse cases, and were proper treatment for all poorhouse mentally defective inmates insisted on as now suggested these mentally defective mothers along with other mentally defective persons would, be provided for and protected.

Habitual Inebriates.—These form the fourth group of mentally defective persons described by Dr. Macpherson as at present more or less neglected, but he qualifies their inclusion in a separate group by stating "that the distinction which is drawn between them and the classes I have already referred to (mentally defective persons in prisons and in poorhouses) appears to me to be an artificial one," and that among them "alcoholism is but an incident—an important one certainly—but not the main factor in the majority of the cases." He gives some instructive cases in support of that opinion. The habitual inebriates he referred to are the more extreme cases, cases such as are found habitually in prison, and are occasionally provided for under the Inebriates Acts.

Macpherson, 21198

The general trend of the Scottish evidence, and indeed also of the English evidence, has been to support his contention that the essential condition of habitual drunkards, and the condition which necessitates special care and control, is mental defect. Sheriff Fyfe, in his evidence, stated : "My own opinion is derived from my observation of the people that I have committed to an inebriate reformatory, and it is that a good many of them, if perhaps not the whole of them, were fit subjects for an asylum." Dr. Carswell describes the majority of habitual inebriates, and more especially those who become "habitual" while still in the adolescent period of life, as feeble-minded or confirmed neurotics. Dr. Donald states that after careful study of the condition he has concluded that inebriety and narcomania are mental diseases, and that inebriates are mentally defective. And both Dr. Cunningham and Dr. McNaughton have given similar opinions.

Fyfe, 24702.

Carswell, 21858.

Donald, 24516.
Cunningham, 24548.
McNaughton, 25026.

The constant, or practically constant, association of habitual inebriety with mental defect may be accepted as an established fact, and as such indicates the nature of the statutory provision required to meet the necessities of habitual inebriates, and that is that the statutory provision for them should be similar to that for other classes of mentally defective persons. Thus cases of habitual inebriety whose circumstances are such as to demand relief at public cost, whether with a view to cure or with a view to protection and control, should be a charge on the same local authority as is responsible for the provision of relief for other classes of mentally defective persons, namely, the parish councils; when the parish councils for any reason fail to provide the necessary care and control for habitual inebriates, and they become public nuisances, and are frequently in and out of prison, they should be committed to a central asylum, and there detained at the cost of the parishes; and when their circumstances are such as not to necessitate public relief, those specially interested or responsible for them should have power to procure an order for their admission to an institution suited to their treatment, and for their detention in such an institution for as long as may be required.

Any division of responsibility in this matter, such as would result in one authority being responsible for the care of habitual inebriates and another authority responsible for the care of other classes of mentally defective persons, would inevitably result in the defeat of the much to be desired object, the provision of care and control for all mentally defective persons whose circumstances necessitate care and control, for if parish councils were not responsible for the care and control of these mentally defective persons who are of drunken habits and who might be styled inebriates, constant difficulties of allocation of cases between the parish councils and the other authority would arise, and the parish councils would be supplied with an ever ready excuse for failing to provide for a large number of necessitous mentally defective persons. In dealing with mentally defective delinquents and with mentally defective "poorhouse ins-and-outs" the adoption of this principle, the same authority to be responsible for the provision of care for habitual inebriates as is responsible for the provision of care for other mentally defective persons, is essential; for among them the discrimination of the cases to be provided by the one authority from those to be provided for by the other authority would be an impossibility.

Many of the Scottish witnesses have spoken as to the necessity of some means of securing that proper care and control be provided for the worst of habitual drunkards, both of cases which must become a public charge and of cases which can be provided for privately, and I believe the above suggested scheme generally meets the opinions expressed by them. Among such witnesses I may mention Dr. Macpherson, Mr. Motion, Dr. Carswell, Mr. Barclay, Dr. Urquhart, Dr. Donald, Dr. Cunningham, Sheriff Guthrie Sheriff Fyfe, and Dr. Sutherland.

Macpherson, 21198.
Motion, 21242.
Carswell, 21858.
Barclay, 23488.
Urquhart, 24435.
Donald, 24516.
Cunningham, 24548.
Guthrie, 24592.
Fyfe, 24659.
Sutherland, 24756.

And I may add, that although differently worded, my suggestion is essentially the same as that implied by the Commission's Scottish Recommendation XXXV., and that therefore in this matter I am in agreement with the majority of the Commission.

Other Desirable Amendments.—Over and above the special provision for the four classes of mentally defective persons described by Dr. Macpherson as at present more or less neglected, there are a few other matters arising from the evidence which deserve special consideration.

Epileptics are a class of persons who frequently, though not invariably, are mentally defective, and at least two witnesses, Dr. Ireland and Dr. Thomson, have drawn attention to their special requirements, and there can be no doubt but that some of them are at present not receiving proper care and treatment. I, however, see no good reason for advising any separate provision to be made for them, as I believe that if the foregoing Recommendations are given effect to their requirements should be fully met. If epileptics are mentally defective they should be relieved on account of their mental defect, being dealt with in imbecile training schools, or in asylums, or in licensed wards, or by boarding-out, but if they are not mentally defective then their relief should be similar to the relief of other persons suffering from physical infirmity, in poorhouses, or in parish or other hospitals.

Ireland, 23992.
Thomson, 24381.

The lunacy certificate will require some change in form to meet presently existing limited conception as to the meaning of the term "lunatic," and I agree with the majority of the Commission that the term "mentally defective" should be used in the certificate

in place of the term "lunatic." I, however, disagree with the majority of the Commission in advising that the term "mentally defective" should be defined by compartments, but hold that it should be defined in a comprehensive manner. But in this matter I need not repeat my opinions as they are fully set out earlier in this Memorandum, in the portion of it dealing with the Commission's English Recommendations.

The protection of medical certifiers against unreasonable and vexatious prosecution is another matter which I consider essential to the success of a scheme for securing that proper care and control be provided for all these mentally defective persons who require care and control. It is a matter dealt with in the evidence of Sir James Russell, who points out the difficulties that exist at present in getting certain cases certified on account of the risk of vexatious actions to which medical certifiers are exposed. The difficulty he points out is undoubtedly a real one, and for the freer use of the certificate in future, for the applicability of the certificate to all cases of mental defect who are in requirement of care and control, it is essential that this difficulty should be removed. Obviously this can only be brought about by protecting medical men against unreasonable actions for opinions stated in the certificates. This is no new principle, the 1890 English Lunacy Act gave them some protection, and the Commission advises that in England those acting in a public capacity should be further protected by bringing them under the Public Authorities Protection Act, 1893, and I hold that protection in some form should be given them in Scotland. Sir James Russell suggests as the best means of protecting medical practitioners against these actions, that the consent of the Lord-Advocate should be required before any action against a medical certifier for any statement made in a lunacy certificate be brought into court, and with his suggestion I concur.

Russell, 23650.

Dr. Ireland, in evidence, drew attention to the fact that in Scotland the General Board of Lunacy has no power to license imbecile training institutions other than those established by philanthropic associations, and that the want of such power prevents medical men from establishing such institutions for the care and training of the mentally defective children of the well-to-do classes. This, though perhaps a small matter, is one well worthy of correction, because every possible facility should exist for the proficient care and training of all such children, and I suggest that the General Board of Lunacy be given the necessary power.

Ireland, 23992.

If the Commission's English Recommendations are adopted, English local authorities will receive an increased grant from the Treasury to assist them in fulfilling their duty towards mentally defective persons. If that is done, doubtless an increased grant will also be given to the Scottish local authorities for the purpose. I refrain from discussing the intricacies of what the exact form of that increased grant should be; but I desire to express the opinion that it should be sufficiently generous to be an inducement to parish councils to treat all mentally defective persons in institutions suited for their requirements rather than in the ordinary words of poorhouses, and that it should be such as the poorer parishes might get exceptional assistance. The Commission in the chapters of the Report dealing with England have referred to the removal of senile dements and of some other mentally defective person from poorhouses to asylums as an abuse of public funds, and one dependent on the present English system of State subsidy for lunatics treated in asylums only, but from that opinion I dissent, as I hold that one of the good purposes to be served by subsidising the legitimate methods of treatment of mentally defective persons and of not subsidising their treatment elsewhere, is to encourage their treatment in approved manner, and in approved manner only, and I fail to see why demented persons of old age should not have the same nursing and other advantages as mentally defective persons of younger age. I fail to see how ordinary poorhouse treatment should be held to be good enough for the one class, but not good enough for the other.

In Scotland inspectors of poor are required to report to the General Board of Lunacy when they fail to provide within a few days for any lunatic for whom application for relief has been made, but this duty on account of the present definition of the term lunatic (a person certified by two medical practitioners to be lunatic, insane, idiot, or of unsound mind) restricts that duty to reporting only those cases who are doubly certified but not provided for. These Reports are of value in that they give the General Board of Lunacy a chance of intervening in case of the failure of the parishes to provide relief should that Board see fit to do so, and I am of opinion that the restriction, the limitation to certified cases only, should be removed. I would accordingly suggest that it should be a duty of inspectors of poor to report to the General Board of Lunacy all cases in which they

have received application for relief on the grounds of mental defect, but have for any reason not provided that relief, no matter whether the mentally defective persons were certified or not. In suggesting this I am in agreement with the majority of the Commission, for in their Scottish Recommendation X. a similar suggestion is made.

The constitution of the General Board of Lunacy is a matter which is not included in the reference to the Commission, and I do not intend to discuss it, but I desire to draw attention to the fact that if either the scheme of amendment embodied in the Commission's Scottish Recommendations or the scheme of amendment described in this memorandum be adopted, there will be a very large increase of duty put on that Board, and that the appointment of an additional medical Commissioner will be required. The small expense which that appointment would entail would be a very small price to pay for the advantage to be gained from efficient medical inspection of poorhouses, and skilled management of a central asylum.

The scheme of amendment which I venture to suggest as an alternative to that suggested in the Commission's Scottish Recommendations, and which I consider not only less extreme but also better fitted to secure that care and protection and control be provided for those classes of mentally-defective persons in Scotland who at present are improperly cared for, or not cared for at all, may be summarised as follows :—

(1) That parish councils should be responsible for the provision of care, treatment, and control of mentally-defective children as they now are for the care and treatment of adult mentally-defective persons.

(2) That the provision of imbecile training institutions should be a duty of the district lunacy boards as it is now a duty of those boards to provide asylums for adult mentally-defective persons, and that for reasons of economy the provision of these training schools should be by those boards in combination and not separately.

(3) That there should be a central asylum for the reception of mentally-defective habitual offenders, the management to be by the General Board of Lunacy, the cost to be borne by the parishes of the mentally-defective persons there treated, the procedure of admission to be that described in Section 89 of the Lunacy (Scotland) Act, 1857, and that for reasons of economy and good management this asylum might be combined with the criminal lunatic asylum and with the State inebriate reformatory.

(4) That care, treatment, protection and control be provided for habitual inebriates by the same authorities and under a similar procedure as the care, treatment, protection and control of other mentally defective persons is now provided.

(5) That the term "lunatic" be taken out of the lunacy certificate and the term "mentally defective" inserted in its place, the latter term being defined as "applicable to all persons afflicted with mental defect, whether that defect be congenital or acquired ; whether it be due to disease, or to age, or to any other cause ; whether it be acute or chronic ; whether it be curable or incurable ; and whether it be such as might be described as lunacy, or idiocy, or unsoundness of mind, or imbecility, or feeble-mindedness, or by any other name indicating mental unsoundness, or mental disorder, or mental incapacity, or mental infirmity."

(6) That medical certifiers should be protected from vexatious prosecution, and for this purpose that no action against a medical practitioner for any opinion expressed in a lunacy certificate should be brought before a court without the consent of the Lord Advocate.

(7) That it should be a duty of the General Board of Lunacy to inspect the ordinary wards of poorhouses and order the transfer of any mentally defective persons found in them to institutions suited to their requirement.

(8) That the General Board of Lunacy should be given power to license private institutions for the care and training of imbecile children.

(9) That an additional medical lunacy commissioner be appointed to enable the General Board of Lunacy to efficiently overtake the increased duties.

(10) That inspectors of poor be required to report to the General Board o Lunacy all cases in which they have received applications for relief of mentall defective persons and have not provided that relief, no matter whether th mentally defective persons be certified or not.

(11) That the Treasury Grant towards the cost of maintenance of mentall defective persons when treated in an approved manner be sufficiently generou to be an inducement to the parishes to treat those persons in approved manne only, and be such that exceptional assistance can be given to poorer parishe on which the lunacy assessment is exceptionally onerous.

(Signed) JAMES C. DUNLOP.

MEMORANDUM BY MR. H. D. GREENE, K.C.

I.—AS TO PARAGRAPH 469, AND RECOMMENDATION XCV.

1. I do not agree to abstain from making a definite pronouncement on what I consider to be one of the most important points disclosed by the evidence, viz., the state of the law as to the protection of the mentally defective from the sexual allurements and attacks of vicious persons.

2. The Warrant directed that: "In view of the hardship or danger resulting (amongst others) to feeble-minded or defective persons not certified under the Lunacy Laws and to the community from insufficient provision for their 'care' a Report should be made as to the amendments in the law and other measures which should be adopted in the matter."

It appears to me to be well within the mandate and by no means "to lie outside our main arguments" for a clear and certain opinion to be expressed as to whether the law does or does not provide due protection for these persons against sexual crime and immorality, and if necessary to offer suggestions for its amendment. It is a matter which I hold essentially relates to their "care" and deserves and certainly requires something more than mere incidental reference.

"Care" includes protection by every means from danger of every kind, and cannot be limited to the means of control, education and maintenance. One kind of protection that can be afforded is punitive preventive protection, by means of an improvement of the Criminal Law. This may not and probably would not give complete protection, since undetected and unpunished crime must always exist, but it might be valuable as an auxiliary, and would often be effective as a deterrent. Admitting that it is not desirable to turn all sins into crimes, yet it can hardly be claimed that the moral and physical degradation of weak and unintelligent persons by those of sound mind and understanding is a matter in which the State may not justly interfere with a very strong hand.

The Statute Law supplies the moral standard of many people, who regard as permissible whatever is not prohibited. For such as these a positive and unqualified prohibition with punitive sanction is absolutely necessary.

3. So far as they go, I do not dissent from this Paragraph and this Recommendation. I do not object to exalted officers of State having their attention called to the evidence and being invited to consider "whether the existing law provides adequately for the protection of mentally-defective persons against sexual crime and immorality," but I do object to transfer to them the responsibility which it seems to me has been placed on this Commission of advising whether or not the law is sufficient. The exact form and extent of any remedial legislation doubtless requires careful consideration by those who initiate it, but I claim that it is the privilege of this Commission to estimate the evidence and offer a positive opinion as to whether legislation is or is not required.

Although the matter is of great importance it is not of such complexity or profundity that it can only be determined by the Lord Chancellor and the Secretary of State, and I am sanguine enough to hope that success might attend an appropriate measure even if it was not introduced into Parliament by a member of the Government. It involves no party question. No proper freedom would be curtailed. All classes would be benefited.

4. A greater number of witnesses, I believe, gave evidence on this matter than on any one topic in the whole inquiry. Upwards of thirty persons coming from England, Scotland and Ireland supported the opinion that the criminal law does not sufficiently protect the purity of feeble-minded persons, especially

females. Nor is it alone the volume of the evidence that deserves attention, but the weight of it also. The opinions of such well-known societies as Dr. Barnardo's Homes, the Metropolitan Association for Befriending Young Servants, the National Society for the Prevention of Cruelty to Children and the Salvation Army were conveyed to us by their representatives.

Local government and Lunacy officials, members of Education Committees and Boards of guardians, Magistrates, Medical men, Prisons and Asylums officers, Social workers, lay and clerical, male and female, also bore their testimony. The accumulated force of this evidence, I think, puts beyond all doubt the urgent need, on Moral, Religious, and Social grounds, for legislation to protect the purity of these people, though as to the precise form it should take some diversity of views naturally exists.

5. Apart from the opinions of these witnesses there is one extensive branch of the evidence upon which any one may form an opinion, viz., as to the expediency of legislation on economic grounds in relief of the ratepayer. I refer to that which deals with the production of illegitimate children by idiot, imbecile and feeble-minded parents and the expense of their maintenance by the public. If the law distinctly made it a punishable offence for any sound-minded individual to have immoral relations with such persons there might, I submit, be some hope of reducing a revolting and costly scandal. I am not unmindful of the difficulty of always enforcing such a law owing to the occasional inability of the outraged party to give evidence in court or the delay in discovering the injury or in identifying and tracing the culprit, but that prosecutions may not always succeed is not a sound reason for not passing a prohibitive and protective law.

The number of illegitimate children, the offspring of feeble-minded parents, who are themselves provided for at enormous public expense, and whose children grow up to be throughout their lives an additional burden to the State, constitutes an evil of intolerable magnitude.

It was not possible to obtain reliable statistics, either of the number or the cost of them, but the facts revealed in the evidence and in the reports of the Medical Investigators indicate that the figures would be startling.

Vol. I., p. 312.

6. I will take a few illustrations from both sources. Sir Edward Fry says :—

"Everyone knows that a large number of the mothers of illegitimate children are of weak intellect; that their issue are frequently of the same type."

"One of the Poor Law inspectors saw in a workhouse in Somerset an imbecile woman with an illegitimate imbecile daughter who had her own illegitimate daughter in her arms. Precisely the same picture has been seen in the county of Cornwall, and these are but pictures in small of a fact which is to be seen in many of our workhouses.'

Vol. I., p. 132

Mr. Bagenal, a Local Government Board inspector, says :—

"Feeble-minded women are particularly open to the seductions of men. They seem to be deficient in will power and the power of resistance to attacks upon their virtue. In some the moral sense is altogether absent. The consequences we see in the frequency of this class in the lying-in wards of the workhouse."

Vol. I., p. 500.

Dr. R. Turner states that out of 127 children in homes for feeble-minded children, 19, that is 14·9 per cent., were illegitimate.

Vol. II., p. 223

Mrs. Wills and many others confirm this evidence.

Vol. III., p. 201.

7. As to Scotland, Dr. Clouston, Physician Superintendent of the Royal Edinburgh Asylum, tells us :—

"I have come to the conclusion that such persons in a large city are subject to overwhelming temptations and pressure towards sexual immorality. I find, as a matter of fact, that it is an exception for any of them not to have been sexually tampered with among a certain class of society. Many of them have had illegitimate children, and this often at very early ages. One had seven such children. I look on this source of immorality as an extremely grave one in our social life. In a way it is more disgusting and degrading than prostitution or sexual lapses through passion. When illegitimate children are borne by such young women, the chances are enormously in favour of their turning out to be either imbeciles or degenerates or criminals."

Vol. III., p. 240.

8. Dr. Sutherland, Deputy Commissioner in Lunacy in Scotland, referring to the connection between illegitimacy and imbecility and feeble-mindedness says :—

"That there is a close connection between the two I have personally, in my sojournings up and down the land, had abundant evidence, corroborated by interviews I have had with inspectors of poor who have to contend with both evils, which are costly to parishes, especially to the poorer

parishes in which it is most in evidence. Again and again I have seen in the same district, and even under the same roof, three generations of "soft" or "feeble-minded" women with illegitimate broods, some of whom are imbecile or "soft" or feeble-minded. No doubt the environmental factor counts here for something, but the real factor is the feeble-minded state of the women, lost to and evidently not possessing any real sense of shame, and regardless of the life-long burden to themselves and to the parishes. Among these broods of illegitimate children there is, in proportion, a vastly larger number of imbecile and feeble-minded children met with than among the offspring of normal and healthy wedlock. These remarks have reference to the inveterate, not so much to the accidental rearers of illegitimate children, and there are generations of the former who are not in the true sense bad or immoral, but are lacking in resistive power, and incapable of forming a proper estimate of the ethical wrong done to society and themselves. One *faux pas* is intelligible, and if all the circumstances were known, perhaps excusable; but repeated breaches of the moral law, and all the hardships it entails on the woman, not to speak of society, is suggestive of feeble-mindedness of the female parent. The feeble-minded male is not an offender in this respect; it is the female taken advantage of by unscrupulous men, and the female who is actively erotic."

9. Dr. Barclay, General Superintendent of Poorhouses, Edinburgh, testified :— Vol. III., p. 163.

"There are women who have had several illegitimate children, and who are of low mental type and facile disposition. I may note a case where I had recently to examine a woman of this class. She is known to have had ten illegitimate children. She can neither read nor write. She could not tell me, counting on her fingers, how many children she had. In this same poorhouse there is a feeble-minded mute who has had seven illegitimate children. Another illegitimate woman has had ten illegitimate children; her eldest daughter is following in her footsteps, and two of the young children (twins) show signs of weakness. In another small poorhouse with nineteen female inmates, thirteen were infirm and sick, four were epileptics, and three weak-minded; one of the latter has had three illegitimate children, and all the three women are not allowed out as they are sent there for protection. In another small poorhouse there are five women. Two sisters, one weak-minded, have three illegitimate children each—one to a near relative. One woman is a deaf and dumb mute of low intelligence, and two are infirm. I may mention the case of a woman now in a small poorhouse suffering from disease. She has an ungovernable temper, and is destitute of any feelings of modesty. Her husband is also in this poorhouse, a mental and physical nonentity. Her father put her out of the house one night for her bad conduct, when she was sixteen years of age, and this man, who was passing at the time, took her to his house and married her. She has had six children, and has been prosecuted for neglecting and ill-treating them.

"My experience leads me to say that the class of women who come to our poorhouses with more than one illegitimate child are generally of feeble mind."

The same witness thus describes the mental condition of women in two of the smaller poorhouses :— Report, Par. 951.

"These women, twenty-two in number, had had eighty-eight illegitimate children. Of the mothers all were feeble-minded except five, and these were described as low and coarse, father weak-minded."

10. The Memorandum on the Reports of the Medical Investigators and the Reports themselves more fully convey an idea of the extent of this evil, but I will only refer to that of Dr. Tredgold of Somersetshire, and two others He says :— Reports of Investigators, p. 235.

"The only aspect of this question which I shall consider is the propagation of children by women who are actually feeble-minded."

Then follows a table showing that from a group of 165 feeble-minded women sixty-one children were born. Of these nineteen were legitimate and forty-two illegitimate.

"This table," he says, "shows two striking facts; first that nearly two-fifths of the total number of feeble-minded women have given birth to children; and, secondly, that two-thirds of these are illegitimate. I think these facts are sufficient to justify the view that these women are particularly in need of efficient control. In some instances they undoubtedly have pronounced erotic tendencies, but more often this state of affairs is due to the fact that they are of facile disposition, which makes them a ready prey to the first sexually disposed man with whom they come into contact. Often they have no sense of either modesty or ordinary decency, and one girl of this class I met (who had four children) was systematically made use of in this way by her mother in order to procure the latter drink. Indeed, many of the particulars ascertained in this connection are too revolting for publication."

Dr. Melland, of Manchester, remarks :—

"They (the feeble-minded) are perfectly free to leave the workhouse at will, and when it is borne in mind how many young women who have already had illegitimate children there are amongst them it will be recognised what grave risk there is in both sexes of the further propagation of their defect." *Id.*, p. 170

Dr. Pearse, Wiltshire, says :—

Id., p. 257. "Many young women of this type (mentally incapable) enter the lying-in ward of the workhouse and there remain as inmates."

11. These extracts give rise to many serious reflections, and not the least Important of them is concerned with the economic aspect of the problem. In the face of them, it seems to me impossible to argue that profligacy which entails such expense on the community should not be made a readily punishable offence. If the probability of punishment will act as a deterrent, and check the production of degenerates, it is manifest that the prevention of the evil will be economically better than having to mitigate its effects.

12. The inference I draw from the evidence is that mental defect which is found to prevail so largely amongst illegitimate children is to be attributed to the feeble-mindedness of one or other of the parents, but usually to the mother. Although such children are usually born amid the surroundings of privation and shame such conditions are not proved to be the cause of mental defect. My view as to this is confirmed by my being in a position to state that in the Foundling Hospital, where there are maintained upwards of 620 illegitimate children ascertained to be the first offspring of mentally capable women, not more than $\frac{1}{4}$ per cent. would be termed idiot or imbecile, and not more than 1 per cent. are such as would be classified as feeble-minded or dull. Although I infer that the mental defect is usually on the mother's side, I am persuaded that the erotic tendencies of mentally-defective males renders them such a source of danger that their protection also should not be overlooked if any alteration is made in the criminal law.

13. Two points arise for consideration :—

(1.) What is the present law ?

(2.) What should it be ?

As to (1).—Lunatics, idiots and feeble-minded people, of course, have the same protection for their persons from assaults, and acts not consented to, etc., as those who are not so afflicted.

But beyond this there are two special statutory provisions, viz. :—

48 & 49 Vic., c. 69. (*a.*) By the Criminal Law Amendment Act, 1885, it is a misdemeanour to have carnal knowledge or to attempt to do so of any female idiot or imbecile woman or girl under circumstances which do not amount to rape, but which prove that the offender knew at the time of the commission of the offence that the woman or girl was an idiot or imbecile.

There is no definition of "idiot" or "imbecile" in the statute, but the onus is thrown on the prosecution of proving that the offender knew that the female was an "idiot" or "imbecile." Persons whose defective mental condition falls short of whatever these words may mean are not protected. In an Irish Court the words have been interpreted to refer only to persons congenitally weak-minded. If the prosecution fails to prove the offender's knowledge the charge fails. Experience shows that this onus is often a difficult one to discharge.

14. Women and girls too helpless to earn their living—whose minds would not be deemed capable of entering into a binding contract of a trivial character—whose marriages might be annulled, and whose wills would be invalidated, may be defiled and even become the mothers of children, for neglecting to support whom they may be punished, while their assailant or tempter is suffered to satisfy his lust with impunity unless the prosecution can convince a jury that he knew she was an "idiot" or "imbecile !"

Surely a state of law under which it is so difficult to prevent such persons from being taken advantage of by those who are sound and strong in mind falls short of the standard of humanity which this country should set up !

15. It has been suggested that : "You could not possibly punish a man for taking advantage of an imbecile woman unless he knew she was imbecile."

Vol. II., p. 66. "You cannot go against the general principle of the whole of English legislation."

The answer to such an argument is obvious. If a person capable of knowing that the probable consequences of his immorality would be harmful both to an individual and to the community chooses notwithstanding to misconduct himself he must take all the risks. No man has a right to complain if as a result of his misconduct punishment falls upon him. It is for him to ascertain if a woman is mentally defective before he seduces her. If he likes to risk it so much the worse it may be for him. If both parties are capable of intelligently consenting to immoral conduct their equality of guilt if the community is not put to expense may be a reason for not punishing either of them for acts which many regard as only sin. But where owing to mental disparity there cannot be equality of guilt in a joint transgression the one who is mentally capable, and therefore certainly is to blame, may not unjustly be made to suffer alone for the injury caused to the individual and the loss inflicted on the community.

That a male parent may be ordered to make a payment towards the support of his illegitimate offspring by a feeble-minded woman is not a sufficient punishment. He might be compelled to do this if the mother possessed mental capacity and understanding equal to his own. Everyone should be taught that it is a serious offence for a person of sound mind to violate the purity of those whose deficiency puts them at a disadvantage and who require protection both against him and against themselves.

16. The second special statutory provision is as follows :—

> (*b*) By the Lunacy Acts, 1890–1, it is a misdemeanour if any manager, officer, nurse, attendant, or other person employed in any institution for lunatics (including an asylum for criminal lunatics) or workhouse, or any person having the care or charge of any single patient or any attendant of any single patient, carnally knows or attempts to have carnal knowledge of any female under care or treatment as a lunatic in the institution or workhouse or as a single patient ; and no consent or alleged consent of such female thereto shall be any defence. 53 & 54 Vict. c. 5, s. 324.

This does not apply to officers and patients in idiot asylums. It is only directed against officials of certain institutions and persons actually having charge of or attending upon single patients. The defence of consent may be set up by any offender unless he belongs to the enumerated limited class.

As regards both (*a*) and (*b*) it may be observed that the acts of impropriety made punishable are very narrowly restricted and are not inclusive of much impure conduct to which such persons of both sexes may be and often are subjected.

I hold that these provisions are totally inadequate.

17. *Now as to* (2).—What should be the law ?

I think an answer is to be found in the precedents of the criminal law concerning offences upon children of tender age who presumably cannot give an intelligent consent or who, on grounds of public policy, ought not to be allowed to consent to their own defilement. Their immaturity, their inexperience, and their weakness of mind or body call for protection, and the law in response imposes upon them a statutory disability to give their consent.

Thus in 1880 it was provided that :—

> "It should be no defence to a charge of indecent assault on a young person under the age of thirteen to prove that he or she consented to the act of indecency." 43 & 44 Vict., c. 45, Sec. 2.

Five years later the Criminal Law Amendment Act was passed for the purpose of protecting women and girls against themselves. At the time it was passed there was a discussion as to what point should be fixed as the age of consent. That discussion ended in a compromise, and the age of consent was fixed at sixteen. A girl under that age was treated as so immature in mind as not to be capable of consenting to carnal knowledge or the attempt to commit it. The presumption of inability to consent was carried so far that it was not even made an offence for a girl under sixteen to abet or incite a male person to commit the crime with her. R. *v.* Tyrrell 12 Q.B.D., 710. 48 & 49 Vict., c. 69.

Under this Act the unlawful carnal knowledge of any girl under thirteen years is felony, while the attempt to commit it is misdemeanour. If over thirteen and under sixteen the same unlawful conduct is a misdemeanour but with this proviso :—

> "That it shall be a sufficient defence to the charge if it shall be made to appear to the Court or jury before whom the charge shall be brought that the person so charged had reasonable cause to believe that the girl was of or above the age of sixteen years."

The effect of this is to throw the onus on the accused of satisfying the jury that he had reasonable cause to believe that the person he had outraged was over the age of disability to give consent. The word unlawful points to criminal abuse. The section does not apply to the marital relation.

18. The power of consenting to unlawful defilement which on the grounds stated has been taken from girls under sixteen should, I suggest, be taken from feeble-minded persons of all ages. The reason for such a law is the same in the cases of infants in age and infants in mind—of the child and the childish.

Upon this point two questions arise.

(1) How is the feeble-mindedness to be ascertained, and what is to be the measure or extent of it ?

(2) (*a*) Should the onus rest on the prosecution to show that the accused knew of the mental defect ?

(*b*) Or should the onus rest on the accused of showing that he had reasonable cause to believe that the female was not mentally-defective or feeble-minded ?

(*c*) Or should the knowledge by the accused of the sufferer's mental state be as immaterial to the inquiry as his knowledge is of the age of a child under 13 who has been assaulted ?

19. *As to* (1).—At present the idiocy or imbecility of the person injured is determined by the jury on the evidence presented either after seeing or even without seeing the alleged imbecile. Certification is not essential. In future anyone who under the law in force at the time is in fact certified, should *ipso facto* be absolutely protected. Any woman also who is certifiable or of such weakness that under the will of her aggressor there was no fair chance for her, or if she is incapable of resisting pressure, of exercising an act of her own will, or of properly giving or withholding her consent should be statutorily disabled from giving it. The production of the certificate should be sufficient proof where the victim is certified and where not certified evidence of mental defect should be given as at present.

20. *As to* (2).—There is some difference of opinion on these questions (*a*) (*b*) and (*c*), but the inclination was to hold that the law should be assimilated to the provision for the protection of girls over thirteen and under sixteen, and that the accused should in cases where uncertified persons have been tampered with, have a sufficient defence if it should be made by *him* to appear to the court or jury that he had reasonable cause to believe that the female was not mentally-defective, etc., so as to be subject to the statutory disability to consent.

As prisoners on their trial may now give evidence it is perhaps better that such a defence should be open to the accused in non-certified cases, and that thereby the whole of the circumstances may be elicited. At all events, it may be best to strengthen the law gradually until public opinion accepts the true principle, viz., the absolute and unqualified protection of the weak from the passions and power of the strong.

Persons who have been certified, and who for the purpose of protecting their property and controlling their person are supposed to be under the protection of the law, and are somewhat in the position of Wards of Court, should be inviolate and apart from any question of knowledge of their mental

state the aggressor should be punishable. Under our suggested scheme there will be many more persons certified, and they should be guarded from evil, whether they are in Asylums, Homes, Institutions, Boarded-out or even resident with relatives.

21. I do not see why an amendment of the law should be deferred until the Lunacy laws are reformed or until fresh measures for educating and maintaining mentally-defective persons have been adopted. The arm of the criminal law should be promptly raised to shield as far as possible those whose mental weakness makes a mute appeal to manhood and whose pitiable condition ought to provoke pity rather than produce passion.

I, therefore, as a first step recommend that: The criminal law should be extended so as, irrespective of sex or age over thirteen, to impose :—

(1) On all persons certified or certifiable as mentally-defective or as of unsound mind (including lunatics, idiots and imbeciles) and also on persons too weak in mind or will to withhold consent—a legal disability to consent to unlawful acts of personal impurity of any description ; and :—

(2) To impose the liability to punishment on all persons who, not being themselves mentally-defective, etc., unlawfully commit such acts with or upon those who are certified, and in the case of those who are not certified wherever the accused fails to satisfy the court or jury that he or she had reasonable cause to believe, and believed, that the outraged person was not mentally afflicted so as to be subject to disability or was not otherwise disabled from consenting and did in fact consent to the commission of the acts charged.

II.—AS TO PARAGRAPH 809 AND PART OF RECOMMENDATION VI.

22. I desire emphatically to dissociate myself from the statements and suggestions contained in this Paragraph concerning the relative positions of the Lord Chancellor and the Home Secretary, but I concur with the Commission in refraining from making a Recommendation thereon.

The paragraph does not present to my mind an accurate idea of the functions of the Home Office and the Lunacy Commission under the Lunacy Act.

The character and importance of the duties of the Home Secretary are, I think, unduly magnified, and I cannot accept the reasoning or the conclusion based on these premisses.

The suggested *status* of the Board of Control does not appear to me to be clear—but at all events it is not practicable. It is not to be made " a part of the Home Office " and " it is to be detached from the Home Office "—The Home Secretary, however, it is said should appoint the Board, " because the official who is ultimately responsible for the work should appoint the persons who are in turn responsible to him." He is to represent the Board in Parliament and be expected to explain and defend its policy. A position at once of detachment and of subordination I am unable to understand. If the Board is to be detached and have a " a policy " of its own it is not easy to see how the responsibility of the Home Secretary for it comes in.

23. No suggestion has been made that the present or any previous Lord Chancellor has failed or been wanting in the discharge of his duties in respect of lunatics or has made improper appointments of Lunacy Commissioners ; on the contrary, the evidence clearly shows the exceeding vigilance and anxious care with which those duties have been performed. It is true that, in 1828, the Home Secretary was for three years empowered to appoint annually, for the Metropolitan area, fifteen Commissioners for licensing and visiting lunatic asylums within the City of London and Middlesex and 7 miles thereof, but this in no respect interfered with, or curtailed the jurisdiction of the Lord Chancellor. The statute was an experiment. In 1831, however, a Bill was brought by private Members, two of whom were Commissioners, appointed by the Home Secretary in 1828 into the House of Commons, to continue and in some ways

Hansard 1831, Vol. VI., p. 448. Vol. VII. pp. 603, 877.

to extend the provisions of the Act of 1828. Upon this Bill reaching the House of Lords, it was stated by Lord Kenyon in moving amendments to substitute the Lord Chancellor for the Home Secretary that "originally the Commission was placed under the control of the Home Secretary and although the duty had been as well done by the Home Secretary as it could be done by a person in that situation, it was found expedient to make some change in the constitution of the Commission and it was thought for obvious reasons that the control should be vested in the Lord Chancellor." It was considered by Lord Chancellor Brougham that the Bill would effect a desirable improvement if it brought matters of lunacy more immediately than they were by the former law under the superintendence of the Great Seal. He thought it most proper that a near connection should subsist between the Lord Chancellor for the time and the Commissioners of Lunacy and he approved of the amended Bill which brought the superintendence of those cases immediately under the House and the Great Seal.

Upon these amendments returning to the House of Commons for consideration, on a Motion being made to disagree with the Lords' Amendments, the Attorney-General and the Solicitor-General supported the Amendments and urged the transfer of the affairs of lunatics to the Lord Chancellor, who was the admitted guardian of that unfortunate class of person. On the other hand, it was suggested that the control by the Home Secretary's office during three years had been made at the request of, and for the convenience of, the Lord Chancellor, presumably Lord Lyndhurst. It was suggested by one speaker that the Lord Chancellor could not give sufficient attention; by another that the superintendence of these unhappy persons should be placed in the Home Secretary's hands as being a matter of police; and by another, that the appointments should rest with the Home Secretary, with whom, at all times, the Commissioners could have free communication, which they could not have with the Lord Chancellor, and, on a division this was carried by a majority of eleven, the figures being sixty-six to fifty-five, and a Committee was appointed to confer with the Lords. Sir R. Peel, who had between 1828 and 1830 served at the Home Office, supported the attempt to hold the appointment for his former office.

In 1832 the Bill was again introduced into the House of Commons by private Members, two of whom were Commissioners appointed by a Home Secretary, leaving the appointment of Commissioners in the hands of the Home Secretary. Upon its going to the House of Lords it appears, by the Journals of the Houses of Parliament, that amendments transferring the control of matters provided for by the Statute of 1828 to the Lord Chancellor, were agreed to by the Commons, and no trace is to be found of any further attempt at that time to differ from the House of Lords.

This, so far as I can ascertain is the solitary instance. and that an unsuccessful one, of a proposal in Parliament to limit the jurisdiction of the Lord Chancellor in relation to lunatics or to restrict his selection of Commissioners. It was, of course, quite natural for appointees of a Home Secretary to struggle for the continuance of his patronage, and it was even more so when they were doubtless smarting under the public censure administered in Court by the Lord Chancellor "for their presumption and undue interference with the authority of the Court."

Hansard, 1831, Vol. II, p. 915

24. In 1845, the Lunacy Act, establishing a permanent Lunacy Commission, was passed giving the appointment of its members as previously to the Lord Chancellor, and imposing the obligation to report to him, and giving him powers which have been continued and extended by various Statutes up to the present time.

25. I can find no Recommendation by any Royal Commission or Select Committee since 1845 recommending that any one should take the place of the Lord Chancellor. I look in vain to the evidence adduced before us, for any testimony which in my opinion would justify the displacement of the Lord Chancellor from the position which he has held in the Lunacy Acts since 1832, although certainly the Assistant Under-Secretary of State for the Home Department, with laudable Departmental ambition and *esprit de corps*, gave

Vol. IV., 33,404.

his opinion that it would be a great improvement if the Lunacy Commission could be put under the Home Office in the sense of its being a sort of sub-department, and if the selection of the Commissioners was taken away from the Lord Chancellor and given to his chief. On fuller consideration, however, he thought that as the duties of the Lunacy Commissioners towards the Royal Courts of Justice would be very important, it might be considered reasonable that the Lord Chancellor should appoint some of them. *Id.* 33,410.

At present the Lord Chancellor appoints the Masters in Lunacy from barristers of not less than ten years standing, and the legal Commissioners from practising barristers of not less than five years standing. The holding of inquisitions by masters affects interests of persons and often also property interests of great value. The duties of legal members of the Board of Control will be so closely associated with the High Court and of so judicial a character that it is manifest that the Lord Chancellor should be responsible. It is true the Home Secretary submits the names of Recorders to the Sovereign to appoint, but his own appointing power at present does not extend to offices of the dignity and importance mentioned and not even to Metropolitan police magistrates.

26. The question who should be head authority for the care and protection of those who it is held by us have the same claim upon the protection of the Sovereign—the *parens patriæ*—as idiots and lunatics have always had, is an important question. It seems to me most fitting that the highest Temporal officer of the realm, should in this matter continue to be the deputy to represent the Sovereign, Removed from constant personal contact with Party politicians in the House of Commons, the Lord High Chancellor is freer from the Party claims for patronage than a more political and less powerful officer. From his legal attainments he is able to consider and promote legislation for the benefit of helpless people who cannot clamour for it, and being invariably a very influential Cabinet Minister he is in a position to influence its progress. With a staff of officials at his disposal, to conduct visitations, described by Lord Westbury as " the eyes and ears of the Chancellor," he can readily obtain information and opinion concerning any person whose affairs he may have reason to believe require investigation. Without the calls upon his time, which are consequential upon Parliamentary and Departmental prominence, he is able to devote to the work energy which experience proves has usually been born of sympathy. Hansard, 1830, Vol. I., p. 1342. Hansard, 1831, Vol. II., p. 838.

For seventy-five years and upwards the Lord Chancellor has appointed the Commissioners and has been receiving annual reports from them, and every month he has had communications from his own visitors reporting in the course of each quarter on all lunatics specially under his charge. These reports, we have been told, by one whose testimony extends over twenty-eight years in the service of several Lord Chancellors, are carefully read and directions are given by the Lord Chancellor, who it also appears is almost daily resorted to by patients in their own interest, whether they are under the control of the Commissioners or not. Sir K. Muir Mackenzie, Vol. IV., p. 392.

27. It must not be forgotten that the public mind has in past times been occasionally disturbed by agitation concerning the improper detention and treatment of insane persons, or persons alleged to be insane, and the present quietude, I think, is in no small part due to the care with which the Lunacy Commission was devised, principally by the late Earl of Shaftesbury, and with which its administration has been conducted. It is probably also owing to the opportunity of access by all insane persons and their friends to the personal attention and influence of so exalted a person as the Lord High Chancellor that there now exists a contentment which would not exist if the authority so long exercised should be removed from him or be placed in the hands of a more actively political officer.

Whatever feeling has in the past arisen with reference to the supposed improper detention of lunatics, it may safely be predicted that a stronger and more widely spread feeling would soon arise when a larger number of persons suffering from a lesser degree of mental defect are subjected to detention unless the utmost care is taken.

The public will not be and ought not to be satisfied to give the power to incarcerate and detain their feeble-minded relatives to the paid servants of any public office however experienced and honourable, unless they are assured that no political or such like considerations have entered into their appointments. The Board of Control, moreover, if it is to enjoy public confidence, must not be merely a "home of rest" for worn-out wire pullers, or a haven of repose for exhausted civil servants.

28. I have not the advantage of the official experience in the working of the Home Office possessed by some of my colleagues, and so it is with regret and diffidence that I venture to convey my own views, which unfortunately do not accord with theirs. I confess I do not at all agree with the suggestion that the Home Office is, or should be, responsible for the administration of the Act of 1890 in the ordinary sense of the word. Whatever duties the Home Office has, I do not see that the Lunacy Commissioners are subject to it. The relative position of the Lord Chancellor, the Home Office, and the Lunacy Commissioners was well described in the evidence given before the Select Committee on Lunacy Law in 1877 by Lord Shaftesbury (Report, p. 551.)

> *Question.*—Of what department are the Lunacy Commissioner's officers; are they officers of the Home Department or of the Local Government Board, or of the Lord Chancellor?
>
> *Answer.*—They are an independent board; they are not subject either to the Home Office, or to the Local Government Board, and they are only subject to the Lord Chancellor to the extent that he exercises a general supervision over lunatics, and has the appointment of the Commission.
>
> *Question.*—The Home Office has the control over County Lunatic Asylums and so has the Local Government Board?
>
> *Answer.*—The Home Secretary would have a control over us of course, as a man of high authority, but there is no official or statutory control. We do not report to him; he does not interfere with our proceedings; we never think of referring to him. In all county matters relating to county expenditure and so on, he refers to us for our opinion; all the plans for buildings, and everything of that kind. and if any controversy arises he generally refers it to us. To that extent we are in connection with the Home Office, but he has no jurisdiction over us beyond that which belongs to his high office.

29. Although the Act of 1890, in some matters, changed the previous law, I cannot see that any subordination of the Lunacy Commissioners to the Home Office has been imposed upon them, and although there is an obligation on the Commissioners to make, on special request, certain reports and visitations, I do not find that the Home Office can, under the Act, require anything from the Lunacy Commissioners beyond visitations, reports and information. I would point out that in the scheme recommended here no subordination is really involved in the duties of the Board of Control.

30. Any argument for establishing the subordination of the Lunacy Commission to the Home Office, or I might say its annexation by the Home Office, I think, must be based on a misapprehension of the functions of the Home Office under the Lunacy Act, 1890. It by no means follows that the control of local authorities in a few matters should give the right to the Home Office to create and control the independent body that is to look after the interests of the patients and advise the local authorities. The two spheres are distinct, and I confess I cannot follow the reasoning that the Home Secretary should have the right to appoint the Commissioners and should represent the Board in the House of Commons, and be expected to explain and defend their policy when, at the same time it is pointed out that the Board of Control should not be made a part of the Home Office. If the Lunacy Commission, as reconstituted, is to remain a detached and independent body without any administrative, compulsory or spending powers or any subordination to the Home Office, I cannot see why the Home Office should represent "its policy" in Parliament. It requires no representative. It has no "policy." It is, and is to be, an

advisory body only, and it is not for the Home Office, or any other Department to defend it for giving such advice as it offers. The Home Secretary could not justly be made responsible for the opinions of this detached body and perhaps he would not agree with their views, and could not, therefore, be expected to defend them efficiently. Whether or not a Member of Parliament should be allotted to represent the Board of Control in the House of Commons, as at present is the case with regard to the Ecclesiastical Commissioners and the Charity Commissioners respectively, is a matter upon which opinions may be divided. For my own part, I think that an Honorary Commissioner might well be invariably selected to be their mouthpiece, if necessary, in the House of Commons. The main matters on which the affairs of the Board would be likely to come before Parliament would be with reference to the salaries of its paid Members and its expenses which have been supported on the estimates hitherto by the Home Secretary. As a matter of fact since 1845 I believe there have only been a very few years when there have not been Honorary Lunacy Commissioners with seats both in the Lords and Commons, and hardly ever when the Lunacy Commission was entirely unrepresented.

I cannot trace in the evidence anything to justify the inference that the independent constitution of the Lunacy Commission should be changed. The existence on the Board of several Honorary Members distinguishes it from other bodies such, for instance, as the Prison Commission, which consists entirely of salaried members subordinate to the Home Office, appointed on Civil Service terms. One great object in appointing honorary members is to give an assurance to the public that mental defectives who are not criminals will be supervised by competent fearless independent persons—responsible to no department and free from official direction and control—persons who are bound to make public reports, criticising if necessary even a Department of State and its highest officers.

31. In 1845 when the Permanent Lunacy Commission was established, it was carefully designed that the Commissioners who had to carry out the duties of inspection should be placed in an entirely independent position, and should be subject to no incentive to yield to popular outcry. They were appointed to serve during their good behaviour, and not for a term of years nor at the will of a Minister. After the first appointments which were made by Parliament itself their successors were to be selected by the Lord Chancellor. Moreover, in order still more to secure the independence of the Commission, the appointment of honorary Commissioners during good behaviour was made one of its features. They represent, apart from technical knowledge and experience, the general common-sense of the public, and afford a security that professional hobbies and experiments will not be introduced into the administration of asylums and institutions under their supervision, and that officialism shall not reign supreme.

32. The position of the unpaid or honorary Commissioners has been more than once the subject of consideration by Commissions and Committees.

In his evidence before the Select Committee of the House of Commons on Lunatics in 1859, Lord Shaftesbury said : —

"They were to have powers pretty nearly co-ordinate with the rest of the Commissioners, to go upon visitations in lunacy, and to take part in all the business of the commission; but what are called the statutory duties, that is, the necessity of visiting—which necessity or duty in the metropolis is imposed exclusively upon the professional Commissioners—these statutory duties must be performed by a medical man and a legal man, in conjunction. The lay element was considered to be of very great importance indeed, in the working of the commission, and I can say, from very long experience in this matter, that the non-professional element, not only upon the commission, but among the visiting magistrates in the country, and in every possible department relating to the care and treatment of lunatics, is of the most indispensable importance, and without it I am quite certain that the whole system of the management of lunatics would fall into the greatest disorder, and we should relapse into many of the errors from which we have been extricated."

33. At the time of giving his evidence before the Select Committee on Lunacy Law in 1877, when Lord Shaftesbury had been on the Commission thirty-two years, it does not appear that he had reason to suggest any change. I think that the importance of having unpaid Commissioners is as great now as

it was in 1859 when the opinion which I have just quoted was given. I think it is desirable that the Chairman should continue to be an unpaid Commissioner. The Commissioners at present have to elect a permanent chairman, being a member of their body and not being a paid Commissioner. In Scotland, there is also an unpaid Chairman of the Commission. I see great advantage in providing that the Chairman should not be of the purely official class. The initiative of much in the office depends upon him. He can bring new ideas, and fresh energy to the work beyond anything which can be expected from ordinary salaried officials, however good. A person who is content to spend his life in ambitionless routine, with a pension for its goal, cannot often be credited with the power to originate or the enthusiasm to carry out great schemes for social betterment. I am disposed to think that the selection of Chairman should be made by the Lord Chancellor and not by the Commissioners. It can hardly be denied that since Lord Shaftesbury's influence was withdrawn, the Lunacy Commission has not increased the reputation earned in his day. Unpaid members have been appointed since he left, but their interest seems to have lessened in the work which is practically now left to the six paid members only. The result, as I find it, is that the Commission is not as energetic and powerful as it was. We were told by the Lord Chancellor's Secretary that since 1898 the unpaid Commissionerships, numbering five, have not been fully filled up, and we were also informed that the opinion of the existing Commissioners is rather varied on the matter of filling up the appointments, though applications had been made to the permanent Secretary of the Lord Chancellor with a view to filling them up. All the Honorary Commissioners should, I agree, be appointed for a term of years, and be eligible for re-appointment.

I am not satisfied that there has been any serious attempt to fill them up by the introduction of persons previously unassociated with the Commission. To my mind fresh blood is of the utmost importance. It has been the practice too often for a Secretary to be promoted to the office of Commissioner and upon retirement from serving as a Commissioner for him to become an honorary Commissioner.

Of the last eleven legal Lunacy Commissioners appointed, I believe, seven had previously served as secretaries to the Commission, and out of twenty-two Honorary Commissioners appointed since 1845, no less than seven have been paid Commissioners. Valuable, no doubt, as it is to have continuity of knowledge and experience in an office, it is worthy of consideration whether, in future, greater variety may not be introduced with advantage. I think that retirement from the office of paid Commissioner should involve complete official severance.

Notwithstanding this criticism I am convinced that the excellent selection of the Commissioners hitherto is of itself a justification for leaving the appointment with the Lord Chancellor. It would be impossible to find more accomplished, considerate, high-minded Commissioners than those at present in office, and I think that it would be a grave public misfortune to diminish their dignity and independence by turning them or their successors into a mere branch of a Department to be appointed and removed by the head of their office.

34. Instead of the Home Office being made the central authority in connection with mentally defective persons, I venture to think that the Local Government Board would be more suited to be associated with the Lunacy Commissioners. It must be remembered that at the great epochs of lunacy legislation, viz., in 1828, 1832, and 1845, the Local Government Board was not in existence. Its position has developed largely during the last few years and at present it has important duties to discharge in connection with the finances of local bodies. If economy and efficiency are to be sought for, the vigilant observation and control of the purse are essential. Various schemes which the local authorities have in view, and for which they require loans, are known to the Local Government Board, who can estimate the relative urgency in each locality of the various projects which are in contemplation. The Local Government Board is familiar with assessable values and pecuniary resources.

For duties connected with sanitation, real property and the construction and maintenance of works of various kinds, the Local Government Board is better equipped than any other public department. Whatever building or construction work has to be done, it has the best means of forming an opinion upon the sufficiency (or efficiency) of what may be proposed.

As regards the approval of plans, etc., for the works of local authorities I cannot see that the Home Office has any concern, whereas the Local Government Board is interested in it, and has a staff of experts, engineers, medical advisors, and an architect. The Home Office has not the same amount of assistance. The Local Government Board, moreover, has before it the reports of the medical officers of health in the localities.

There is much to be said for the view of Mr. Davy that the Home Office has "nothing to do with it really. The Home Office originally seems to have been brought into the matter because it had to do with the Justices of the Peace, who were then the local authority. The same reason which led to the Home Office being selected in those days would be a reason for making the Local Government Board responsible now." The suitability of the Local Government Board has been urged by other witnesses.

Vol. IV., p. 354.

Vol. II., Index title: Authority for Care of Feeble-minded. Vol. IV., Index title: Local Government Board.

35. I consider that the Lunacy Commission so long as it lasts (and the Board of Control if it comes into existence) should be an absolutely detached independent advisory body—not controlled by or subordinate to any Department, and able as at present fearlessly to report what they deem right about any Department. I prefer that the duties of the various high functionaries concerned should remain as at present. The Lord Chancellor should continue head over all. The Home Office should still be the protector of certain public interests with executive powers to enforce the performance of their duties by local authorities. The Local Government Board should still watch over the interests of ratepayers, while the Lunacy Commissioners or Board of Control, as an independent consultative and advisory authority, should still act as the guardians of the patients, and claim for them from local authorities and see that they receive all the benefits which the law allows.

III.—AS TO SCOTLAND AND IRELAND.

The remarks I have made are intended to relate so far as applicable to Scotland and Ireland.

IV.—AS TO RECOMMENDATION XLI.

36. I am unable to concur with this Recommendation. It involves the subject of Local taxation, which in my opinion was not submitted by the Warrant for the consideration of this Commission nor was the apportionment of State aid towards the care and control of mentally defective persons a subject on which I think we have received much (if any) assistance from the oral evidence.

The first suggested scheme it may be remarked is not in accordance with the Report of the Majority of the Royal Commission on Local Taxation. It is taken from the separate Recommendation of Lord Balfour of Burleigh and Lord Blair Balfour. Although Sir E. Hamilton, and Sir G. Murray joined in recommending its adoption they explained that: "As it bears a somewhat complicated appearance they desired to offer their own explanations of it and to support it with some illustrations," while two other members of that Commission who "would not reject it as a possible ultimate solution of the problem," added that "the novelty and the obscurity of so much of the scheme as relates to the distribution of the proposed relief made it in their opinion necessary that it should be subjected to the test of public discussion."

The second suggested scheme is only one of sundry plans that might be proposed, and is by no means the only alternative to the first scheme. In addition to the present Exchequer contribution it contemplates the making of a fresh grant of the sum which the "Board of Control" should certify to be equal to "one-half of the cost properly incurred" in providing for a greater number of mentally defective persons and epileptics not mentally defective than

were provided for on January 1st, 1908. This is open to the objection that it would leave the amount of the annual Exchequer contributions for this purpose to be fixed by the "Board of Control" and not by Statute nor by the Government Department charged with the responsibility for finance. Moreover, it deals with the question as if it was an isolated matter, and as I think without sufficient regard to the general principles and considerations which should be applied in determining how relief to local rates should be provided, distributed and paid. I do not find any evidence to justify "fixing one half the cost" as the proper proportion on which to base the grant of state aid.

As I regard the question: "How Exchequer contributions should be distributed?" as outside the matters referred to us, I refrain from offering any suggestion, though I differ from the schemes which are here recommended.

V.—AS TO RECOMMENDATION XCII.

37. I am unable to concur in this Recommendation which relates to the removal of disability to exercise franchise rights by reason of the receipt by a voter of assistance for mentally defective members of his family. The subject of the political privileges of the *relatives* of mentally defective persons might suitably be considered in connection with general measures concerning the representation of the people, when the exercise of the franchise at all events by certified mentally defective persons might also be considered, but it does not appear to me to bear closely enough on the "care, training and control of the feeble-minded" to have a place in these Recommendations, or to be dealt with in this Report.

(Signed) HENRY DAVID GREENE.

MEMORANDUM BY THE REV. H. N. BURDEN.

I am in complete agreement with the Report as a whole. But I should like to give prominence to the need for economy in and strict Government control over the establishment of institutions for the reception of mentally defective persons.

The cost of establishment of institutions for mentally defective persons not requiring special medical treatment should not cost the ratepayer anything approaching the amount expended on present day-asylums. The erection of institutions at an expenditure involving the payment of 8s. to 10s. per bed per week for interest, repayment of loans, and such-like charges alone should, I am convinced, be wholly a thing of the past.

I am of opinion that the cost of building an institution for the mentally defective (other than for "persons of unsound mind") should never exceed £150 a bed, and for many of the classes of the mentally defective suitable provision can be made at a cost not exceeding £100 a bed.

(Signed) H. N. BURDEN.

MEMORANDUM BY MR. W. H. DICKINSON, M.P.

I am in accord with the Recommendations of the foregoing Report with one exception. I do not agree with Recommendation XLIV. The effect of this Recommendation if carried out would be to distribute duties relating to the care of the mentally defective amongst no fewer than three central departments, viz. : The Board of Control, the Home Office, and the Local Government Board.

In my opinion this multiplication of central authorities will prove to be very objectionable. It will delay and hamper the efforts of the county councils if they have to satisfy three distinct boards in London, and it will, moreover, tend to lessen the feeling of responsibility entertained by each of those central authorities below that which one body would exhibit if charged solely with these duties.

I therefore recommend that the Board of Control should be charged with all duties of a central character arising under the proposals of this Report, and that in order to ensure the ultimate control of Parliament over its proceedings the Board should be appointed by and directly responsible to the Secretary of State for Home Affairs.

(Signed) W. H. DICKINSON.

I concur in the above Memorandum.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

WARRANT APPOINTING THE COMMISSION.

EDWARD *R. & I.*

EDWARD THE SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and right well-beloved Cousin and Councillor WILLIAM HUMBLE, EARL OF DUDLEY, Knight Grand Cross of Our Royal Victorian Order;

Our right trusty and well-beloved Councillor SIR ANTONY PATRICK MACDONNELL, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Commander of Our Royal Victorian Order, Under Secretary to Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland;

Our right trusty and well-beloved Councillor SIR JOHN CHARLES READY COLOMB, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George;

Our right trusty and well-beloved Councillor SIR FRANCIS MOWATT, Knight Grand Cross of Our Most Honourable Order of the Bath, Companion of Our Imperial Service Order; and

Our trusty and well-beloved :—

The Most Reverend PATRICK O'DONNELL, Doctor in Divinity;

JOHN ANNAN BRYCE, Esquire;

WALTER INCH KAVANAGH, Esquire;

CONOR O'KELLY, Esquire; and

ANGUS SUTHERLAND, Esquire; Chairman of the Fishery Board for Scotland;

GREETING!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas.

Now know ye that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said William Humble, Earl of Dudley (Chairman); Sir Antony Patrick MacDonnell; Sir John Charles Ready Colomb; Sir Francis Mowatt; Patrick O'Donnell; John Annan Bryce; Walter Inch Kavanagh; Conor O'Kelly; and Angus Sutherland to be Our Commissioners for the purposes of the said Inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the 20th day of July, 1906, in the sixth year of Our Reign.

By His Majesty's Command.

H. J. GLADSTONE.

Appointment of Secretary.

DUBLIN CASTLE,
July 24, 1906.

WALTER ERNEST EVERARD CALLAN, Esquire, B.L., The Castle, Dublin, has been appointed to be Secretary of the Royal Commission appointed to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

SIXTH REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

We, the Commissioners appointed by Your Majesty on the 20th July, 1906,

"To inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas,"

Availing ourselves of Your Majesty's permission to report our proceedings from time to time, desire to submit to Your Majesty, as an Appendix to this sixth preliminary Report, minutes of the evidence taken in the Counties of Sligo and Leitrim during the month of April, and statements and returns in writing that have been furnished to us in connection therewith.

We think that the immediate publication of these documents is desirable.

All of which we humbly submit for Your Majesty's most gracious consideration.

DUDLEY, *Chairman.*
A. P. MACDONNELL.
JOHN C. R. COLOMB.
FRANCIS MOWATT.
✠ PATRICK O'DONNELL.
JOHN ANNAN BRYCE.
WALTER KAVANAGH.
CONOR O'KELLY.
ANGUS SUTHERLAND.

WALTER CALLAN,
Secretary.

DUBLIN. Dated this 30th day of August, 1907.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

APPENDIX

TO THE

SIXTH REPORT.

MINUTES OF EVIDENCE

(TAKEN IN COUNTY SLIGO AND COUNTY LEITRIM,
17TH TO 27TH APRIL, 1907),

AND

DOCUMENTS RELATING THERETO.

Presented to both Houses of Parliament by Command of His Majesty.

DUBLIN:

DIGEST OF EVIDENCE.

BRENNAN, Mr. HENRY.

See pp. 1—9.

Question of Extension of Definition of Congestion.

Cliffoney North and Cliffoney South scheduled, but not Ross Inver East and Ross Inver West, 27373-4. Witness would like all Connaught to be scheduled, Ross Inver East and Ross Inver West were as poor as any scheduled areas, 27377, 27528-30, 27535.—Board did not schedule district if valuation per head exceeded 30*s*., 27377, 27379-82—Extent of mountain land of inferior quality raised valuation in Ross Inver divisions, 27378.—Similarly circumstanced districts should also be scheduled, 27531-2.—Electoral division was smallest unit that should be scheduled, townland was too small, sometimes it had only sixteen inhabitants. 27533-5.—Board should take condition of people and extent of holdings into consideration, 27536.—Preferable to have some line of demarcation, 27537.—Possible to make one satisfactorily by definition, 27538.

Discretionary Power of Scheduling for a Representative Authority.

Witness did not altogether approve of Congested Districts Board, but authority dealing with question should have discretionary power of scheduling if it were a representative authority, 27547-8.—There should be a representative on the Congested Districts Board from every congested county in Ireland, 27550-2.

Necessity for Drainage of Flooded Area in Cliffoney North.

Drainage of flooded area in Cliffoney North, in townland of Bunduff, on Ashley estate was urgent, appeal already made to Board by the people 27382-4.—Seventeen tenants adjoining whose lands were flooded, road also flooded so that they had to trespass on fields to fetch doctor, or priest, etc.; drain through landlord's property, for which no compensation could be claimed, would relieve flooding; drain could be run into Atlantic, would cost little; landlord had been appealed to and said he would remedy it but had done nothing, 27384, 27386, 27406.—Area scheduled as congested, strong appeals had been made to witness, priest, and doctor, 27385, 27395, 27407.—Flood came from mountain, bog, and streams, tide did not affect the flooding, but stopped the outlet; only relief would be good open drain, piped and closed after a time; would benefit tenants and land for great distance, 27386-7.—A lock could be made to keep tide, and above suggestion could also be carried out, so witness was informed by people, he had not spoken to county surveyor, 27388-90, 27411.—People afraid to sue landlord for drainage as their rents were in arrears, so appealed to Board, 27390-1.—140 acres half covered by water, 71 acres suffered, 27392.—Eighteen people occupied holdings and were affected, 27393-4.—Board applied to two or three years ago on behalf of tenants, reply sent, 27397-9, 27413.—Nature of answer was that landlord made some objection, 27400-1, 27412.—He might have wanted swamp for birds, 27402-2A.—Chief tenant had been asked to come before Commission, 27404-5.—Witness had not applied personally to Board, 27409.—He drafted a memorial for the people which they signed, 27415.—Nothing more had been done, 27414.—Mullaghmore men not present, it was four miles from Grange, 27417-8.

Neglected Condition of Mullaghmore Harbour.—Alleged Expenditure by Congested Districts Board.

Mullaghmore Harbour, in Cliffoney North, required something done to it; it was the property of the landlord; length, 120 yards, breadth, 700 yards; vessels of any size would not get in, 27419-20.—Vessels of 100 or 120 tons went in with coal and kelp, 27421.—It was silted up and dry at neap tides, 12 feet deep at full tide, 27422-4, 27449-50.—Deep enough when first made, 27451.—Board, in Report for 1903, said they spent £348 on it; witness lived within a mile of it and had never seen anyone working though he must have had they been there, he had asked inhabitants of locality, and they had seen no one, 27425-7, 27428, 27434-7, 27441-3.—He disputed that money had been spent, 27429-30.—About three years ago breakwater was improved by cementing and concreting, 27431-2, 27438-40, 27443.—That was not expensive, it was 40 or 50 yards in length, and the work was done at the other end where the tide washed over it, 27444-6.—It might have cost £348, but not to witness's thinking, 27447-8.—Board did not consult local men in carrying out work in a locality, 27427.—Witness took deeper interest in Board in earlier days, it was becoming a second Commission of Estates now, 27433.—Cleaning of harbours should be done locally, no local hold of Mullaghmore harbour, it belonged to landlord, 27453-4.—He did not levy dues, 27455.—Sligo County Council contributed to maintenance of piers and harbours since Act of 1898, but not to the harbour in question, 27456-8.—Present owner never dredged harbour, late Lord Palmerston and Lord Mounttemple kept it in order, 27459.—Mr. Ashley had owned the property since about 1877, and had expended nothing on pier either before or after Act of 1881, 27460-3.

Kelp Industry in Mullaghmore.

Kelp industry had been successful and remunerative, hundreds of families used to gather seaweed and burn kelp, it had been monopolised by one buyer and had almost died out, 27464.—People had no encouragement and could not get market for kelp, £5 or £6 a ton formerly obtained, now £3 5*s*. was the highest price at end of season, 50*s*. and 30*s*.; not worth looking for at that price, iodine, etc., now got better and cheaper elsewhere and by other means than kelp, buyers fell off because it did not pay at the price, 27465-6.—Remedy suggested was for Board to give grant or seek to establish a market elsewhere, or to set up a kelp-making factory themselves, 27467.—If present buyers refused to purchase, substitutes would come from Spain or Cuba, 27469.—Complaint that kelp from Mullaghmore and Donegal was not as good as formerly, 27471-3.—Board could guarantee the article by sending inspector, but purchaser would still buy through his own man, 27474.—In either case he would only buy in expectation of profit, 27475.—Board might take up manufacture of iodine themselves, 27476-7.—Fall in price of kelp was general, 27482.—Good deal of Donegal kelp came to Mullaghmore Harbour, 27483.—Better seaweed at Mullaghmore, kelp fetched higher price there than in Donegal, 27484-5, 27492.—Price £3 5*s*. at beginning of season, 30*s*. or 20*s*. at end; people were disheartened and said it would not pay at less than £5 a ton, 27486-9.—In winter people had nothing else to do so made kelp, 27489.—Glasgow firm bought the kelp, 27490.—Makers ran it into a solid to sell, 27491.—May weed very good, great variety at Mullaghmore, 27493.

Desire of Mullaghmore Fishermen for a Curing House for Fish.

Curing house for fish where they could be opened and salted wanted at Mullaghmore; fishermen lost half their earnings because they had to return by 2 o'clock in the day to sell fish to local buyers; if they could stay till 4 or 5 o'clock and sell them or get them cured they would make more money, great take was from 2 to 5 o'clock, 27494-5, 27523.—Mackerel, haddock, whiting, and general fish caught in the daytime were spoken of, 27496.—Men went at 5 a.m. for mackerel and fished all day, 27497-8.—There were curing houses at Dunmore, 27498.—Matter had not been brought before Board or Fishery Branch of Department, 27499.—Want felt for a long time, 27500.—All fish sold fresh, buyers came from Bundoran and Sligo, and fish were sent away to different places, some in barrels, 27502-5.—Nothing done to the fish before putting them into barrels, 27506-9.—Witness lived in next village to Mullaghmore Harbour, and

BRENNAN, Mr. HENRY—*continued.*

knew its ways well, 27510.—Idea was for Board to establish curing house and send man to teach people to cure and salt fish, 27511-2.—People not capable of curing now, and had no place to store fish, 27513.—Bundoran the nearest railway station, seven miles away, 27514-5.—Kelp vessel the only coaster that called, or a coal vessel; no regular trade, formerly a trade with Belfast, that failed, 27516.—Such vessels could be used when there was a big catch, 27517.—Cod fish most prevalent, 27518.—In January and February, 27519.—Board had never had curing station on coast, 27520.—Fish carted was herring, mackerel, cod, or ling, 27522.—Herring and some mackerel were night fishing, possibly no use in fishermen staying out during afternoon for them, 27525-7.

Expenditure by Congested Districts Board on Piers, Roads, etc.—Complaint that Sligo was neglected as compared with Donegal and Mayo.

Outlay of Congested Districts Board for years 1901-1903 in Mayo, £10,000, in Donegal, £11,000, under head of Peirs, Roads, and Bridges, in Sligo only, £640, 27553-9.—Parish Committees not referred to, 27560, 27564.—Twenty-two electoral divisions scheduled in Sligo, 27561, 27570.—Small amount spent in Sligo accounted for by neglect of Board because Sligo had no representative on it, 27562.—It might possibly be because Sligo was not so backward as other counties, but relief had often been asked for drainage and improvements to Raughly Pier, etc., some electoral divisions very poor and with low valuation, in Cliffony North only forty or fifty families with valuation over £4 out of 400; representatives of districts on Board necessary if congestion were to be relieved, 27563.—Witness a shopkeeper and therefore not on Parish Committee, 27565.—Difficult to get list of all the applications to Board, 27566.—Usual answer from Board "No money for any such purpose," 27567-9.—Witness thought some money should be spent on scheduled districts in Sligo, Board's money was Church suhplus of £45,000, and Sligo should have its share, 27570.—Scheduled divisions did not get their fair portion, 27571.—Tenants had purchased some property from Sir J. Gore-Booth, and there was work going on at Raughley, 2573-4.

Inishmurray School—Expenditure above Requirements.

Board had built a school in Inishmurray in Cliffoney South, eight or ten children attended now, school cost £618, could have been built for £200 or £220 sufficiently good for requirements, 27576, 27580.—(*Rev. Mr. Kenny*, twelve pupils at school, formerly thirty-five, people clearing out of Ireland, 27585).—£138 had been expended on the landing-place at Inishmurray for clearing away stones, County Council gave subsidy; £141 spent on Ballyconnell pier, 27576-9.

Migration.

Migration a remedy for congestion, 27585, 27611.—People in district willing to migrate, 27586-7.—Forty or fifty people would go to Meath or elsewhere if shown they would get twenty, or even ten acres of good land, at reasonable rent, and capital at reasonable interest to work with; better to buy up land in immediate neighbourhood before going to a distance, 27588-9, 27612.

Sons of tenants in neighbourhood of grass lands at Lissadell should have claim for settlement before migrants, 27652.—If there were enough land congests from a distance might be bought, 27653.—Sons of tenants had prior claim at Lissadell, because their fathers and grandfathers were evicted in 1846, 27654-8, 27663.—If it were not for that, wants of heads of families in neighbourhood should be first consulted, after that wants of heads of families at a distance, and finally the sons of tenants, 27660-4.

Cost of Equipment of New Holding.

Man with twenty acres of good land ought to get a horse and cart for £30 or £35, four cows for £60, ten sheep for £20, build a house for £200, and spend £10 on farming implements, total cost of equipment, £325, 27591-3, 27600.—Cow-shed, pig-stye, and out-offices would come afterwards, 27594.—Fences could be done by himself, 27601.—People in witness's locality good enough farmers to get on in plains of Boyle, 27595-6, 27598.—They could all use the spade, 27597.—Witness a business man, and made living by groceries, etc., 27599.—Money for equipment could be given as loan and annuity at 3¼ per cent. interest, 27602-4, 27620, 27625-7.—State could not be asked to equip a farm for every man in Ireland, 27605.—Witness was talking of settlement of tenants' sons, not of migration of whole families, 27606-11.—If man migrated, his old holding should be amalgamated with the next, 27612A.

Question of Compensation for Tenant-Right of old Holding and of State Loan for Equipment of New Holding.

He would have to give up his tenancy in order to get better holding, 27613.—And must be paid compensation for tenant-right, 27614-6.—Amount thus obtained could be deducted from money for equipment of new farm, 27617-8, 27621.—If he had money he would not want it from the State, those who got money in America bought land if they could get it, 27618-9A.—Those remaining at home had no money, 27619A.—Migrant probably had some stock on old holding, that would also lessen cost of equipment, 27622-4.—Money for equipment would be repaid to State, 27628-9.

Enlargement of Holdings—Land available on Lissadell Property.

No land for enlarging holdings on Ashley estate, untenanted land all bog and marsh, three or four thousand acres available on Sir J. Gore-Booth's property in parish of Lissadell, six or eight miles distant, 27630, 27651.—Sir Josslyn had sold to Estates Commission and got twenty-four and twenty-six years' purchase for tenanted land, 27631-2.—Estates Commissioners should not confirm sale till at least 2,000 or 3,000 acres of untenanted land at Lissadell were purchased by Board for migration purposes, 27633.—Sale carried through by Estates Commissioners, 27634.—Tenants consulted as to price, 27635-6.

Proposed Restriction on area of Demesnes, etc.

Legislation should be pushed forward that no landlord should hold more than 600 acres adjacent to demesne, and should cultivate at least a twelfth of the demesne and crop it, 27636-7.

Australian Land Settlement.

Squatters of Australia began with 640 acres, then 320, and came down to 100, and 50; in the sixties Government fenced and gave a hut, after eight years payment at 2*s.* 6*d.* an acre the land was theirs; to stop emigration something similar must be done in Ireland, population had dwindled from eight and a half millions to four and a half, and if it continued at same rate only twelve people would be left in seventy years, 27637.—Recent legislation in Australia had object of compulsorily resuming possession of great grass areas for closer settlement, 27640.—Agricultural programme of United Irish League founded on Australian legislation, 27641-2.

Land Purchase.—Defaulting Annuitants in Kildare County and County of Longford, Causes of Failure to pay Instalments.

In Kildare and Longford the County Councils would have to furnish amount of instalments that those who had purchased had failed to pay, County Kildare now threatened by notice from Local Government Board with stoppage of £8,000 out of grant in relief of poor rate, 27642.—There were two causes, one non-payment of instalments, the other downfall of Land Stocks; Land Stocks had fallen 15 per cent., principal tenants were required to pay notwithstanding magnanimous Bill of 1903, 27643.—Twenty processes at present, if men got nothing they would come back on Council, who must strike a rate, 27644.—Hardship that tenants should be compelled to make up loss on flotation of stock at its present price, 27645.—Great mistake of the Bill was that the poor tenant had to pay for it, 27646.—Before bargain was concluded by Board or Estates Commissioners, County Councils should meet

BRENNAN, Mr. HENRY.—*continued.*

once or twice and understand price of an estate, because they were the ultimate security, 27647-8.—Not many sales in County Sligo since Act of 1903, 27649.—Lissadell and Hazlewood the only ones witness knew of, 27650.

HARTE, Mr. BERNARD.

See pp. 9—17.

Condition of Lissadell Electoral Divisions—Fishery Development hindered by lack of Appliances and Landing-Places—Turbary Difficulties, etc.

Witness lived at Grange, 27666.—Lissadell North and West were congested and scheduled, Lissadell East was not scheduled, all three were in Sligo Union, 27668-72.—Congested Districts Board had never expended money on piers or roads or assistance with boats and nets in any of these divisions; fishing principal industry, could not be successfully developed for lack of landing slips and appliances; slips at Milk Harbour and Streeda suggested; in Lissadell North several roads required repair, Board's engineers visited them and reported on bad condition, nothing further done; tenants all on small holdings, formerly existed by kelp industry, its price now did not repay expenses, as it had to be carted fourteen miles to Mullaghmore; no bogs in these divisions, tenants went ten to twelve miles for turf, small bog on Captain Jones's estate, no tenant allowed to cut turf there who had been twice served notice for fair rent, although they had usual existing right of cutting turf for years; Parish Committees did much good with their grant of £150 yearly, enabled poor to make houses habitable, and grant should be increased, 27672.

Agricultural Bank.

Two years ago small Committee started a bank to help people purchase cattle, 27672, 27693.—Bank financed by £100 from Congested Districts Board and money borrowed from Sligo banks on security of Committee; advances made at same rate of interest plus clerical expenses, 27672-5.—Bank still in existence, 27673.—Security assigned to the Sligo banks extended to £1,000, 27676-7.—Sligo banks would not advance to individuals, 27678.—300 shareholders in bank, 27679.—Working Committee appointed by shareholders who pledged their security, 27680, 27686.—Advances were made up to the full extent of the £1,000 credit, 27681.—Increased credit never desired, if money could be borrowed at cheaper rate from Board it could be lent cheaper, 3 or 3¼ per cent. charged by Board on the £100, 6 per cent. charged by Sligo banks, 27682.—The 6 per cent. varied with the bank interest, 27683-4.—Bank charged 6 or 6½ per cent., 27685.—No bad debts made yet, 27687.—7 or 8 per cent. charged on small accounts of £5 or £10, 27688-9.—It used not to be so high, 27690.—Insufficient stock for land when bank started, it was hoped that operations in that line would be finished in time, 27694-5.—Supervision of loans to see that money was used for right purpose, 27697-8.—No bulls bought, only cattle and pigs, 27700.—Limit an industrial one, 27701.—Assistance might be given to buy horse, but horned cattle were more wanted in the neighbourhood, 27702-3, 27711.—Fair amount of tilling among small farmers, mostly spade work, 27704-5.—Holdings and fields too small to plough, 27706-9.—Draining and sub-soiling done in winter, 27710.—Bank limited to loan of £10 for stock by legal rules, 27712-3.—Nothing to prevent bank extending the field of its operations if it could afford to pledge credit, 27714.—Commercial fruit-growing would not be successful, many small farmers had an apple tree or two, 27715-7.

Complaints in connection with Building of Landing-Place at Knockiane by Congested Districts Board.

Lissadell West still more congested than Lissadell North, fishing principal means of subsistence, 27691, 27717.—Want of harbours; Board was building landing-slip off Knocklane assisted by grant from Sligo County Council of £100, 27717, 27719, 27731.—Witness and Mr. M'Hugh, M.P., heard complaint that people

HARTE, Mr. BERNARD.—*continued.*

were not given employment, and visited place; fishermen all said pier would be useless in stormy weather, owing to spot it was built in, 27717, 27733, 27768, 27771-2.—Board's engineer choose site, not where tenants wanted it, 27718, 27733.—County Surveyor was not consulted and no local men were present when site was selected, nor were they apprised of work being put in hand; witness walked over to it two or three months ago and made enquiries, it was then too late to object, as it was half built, 27720-9, 27769.—No dissatisfaction expressed when it was begun, 27770.—Pier cost £500, 27730.—It was arranged between Board and County Council, 27732.—Resolution sent from County Council that fishermen needed pier, Board said they would erect it and give £400 if Council gave £100, 27733, 27736.—County would maintain pier when finished, 27734-5.—County had a surveyor, he was not notified when Board's engineer came down and no plans were submitted, so nothing was known of what was being done, 27737-46.—County named the place Knocklane, but not the exact spot, pier would have been more useful fifty yards further in sheltered spot, 27747.—County Council left matter in Board's hands but would gladly have sent representative to accompany engineer to inspect site, 27749.—Views of local body, especially views of fishermen, should be ascertained before making marine works, 27750-1, 27755.—Mr. Green had been over coast, fishermen were there when site was selected and objected to it, 27752-3.—When a public body like Board had inspected site and heard views of the people, their own engineer would naturally select exact site, but he should meet the people half-way, 27756.—Impossible to find out county surveyor's opinion as he had retired, 27757.—Fisherman a better authority on piers than county surveyor, he would look at it from fisherman's point of view; engineer had to carry it out, 27758-61.—Knocklane Pier would not have been as expensive in more suitable place, thirty or forty yards along the coast made a great difference, the fishermen could then land in stormy weather; engineer should be guided by his judgment, but unfortunately in this case it was against the views of the fishermen, 27766.—As much employment could not be given by the work as was expected, it was not stone but concrete work, and had to be allowed to set for a certain time before going on, 27767-8.—People used to bring in their boats at about the place where the present pier was erected, it was a sheltered place, with big overhanging cliff, big stones had to be cleared away; pier not exactly at same spot, 27773-5.—Witness had seen pier, 27776.—In present place it was long enough to be of use, 27777.—Same length ample for other place, 27778.—Not much difference in depth of water in the two places, 27781.—Both dry at low water, 27782.—Knocklane seven miles from Grange, 27783.

Application to Congested Districts Board for Curing Station at Raughly—Defective Landing Accommodation.

Poor accommodation in way of boats and nets; applications had been made to Board for curing station at Raughly, 27785-6.—Mullaghmore twenty or thirty miles north-west, 27786.—Pier at Raughly, 27718, 27748, 27786.—Useless pier, not long enough, filled up by sand yearly and cleaned at expense of County Council, built by Grand Jury; Raughly people hampered by want of market for fish, men could not go out in stormy weather as there was no landing stage, 27786.

Condition of Roads.

Roads in Lissadell West more neglected than anywhere, 27786.—A pity Board only gave grants for new roads, one should be given for repairing road at Cloonagh, Sir J. Gore-Booth had offered grant of £30; road passed through most congested districts in Ireland, 27787, 27800.—The neglected roads were made in 1847 to give employment to people, and were never taken over by county or kept up, 27788-92, 27795.—People paid rates, 27793.—County Council had too many roads in district and did no repairs to roads mentioned, 27794.—They simply took up roads handed over by Grand Jury, these had not been handed over, 27795.—People threw odd heaps of stones down occasionally, these were only repairs since Famine,

HARTE, Mr. BERNARD.—*continued.*

27796-27800.—Point should be stretched in their favour, they were works of public utility, county did not like too much taxation, 27797-9.—Road to pier a county road, 27800.—Board were making a road to Knocklane Pier, through the Gethins Estate, 27801-2.

Condition of Lissadell West—Congested Districts Board had only just begun operations on Estate purchased.

Holdings in Lissadell West very uneconomic, people very poor, enlargement of holdings and construction of roads would improve their condition, 27807.—If tenants migrated their holdings could be used to enlarge others, 27808.—No accommodation works on estate, not long since it was vested, 27809-10.—Great dissatisfaction caused by delay in vesting, 27811-2.—Land and grazing farm, Board striping what was habitable, 27813.—Soil sandy, 27814.—Half could be broken up for tillage, 27815.—No indications of new holdings as yet, 27817.—This was witness's only experience of Board's working, 27822.

Allocation of Congested Districts Board Funds.

Sligo should get its fair share of Board's money, 27818-9.—Board's funds should be allotted to counties in certain proportions, reserving a considerable amount for very congested areas, 27820.—Witness had no experience of working of Estates Commissioners, sale of Gore-Booth property was not yet sanctioned, 27823.

Sligo was not represented on Board, which was the reason why Sligo was neglected; representations for appointment of Dr. Clancy frequently made; no vacancy for him, 27807.—Plenty of grazing land available on Gore-Booth property, 27802-4, 27807.—All Connaught should be scheduled so as to be able to migrate people from different districts, 27807.

KELLY, Rev. MICHAEL.

See pp. 13-17.

Migration.

Much congestion in Grange, valuation low, only 5*s.* in some places, people must be migrated and their holdings divided amongst remaining ones, 20 farmers in locality had agreed to give up holdings and go elsewhere, 27830-2.—Witness had asked heads of families, the young men agreed, too, 27833-5.—Sixty families in Mullaghmore, something must be done for them, fishing might be improved, 40 families in Magherow lived by fishing alone, average valuation of district, including grass lands, 5*s.*, 27835-6.—Gethin Estate in Lissadell West had been bought, that was a large farm, including its valuation only 5*s.*, some tenants must be transferred to give economic holdings, 27837.

Poverty of District.—Horses and Cattle Bought on Six Months' Credit.

Extreme poverty in district, twelve years' arrears of rent on Colville-Jones estate, fifteen in Inishmurray Island, credit system so largely in vogue a proof of poverty, common for farmers to go to auctions to buy cattle or horse, auctioneer paid farmer who sold, purchaser paid auctioneer's fees and interest on money, and got cow on credit for six months, 27837-45.—Purchaser thought it better to do that than to have no beast on farm, 27846.—If a person bought cow at £10 he paid auctioneer's fees of 5 per cent., 7 or 8 per cent. interest on money, and was lent beast for six months, 27847.—Payment usually made at end of six months, seizures rare, 27848.—Such a gamble kept people in perpetual poverty, 27849.—Money came from friends in America, Scotland, and England, and from proceeds of stock sold at fairs, 27850-1.—The system was common in Collooney and Cliffoney, 27852.

Land Available for Migration and for Relief of Congestion in the District.

Three farms of Mr. Ashley's at Cliffoney available for migration, also Mr. Jones's estate, he had twenty-one tenants, and offered to sell to Board some time ago, his valuation of the farm was £1,753, and of house and demesne £175, 27852.—Large portions of

KELLY, Rev. MICHAEL—*continued.*

estate kept for meadow land, meadow sold and cattle placed on the rest, 27853.—Small holders who now used that grazing could increase their farms by getting portion of it, 27854.—Large strand in district flooded, could be reclaimed if river bed were sunk, 27854, 27860.—No fishing rights in district, 27856.—100 acres was submerged frequently on Mr. Jones's estate, 27857-9.—And could be reclaimed from sea, 27861.

Direct Sale of Barry Estate Without Improvements.—Need for Re-arrangement of Holdings.

Board could improve tenants' holdings on Mr. Barry's estate, it was sold sometime ago, sale sanctioned by Estates Commissioners, price 23½ years on second term rents, half of the tenants were residential, holdings were in rundale, houses in a cluster, estate should be improved, 27861.—Witness supposed it could not be done now, 27862.—Bargain made between landlord and tenants, 27863-4.—Tenants had much trouble with the strips of land, they were in the courts very often, 27865.—It would be possible to re-arrange holdings, 27867.—Estate sold two years ago, 27867.—Solicitor in Ballyshannon negotiated sale, witness not consulted, 27868-9.—Estates Commissioners' aid had not been recently invoked, 27870.—No negotiations between Commissioners and those advising tenants, 27872.—Holdings should be striped and houses removed, insanitary to have them in cluster, 27873-4.—Vesting orders had been completed, 27877.—If holdings were re-adjusted some tenants would be satisfied, and some would not, 27878.

Kelp Industry.

400 or 500 tons of kelp shipped yearly from Mullaghmore, made from drift weed and cut weed, cut weed used for making carbonate of soda, drift weed for iodine, agent of company who bought kelp told witness price could be increased 25 per cent. by using proper weed and keeping it free of sand and stones, people burned kelp too quickly, Board should teach them to burn it properly by appointing an inspector, 27879-84, 27887-93.—Inspector would have authority by law, 27885-6.—Printed instructions would not be of much use, 27888.—Higher price in Sligo than in Donegal, did not show it was made in best way, 27889-90.—Manufacture of kelp could be increased, supply sent to Scotland going down, 27891.—Iodine was the principal product, but there was a new method of making iodine now, 27892.—cut weed should not be used for iodine, 27893-5.

Lace-Making—Appeal for Re-establishment of Lace School at Grange.

Lace-making started in district in 1896 on small scale, it flourished greatly, and in 1902 Board had great school, and sent supplies to Irish Lace Depôt, Grafton street; Hibernian Lace Company in O'Connell street bought £300 or £400 worth from school, teachers got orders from Congested Districts Board not to supply company, lady in charge of school transferred her services to the Hibernian Lace Company, Board sent no agent, and this girl attracted the pupils away; Board stopped school, 27896, 27928.—Board should re-establish it, Grange people took great interest in lace industry, £3,261 paid for lace in 1906, 27896.—£2,000 of that in village of Grange, girls of district industrious, large numbers engaged in Dublin and elsewhere, at present they could not qualify as teachers, vacancy for teachers at Rosse's Point, 8 or 9 girls in locality wanted appointment, but were not qualified, drawing and designing should be taught as well as lace-making to enable them to qualify as teachers, 27897-8, 27911-2, 27929-31.—Girls would attend if they had that prospect, 27932, 27935.—School deserted because those subjects were not taught, 27933.—Lace-making prospering in people's homes, 27898, 27918.—£2,000 a year added to their earnings, 27919-20.—Withdrawal of school had been arranged by Mr. Walker and parish priest, 27899.—Parish priest had since died, 27900.—School had been the finest of all the schools, 27901.—26 teachers employed in Ireland from this district,

KELLY, Rev. MICHAEL—*continued.*

27902.—A splendid opening for girls, they got £1 a week, 27903.—Housework done by mother and other sisters, girls making lace were capable of all the housework they had to do, 27904-5.—Best lace-maker emigrated at the time of the crisis in 1903, but on the whole they remained at home, 27906-7.—Witness thought Mr. Walker would send back teachers if asked, 27910.—The girl who was such a good lace maker was in America doing other work, she would have been a competent teacher if she had had a certificate, 27914-7.—Return of sales to Hibernian Lace Company was—£535 15*s.* in 1900, £1,102 in 1901, £2,801 19*s.* 3*d.* in 1902, £2,994 17*s.* 11*d.* in 1903, £1,691 16*s.* 10*d.* in 1904, £3,460 16*s.* 2*d.* in 1905, £3,261 3*s.* 4*d.* in 1906; in area from Grange to Ballyshannon, two-thirds in Grange, 27921-2.—Return of sales to Irish Lace Depôt in April, 1906, £104; May, £109; June, £161; September, £113; October, £91; November, £117; December, £94; January, 1907, £126; February, £155; March, £170, 27923.—500 families working, two girls on an average to a house, that is 1,000 girls in Grange district, 27924-7.—Board's grant to lace school was about £1,000, 27934.

Fishing Industry.

Board had done little for fisheries on coast from Ballyshannon to Sligo, Magherow and Mullaghmore important fishing stations, 60 herring boats near Grange 10 years ago, none now, there used to be a landing place at Luchan, 27936-9.—In Lissadell West 30 fishing boats, 13 trawlers, boats made £70 or £80 a year, trawlers £2 a day, Board should supply large boats and an instructor for deep-sea fishing, 27940-5.—Witness meant deck boats of 50 or 60 feet keel, 27943-4.—Fishermen did not know where to go themselves, 27946-7.—Coast shallow, 27948, 27954.—Harbour at Mullaghmore wanted sinking to admit larger boats, 27949-51.—It was dry at low tide and silted up, 27952-3.

Island of Inishmurray—Decline in Population—Larger Boats and Extension of Landing Place Needed.

Population declining on island of Inishmurray, only 13 families where there were 16 a few years ago, 35 children used to attend school, now 12; men emigrated, little fishing done now, three skilled crews five years ago, hardly one now, they had not big enough boats and no landing place, Board built landing place at a cost of £146, useless when wind blew from east, but could be extended and an "L" turned on it, slip should also be built, men now resorted to manufacture of spirits, 27954-9.—Much land on island rocky and useless, people who left sold their land to friends, 27960-1.—Only two people on island made decent livelihood, rest extremely poor, addition of land would not help them, 27962.—North and west of island stormswept, landing was safe only on southern side, 27963.

School Built by Congested Districts Board.

School was built by Board, and cost a good deal, because it was expensive to bring material from mainland, cargo of cement cost £1, 27964-5.—No teacher's residence or second room, 27966-7.—No priest there, it was in the parish of Ahamlish, difficult for priest or teacher to get across, 27968-72.—People sold dried fish in Grange, 27973-5.

Means of Communication.

Crossing took an hour on an ordinary day, pulling all the time, 27976.—One badly-kept road on island, houses all the other side, 27977.—"Our Franciscan Sisters of Loughglynn" had offered to promote industries in Grange if encouraged, 27978.—Offer made to Dr. Clancy, 27979. (*Most Rev. Dr. O'Donnell*—Dr. Clancy had made an arrangement with Department, 27981.)

L'ESTRANGE, Mr. HENRY.

See pp. 17-25.

Classification of Land in County Sligo according to its Nature and Working.

On land managed by witness there was a good deal unsuitable for tillage, of rocky nature and too low-lying for drainage, 27991-2.—It was solid rock, limestone coming shallow to surface, 27993-4.—Remarkable tillage efforts made among rocks, but it was all spade labour and unprofitable, 27996.—Witness was speaking of both tenanted and untenanted land, 27998.—Two kinds, one so rocky it could not profitably be tilled; the other possible to till, but requiring so much labour as to render it also unprofitable, 27999.—There were a few places where tillage would be better than present system of grazing; parts of these in healthy condition now; would revert to original condition if not cared for, 28000-1, 28056-60.—Parts had been formerly tilled, 28001, 28014.—This applied to all sorts of boggy land, 28002-3.—Boggy soil often yielded rich crops if well looked after, 28004.—No reason why it should not be profitably tilled, 28005.—Required more attention than other tillage land; a good deal of it all over West of Ireland was only kept from reverting to original state by industry of people; a good deal was used for rough grazing because labour for tilling was not forthcoming, 28006-7.—A. B. and C. mentioned by witness included as much tenanted as untenanted land; it was grazed as being better than tilling, 28008-13, 28015.—Necessity had caused the change in this class of land from tillage to grazing, 28016.—Men did not like hard work on mountains, and they had generally enough of a different class of land, and had allowed the land mentioned to revert, because they thought it unprofitable to till, 28017-8.—The men were not lazy, but where they had comparatively easily-worked land they used the suitable land in preference to the other, 28038-55, 28067, 28074.—Nothing in the land itself to make it unprofitable, 28019, 28037.—Land described as "hungry" land would need a great deal put into it to keep it up; it would not pay to do it, 28020-1.—Looking well after land meant putting in capital as well as energy of an active man, 28022.—Manures needed, &c., 28023-4.—Proper system of manure more likely to yield good crop, 28026.—Putting beasts in houses and using manure a better method than the system of grazing, 28027.—Would require enormous capital to get sufficient stock, 28028-30.—Stall-feeding of animals kept at present would effect a small improvement, 28031.—Capital only wanted for improvement on large scale, 28032.—Supposing there were thirty acres of such land it must be manured to make it fit to carry stock, and would take years of gradual progress before it became a fairly mixed farm, 28033-6.—Large extent of grass land not capable of tillage, 28061, 28073.—That should be available for giving profit rent to owners of estates, 28062.—Tillage had advantage over grazing in that it employed the whole family of small occupiers and also artisans in district, whereas grazing gave little employment, 28063-6.—Sixteen or twenty acres fairly good land enough for small occupier to live on, 28075, 28086.—Rent would be 15*s.* or 14*s.* per acre, 28088.

Want of Agricultural Instruction in the District.

Want of practical instruction in locality, 28068.—Might explain tendency to allow land to revert, 28072.—Should be an advantage if practical agriculturists were put in district by such a body as the Board to show methods of tillage, improving stock, &c., 28069-70.—People willing to take up suggested improvements, 28071.

Migration.

Migration must play very large part in solution of congestion problem, 28082-3.—Possibility of obtaining grass lands first condition of any migration scheme, 28084.—Difficult to get land unless it were surrounded by farms of at least thirty acres or immediately outside demesne land; smallish men would consider only fifteen or twenty acres economic, and would expect increase if untenanted land were near them, 28085.—Fairly large occupiers might claim some of the land to be striped for their sons, and might consider that they should be preferred to strangers, 28089-92.

L'ESTRANGE, Mr. HENRY—*continued.*

ATTITUDE OF RESIDENTS TOWARDS STRANGERS—PHIBBS PROPERTY.

People resented introduction of strangers into locality; even if their own holdings were economic, they thought available land should be used to enlarge them; a really large farmer might not, but ordinary small holders would, and would probably make it very hot for the stranger; the feeling varied in different parts, 28075-9.—Difficult to say whether with education opinion would change, 28080-1. People on Major Phibbs' property gave witness to understand they would object to migration of strangers, because there were lands there that were in hands; no case of actual resentment against strangers, 28093-7, 28101.—Phibbs property not in scheduled area, 28098-9.—Tenants had bought it; lands in hand sold to Estates Commissioners, 28100.—Would be wrong to bring them if tenants were in need, but they were not, 28103.—If tenants were as poor as those in scheduled areas they should have preference over anyone from those areas, 28104-5.—Migrants from a distance should have prior claim over sons of tenants on economic holdings in neighbourhood, 28106-7.—Not much justification for resentment against strangers, as tenants were on economic holdings, 28109-10.—£8 or £9 approximate average rent on Phibbs' property, 28112.—Uneconomic holding was one a person could not live fairly comfortably on, and keep his family and meet his debts; size would depend on quality of soil, 28113-5.—About ninety holdings on Phibbs' estate, 28116.—Fifty or sixty of them were economic, forty uneconomic, 28117-9.—Approximately 400 acres of grazing, 28121.—Not unreasonable for forty occupiers of uneconomic holdings to resent incoming of strangers while they themselves stood in need, 28122-3.

LAND AVAILABLE IN COUNTY SLIGO FOR RELIEF OF CONGESTION.

Sufficient grazing land could readily be obtained without compulsion in County Sligo to relieve congestion in that county, provided fair purchase price was given for it, 28125-6.—Land referred to could be tilled right away, and would improve under tillage, 28127, 28129.—It would pay to cultivate in the second year, 28128.—A man would probably till only three or four acres at a time and keep the rest in grass; by treating it in that way a new farm would pay from the start, 28130-1.—Witness had had no actual experience, but did not doubt it could be done, 28132-3.—The man would either meadow the grass or use it for agistment purposes for grazing, 28134.

LANDLORDS WILLING TO SELL—QUESTION OF COMPULSORY POWERS.

There were enough landlords willing to sell at a fair price, 28135, 28138.—No likelihood of anyone asking ridiculously high prices or refusing to sell on any terms, 28136.—Witness's clients had told him that they would sell unless land were inside or worked in conjunction with demesne, 28137.—Compulsion was the only way to deal with it if it did, 28140-1.—If exhorbitant prices were asked the case could be dealt with by arbitration, 28142-5.—Fair price would be arrived at on the basis of valuation in the same way as income tax, 28146-7, 28152-3, 28163-4.—Landlord paid tax on income, on poor law valuation, 28165-6.—It would apply more generally to land in landlord's own hands, but might be based on income derived from land for eleven months, 28148.—Landlord got more for an eleven months' letting, but it was not as certain, 28149-50.—And he had also to pay taxes and repairing of fences; net income would be the basis, 28151-2, 28181.—Landlords willing as a rule to sell at fair price although there might be cases where they would not sell at any price, 28154.—There were cases where land was more valuable to landlord than to anyone else, as he worked it in connection with other land; for example, an outlying farm might be worked in conjunction with demesne, 28155-7.—He might then ask a price higher than the actual value, 28156.—Such a case might be stated

L'ESTRANGE, Mr. HENRY—*continued.*

for arbitrators and price awarded accordingly, 28158.—Court of Arbitration might justly find value something more than one and a third on basis of income tax allowed, 28159.—If tenants were willing to give fair price for tenanted holdings, and money were forthcoming, there would be no need for compulsion; Act had worked well; there would be plenty of land if money were available; land purchase should go on smoothly, 28160-2.

SALE AND PURCHASE IN COUNTY SLIGO.

Witness managed fifteen properties in County Sligo, 28167-8.—Tenants had approached him with view to purchase, 28169.—He had sold some properties, 28170, 28174.—Fair price ascertained by considering how gross price invested in trust securities would compare with net income, 28171.—Tenants had approached witness with regard to some of the other properties; fair price not the obstacle, 28175-6.—No difficulty in transferring property if tenants gave fair price, 28177.—Management and legal expenses of owners would have to be deducted, 28178.—If grass part of an estate were sold to the Board, tenants would refuse to buy the tenanted portion, 28179A-80.

LANDLORDS' IMPROVEMENTS IN COUNTY SLIGO—EFFECT OF ACT OF 1881, &c.

Witness had the management of property in Sligo, which was better than the average, 27984.—Markree his principal agency; landlords in County Sligo had spent considerable sums on improvements before and since Act of 1881, chiefly before, 27985-9.—During last twenty years landlords had effected improvements in making roads, reclaiming bogs, planting timber, building cottages, and making loans to tenants, 27988-9.—On one estate managed by witness, owner expended several thousand pounds of late years improving tenants' holdings and buildings, drains, loans to tenants, &c. A considerable amount had been expended since Act of 1881, 28182-3.—Witness meant out-of-pocket expenditure as well as loans; also expenditure on road-making, 28184-6.—Bogs had been drained to supply turbary, and roads made to bogs; nominal charge for turbary made; less than that made by Commissioners, 28187-91.—No case since 1881, where landlord spent money on improvements except in form of loan asked for by tenant, 28192-5A.—Five per cent. charged; borrowers could pay at any time they liked, £5 or £10, 28196.—Loans always made through Estate Office, 28198.—Owner did not lose by transaction, but it was a generous act, 28197, 28198A-9.—Roads made absolutely to benefit tenant, not only to bogs but to holdings; the late Colonel Cooper had spent money on roads since 1881, some had been taken over by county, he got no return for outlay, 28201-3.—County Council responsible for roads, large number made by landlords in old days and taken over by Grand Jury, 28204-5.—Some roads had been made to houses since fair rents were fixed, they were made in 1895, not for one tenant, but for the benefit of a group, 28207-9.—Act of 1881 did have effect of drying up sources from which money was spent on holdings, 28210.—Before that landlords spent much on improving tenants' holdings, 28211.—From 1873 to 1906 Colonel Cooper spent over £31,000 on road-making, tree-planting, and drainage, 28213-5.—Large amount spent on buildings for tenants and labourers' cottages, 28217.—Trees were planted on outlying mountains not on tenants' holdings, 28218, 28220-1.—Benefited tenants only by employing labour, 28222.—Loans for building purposes included in the £31,000, 28219.—Labourers' cottages were put up; all the building was an investment bringing good percentage, 5 per cent. in cases of loans, 28223-5.—Year 1881 important, because under Act of 1881 tenant got credit in fixing of rent for improvements made prior to that, 28226.—After passing of Act landlords had no guarantee that they would get credit for improvements if they spent money on land, 28233-4.—They had not sufficient confidence in the people fixing the fair rents, so did not spend money, 28230, 28235.—The change of policy was not due to resentment, but to the fixing of judicial rents, 28227-9.—The £31,000 spent by Colonel Cooper was

L'ESTRANGE, Mr. HENRY—*continued.*

all an investment except the grants for roads and expenditure for benefit of the people, 28236-7.—Between 1880 and 1898 £1,900 was spent on roads, 28238.—On fixing of fair rents evidence was given to show who made road so that it was an investment to a certain degree, 28239-40.—For houses owner borrowed money at 5 per cent., and lent to tenants at same rate, 28241-2.—Roads benefited tenants more than landlord as an investment, 28243.—When landlords were improving, planting, &c., before 1881 they employed labour, they had an estate staff, 28245.—Act of 1881 reduced this expenditure and the number of artizans employed, 28246-52.

Decrease in employment of Artizan and Labouring Classes in Rural Districts subsequent to 1881.

Money was sometimes borrowed from Board of Works at 6 per cent., 28253-4.—Money could be got at 5 per cent., and tenant was liable to be charged 6 per cent., but rarely was so charged, 28256.—More spent out of landlord's private income than was borrowed from Board of Works, 28257-9.—In cases on Colonel Cooper's property interest charged was never more than 5 per cent., 28260-3.—Board of Works charge for loan was 1 per cent. for sinking fund, 5 per cent. interest, 28264-7.—About £10,000 of the £31.000 was borrowed from Board of Works, if tenant failed to pay landlord was responsible to Board of Works, 28268-74.

Tree-planting had been Successful.

Land where trees were planted was poor, and used for mountain grazing, 28276.—In some cases in owner's possession, in others compensation was paid for tenant right, 28277.—Plantations successful, revenue trifling as yet, timber only now getting saleable, the plantations were on out-of-the-way places, and it was difficult to name a price, 28279-80.—They would pay when grown, if convenient to market, 28281, 28283.—There had been considerable annual outlay keeping them in order, also expense of fencing, but very little labour in addition, 28284-5.—There was a little local sale for thinnings, but not in out of the way districts, 28286.—Trees were principally larch, 28287.—Situation of plantations to a great extent on side of hill away from sea, generally with a southern aspect, 28288-9.—Still possible under present conditions of tenant right, &c., to plant estates in the same way as Colonel Cooper had done; had been done to a less extent for shooting purposes, 28290-2.—Witness had always compensated tenants, there might be opposition if planting were done on a large scale, 28293.—Not more difficult for Government or Board to do it than for private owner, 28294.—If reafforestation were carried out near roads there was prospect of early success, 28295.

Punctual payment of Rent in County Sligo—Phibbs Estate was the only one under witness's management on which there were arrears.

Rents paid punctually in Sligo, although holdings were small, no ground for apprehension about payment of annuities, 28296-8.—Ten to fifteen years arrears in Inishmurray, but it was exceptional, 28299.—Rents paid punctually before 1881, 28302.—Security for State for annuities even in places with arrears owing to reduced amounts, 28303.—Great accumulation of arrears, perhaps, showed land was incapable of paying rent; witness had no experience of that class of land, 28304.—Mismanagement might be a cause, 28305.—Major Phibbs' estate the only one on which witness had any difficulty in getting rent, 28307.—Rents well paid before Act of 1881, but not so since, 28307-9.—There were arrears in 1881, 28310.—The Commission had dealt with them, 28311.—No reason for rents being less well paid since Act of 1881, it was the other way, 28313-4.—Tenants on this estate got into slip-shod way of paying rent, difficult to get them back into old way of paying, 28315. 28323.—Landlord could not recover arrears beyond two years by process of ejectment,

L'ESTRANGE, Mr. HENRY—*continued.*

28316.—Tenants on Phibbs' estate twice took landlord into court, 28317-8.—Amount payable after fixing of rent less than before 1881, 28319.—In spite of that tenants less punctual in paying, partly owing to death of owner and estate changing hands, 28320-2.—Tenants were proceeded against in ordinary way; chiefly owing to Land League that rents were badly paid; it was a combination against payment, 28324-6.

Documents put in by Mr. Henry L'Estrange.

	Page
A.—Statement showing how rents have been paid on estates managed by him in County Sligo,	242

GORE-BOOTH, Sir JOSSLYN.

See pp. 25-8.

Voluntary Striping of Grazing Farm on Witness's Estate.

In 1901 witness was asked to stripe grazing farm of 153 acres, and agreed, provided he did not lose by it, his terms were thought fair, and the striping was carried out, the land was divided on basis that landlord was to receive the average net income of the five years previous, less expenses, and rough rules embodied in agreement, witness was offered larger sums in fines from farmers whose holdings he did not consider required enlargement, second term rents not up to average of five years' grazing, so people were asked to pay fines, 28328-30, 28389.—Fines were about £30 per head to make up difference, 28330.—Local banks and parish priest helped tenants to raise fines, fines were long since paid off, and tenants had done well, one holding had been equally divided between two adjoining tenants, and the tenant who sold was provided with new farm at Streamstown, paying the fine with the money he got for tenant-right, he had already built slated house on new farm. —28331, 28339-42.—No money lost by transaction, tenants materially and morally better for it, 28331.—It was carried out on same lines as work of Congested Districts Board, and land was striped among neighbouring holdings, 28332.—New tenants remained tenants, they were not peasant proprietors, 28333.—They were judicial tenants, 28334.—It was the only attempt at striping made by witness, he had never been asked to stripe another farm, 28336.—It was a grazing farm adjacent to the people's holdings, so long as he got his income witness did not care what happened to it, 28337-8, 28407.—Grazing land could be striped without loss to anyone, except in certain cases in congested areas, Board charged fines in many cases, Land Commission charged no fines, 28348.—Witness did not sell the land because Act of 1903 had not come in, 28392.

Price of Grazing Land.

Much grazing land would be immediately available for enlargement of holdings if prices offered were fair, many large graziers would give up their judicial tenancies if they got fair compensation; following cases actually happened on witness's estate:—Case 1—Area 147a. poor law valuation £105, net income £145, price as valued by witness's valuer, £3,368, £2,100 offered by Land Commission, tenant's interest in this holding bought by Sir H. Gore-Booth for £953 at request of adjoining tenants, in order to give them accommodation land, 28343-4.—Return on sum offered by Land Commission would be £84 at 4 per cent., as against average net income of £145, 28345.—Average income 1½ times poor law valuation and a little more, 28346. Case 2—Area 243a., poor law valuation £183, net income £122, price as valued by witness's valuer, £3,314, this, together with mountain land of £85 valuation, was offered to Land Commission, who offered £1,739 for the whole. Case 3—354a., £250 poor law valuation, first term rent £240, landlord's interest at 21½ years' purchase as agreed with tenants £5,169; price offered by Land Commission £5,635, leaving for tenant's interest £466, or less than two years' purchase; Mr. Bryce had stated

GORE-BOOTH, Sir JOSSLYN—*continued.*

in House of Commons that prices paid by Board varied from 28 years' purchase to 29 years' purchase of annual value, 28346-7.—Instances given were adduced to show that price offered was not a fair one, 28351.—It looked as though compulsion meant compelling landlords to take the unfair price, 28352.—If witness had not taken price offered in first case sale would not have been sanctioned, it was indirect compulsion, average price paid by Board for six years was 27½ years 'purchase, 28353-4.—In this case only 14½ paid, 28355.—Witness not afraid of compulsion if it were fair, direct compulsion might conceivably be fairer than indirect, 28356-7.—Tenanted land had been sold at 21½ years' purchase of first term rents, 24½ of second term rents, 28359.

Co-operation Movement.

North Sligo was a good dairy country, and co-operative creameries were a success, as their audited accounts showed, every farmer within reach supplied milk, and was a member, creameries were owned by the farmers themselves, only assistance received was the teaching from the Irish Agricultural Organisation Society, the people found capital and worked creameries through committees of farmers elected by themselves, possibilities of co-operation enormous, I.A.O.S. had insufficient funds to carry on active propaganda, 28348.—Sir H. Plunkett said in his memorandum that what was now needed was a policy the aim of which was not only to inculcate principles of self-help and reliance, but to make these principles vital and operative through broadly-conceived scheme for improving conditions of people, 28360.

Landlord's Improvements.

Statement that no landlord in Ireland spent money on estates was inaccurate; witness had spent money on improvements since 1881, 28360-2.—He had joined Board in their first scheme, and done one-third of drainage work in order to help the people, 28362-3.—He gave the money as a neighbour, not from an estate point of view, 28364-6.—He had also given tenants lime, timber, etc., 28366.—He only succeeded in 1900, 28367.—Few of his tenants had been in the Land Courts, 28369.

Land Available for Purchase on Gore-Booth Estate.

Witness had offered to sell to Estates Commissioners, not to Board, 28370, 28372-3.—He still had large quantities of land, if price were right he would take it, 28371, 28373.—Lands available were those mentioned, 147, 243, 354 acres, and 894 acres of mountain, 28374.—Lands not scheduled, 28375.—Witness had 3,000 acres of demesne land which he worked himself and would not be willing to sell, 28377-9.—the 1,300 acres he would sell, 28380.—He worked demesne energetically, 28381.—No wall round demesne, 28383.—It was tenanted in old times, 28384, 28402.—Marks of tillage no longer there, 28386.—The fact that it was formerly occupied would be no inducement to re-people the land with tenants, 28388.—Witness would object to disposing of any land worked as part of his business, 28403-4, 28408.—It had not occurred to witness to offer lands to Congested Districts Board, though they could buy in non-congested area, 28395.—Cases 2 and 3 not closed yet, 28394.—Genuine grazing farms witness was willing to sell were outside demesne, 28396-8.—Only about 2,000 acres really demesne, great deal of that under timber, 28399-400.—Some under grass, some tilled, a larger portion tilled every year, 28401.—Land had been developed since witness succeeded in 1900, 28405.—He began to break it up for tillage then, 28406.—More under grass before, it employed more labour now, 28409.—Actual demesne not scheduled, scheduled areas on coast, 28411.—Congested district near, 28412.—(*Mr. Cooper—A small portion of the demesne was in scheduled area,* 28411).—Exclusion of grass land of demesne would not bring the valuation per head within the 30*s.* limit, 28413-6.—Possession of land not essential, so long as it was worked energetically, just as good if another man worked it, 28418-20.—Tenants on witness's land not evicted, passages were paid to America, 28422.—Witness employed a considerable amount of labour of various kinds on his land, 28423-4.—He thought if tenants had the land there would

GORE-BOOTH, Sir JOSSLYN—*continued.*

be less labour employed, 28421, 28425.—Labourers would have no employment unless they too got land, and would leave the country, 28426-7.

Documents put in by Sir Josslyn Gore-Booth.

	Page
A.—Notes of evidence,	243
B.—Agreement as to division of Streamstown Grazing Farm,	245
C.—Schedule referred to in B.,	245

MEEHAN, Mr. PATRICK.

See pp. 28-9.

Farm belonging to witness's father was 20 acres in extent, valuation £20, 28429-30, 28462.—Land in Board's hands, works begun, 28431-3.

Witness appeared for Magherow Branch of United Irish League, which comprised electoral divisions of Lissadell East, West, and a portion of Lissadell North, no untenanted land in latter division so far as it extended to witness's parish, road accommodation needed in Lissadell West, Carrigans, Ballyconnell, Kilmacannon, Aughagad, and Cloonelly, inspection of estates in process of being sold was desirable before State advanced purchase money.

Gore-Booth Property.—Acreage and Valuation of Untenanted Land Compared with Valuation of Tenants.

Sale of Gore-Booth property was concluded at an advanced price, because tenants in arrears wanted immediate relief, tenants on that property proposed to memorialise Estates Commissioners, but some refused to sign for fear sale should be arrested and landlord press for arrears; there were 206 acres belonging to Sir J. Gore-Booth at a valuation of £149; while there were 216 families under £10 valuation, portion of which had been evicted since 1873; Sir J. Gore-Booth had 1,121 acres untenanted land in Lissadell East, valuation £845 4*s.*, while there were 67 families under £10 valuation, same owner had 77 acres in Lissadell North, valuation £3 19*s.*, in Lissadell West there were 373 acres of untenanted land, valuation £98 5*s.*, in possession of Congested Districts Board, 28434.

Fisheries.

Fishing might be improved by erection of suitable landing places and improvement of boats, 28434.—Boatslip at Knocklane being constructed was more an obstruction than anything else, 28435-6.—Witness not a fisherman, men wanted it 30 or 40 yards further West, 28437.—Not much fishing off coast now, 28438.—30 or 40 small boats, 13 steam trawlers, 24839.—From Raughley, 24840.—They fished for flat fish, 24841.

Migration.

Seven tenants evicted from grass lands, 24842.—Would be willing to pay fair price for additions to holdings if bought over by State, 28443-5.—Witness was in a congested district, would migrate willingly anywhere in Ireland, 28446, 28450-1.—He thought the others would, too, 28447-9.—Two more in family besides himself, also a father and mother, he was the eldest son, 28452-4.—Whole family would not be afraid to go, though they might not wish it, 28455-6.—A farm of £30 would attract them, 28453.—Witness would like a farm in some other part of Ireland, 28459-60.—Magherow a very poor district, 28461, 28464.

QUILTY, Mr. JOHN GEORGE.

See pp. 29-32.

Logan's Estate.—Condition of Tenants on Uneconomic Holdings.—Negotiations for Sale at a Standstill.

Majority of tenancies uneconomic on Logan's estate, a typical Western estate, tenants of such estates were the backbone of Irish agrarian agitation, Logan's estate consisted of 500 acres, mostly reclaimed bog, there were 32 tenants with holdings 2 to 100 acres in size, total rental £240, turf was formerly cut

QUILTY, Mr. JOHN GEORGE—*continued.*

and saved on estate, rent was charged as estate was brought into cultivation, or raised, sometimes small holdings were confiscated and given to favourites, in 1864 rents were raised all round, tenants were ejected and reinstated at increase, landlord was an absentee, but estate bailiff came from Dublin once a year to receive rents, tenants were processed at once if they failed to pay, they had been treated harshly in the past, and disliked landlordism, 27 years ago Drumcliffe Branch of Land League was started by tenants, treasurer appointed and 17*s.* collected at once, first branch of League in County Sligo, estate was well watered, but needed drainage, money was borrowed by tenants from Board of Works for that purpose, tenants said Board robbed them, tenants and farmers should be assisted in reclaiming, they were industrious and compelled to add to their incomes by extern labour, the men would be model farmers if they had good farms, producing milk for local creamery was the principal industry, all land was in pasture except what was necessary for vegetables for home consumption, children emigrated as soon as old enough, one son remaining on farm, if he were not married when his parents died he sold out and went too, no turbary on estate, light and fuel cost £7 per tenant, 27 out of the 32 holdings were uneconomic, witness considered every holding rented at less than £10 uneconomic, Farmer's income on such an estate where creamery system was adopted depended on number of cows he could keep, grass being poor milk was poor, £6 a season for milk considered good from one cow, calf sold in September for £4, 30*s.* paid for bran, meal, etc., to feed cow after calving, 10*s.* to feed calf, net profit on cow and calf £8, number of cows kept limited by size and quality of farm, farmer might also have one or two tons hay for sale and two or three pigs, profit on pigs light, only £1 a head, hay this year inferior, sold at £1 a ton, most farmers had no pigs or hay, in a severe winter they were compelled to buy hay, farmer keeping three cows would have net profit of £24, £4 for extras sold off farm, total income £28, out of that he paid £6 10*s.* for rent, £1 rates, £7 fuel and light, £2 10*s.* seed and special manures, £11 left for food and clothing, impossible to live without extern labour and assistance from children abroad, death of cow meant loss of one-third profit, and would take at least ten years to recover from; Thomas Mitchell married in 1860 a girl with farm of 20 acres on Logan estate, he brought £90 earned in the United States, which he spent on reclaiming, etc., he found work of earning money in United tSates less hard than trying to make both ends meet on farm, he was now poorer than when he started, his children had to leave the country, original rent £8, raised to £10, reduced in 1884 to £8, and in 1893 to present figure, £6 10*s.*, in 1884 he borrowed £50 from Board of Works for drainage, Board gave him £47 10*s.*, charged him 10*s.* and 6*s.* afterwards for expenses, and for the last 22 years he had paid £3 5*s.* per annum, a total of £72 6*s.*, such estates should be scheduled; after passing of Wyndham's Act the agent of Logan's estate negotiated for sale to tenants, price could not be agreed on, tenants refused to give what landlord asked, sale must be effected by compulsion and inspection, nine years ago tenants on "Coolbeg Estate" bought under the Ashbourne Act at 17 years' purchase, it was a similar estate to Mr. Logan's, and the tenants thought they should buy at same price, no arrears on this estate, 28466.

Lissadell Estate.

Lissadell Estate bought at 21½ and 24½ years' purchase (Wyndham Act), landlord, Sir J. Gore-Booth, took interest in tenants, and wiped out arrears of rent, 24 processes served on tenants for non-payment of interest on purchase money, tenants memorialising Estates Commissioners not to sanction sale, bad security for purchase money advanced on uneconomic holdings, Coolbeg tenants paid instalments without hitch because they had extern employment, Lissadell tenants were beginning to fail because they could not get it; 50 years ago, before advent of Sir J. Gore-Booth and his father, the tenants on best part of property were ejected, getting seven-acre holdings of unreclaimed waste at 24*s.* 6*d.* an acre instead, commonage formerly free, was divided, and tenants paid rent of £5 5*s.* for their portion; these tenants of Barnrobin must fail to pay purchase instalments, as holdings were uneconomic, and there was no extern labour, they expected ultimately to get farms from Sir J. Gore-Booth's ranch land, 23 and 26 years' purchase really paid, as arrears were added to purchase price.

Landlord refused to sell on Hippisley estate, landlords of other estates would sell part, tenants would not agree unless all were sold, part of Wynne estate omitted in sale, as tenants would not give 27 years' purchase for bog land, 28466.

Emigration.

Tenants of Logan estate had sent 28 children abroad, principally to United States, the rest would go, assistance from America a necessity, relations in America paid the passage, no use to try and deflect emigration to Canada, all their relations were in United States, and the rest joined them, best thing to do was to stop emigration, it would cease if there were employment at home, emigrants attributed their exile to landlordism, 28466.

Butter Production as a Farm Industry.

Butter production the only farm industry in North Sligo, principally on creamery co-operative system, practically no tillage, which was the cause of emigration, 28466.—Creameries really good, but did away with tillage, 28466-7.—Doubtful if there was better produce in milk from mixed farm than from a grass farm, 28468.—Land would not grow roots, cows fed on a little hay in winter, but practically starved, after they calved they got a little extra stuff, 28469-71.—District should not depend on one industry, people would starve if American flour, meal, and bacon were stopped, majority of reclaimed bog farms incapable of wheat growing, wheat land of Connaught locked up in grazing ranches, flax formerly cultivated, might be revived, linseed meal imported from Russia; some poultry kept by farmers' wives, but the men did not like them because cattle would not eat grass the poultry had soiled, 28471.

Compulsory Tillage.

Untenanted land should be tilled, if tenants did not till it in ten years it should be taken up by compulsion, and compensation should be given; one-third should be tilled, but the people would not do it unless compelled, 28471-7.

Fishing.

Better and larger boats and gear for deep-sea fishing required, boat sent to Raughley by Congested Districts Board at wrong season, it stayed a week, and never came back, 28477.

Piers Needed.

Pier needed at Rosse's Point, pier at Streeda would be in a central position and would be used by Inishmurray islanders; one should also be built at north-east corner of Inishmurray and engineer should consult fishermen before beginning construction, 28477.

Evictions in Inishmurray.—Condition of Islanders.

Notices of eviction served on three islanders of Inishmurray for non-payment of rent, island was 1 mile long, ½ mile wide, oval in shape, and boggy in the centre, there were no trees or shrubs, only short hard grass, main land was eight miles away, population 80, there was so much salt that potato blight was unknown, but the potato plant was often poisoned as well as the microbe, landing was possible only in very calm weather, therefore no rates could be collected, police and gunboat would be sent to carry out evictions at ratepayers' expense, landlord should evict them himself, as he was the only gainer, he was one of those who refused to sell to tenants, 28477.

Cottages Industries.

Children of peasants should be taught cottage industries, such as decorating gift boxes with fancy shells, making ornaments, etc., from bog oak; formerly baskets, chairs, cradles, etc., were made from

QUILTY, Mr. JOHN GEORGE—*continued.*

osier rods by cottiers, also earthen crocks, pots, etc., by a family called Irvine, door-mats were made from bent grass, and flannel manufactured at home, formerly sold in the street in Sligo; all these had disappeared; plenty of heather, but no bees; Congested Districts Board should protect such industries and find a market for produce, peasantry greatly praised, crochet-knitting industry recently introduced, 28477.

Kelp-Making.

Kelp-making next in importance to fishery, price of 3*s.* a cwt. last season, barely paid to burn it, half a dozen agents divided the coast, and gave what they liked, people beginning to adulterate kelp, 28477.

Untenanted Land.

There were 10,600 acres of untenanted land north of Sligo borough boundary, the greater part arable, should be utilised for migration and enlargement of holdings, farmers wanted it, but none had been surrendered except Ballyconnell Bent, employment should be given by compelling a portion of it to be tilled annually, might be done in the same way as settlers in Canada were required to plant one-fourth of additional land they acquired, migrants receiving farms should also be compelled to till one-third, and large residential farms might come under the same rule; land constantly used for grazing deteriorated, market in England for roots and vegetables, roots could in any case be used to stall-feed the cattle which at present went to England in a half-finished condition; untenanted land under 10*s.* an acre should not be neglected, Canadian law of planting one-fourth with trees could be applied, Ireland almost denuded of woods, shopkeepers and people with money would then be less greedy for land, there would be stoppage of extensive emigration, and greater prosperity in the country; establishing of farmers in ranches surrendered, and paying of compensation should be done by Government money, Government had spent £20,000,000 on West Indian slaves, it would be seen whether the Irish peasant was as much thought about, 28477.

Suggestions.

Suggestions for solution of problem of congestion, emigration, and famine were: (1) Compulsory purchase, at least in Connaught, (2) creating labour by compulsory tillage, (3) scheduling Connacht, Donegal, Clare, and Kerry, (4) establishing cottage industries, (5) migration and enlargement of holdings, (6) cheap transit and building of railways where required, 28477.

Documents put in by Mr. J. G. Quilty.

Page

A. Particulars of tenants on Logan estate, . 246

B. Particulars of tenants on Midleton estate, 247

ROONEY, Mr. P. J.

See pp. 32-3.

Scheduling of Ross Inver West Proposed.

Size of witness's farm was 71 acres, greater portion was on the side of a mountain, valuation £31 11*s.*, £11 1*s.* 11*d.* paid half-yearly to Estates Commissioners, being 3½ per cent. on purchase money agreed on, farm was being sold, but sale was not completed, it was on Sir J. Gore-Booth's estate, and was not scheduled, 28481.—It was worked in grass and tillage, 28482.—Two English acres tillage, 28483.—Not scheduled on account of grazing portion, but should be scheduled, 28484-5.—Whole division should be scheduled, people poorer than in some scheduled areas, 28486-7.—Outside grazing portions witness thought valuation was not as much as 30*s.* a head, 900 or 1,000 acres in grazing portions, people very poor, 28488-9.—If division were scheduled grazing should be divided among the people, 28490.

Flooding of Duff River.

Duff River did damage by flooding, banks being eaten away on both sides, people needed assistance to repair damage, tree planting of no use, banks must be rebuilt, the mischief was getting worse every year, 28490-8.

Bad Roads.

District badly off for roads, no turf could be cut for 9 or 10 months if season were wet, 28499.

ROONEY, Mr. P. J.—*continued.*

—Sligo District Council had been told, but they had hardly passed any new works for last six years on account of rates being too high, 28500-2.—District Council would help district if it were scheduled, 28503.—Scheduling wanted in order to get help from Congested Districts Board, 28504.—Witness's farm not close to grazing lands, 28505.

GALLAGHER, Mr. DANIEL, and Mr. WILLIAM DUFFY.

See p. 33.

Necessity of Cleaning Mullaghmore Harbour.

Witnesses came from Mullaghmore, Mr. Gallagher a pilot in Mullaghmore and Donegal Bay, 28506-7.—He fished at Mullaghmore, and kept a two-ton boat drawing 1½ft. of water, 28508-11.—25 Greencastle boats there, 26ft. keel, 28512-3.—He fished in Donegal Bay as far as Teelin for mackerel, herring, flat fish, and cod during winter season, 28514-6.—Had done poorly lately, could not fish on Friday and Saturday, as no buyers came.—(*Mr. Duffy*—Boats hauled up on Thursday evening or they would be broken, 28517-8).—(*Mr. Gallagher*—Harbour rough, 28518.—Filled with stones and gravel, 28518-9.—Splendid harbour, but required cleaning, 28520, 28535.—Fishing interfered with by harbour being practically useless, 28521.—Schooners came there, also coasting vessels from Liverpool and Glasgow, 28523.—No harbour dues, it was the private property of Mr. Ashley, built by Lord Palmerston, 28524-6.—Witness had lived there all his life, and could remember 40 years back, and had never known of any effort to clean it, 28527-9.—It was always dry at low tide, 28530.—It had silted up 6ft. since he began to fish, 28531.—In winter the tide carried in stones and gravel from the bay, 28532-3.—Breakwater required dredging, 28534.—Priest had been spoken to, and witness believed he had written about it, 28538-9).—(*Mr. Brennan*—Mr. Bryce promised something should be done, 28540).—(*Mr. Gallagher*—A little pointing was all witness saw done, 28541, 28544.—No protection to harbour for breakwater to be pointed, 28544-5).—(*Mr. Duffy*—No more than 6*s.* worth had been put on it).—(*Mr. Gallagher*—Vessel broke down jetty and it was repaired, 28542-3.—Mr. Green had been there, but fishermen had not spoken to him, 28547-51.—Curing station badly needed, hundreds of cargoes of fish lost through want of it, 28535-6, 28552.—Mackerel, herring, and cod would be cured, 28533).

SCOTT, Dr. HENRY MARK.

See pp. 34-5.

His district comprised parishes of Castleconnor and Kilglass, electoral divisions of Rathmacurky, Castleconnor East and West, Castleconnor East was scheduled, 28554-5.

Maintenance of Roads.

Employment should be provided for the people at home to prevent emigration, 28556, 28596.—Majority of the people were very poor, direct labour on roads would employ sons of small holders, man with two sons earning 10*s.* a week would be in more comfortable position than at present, 28556.—Men should be employed direct by County Council, not by contract, contract a sweating system, 28557-8.—By it a man took a contract for a mile or two for maintaining and keeping road in order, employing men at wages of 7*s.* or 8*s.* a week, and making as much profit as possible, 28559-60, 28604.—Middleman should be got rid of, he was usually a man with a holding of 40 to 60 acres, and could live on his land, 28561, 28572.—Employment of direct labour not allowed except in a few counties, Local Government Board's permission had not been asked, 28562-3.—Roads in one county in Scotland maintained by direct labour, wages £1 a week, yet difference in cost of maintaining roads was very small, 28564.—Direct labour would not only give employment but would also provide better roads, 28565-6.—Election of County Councils greatly in hands of class that took contracts, though they were in a minority when the whole county was considered, they worked with sweated labour, and wished to keep contract system, witness

SCOTT, Dr. HENRY MARK—*continued.*

wanted to provide for permanent labourer and small farmers' sons, 28567-72.—Contractors were required to be men with capital, and had to have security, so that surveyor could compel them to do work, with direct labour men would earn £10 to £14, and remain at home, 28573.—It might be a slightly more expensive system, a few superintendents would be needed, 28560, 28574.—Grand Juries put roads under contracts, and employed no direct labour, 28575-6.—Middleman's profits would be saved, owners of vehicles who were ratepayers would also be spared expense of wear and tear, 28577-9.—Matter was one for decision of County Council, witness would compel them to have direct labour, 28580.—County Councils were elected, every man had a vote, 28581-2.—Fewer landholders with valuation over £10 than under, but they had numbers of relations, it was a family affair, smaller men not instructed as to what was best for themselves, many thousands a year collected in rates, best value should be got for it, right to benefit labourer as the man who did the work, 28583-5.—Ignoring of popular Government not advocated, if higher authority pointed out that direct labour was best for small landholders the County Councils would do it, it was advocated for purpose of giving labourer a chance, 28586-8.—It had never been suggested in Sligo, if it was put before them the people would insist on it as in Athlone, 28589-90.—It would not raise the rates much, public money should be spent for good of greatest number, 28591-2.—Small farmer who took contract and did work himself not to be interfered with, 28593-4.—Roads not well enough kept for money spent on them, 28595.—One to four miles of road in contract, great benefit to have roads in West of Ireland properly kept up, 28596.—Contractors both worked themselves and employed labour, 28597.—Wages not good, double would be paid for direct labour, a man would not take contract without profit, 28598-9.—Roads kept about the same now as under the Grand Juries, mileage was increased, 28601-2.—Labourers would be paid 10*s.* to 14*s.* for direct labour, 28603.

O'NEILL, Mr. M.

See pp. 35-41.

Uneconomic Holdings in Kilglass Parish.

Rathmacurky Electoral Division was scheduled, 28607.—Several sales had taken place under Act of 1903 in Kilglass parish, tenants not yet declared purchasers, but expected to be, and paid interest on purchase money, condition of the people would be bad if nothing were done to give them more land, majority could not live on what they had, land was inferior and there was not enough, men industrious, yet men with big families sometimes went to America to earn living and pay rent, 28608.—Majority of holdings between 5 and 15 acres, 28609.

Campbell Estate.—Direct Sale to Tenants.—Necessity for Enlargement and Striping of Holdings.

Campbell Estate was in Rathmacurky Electoral Division, in Union of Dromore West, majority of rents were £4 to £5, some £3, some £10, on Rathmacurky portion of estate the people lived in a village with land in rundale, there were 19 tenants and 3 economic holdings, the rest were miserable, valuation 15*s.* to £4, 28610, 28658.—The people entered into purchase agreements without consideration, could not meet annuities if money from America were withdrawn, 28611.—They all got money from America or Scotland to pay rents, 28612.—They purchased at 7*s.* in the pound off, but that made little difference, 28651.—The estate was four miles from Dromore West, 28653.—Reason for the poverty was the want of grass land, no compulsion in Act to enable Estates Commissioners to purchase it, it was suggested to landlord to sell through Board or Estates Commission, but he refused, and preferred to sell direct to tenants, 28654-6.—There were some arrears, tenants owing one or two years were charged one year's rent, 28657.—Nothing could be done unless Estates Commissioners or similar body striped estate, it could not be done voluntarily, present holdings not worth striping, it would not suit unless more land were available, better to have the holdings solid, the tenants might allow the Board to do it if they got more land, 28657-67.—Difficult to stripe land after sale unless more were added, 28668-70.—Plenty of grass farms in parish in next electoral division, holdings could be enlarged without lifting them, 28671-5.—Colonel Campbell had two estates in Kilglass parish, Frankfort Estate was all grass farms held by non-residents, recently sold to these tenants, 300 acres sold last November, 28675-6.—Seven judicial tenants on 300 acres, each had economic holdings elsewhere, 28677-8. They preferred working land in grass to tillage, they had forty acres on an average, one man had 61 acres, and 71 in an adjoining townland and a residential holding beside, he lived a mile or two away, 28679-82.—Valuation of the 300 acres was £120 to £125, 28684.

Hale Estate.

Twelve tenants in one village, all below £4 valuation, got £108 between them every year from America, 28612-4.—Formerly there were migratory labourers, now everyone but old people had gone to America, they went there rather than to England or Scotland, 28615-6.—The estate was all together, there were two villages, a portion of the estate in Castleconnor was purchased by the Board 8 years ago, 28617.—Little land bought for enlarging, 3 holdings were made from made from 80 acres, two tenants migrated, and their holdings were divided among six persons with very small holdings of 3 or 4 acres, 28618.

Uneconomic Holdings.—Work of Congested Districts Board.

26 other tenants had uneconomic holdings, Board had done good work on estate, made roads, etc., want of land prevented people getting benefit, 28636, 28638-9.—Estate bought three years ago, vested year or year and a half ago, 28637.—Estate in two portions separated by river, both sides of river tenanted, 28640-2.—Grass land five or six miles from tenanted land at Knockagower, no demesne on estate, 28643-6.—Three men migrated from Culleens to Knockagower, land left was divided among others, no one at present leaving one place held land in another, 28646-8.—Two houses built so far, one more to be built, 28646.—People would prefer to get plots if land were near home, they paid £3 to £5 for con-acre, grass lands connected by road at a limit of four or five miles could be used for tillage, etc., 28619-27, 28650.—People with no land went a long way for con-acre, but it did not pay for the labour, only gave a little more produce, 28625-9.—Middlemen let out con-acre, people cultivated their own land to last extent before taking con-acre, 28630-1—A large profit was made by letting in con-acre, 28632.—The plots were taken for two years or for five, corn crop taken off first and then potatoes, 28633-4.—Artificial manures used, 28635.

Orme Estate, Duke Estate, and Rashleigh Estate.

Orme Estate, Duke Estate, and Rashleigh Estate were sold direct to tenants, tenants were let off a few shillings, and a year's rent was added to the purchase price, so they embraced the chance of purchase in a bad season, 28656, 28684-5.—No rundale, some non-residential farms were sold with the others, majority were small uneconomic holdings, 28686-90.—No houses on the grass lands, herds were the only people making living out of them, 28691-2.—Some grass lands on Rashleigh, Orme, and Duke Estates, on Rashleigh Estate a few tenants had large farms, in Carranduff there were ten farms rented under £10, one over it, three valued under £10, eight over it, same system of rent and valuation all over division, people poor, it ought to be scheduled, 28693.—No grass lands available for enlargement on Rashleigh Estate, 28695.—Plenty near it, 28696.

Enlargement of Holdings Prior to Sale.

Effort should be made to enlarge holdings before sale, 28697.—Better for the country to have a number of prosperous small farmers than a few large graziers, they would make more out of the land, and be more prosperous, prosperous people made a prosperous State, 28698.—Tillage paid better than grass if judiciously worked, 28699, 28701, 28704.—If a tenant had capital he could fatten cattle, whereas now they were sold as stores at only half the amount, 28701.

O'NEILL, Mr. M.—*continued.*

Witness's Farm in Culleens.

Witness had a small farm over 30 acres, a great part of which was unreclaimed, 28700, 28702.—Valuation £3, 28703.—The whole of it was tilled in five-course rotation, some fields being left out for grazing and meadow, 28705.—Rent low, 28706.—£10 an acre would be required to reclaim it, 28708.—Unreclaimed portion was not tilled, it was half the farm, 28709-10.—All the 15 acres under tillage were reclaimed, 28711-2.—By witness and his father, 28713.—Small tenants had enough capital to carry on tillage, 28714-5.—Witness's farm was in Culleens, 28716.—He could not live on it if he left it in grass, it would grow rushes and heather inside ten years, 28717.—The potatoes were not a good crop, twice as much could be taken off better land, 28718.—Witness kept five or six cattle and one horse, could keep more if he had the means, rough land could not be managed without horse, 28719-20.—Holding cultivated by spade and not large enough to keep horse would be uneconomic, 28721-2.—Beasts were sold at 1½ to 2 years old, land not good enough to grow crops to fatten them, 28723-5.—Witness had no help on farm except hired man occasionally, he had a wife, one child, and a mother, he could not make a living with larger family, 28746-50.—He took no holidays, and worked from 6.30 or 7.0 a.m. to 10 or 12 o'clock at night, most farmers did the same, they were very industrious, 28751-6.—He had to manage carefully, most people in locality had to trust to shopkeepers sometimes, 28748.—If farms were larger farmers would till them if they got something to start with, but it was difficult to make an up-hill fight, getting credit for everything, and paying £20 to £100 for it, 28757.—Witness's case typical, he sold stock at year or year and a half at local fairs, 28803-4.—Local graziers bought it and strangers, too, they reaped profits while they reared stock, 28805.—Witness found it a struggle to live, 28806.—He had to go into debt, and was uncertain whether he could meet it, 28806.

Question of Industries in Dromore West.

No creamery in Dromore West, no industry at all, except a little sale of turf, which hardly paid 1*s.* a day, 28726.—No reason for not having creamery, it would answer in district, farmers made butter at present, and sold it for 6*d.* a pound to local traders, 28727-9, 28731-2.—Housing accommodation bad, 28730.—Capitalists afraid to invest money in industries, those started failed, people not enough advanced to start co-operative industries, 28731.—Boot factory started in Ballina by Father Quin and others, failed for want of capital, with no one to foster industries they generally fell through, 28735-9.—No creamery had been a failure, 28734.—Board had not started anything, 28737.—Failure of an industry like the Ballina industry made capitalists refrain from starting industries, 28741.

Cottage Dairies and Creameries.

Cottage dairies attached to houses would be an improvement, and would meet the people's wants better than a creamery if market were found for butter, market would come if fostered, poor people starting an industry on their own responsibility had not much chance, 28743-5.—Cottage dairies would be more suitable than creameries because grass lands were in centre of district and tenant's land up towards mountains, distance great to a creamery in grass lands, so profit would not be much on account of loss of labour, 28758.—Roads bad in mountains, 28760.—Creamery butter fetched a better price, 28761.—Tenants kept two cows as a rule, and had to buy turnips, etc., in winter, 28762.—Better to have co-operative scheme than individual dairies, 28763.—In one case within witness's knowledge where there were three cows and a dairy the owners exhibited at fairs and obtained fancy prices, such a system would be remunerative, 28764.—Cottage dairies involved no change of system, it only improved the butter, 28765.—Small holders would make double, 28766.—With two cows churning could be done twice a week, three cows necessary, 28767-8.—Butter sold in rolls to local shops, no competition, same price of 6*d.* to 7½*d.* per

O'NEILL, Mr. M.—*continued.*

lb. everywhere, price of good butter reduced by the bad quality of much that was offered, best butter went to market and got the highest price, 28769-76.—Quality of butter varied from different houses, 28773.—Creamery butter would be more uniform, 28778.—Better price would be obtained if difficulty of distance could be got over, 28779.—Cows would not have to be fed in winter to keep up milk supply for creameries, 28780.—There was a tendency in the case of creameries to send all the milk to creamery, leaving none for family, skim milk from creamery was of little value as food, 28781.

Amount of Capital Necessary to Start Migrants on New Holdings.

Fifty pounds might be necessary to start tenant on new holding, it depended on circumstances, 28782.—Houses already built on Hale Estate, out-offices small, no accommodation for pigs, 28783-5.—One tenant was offered £30 free grant and £25 loan if he would build a house, good scheme to improve condition of tenants if each got loan of £25 payable on same terms as purchase loans, 28786.—£50 to £70 wanted to stock farm of fifteen acres if tenant had no money, 28787.—He would not like to go too deeply into debt, 28788.—Two milch cows could be bought for £20, a horse for £10 to £15, £10 would be needed for farm implements, £4 for pigs, £100 would be wanted to stock farm if tenant had no stock of his own, 28788-91.—Farms varied, on one of £5 or £6 rent stock would be four or five cattle, one horse, and pigs, almost everyone had plough and harrow, 28792-4.—Such a tenant could not start on larger farm with stock he had already possessed, there would be larger calls to meet, 28795.—He might get extra capital needed at first by letting balance of land, better if he had his own cattle and laboured land himself, 28796-8.—A man could be successfully migrated if he got loan on same terms as purchase loan, men did not want to take more than they could meet, men who were not industrious would not take loan, 28799.—Good arrangement to delay premiums repayable on advances for two or three years, 28800-2.

Howley Estate.

The land was inferior, mostly bog and reclaimed moor, and living could not be made out of the holdings, tenants agreed to purchase if sufficient grass lands were added to make holdings economic, after terms were arranged tenants murmured and appealed to Estates Commissioners to interfere, result was certain grass lands were sold for distribution, but not enough, tenants' first agreement fell through, final agreement signed with Estates Commissioners, 28807-8, 28812.—The estate was in Rathmacurky division, 28809.—A mile or two from Campbell and Hale Estates, 50 tenants on Howley Estate, 32 got holdings enlarged, they received four or seven acres, those of fairly high valuation from £5 got increases, those from £5 to £3 got nothing, the small occupiers should have had first claim, 28810-11, 28814.—Maria Kennedy got 6 acres, Phil Atkinson, with two acres, got nothing, he lived on bog and had no valuation, 28813.—All the grazing land was not yet divided, but sale was completed, some of the tenants refused to sign agreements, they were decreed and forced to sign by Estates Commissioners, except one, a certain section of Land Act was put in force against him, and he also was decreed, 28815-7, 28820.—Estates Commissioners bought remaining grass land of 365 acres, and had held it three years, apparently they did not propose to re-arrange it, 28817-20.

Roads.

Roads needed in mountains of Dromore West, 28821.

Harbour Required at Poulaheeny

Harbour recommended at Poulaheeny, splendid natural harbour, 300 or 400 families under £5 or £6 valuation would benefit, they were fishermen who could not live on the land, they had signed a memorial which witness handed in, 28821-2.

MITCHELL, Mr. WILLIAM.

See pp. 41-3.

Uneconomic Holdings in Parishes of Templeboy, Skreen, &c.

In parishes of Templeboy, North and South, Skreen and Dromore East and West, there were twenty-nine holdings not exceeding £20 valuation, 128 under £15, 142 under £10, 178 under £5; holdings above £20 were not taken into account; there were 2,175 acres untenanted land in same parishes, valuation £736 12*s.*.; on Camcuil, a property under consideration of sale to the Congested Districts Board, there were thirteen tenants with uneconomic holdings; a shopkeeper had purchased over their heads; something should be done for the poor people; eight tenants on valuation of £10 15*s.*, 28826-8.

Compulsory Acquisition of Grass Lands—Mr. King's Ranch at Templeboy.

Rural district should be scheduled and the grazing farms acquired and divided, especially the ranch of Templeboy belonging to H. A. King. Mr. King had lived in Australia for fifty years, a bailiff or herd took in grazing for him, there were no houses on the land, the tenants had been evicted in 1848 or 1849, he had no other grass land and no dairy, graziers had had the land and could not get rent fixed because it was grass land, so gave it up, it comprised 335 acres, valuation £227 5*s.*, 28829, 28833-5, 28841-6. The land should be divided, but compulsion was necessary, and should apply to tenants as well as to landlords, Ballygrenan was four miles from Dromore West, in applying compulsion person and circumstances of land should not be considered, only whether it were required, 28829-32, 28836-8.—Tenants evicted from Mr. King's estate had emigrated or were living on the mountains, descendants could be found, 28829, 28846.—There was other suitable grass land in Templeboy, 28847-8.

Effect of breaking up Grass Land on Cattle Trade.

Breaking up of grass lands would affect cattle trade by increasing the number of stores, market for stores would not be greater in Ireland, 28849-50.—Men could fatten their own stores if they had more land, 28851.—Witness was a farmer, he bought stores and reared them, 28853.—Mixed farming got more out of land, 28854.—Tenants had not the land to fatten beasts at present, 28855.—Best market for stores was England and Scotland, a market would always be found, there might be diminution of market at first, but that would right itself, 28856, 28859-61.—Making the most of what the country would produce was the best way of doing it good, 28861.—Witness had two holdings, one 120 Irish acres, the other forty-four statute acres, he lived on the latter and had purchased it under the Act, 28857.—He kept stock till it was three years old, 28858.—Eight acres was worked in tillage on the small farm, on the other farm there was no tillage except what the herd tilled, 28862-7.—His son was soon going to the other farm, when it would be no longer a grass farm, 28868.—He did not want any additional grass land himself, 28868.—If it were for the good of the country he would relinquish his grass land, 28869.—A fair price should be paid for grass land, which Government should fix, 28870-1.—If compulsion were exercised no one ought to lose but the State, should there be profit the State should get it, 28872-5.

ROUSE, Mr. W.

See p. 43.

Land Act inoperative in Dromore District—Compulsory Purchase advocated.

Land Act had not worked at all in Dromore, twelve or fourteen landlords in parish of Easkey and only two sales had been effected, demands of landlords considered exorbitant, 28878.—Landlords more disposed to sell to Congested Districts Board or Estates Commissioners than to tenants, 28879.—In most cases tenants had tried to purchase, 28882.—Witness's reason for wishing to have compulsion was

ROUSE, Mr. W.—*continued.*

to be able to get land at a price more nearly approximate to tenants' offer, 28884.—Compulsion should be applied to tenanted as well as untenanted land, 28885.—Only about five millions a year available for land purchase, 28886.—Parts of the district were already scheduled as congested, but there were even smaller holdings and lower valuations in unscheduled portions, 28888.

Condition of unscheduled portions of district.

In Ballymeny townland there were fifty-five tenants, and three-fourths were under £5 valuation, 28889.—Population of Ballymeny was 275, each person would get 1 acre, 3 roods to live on, 28890.—Some assistance should be given by Congested Districts Board to such small valuations, 28892.—Aid was given if a place was scheduled, 28894.—There might be a Parish Committee, there was one at Rathmacurkey and Easkey, 28895.—There was another townland called Rathlea containing eighty tenants, more than half under £5 valuation, some living on two and a half acres of land; a third property contained about 50 tenants, about half living on farms of a valuation of £5 and under, very little grazing land in Rathlea, that might be split up, perhaps 300 or 400 acres, 28896.

Industries Needed.

The place was very much lacking in industries, if something could be done to foster industries and give people some little employment it would be a great improvement 28897.—Only industry at present existing was kelp-making, and that was almost valueless, 28898.—Lace-making might be encouraged, 28899.—Unlimited market for lace, 28901-2.—No lace-making in neighbouring scheduled area, 28909.—If started there the people in witness's area would benefit, 28910.—Great number of young girls in locality had practically no employment except to emigrate, 28900, 28904-5.

Fishing Industry hampered by bad Pier Accommodation—Improvement of Natural Harbour between Rathlea and Poulaheeny.

Fishing industry rather poor owing to very bad accommodation, there were some piers, but they were practically of no use; one very central point, particularly good for fishing midway between Rathlea and Poulhaheeny had a fairly good natural harbour which with some expenditure could be made a beautiful pier and landing place for boats, 28906.—District not scheduled, that was why witness referred to these places having such wretchedly small holdings, 28907.—They ought to be scheduled, 28908.

M'NULTY, Rev. PATRICK.

See pp. 44-6.

Evictions from King's Farm.

Witness's district and Tiereragh generally, should be an agricultural district, development of agriculture and apportionment of people to the land should be facilitated; coming into the district in July, 1869, on Bianconi's car witness heard from driver how eighteen years ago he had seen one morning twenty-six families asleep on the roadside, having been evicted the day before from King's farm, saucepans and things were scattered about the road, in the evening people had all disappeared. Witness had heard that there were 355 acres of land on that farm, from 1869, and probably for twenty years before, it was a grass farm from which these people had been evicted, and it had remained ever since in hands of landlord, children of these families should have been sent back to that land, 28913.—No tenants now on land, 28981-2.—People took in cattle at so much a head, for a long time it was in the hands of one tenant, 28933.—Managed by the landlord now 28984.

Question of Purchase of King's Farm.

Witness not aware that any attempt had been made to buy farm from Mr. King, or whether he were willing to sell it, 28914-5.—Whole decision as to sale

M'NULTY, Rev. PATRICK—*continued.*

rested with landlord, tenants could do nothing, 28916. —In many places in Ireland local people had suggested to landlords sales which had been carried through, witness had been concerned in a very large sale, as far as tenants were concerned there was no solicitor at all, sale carried through by solicitors having carriage of sale, 28917.—Mr. King's property was managed by firm of Dublin solicitors, 28918, 28982.—No suggestion of purchase had been made to solicitors, only purchasers would be Estates Commissioners, 28919.—Witness not aware if attention of Estates Commissioners had been drawn to fact that this land might be available, 28922.—It was not a scheduled area, 28923.—Congested Districts Board could buy land outside a scheduled area, 28924.—Small occupiers all round about obliged to send children to America just when they were grown up, painful instances where young men and girls had been obliged to go away, 28925.

Other Grass Lands available in District.

There were other grass lands, about 200 acres, available at Carrowcullen, 28926-7, 28930.—No resident tenants, it had been sed exclusively for grass for some years, but in years gone by had been used entirely for agricultural purposes, 28931.—There should be some authority vested in Estates Commissioners which would extend agriculture and keep people from being driven out of the country, 28934-5, 28938, 28941.

Compulsory Purchase and Compulsory Tillage.

Landlord of those lands was not getting £1 a year as a judicial rent, tenants occupying these districts could get £4 and £5 an acre for it by operation of law, 28936.—If landlords would not sell the land they would have to buy it compulsorily from the judicial tenants, no other way as far as witness was concerned, 28940.—Witness was prepared to apply compulsion not only to landlords but to tenants, 28941.—The land was naturally intended for tillage, but people had to go to America because they had no employment, 28943, 28945-6.—Witness wished that there should be moderate-sized holdings on which people could live, then they could remain at home and have as many cattle as there were in district at present, 28944.—Objection to such an extent of grass land was that tillage was pushed out of the country, 28945.—A man who tilled 100 or even 50 acres must give a good deal of employment, at present farms afforded no employment, no one living on them, 28947.—Ten or twelve acres of land was quite sufficient to maintain a family; family living on ten acres would be better for the State than four or five, or ten bullocks, 28448.—People driven from the place where nature intended them to live to the slums of the mountain by extension of grazing farms, 28950.—If witness had a farm of 100 acres he would resent State laying down conditions on which to farm, but at same time would submit to justice, 28951-5.—State ought to have power of resuming or taking up these lands and should encourage young men to remain at home, if the fathers' holding could be increased by a few acres, witness knew several cases where families could remain together, at present they only left behind the old and infirm, 28953.

Tillage on a small scale might pay where tillage on a large scale would not.

A man living on a small holding could work for two hours or a single hour, but a man having a large farm was obliged to employ labour for the day, 28954. —In the case of the large farm it could be taken up and given to tenants in reasonable holdings, they need not be very large, small holdings of this good land worth a whole district to a poor man for supporting his family, 28955.—Tillage on a small scale very different from tillage on a large scale, 28956-7.—Owing to climate and seasons, man employing many labourers might find on occasions that he could neither dismiss them or keep them working, 28958-9.—Facilities for purchase should be given to tenants who tilled, then to tenants of same class, and then to residents, 28961-3.—State had an obvious advantage from tillage system, 28964.—Irish race was degenerating owing to strong, able men leaving the country, 28965.—Practical encouragement was given to tillage by the State in Australia, 28966.—Same sort of thing needed in Ireland, 28967.

M'NULTY, Rev. PATRICK—*continued.*

Small Occupiers obliged to till in order to live.

Small occupiers could not take to grazing, they must till the land, in order to live on it, 28968-9.—Very little stall-feeding done in Ireland, grass taken off and cattle allowed to eat it, some who had grazing lands would not even cut the meadow for purpose of feeding cattle during winter, they would leave a field of meadow standing, and if winter was very bad would let cattle on it to save labour, 28970.

Agricultural Instruction.

County Council had employed an agricultural instructor, 28971.—Intelligence of people awakened a good deal, but not much practical result, 28972.—Some men who had land were quite capable of carrying out any system pointed out to them, they should be encouraged to make their holdings demonstrations in the locality, very little good cultivation practically, 28973.

Extent to which condition of farmers could be improved without enlargement of holdings—Class of land in neighbourhood.

Room for improvement in rotation of crops and in drainage and improving homesteads, 28974-6.—Land in this part of district required simple cultivation, and drainage would be of great service, it was good land as a rule, but some portions would never pay for cultivation 28977.—Land from here to Ballina was cut-away bog reclaimed, 28978.—Such land would not pay for hired labour, it was only that people had to be doing something, 28979.—Comparatively good outlet for tenant's labour once his improvements were secured to himself, 28980.

Decline of Fishing Industry—Training necessary for its Revival—Plenty of Fish.

This part of the country bordered on the sea, splendid fishing ground, but no accommodation, there used to be a number of boats along the coast, none at all now; in Portavad on Ballysodare Bay, where there was a nice safe harbour, there were forty boats, when cathedral at Ballina was being built, in 1828, a great deal of stone was quarried in Dromard, and taken in boats up River Moy to ground where cathedral was built, that was before the Famine, 28986.—In 1845, twice as many men were engaged in the fishing on the Irish coast as now, plenty of fish in the bay if there were only proper means of capturing them, 28987.—Plenty of fishing in Sligo Bay, boats came from Isle of Man, but there were no local boats, 28989.—Fishing required very special training, men must be accustomed to it and to the sea, 28990.—Population declined, and industry dwindled at time of Famine, 28991.—Industry never recovered, witness had received letters from people whose parents had had boats and who imagined there was some property to settle, for twenty miles along the coast fishing business was entirely killed, 28992.—Witness had hoped that people would take to the sea again and that it would receive its due share of attention along with agriculture, 28992.—There used to be immense catches of herring, 28994.—Herrings still there, 28955.—About three years ago there had been doubt about it, men came over from the other side of County Sligo, the Donegal side, and fished with other boats, they found they were driving through shoals of fish, people commenced by selling them at 50*s.* per 1,000, and ended at 7*s.* 6*d.* per 1,000, when buyers got what they wanted they did not go further, 28996.—Congested Districts Board had made seventy-four loans amounting to £626 16*s.* 10*d.* for small boats in Sligo, there were a few in witness's own locality, 28997.—They extended from Ballysodare to Dromore West, about twenty-five miles of coast line, 28998.—Training was absolutely necessary before fleet could be greatly enlarged, people would not go at present into a boat and stay at fishing as they would if properly trained, 28999.—Any application had been freely acceded to, 29000.—Boats had come from other parts of the West of Ireland, from Isle of Man, and even from French coast to fish in Sligo Bay, 29001.—Witness was not aware that Donegal boats ever came, 29003-4.

M'NULTY, Rev. PATRICK—*continued.*

Absence of means of Locomotion.

People were put to considerable inconvenience for want of locomotion, not the slightest public means of transit except a one-horse car, people marketing their produce lost three days by the journey to Sligo and back, they had to start at two or three o'clock in morning and had to stand in the market, and come home the following night, terrible inconvenience and danger to life, witness had heard of three or four accidents, 29005.—The new railway would do a great deal of good, 29006.

GILLIGAN, Mr. P. J.

See pp. 46-7.

Condition of holdings in Aughris—Earnings sent from America—Purchase and re-striping of holdings.

Twenty-nine tenants on townland of Aughris, sixteen tenancies in rundale, three tenants had holdings of eight different plots, witness had five plots over a mile between some of these plots, 29008.—People wanted Congested Districts Board to buy, 29009.—Landlord had been approached and had offered them 5*s.* on first term rents, and 3*s.* 6*d.* on second term rents, 29010.—Average bid was 6*s.* for the whole townland, it was in trustees' hands at the time, and they could not improve their offer, there was a place where crops had been destroyed by spray from the sea, people could not live on the land but for money they got from their children in America, 29011.—Sons went to America, nothing for them to do at Aughris, very often witness got £30 or £40 annually from his family in America, 29012-3.—Very difficult thing to purchase land in rundale as it was at present, there was a grass farm at Garraduff of eighty acres, if there was any addition to holdings, people would feel inclined to purchase, 29016, 29029.—Rundale not increasing, 29019.—Better if Congested Districts Board or Estates Commissioners would buy the land and re-stripe it, 29020.

Fishing Industry.

They had a small pier at Aughris, before it was erected there had been a very good salmon fishery, £18 to £21 made per man for three years in succession, paying all expenses of fishing gear, 29014.—Then came a failure for eighteen or twenty years, year after year it declined, fishing for nothing at all at the finish, then the people ran short of boats, 29021.—Witness got his boat from Killala, 29022.—People always bought their own boats, 29023.—Witness had a share in two boats until the last few years, 29024.—Any amount of herring still about the bay, but people had neither boats nor nets, 29025, 29030-1.—Herrings came in every year, witness had never seen better signs than during last two years, 29032.—There were boats to hire quite convenient, but it was not convenient to get out on the bay except on a very calm day, 29033-4.—A few young fellows could be got to go out, but witness did not believe they could continue, 29035.

MELVIN, Mr. T. P.

See pp. 47-8.

Negotiations for sale of Mr. King's Farms at Templeboy.

Ranch at Templeboy, property of Mr. King, of Australia, had been in the hands of a firm of Dublin solicitors, there were negotiations for sale, solicitors made an offer; some of the tenants resided in Dromore West, and some in Templeboy, they refused to buy unless Ballygrenagh and other ranches or farms were subdivided among them and sale fell through, 29039, 29041-2, 29044.—Mr. King had tenanted land as well, 29040.—Solicitors made no offer of untenanted land, not much trouble about price if they got lands for 5*s.* in the pound immediate reduction, 29045.—Only a question of splitting up these lands, witness was not

MELVIN, Mr. T. P.—*continued*

a tenant on that property, but had been appointed to represent tenants before Commission, 29046.

Garryduff Farm derelict—Hostile attitude of people.

There was a farm at Garryduff owned by Mr. Beatty, of Inniscrone, lying derelict, no man would bid for it, 29047, 29049.—People would not send their cattle there to graze, 29052, 29055-8, 29077.—Close beside it were about forty small holdings under £5 valuation, 29048.—Mr. Beatty had tried to sell by auction, but people were opposed to this sale inasmuch as they expected it to be carried through the Congested Districts Board or Estates Commissioners in accordance with Mr. Wyndham's Act, 29053.—Farm had been a sort of accommodation farm to tenants in the line of grazing, there was a herd who managed the farm, took in their cattle, and received the grazing money or rent, 29059.—Up to twelve months ago small occupiers on margin sent their cattle to graze, paying so much a head, 29057-8. Land was sometimes overstocked, 29060.—Then it was proposed to sell the two divisions in two plots, when the people would have been excluded, 29061, 29063.—Sale was abortive, 29062.—If it had been carried through land would have passed permanently into private hands, 29064.—And possibility of having holdings enlarged would have disappeared, 29065-6.—People intervened in time and appointed men to speak to Mr. Beatty, 29067.—Strangers buying would have been made uncomfortable, 29068-9.—Mr. Beatty, seeing that auction fell through, did not press sale to surrounding people, but Estates Commissioners had since sent a man to examine the land and see what it would be worth, 29070-1.—If Estates Commissioners bought it they would make the land available, and people would be satisfied, 29073.—Not known whether sale would take place, 29074.—During period of uncertainty surrounding men had left the land severely alone, 29075-7.

Amount of Grazing Land in Ballygrenagh.

Very little heard about grazing ranches in Tireragh, whole barony of Tireragh could be classified as one grazing ranch, 29078.—There were 1,100 acres, including rough sides of mountains, in Ballygrenagh, it had been stated that there were only 300 acres, none of it tenanted land, one portion was claimed, but the man would not go into court, which proved there was no proper tenant, 29079.—If he were a tenant he would be entitled to get fair rent fixed, 29084.—There were 600 acres of good land, 29080.—And a lot of rough pasture, very suitable for small farmers along mountain side, 29082.—Some of the land not suitable for tillage, but would come in conveniently for the people of southern Templeboy district, it was not tenanted when Wyndham Act was passed, 29083.

O'NEILL, Mr. J.

See pp. 48-9.

Tenants in Caminil—Refusal to acknowledge new Landlord—Tenants willing to purchase holdings provided they got some grass land.

Witness's landlord was at present Mr. Cuffe, before 1902 it was Mrs. Grace Middrie, then Messrs. Fenton and Lyons acted as agents, auction was held of house, furniture, and farm implements in May, 1902. Mr. James L. Cuffe, of Aclare, took place for grazing purposes immediately after, in the beginning of 1904 agents wrote to tenants offering their own holdings for sale, tenants would not accept terms, as grass lands had been reserved, and finally said they would abide by decision of Congested Districts Board or Estates Commissioners, Board replied that they were attending to matter, all went well till some time in 1905, when tenants were told by agents that Mr. James L. Cuffe was their landlord, and that all rents from 29th September would be due to him, form sent to tenants to fill up acknowledging Mr. Cuffe as landlord, which they refused to sign, 29086.—Tenants did not know the law, 29096.—They were decreed for rent as result of refusal, 29097.—They had not been asked to sign form before purchasing, 29097A.—There were thirteen tenants, nine had land with total valua-

O'NEILL, Mr. J.—*continued.*

tion of less than £11, on these nine holdings there were forty-five people, 29086.—The people did not buy direct from landlord, because they wished to get addition to holdings, 29087.—There was a good deal of grass land which belonged to Mrs. Niddrie, which Mr. Cuffe had bought, 29088-9.—There was a mansion-house used as a police hut at present, 29090.—It could be used in a different way—a doctor had applied for loan to get a mansion-house built, it would be very suitable for him, 29099.—If public board intervened it would be important to have means of disposing of mansion-house, it would take away a good deal of purchase money and instalments could be met more easily, 29100.—Mr. Cuffe had more grass lands there, 29091.—He had cattle of his own, 29092.—No use to try to buy from Mr. Cuffe, it would make no difference to a man with a 5*s.* valuation, 29094.—Tenants would be willing to buy holdings if they got some grass as well, 29095.

MARLEY, Mr. PATRICK.

See p. 49.

Conditions of Life on Witness's Farm.

Farm of fifteen acres bought from Sir Malby Crofton in 1847, 29102-3.—Tenant-right had been bought, 29104.—Very hard to live on small spot, poor men paying very dear for it, 29106.—Witness kept a few cows and tilled part of holding, 29107.—He got oats, roots, meadow, potatoes, turnips, and mangolds, 29108.—About three acres under tillage, 29109.—The rest was grazed, 29110.—Witness kept two two-year-olds, two cows, and a couple of calves and a horse he could not feed more, 29111-3.—He had three sons with him and two daughters, the rest were in America, 29115-6.—They could not live on holding if it were not for America, 29117-8.—One son helped with farming, the others were at school, 29119-20.—He could manage farm himself with assistance, and they had to get in men according to the work, 29121.—If they got an enlarged holding the younger sons would be kept at home to help, witness's family was young at present, but when they got older and saw that they could not live at home they would go away, 29122.—If there were anything in the line of these ranches going witness ought to get a division so as to keep his sons at home and stop emigration, 29125-7A.—Landless man could not be more in need than the man who already had a patch, but the head of a family whose holding required enlargement should have a prior claim to witness's son so long as the son was youthful and could go abroad, 29128-30.

ROBINSON, Mr. RICHARD ST. GEORGE.

See pp. 49-56.

Size of an Economic Holding.

In Sligo, if land were divided for enlarging holdings, enough should be given to rear three or four cows and their calves till year-olds, with sufficient meadow and tillage for a man to work with own family; area required would depend on quality; holding with a valuation of £12 or over would be economic, but the more a man got the better, 29131-2.

Reasons for sale of Cattle as year-olds.

Calves sold as year-olds because they fetched high price then, 29133.—Few farmers fattened; they could if they went in for tillage, but that did not pay, 29134-6.—Tillage might pay with dairying; cattle could not be fattened without tillage or artificial feeding, 29137.—No reason why it should not be done, 29138.—More profit in selling year-olds than two-year-olds, 29140.—£8 2*s.* 6*d.* paid for yearling; good two-year-old bought for £11; only £3 difference for an extra year's keep; £4 necessary to repay outlay, etc.; £12 must be paid for two-year-old in order to make a profit, 29144-51.—Two-year-olds £1 5*s.* dearer this year than for many years past, 29146.—Beef from Canada and the Argentine probably four years old, 29141, 29143.—In England and Scotland 1½-year-olds put into stalls and came out as two-year-olds fat, 29142.—Average price of yearling £7 to £8, 29145, 29204.—Good ones fetched up to £9 5*s.*, 29204.—Average price of two-year-olds, £10 10*s.* to £11, 29204.

ROBINSON, Mr. RICHARD ST. G.—*continued.*

New Lettings.

Few new lettings made by Board in Sligo; none by Estates Commissioners; if new occupier had not enough capital to stock farm he would be driven temporarily to sub-letting, 29151-2.

Migrants.

Migration of strangers from a distance would be resented by occupiers in neighbourhood, 29153.—Some of whom were on uneconomic holdings, 29155.—Grass lands proposed for sale were mostly in hands of judicial tenants, 29156.—Dealing with tenants a delicate matter, 29157.—Best for public authority to first enlarge uneconomic holdings in neighbourhood, 29159.—Residents would still object because they wanted the grass lands for themselves, 29160, 29164.—In discussing sale with tenants witness had made clear that owner could not guarantee what Estates Commissioners would do with land, 29153, 29161-2.—Not unnatural for tenants to take all precautions to prevent introduction of strangers, 29163.—Tenants on estate in Galway recently sold to Estates Commissioners would not have agreed to buy if 73 tenants on congested estate in same townland had been included, 29165.—Tenants in congested districts would not migrate to a distance; migrant would require house, offices, fencing and capital to stock farm, total cost would be about £300, 29165, 29166-73.—Twenty per cent. of the people would have enough agricultural knowledge to work new farms if land were same quality.

Restrictions proposed on right of Selling Tenant Interest.

Migrant should not be allowed to sell his tenant's interest till he had been five years in occupation; he got interest free and there was nothing to prevent him selling it and making profit, 29165, 29174-6.

Land available for Migration purposes.

Sufficient land could be obtained by voluntary purchase at fair price; estate of 2,400 acres of good arable land, excluding bog and rough land, being offered within next few months; would not be sold if Estates Commissioners did not give fair price, 29165, 29177-8.—All in Sligo except 400 acres, 29179.—All grass land, 29180.

Price that should be given for Land.

Basis of price of land should be 1⅓ times the valuation with option to owner to make appeal; it was fair in some cases, in others did not cover value of land, 29181, 29214.—Owner should then get capital sum which, if invested at 3½ per cent., would yield net income; net receipts often not a fair basis for selling value; owner sometimes employed labour, for sake of giving employment, in making permanent improvements, or he might have insufficient capital to keep land fully stocked; lastly, but not least, many lands were boycotted, 29214.—Some on properties for which witness was land agent, 29218.

Compulsory Powers unnecessary, but if granted there should be a Court of Appeal.

Compulsory powers quite unnecessary, if granted there should be independent Court of Appeal; in no case should fixing of price be left to Estates Commissioners or Board, 29181.

"Backstairs" Compulsion.

Estates Commissioners as it was unfairly used great deal of "backstairs compulsion," 29181, 29195, 29342.—They wrote to one estate saying, "I am also asked to suggest that if evicted tenant is reinstated it may facilitate in arranging terms for the sale of estates to the tenants," that was a disgraceful suggestion, 29182-6.—As a fact estate in question was demesne land offered for net income of what tenant farmers

ROBINSON, Mr. RICHARD ST. G.—*continued.*

paid, which was less than the owners made out of it, 29187.—Paragraph did not refer to price, it should never have been written, 29189-91, 29193-4.—Owners willing to sell at fair price without such a paragraph, 29194.

Boycotting and Agitation at the mere mention of Compulsory Sale.

Compulsory powers would lead to boycotting and agitation, mere mention of it had done so already in County Sligo and adjoining county, 29195.—Negotiations for sale to tenants would stop if grass lands were compulsorily taken for migrants, 29196.—Mr. Bryce, in his speech introducing present Commission, referred to compulsion, saying Commission would lead up to it; since then one of the quietest districts in the country had been very disturbed, 29195, 29197-200.—County Sligo had always been quiet except a small portion of it, 29201.—It was affected by speech; thought Commission was leading to compulsion and wanted to force owners' hands, 29202-3.—If there were proper Court of Appeal witness would submit to compulsion though he would not like to part with his estate, 29204.—Compulsion should not be given at all, it was a greater evil than congestion, 29313-6.—Plenty of land to be got without it, 29317.—Landlord had a right to his own property, 29318-9, 29324, 29328-31.—Different thing taking land by compulsion for railways; owners were well paid, 29320-1, 29325.—Living was certainly more important than quick transit, but cases were not parallel, 29323, 29325.—According to Estates Commissioners present valuation owner would get nothing for occupation interest; owner must be compensated, 29327, 29329.—Though compulsion might be right in New Zealand and Australia it was not necessarily so in Ireland; there was an element of compulsion in Labourers' Act; no one knew yet how it would work, 29332-6.—Witness's view not modified by fact that Board had already certain compulsory powers, 29337-9.—If occupying tenant were compulsorily expropriated he was very well paid, 29341.

Effect on Cattle Trade on breaking up of Grass Lands.

Breaking up of grazing land would be disastrous to cattle trade; small farmers would not feed cattle to two and a half years or older; area of holdings too limited and artificial food necessary which they could not afford, and which would be unprofitable; tendency would be to raise more young cattle for sale at year to year and a half, when they fetched better price in proportion; existence of creameries fostered this practice; if large graziers were banished there would be no market; Twenty-two graziers in County Sligo who fed 3,500 to 4,000 cattle a year and 3,300 sheep mostly bought in local markets; during four leading fairs in Collooney last year two banks paid out over £62,400, chiefly to dealers; small local men brought cash in hand, so that the £62,400 did not represent anything like the total amount which really changed hands 29204-6, 29208-10.—A few two-year-olds were exported and some 1½-year-olds, 29212.—Graziers bought year-olds, 1½ and 2¾-year-olds; small cattle on mountains seldom sold under 2½ to 3 years, exclusively bought by graziers, 29213.—Small farmers did not breed sheep, except in one barony, so that cutting up grazing land would mean reduction in number and price of sheep, 29213.

Breaking up of all Grass Lands would eventually increase Congestion.

Agricultural farm to keep a family must be at least twenty acres (Irish) fairly good land of mixed quality, to carry five cows and their calves, giving three acres to tillage; many occupiers of holdings of £15 to £20 valuation, but only useful in one line, would find it difficult to get on without assistance of large farms close by, while holders of smaller farms of general quality could make good living; thirty to fifty acres of hilly, stiff clayey soil the most uneconomic of all farms; holders on poor, wet farms added to income by using grazing facilities on larger grass farms; grazing rates regulated by market price of stock; this system by winter feeding added much to value and production of home farm; owners of large farms anxious to let grazing; it involved less risk and

ROBINSON, Mr. RICHARD ST. G.—*continued.*

capital; occasional grass farms therefore necessary and useful to small holders; large grass farms stocked by owners themselves caused sharp local demand for young stock not fit for shipping; producers of young stores would suffer without that demand; no use talking of home fattening on poor, small farms; where large farms were divided care should be taken to leave large grass farms; occasional grass farm helped to relieve congestion; many grass lands unfit for holdings; doubtful if peasantry of uniform holdings would prosper; best attempts to relieve congestion in that way would fail; large grass farms would never pay and would deteriorate if broken up and put into hands of small holders; migration which might relieve congestion in one part would increase it in another; with better education and commercial prospects no young Irishman of ability would settle on a few acres while better conditions offered abroad; better to aid and encourage industrious people, leaving lazy and idle to learn from them; State was always providing for latter and driving capital and energy out of the country, 29336.

Importation of Canadian Cattle.

Importation of Canadian cattle, etc., should be strongly opposed owing to risk of disease, and because it might lower market value of young stock and finished cattle; it would also increase demand for grass lands, and therefore letting value of grass land must be taken account of in estimating price of land, 29213.

Tillage did not pay so well as Grass Farming.

Tillage not so paying as grass farming, 29213.—Tendency for small farmers to till as little as possible; they would not increase quantity of tillage with increased holdings, 29206.—Figures of a leading firm of corn merchants and millers showed how production of oats had fallen off in Sligo; in 1883-4, 5,096 tons of oats purchased; in 1884-5, 3,927 tons; 1885-6, 3,148 tons; 1905-6, 365 tons; export of oats showed same decrease; total exports of Sligo Steam Navigation Co., 1884, 10,157 tons; 1885, 7,522½ tons; 1886, 7,886; 1899, 605 tons; 1900, 40 tons; 1904, 60 tons; 1905, 56½ tons; 1906, 18 tons, 29213-4.

Rents on Small Holdings well paid, except on certain Estates where Political Agitators were at work.

Small rents well paid, except where political agitators tried to get tenants to refuse to pay, 29218-9, 29287-9.—Small holding was as good security to the State for purchase as the large holding, 29250-2.—Some of the rent came from America, 29253.—Agitation pretty bad in some places; it went in rings; took place on some estates witness managed, 29221-5.—Tenants had refused to pay rents; no steps taken yet; it was hoped they would have the sense to pay; they usually paid in November, 29227-35.—Tenants had not bought because they wanted to fix their own price, 29236-7.—Refusal to pay rent had occurred on four adjoining estates in Connaught, one of the four in witness's hands, 29242-5.—Agitators told tenants not to buy unless they got land at certain price, 29246-7.—Landlords offered liberal terms, 29248.—Tenants would have dealt with them straight off, 29249.—No rent nor taxes nor rates paid in Inishmurray, that was hardly an estate, 29254-5.—Holdings very small; making poteen chief industry, 29256.—It was seven miles from mainland and they could see police coming; magistrate could not try them till they were caught, 29257-8.—Land bad and light; no harbour for fishermen to land, 29259-61.

Increase of Income and Powers of Congested Districts Board suggested.

Congested Districts Board did excellent work; no Government department could do as well, 29261, 29272-4, 29290.—Board had very competent staff, 29274-5, 29250-1, 29297.—It would be a public blunder to abolish the Board, 29261, 29290.—Income and powers should be largely increased and work of Parish Committees improved and extended, 29261, 29310.—Success partly due to popularity of officers, 29276.—The Board should have power to deal with tenants adjoining estates purchased, not only with migrants, difficulty in dealing with migrants as well as in purchasing land, 29311-2.

ROBINSON, Mr. RICHARD ST. G.—*continued.*

Suggestions as to authority for maintenance of Drainage in Connaught.

Drainage system throughout Connaught should be taken charge of by Board; new proprietors unlikely to strike maintenance rate; they had refused in Dromore district in 1903, 29261.—Up to passing of Land Purchase Acts cost of maintaining arterial drainage schemes borne by landlords; work now lying derelict, 29262-3.—1,000 acres of drainage done in Dromore in the "forties"; since then when damage was done there was a Drainage Board which entrusted contractor with work and struck rate to pay cost of repairs, 29264.—Drainage Board consisted of landed proprietors constituted under Act of Parliament, 29265-7.—After Purchase Acts Board of Works wrote to witness to call meetings of proprietors, which he did; tenants who purchased refused to have anything to say to it; County Council could be called on to take over drainage, 29268.—Board would carry out work better, and if necessary should be given compulsory powers to strike rate, 29269-70, 29279.—It was necessary work and would not interfere with Board's popularity, 29271, 29277.—County Councils had enough to do to keep roads in order, 29278.—Best way would be for Board to have power to compel County Council to strike rate for drainage purposes and then for the County Council to hand it over to the Board to see work was properly done, 29282.—Necessary to have some authority to take place of landowners, 29283, 29286.—In cases of subsidiary drainage arrangement formerly made with tenants was that each should do his portion, 29234.—After Act of 1881 landlord had not power to make tenants fulfil agreements, 29285.

Congested Districts Board preferred to Estates Commissioners.

Witness would rather deal with Congested Districts Board than with Estates Commissioners, 29292.—He had sold one estate to Board and thirteen to Estates Commissioners, or at least sold them direct; four or five in process of sale; only three of above inspected and portion of one conveyed, and that was to Board, 29293.—Two bodies doing same work must clash; they never competed to witness's knowledge; Board not doing much in Sligo, 29294-5.—Easier to come to terms with man who knew his business; many of Estates Commissioners did not, 29299-300.—Opinion based on knowledge of their prices; no danger of their being extravagant; everyone found difficulty in agreeing with them as regards price, 29301-4.—Witness had little knowledge of Estates Commissioners' work; his opinion was founded on what he had heard from others, 29306-9.

Landlords' Improvements.

Letter from Major O'Hara, Lieutenant of the County, in which he said—On his property in former times a staff of men was kept and estate steward, who made and kept up roads and fences on tenants' holdings; steward advised as to best use to be made of farm; many roads still kept up; tree planting always done by landlord; orchards planted; money borrowed for drainage still being repaid; houses built for tenants in many cases; in parts where holdings were small; field kept for accommodation to graze young stock; when there was talk of sale of property tenants warned owner to keep land in his own hands for their use, 29343.—Work done chiefly by Major O'Hara's granduncle and father, 29344.—Lord Harlech also did a good deal, and many landlords spent money making roads and drains, 29345.—Witness's firm did not manage Lord Harlech's estate, but he knew it well, 29345.—Firm paid £520 a year to Board of Works for different estates, 29347.—Expenditure on Major O'Hara's estate not repayable; money spent on roads to bogs and drains repaid landlord to certain extent, 29348.—Farm with accommodation road worth more than one without; most of the money not repayable, 29349.

Documents put in by Mr. R. St. G. Robinson.

M'LOUGHLIN, Mr. J.

See pp. 57-64.

County Sligo.—Statistics of Population, Area, Valuation, &c.

Population of Sligo in 1841, 180,886, in 1901, 84,083, area of county, 452,356 acres, 74,508 under tillage, 237,536 acres pasture, 76,078 acres plantations, 120,819 acres waste, 11,815 acres under water, 13,491 agricultural holdings in County Sligo, mean valuation £13, in 1906 total rateable value £214,216. emigrants from May 1st, 1851, to December 31st, 1905, numbered 79,829, in 1905, 792, in 1900, 1,544, 29352.—1899 a bad year, and depression caused more emigration, 29353-4.—In 1905 migratory labourers, 169 landholders, 725 not landholders, 899 went to England and Scotland, 17 to other parts of Ireland, 29354.

Total Number and Sizes of Agricultural Holdings—Expenditure on Poor Relief, &c.

Of 13,491 agricultural holdings in Sligo 3,511 under £4, 5,605 £4 to £10, 1,817 £10 to £15, 860 £15 to £20, 704 £20 to £30, 472 £30 to £50, 320 £50 to £100, 201 over £100, 896 holdings not exceeding one acre in 1905, 1,422 1 to 5 acres, 5 to 15 acres 5,492, 15 to 30 acres 4,495, 30 to 50 acres 1,574, 50 to 100 acres 782, 100 to 200 acres 302, 200 to 500 acres 123, above 500 acres 37, 29361.—Expenditure on poor relief year ending September, 1905—Sligo Union 1*s.* 7¾*d.* in the £1, Tobercurry Union 1*s.* 10½*d.* in the £, average number of persons in workhouse, 1905—Sligo 448, Tobercurry 103, 29361.

Number of Holdings Sold Under Act of 1903 and under Previous Acts.

Nineteen estates sold in County Sligo from 1st November, 1903, to 31st March, 1906, 8 in congested districts, 29354, 29357.—536 purchasers, 800 holdings, including 278 in congested districts, 29357.—800 purchasers under Act of 1903, as against 1,200 under previous Acts, not encouraging, 29358, 29360.—99 per cent. of tenant farmers anxious to buy at reasonable price, 29359-60.—Purchase operations accelerated under Act of 1903, 29361.

Amount of Untenanted Land in South Sligo.—Decline of Population in Certain Districts.

Ballintogher East Electoral Division included 1,252 acres untenanted land, owner W. J. Griffiths, valuation £135 in townland of Kilkerry, population of Kilkerry fell fell from 241 in 1881 to 183 in 1901, was in Sligo Union, near Dromahair, 29361-2.—In townland of Sleshwood 374 acres untenanted, owner Mr. O. Wynne, valuation £25 10s., Mr. Wynne had £15,000 advanced by Estates Commissioners for sale of demesne at Hazlewood, he had not sold whole of property, had number of grazing farms, 29362-3.—Ballintogher West Electoral Division, included 1,913 acres untenanted land, exclusive of 194 acres, Castledargan mansion house and demesne occupied by Mr. Hosie, 29364-8.—Ballinakill Electoral Division included 522 acres untenanted land, valuation £211, population fell from 5,712 in 1881 to 4,359 in 1901, demesne of Castle Neno not included, 29368-9.—Ballisodare East Electoral Division included 377 acres untenanted land, valuation £266, rich land used for grazing, population 888 in 1881, in 1901 677, 29369.—Ballisodare West Electoral Division included 694 acres untenanted land, mostly occupied by Mr. C. K. O'Hara, 100 acres held in Streamstown by Mr. A. Sim, there was a strong rumour that he was ready to sell at a reasonable price, 29369-77.—Population fell from 850 in 1881 to 712 in 1901, 29377.—Bricklieve Electoral Division included 411 acres untenanted land, valuation £323, owners Sir J. Gore-Booth and Mr. Creighton, Sir J. Gore-Booth lived 20 miles away, population in 1881 668, in 1901 499, 29377-81.—Collooney Electoral Division included 2,505 acres untenanted land in occupation of Mr. Cooper, excluding Markree demesne, valuation £927, considerable portion consisted of game preserves, public excluded from touching it, 29381-5, 29389.—There was a deerpark as well, 29386-8.—Demesne comprised 497 acres, valuation £400, 29392.—Hares, rabbits, pheasants, partridges, etc., on game preserves, 29393.—Population of Collooney, 2,018 in 1881, 1,287 in 1901, 29393-5.—No evictions on estate of 2,505 acres,

M'LOUGHLIN, Mr. J.—*continued.*

population had no prospects, so emigrated, 29396.—Game preserves were there when population was high, 29397. Drumfin Electoral Division included 385 acres untenanted land, population 937 in 1881, 792 in 1901, land not mountain, 29411-3.—Kilmackowen Electoral Division included 365 acres untenanted land, valuation £371, population 1,709 in 1881, 1,363 in 1901, 29413.—Knocknarea Electoral Division included 953 acres untenanted land, excluding demesne of Mr. J. F. Walker, valuation £738, population 1,207 in 1881, 978 in 1901, 29413.—In Lisconney Electoral Division there were four large farms of good quality untenanted, farm of 271 acres in Doorly, valuation £189, owner Miss Cooper, same lady owned farm of 226 acres in Lisconny, valuation £171, farm of 128 acres in Lisruntogh, valuation £84, owner Dr. Tweedy, farm of 289 acres in Spotfield, valuation £129, owner Mr. R. A. Dilke, 29413.—Riverstown Electoral Division included untenanted farm of 161 acres at Ardcumber, valuation £100, owner Mr. Phibbs, 29413.

Emigration from Collooney.

Emigration due to distress after harvest of 1879, when there was no change in land laws to benefit the people and root them in the soil, 29398-9.—Holdings were small, 29400.—Dwindling of population enabled remainder to live on land, most stalwart and intelligent emigrated, 29401.—Valuation of farms was £20 to £1, 29402-3.—The labouring men had to emigrate, 29404-5.—Holdings not evacuated, old people remained, 29410.—Bone and sinew of youth went to foreign countries, their labour paid the rent, it was not taken out of land, 29411.—There was a country town at Collooney, 29439.—Townspeople had very little land, it would not be included in the 45 out of 170 holdings not exceeding £4 valuation, 29440-3.—Very few cottages in Collooney with small potato gardens attached, 29444.—Emigration not from the town, but from the Electoral Division of Collooney, country round mountainous, people in the town more prosperous than in country round, rural districts suffered most, 29445-9.—There was some encouragement in the village, Mr. Sims was an enterprising man, and it was a little manufacturing town, industry drew people from country as well as town, development of industries would be beneficial and would tend to stop emigration, 29450-3.

Question of Scheduling the Whole of Connaught.—Migration.

Entire province of Connaught should be scheduled to relieve congestion on mountains and bogs, Board or Land Commission or State should take over all waste lands, 29413-5, 29453.—Where number of poor peasants were on holdings under £4 some two should be taken up and put on waste lands, leaving one in possession of what would then be an economic holding, 29416.—Best way was to schedule the whole, poverty extreme in some places that were not scheduled, 29417-21, 29423.—None of above divisions were scheduled, 29422.—Grazing farms put up valuation above 30s. standard, 29424-9.—Insufficient accommodation in Connaught for migration of people in the province, scheduling province would be a step in right direction, but need not prevent the people being migrated outside, 29430-4.—Board should get larger powers, 29435.—Parishes in Sligo as poor as anywhere in Ireland, 29436.—If only spots most requiring it were scheduled deserving places might be left out, 29454.—Selection difficult, 29456.—No room for landless people and farmers' sons unless whole were scheduled, it would save them from emigration, 29457.—Board would be more powerful if it had some compulsory powers, 29458-9.

Taking Over Non-Residential Grazing Lands by the State for Enlargement of Holdings and Creation of New Holdings Proposed.

All non-residential grazing lands should be taken over by State and used for enlargement and creation of holdings, 29460.—Non-residential grazing farms were those given up to bullocks and sheep, and no one

M'LOUGHLIN, Mr. J.—*continued.*

living on them, some people had six or ten of these, living on one and having the others on eleven months' system, residential farm was the one lived on, 29461-2.—If a man built a house on a non-residential farm and his son lived in it, it would then be residential, many men had no sons, 29463-70.—No one should have more than 30 acres, practical farmer would be glad to have as much, while a gentleman's son who could not use a spade would not be thankful for 50 or 100, land was for the people, 29471-4.—If the landlord's son were a *bona-fide* occupier he should be left undisturbed whatever size his farm, different if he were put there for bogus purpose, 29475-80.—Every attempt should be made to keep sons of farmers in the country, land splendid crop land if farmers' sons were willing and able to make it pay, 29481.—Land not tilled, because it was in hands of non-residential grazier, poor people were on the mountain struggling to rear their families to go abroad and make money, 29482.—Two classes of people—industrious, hard-working class and idle, unproductive class, 29483.—Graziers belonged to unproductive class, 29484.—Untenanted land should be distributed among landless people and farmers' sons, 29485-8.—Whoever used untenanted land ought to be purchased out, 29489.—He would be compensated, 29490.—Even if a man had acquired large grazing land to supplement his tillage he ought to go, one farm was enough for him, 29490-1.—Farmers as well as owners would be affected, 29492.—If a shopkeeper had bought a grazing farm with proceeds of his business case would be the same, 29493.—Shopkeeper and gentleman farmer were dangerous to the country, 29494.—Poor man could not touch land while shopkeeper was bidding, the latter might have some land, but not whole face of country for miles, 29495-6.

Tillage Paid Better than Grazing.—Proportion of Land which should be Tilled.

Witness a farmer with 30 acres, of which about 10 acres were tilled, 29497-500, 29503.—Tillage paid twice as well as grazing, 29501.—Half of the lands of Ireland should be tilled, 29504-5.—Witness did not till more, because he could not get labour, 29506-7.—Not one-sixth of land in Ireland tilled, 29508.—One-third should be tilled, 29510.—No tillage at all on some farms, 29509.—Mixed system of farming advocated, 29513-4.—Land should be let out to grass sometimes, rough grazing wanted as well as tillage, 29514-5.—Considerable portion would thus be under grass, 29516.—If young men could be induced to stay in country tillage on farms would encourage them still more, 29517.—Easier to get farm hands if they were not driven to America, 29518.—Not enough practical agriculture taught, what little there was induced people to till more, 29519-20.

Reasons for Not Tilling More Land.

Reason more land was not tilled was because large farms were in possession of those who preferred to live an idle life and were not anxious to work or till land, and allowed it to drift to decay, people who would till had not got the land, 29521-5.—If land were broken up into small farms it would come into hands of people who would be anxious to till it, as that was more profitable, 29526-7.—New tenants were industrious class, and would work hard, 29528-9.—Graziers foolish not to till land, they were content to see poor men struggling on mountain, so long as they were better off, 29530-3.—Owner let grazing farms on eleven months' system in many cases, 29534-6.—11 months' man had no right to till, 29537.—System worked between landlord and middleman grazier, poor man had no look in, 29538.—Middleman real occupier, he let poor men bring cattle and pay highest grazing, 29539.—System the block between farmer and land, real tiller of soil could not get at it, 29540-1.

Tillage on a Small Scale Might Pay Where Tillage on a Large Scale Might Not.

Agriculture on large scale might be unprofitable when that on small holding would be very profitable, 29542, 29548, 29555.—Many hands needed for farm of 200 acres, difficult to employ them on a wet day,

M'LOUGHLIN, Mr. J.—*continued.*

29543-4.—If such a farm were split up into 30-acre holdings tillage would be done by farmers themselves, employing a man or two, easy to find employment indoors in wet weather, 29545-7.—Class of agriculture that got most out of the land was that of comparatively small holdings, 29549-50.—Large holdings never paid, small one had profit on poultry, pigs, etc., family a hive of industry creating prosperity for country, 29551.—Tillage paid twice over when done by the farmer, 29552.—Would not pay on a large holding where labour must be paid for, 29553.—Mass of people anxious to till and make farm pay, tillage not decreasing because of people's objection, 29554.—Plenty of 50-acre grazing farms in district, 29566-7.—It was accommodation land, and owner was too idle to till, 29558-60.—250-acre holdings treated similarly, 29561.

Proposal to Create 30-Acre Farms.

Witness proposed to create 30-acre holdings, 29562.—People from mountains would be put on them, and they would be anxious to make them pay, 29563.—If one farmer on the mountain had the land now occupied by three they would not need accommodation land, 29564-6.—Given three farms of five acres each, with one or two head of cattle apiece, and two men were migrated, the remaining farmer would till five acres, and have ten for pasture, so would not need accommodation land, 29567-71.—Grazing farm could be used more profitably by expert farmers, 29572.—The 50-acre man finding no beasts to take on land would till it or take compensation, and let the man who would till have it, 29573, 29575.—30-acre man kept milch cows on his own land, he could profitably supply town and creamery, 29576.—He sold young stock, 29577.—Always a demand at fairs, buyers came from many places, some from North of Ireland, 29578-9.—Buyers were graziers, and even farmers themselves bought, 29580-3.—No fear of market going unless there were importation of foreign cattle, 29586.

Effect on Cattle Trade of Breaking Up of Grazing Farms.

If grazing farms were broken up there would be a mixed system of stock and tillage, which would pay better, 29584-5.—The more tillage the less cattle could be raised, and price would rise, 29587.—Much cattle on grazing farms had been raised by small holders of district, 29588.—These would rear cattle on their own holdings when restored to land, 29590-2.—They did not do it now, they were not in possession, 29591.—Profits of middleman would be done away with, 29593.—Grazier not a necessity, but ruin to the country, 29594.—Profits would go to small man, and would rise with start he would get, 29595.—Some capital would be required to help him over interregnum, 29596.

Development of Sea-Fishing.

Coney Island and Ballisodare Bay sea fisheries should be developed, 29597.—Pier would be useful, present one in Ballisodare Bay in poor condition, fishermen in deplorable state, 29598-9.—People living on Coney Island could not get off from mainland unless tide were out, it was not scheduled, many poor places left out, 29600-1.—Department's intentions good, but it did not reach the very poor, prizes went to moneyed parties, nothing done for the fishing, 29602-3.—Drainage of Owenmore a necessary work, 29603.

PHIBBS, Mr. CHARLES.

See pp. 64-75.

Doobeg Estate—Price, Rental, &c.

Witness had been a landowner and J.P. for more than thirty years, 29606-7.—Residing in Tobercurry district; he purchased Doobeg Estate in Landed Estates Court in 1877; it comprised 742 acres; 476 acres were in his own hands, including 176 acres of bog; there were twenty tenants in 1877; one new one

PHIBBS, Mr. CHARLES—*continued.*

created; rental then £190; raised to £224 on valuation of valuer nominated by tenants in 1876, 29608-9.—Two tenants with rental of £5 sold interests to witness, one went to America, one confined himself to his farm on Lord Harlech's estate; witness paid their own prices; third tenant with rental of £12 got into difficulties; witness bought his interest for £130; gave him back small portion of holding at rent of £1 10*s.* and helped him build house; he was now a future tenant; remaining tenants afterwards got judicial rents fixed with usual reductions; rental now, £156, 29609-12.—Witness paid £11,000 for estate, which represented 23 years' purchase of court valuation and 32 years' purchase of poor law valuation; estate bought subject to tithe and rent charges of £23 a year, 29612, 29913.—It belonged to absentee landlord and was in deplorable condition; 80 acres let to conacre tenants who had been allowed to burn soil, 29612.

Witness's other Estates.

Witness also owned Mullane, Phibbs Estate, near Clonacool, which was let to tenants, rental £120; till recently he had six other townlands, now sold under Act of 1903, namely, two near Ballymote, rental £70; two near Collooney, rental £150; two near Tobercurry, rental £220, 29612-3.

Graziers.

Graziers were the backbone of Western Ireland; greater difficulties would be created by policy of diminishing their trade than had as yet been faced, 29613, 29679.

Criticism of gigantic schemes for Migration and Enlargement of Holdings.

Gigantic schemes of migration and enlargement of holdings proposed were both impracticable and mischievous; most purchasers would not have enough capital to till or stock holdings, they would let in conacre or sub-let and land would deteriorate, they would then be unable to pay annuities, and the bad example would tempt others to make excuses for non-payment, 29613, 29644, 29689.—People migrated by Board had only recently been put on land, 29614.—Wholesale migration could not succeed, 29616.—Reform must be carried out gradually, 29618, 29622-3.—Witness in favour of gradual migration if people agreed, 29620-1.—Land required might be bought up if migration were carried out very slowly, 29629.—Board had already purchased some land in immediate neighbourhood and striped it, 29631.—Migration more likely to succeed if carried out clowly, 29632-3.—Many landowners letting land on 11 months' system were willing to sell, 29634-6.—No objection to State buying it, 29637.—Witness prepared to see migration carried out immediately to extent landowners were willing to sell, 29638.—Voluntary sale the line drawn, compulsory purchase was extravagant, 29639-40.—No danger of too rapid migration so long as the land was bought by voluntary purchase, 29641-3.

Deterioration of Land cropped without Manure, etc.

Value of land reduced if it was cropped without manure and grazed without feeding, 29644-6.—Not much feeding in country, grass land deteriorating, 29647-8.—Could be remedied by proper tillage or feeding on it, 29649.—Letting in conacre worse than present system, 29650-1.—Under landlord and tenant system crops all taken off land, no feeding of it; a man given forty acres and no capital must sub-let for a year or two till he got capital, 29652-4.—Situation would be better if he had some stock, 29655-6.—The land was safer under grass than tillage on the assumption that there was no manure, 29658.—If the small holder sub-let and took in cattle it would not be worse than present system of large grazing farms, 29660-3.—If tenant had sufficient capital and used land judiciously it need not deteriorate, 29664.—Many examples of deterioration had come under witness's notice, 29665.—There had not been sufficient time for it to show on estates purchased by Board, 29666, 29668.—The 289 migrants were not in Sligo, 29667.—On Board's estate at Doocastle and Chaffpool lands had been striped, mud fences erected, and men

PHIBBS, Mr. CHARLES—*continued.*

put on the land; very recently at Chaffpool, and Doocastle last year, 29672-4.—All grass lands, one migrant, the rest had been migrated on same property, 29675-8.

Question of Deterioration of Land and Security for Purchase Annuities.

Security of State in matter of annuities depended on prosperity of land; annuities small, 29690.—Annuities secure if land prospered and did not deteriorate, 29691-2.—Security doubtful if land deteriorated, 29693-4.—No uncertainty on bad land with present annuities which were 5*s.* below second term rents, 29695, 29700.—Almost all the lands worn out and passing from landlord to tenant under Act of 1903, 29698-9.—Untenanted lands had no basis, therefore less secure, 29701.—If land were bad it could only be security to limited extent; State secure even on bad land if annuity were low, 29702-4, 29707.—Tenanted land already twice over-valued and twice reduced; purchase annuities were a further reduction, 29706.—Judicial tenant had not necessarily been into Court, but the numbers were very small even though there had been no inspection, 29708-12.—Witness was surprised to hear that about half of the judicial tenancies had been fixed out of Court, 29738-9.—Tendency to settle out of Court had diminished, 29471-2.—No inspection when rents were fixed by agreement, 29714-6.—If those estates were sold under Act of 1903 they were within the zones and there would be no inspection; few estates had many rents fixed, 29713.

Increase in Price of Land.

Occupation prices had risen in last few years, 29717.—Landlords had given up selling, 29718.—Land not more valuable in 1902 than in 1907, 29719.—Generally a reason for landlord increasing price of land, 29720.—Witness had agreed to sell his own property at 20 years' purchase, 29722.—A landlord had agreed to sell at 20 years in 1902; price raised to 23 years in 1904; it was joint property owned by witness and brothers; they negotiated with tenants to avoid expense of partition; every tenant had not agreed to 20 years' purchase; cost of partition was pending; it would take a less price to save a lot of costs; there was no bonus; witness's estate solvent, 29720-34.

Deterioration of Land if worked with Insufficient Capital.

Breaking up grazing lands would affect cattle trade and the well-being of existing small holdings, 29735.—Unless tenants put on them had sufficient capital they would be driven to break up land in meadow and conacre, which would deteriorate it, 29736.—No danger if care were taken to give tenant enough capital, 29737.

Graziers.

Cattle trade would be upset if graziers were abolished; they were largest purchasers of 1½-year-olds, 29679-81.—Witness did not agree with Mr. M'Loughlin's statement that graziers were not a necessity, 29682-3.—Small farmer never finished his stores himself; witness thought he never would, though it was possible, 29686-8.

Effect on Cattle Trade of abolishing Graziers.

Little market for cattle if graziers were abolished; price of stock up to 1½ years would be reduced; small farmers could not keep stock more than a year; they would not thrive in confined area and could not be stall-fed or in-fed as farmers knew nothing of system and had not enough capital to adopt it; dealers would not buy immature stores unfit for shipping, 29742-3.—Cattle stall-fed in Scotland unsuitable to Ireland, 29744-7.—Farmers had never done it; suitable outliers prevented it; cattle subject to disease; danger of anthrax if forcing young beasts were attempted, 29748-50.—Want of skill the reason; climate not unsuitable, 29751-3.—Irish peasant had not the enormous housing accommodation necessary, 29754-5.—Farmer could feed stores in summer without stall-feeding, 29756.—Stock never put in in winter, 29757.—Irish climate milder than Scotch climate; Scotch farmers forced to put up buildings while Irish were not, 29758-61.

PHIBBS, Mr. CHARLES—*continued.*

Reduction of Tillage—Attitude of Farmers.

Mr. Doran thought small farmers would, or should, till most of their enlarged holdings, and he was a man of great experience; witness thought people were growing more averse to tillage and were reducing it and trying to get holdings into grass; grass more profitable and suitable to wet climate with little ripening sun; rarely more than three acres tilled on small farm, usually less; theories and advice would not induce farmers to till to larger extent, 29762-70.—Conclusion arrived at from personal observation, 29772-7.—Three acres of tillage now on a ten-acre farm; double that five and twenty years ago, 29778-81.—Witness did not agree with Mr. M'Loughlin that people were not averse to tillage, 29782-3.

Creameries helped to reduce Tillage.

Creameries in district, 29784.—Their presence reduced tillage; milk sold to them, 29785-6.—More tillage, if done differently, would produce more milk; practically no mangolds or turnips grown, 29787-8.—Mangel-wurzel had been grown, they did extraordinarily well in district, 29797-9.—Creameries not good for country, they deteriorated the calves, as farmers did not reserve enough milk for them, 29789-90.

Calves injured by Creameries absorbing too much Milk.

Calves could not be reared without milk for two months or so, then other things could be added, oatmeal the best, 29793-4.—Separated milk good if process was carried out at home; creamery process rendered it hardly fit for use, 29795-6.—Witness bought Limerick calves before creameries were started; never now, 29800.—No calf like that fed on milk, 29801.

Grass Land necessary for preservation of Milk and Butter Industry in Tobercurry District.

Chief industry in Tobercurry district was the production of milk and butter and young store cattle and pigs; grass lands necessary to keep this intact; (1) to provide home market for stores; (2) to enable small farmers with capital to send out, for summer's grass, surplus cattle and milch cows on which they made profit; moist, mild climate suited cattle; grass always growing where land was in heart; grew so fast in January and February last year that witness stopped hay to out-liers, leaving them on grass alone; witness's land differed from other land in the district, in that it was in heart, 29801.—Cake-feeding for thirty years put it in heart, 29802.

Condition of Doobeg Property.

Witness cultivated 50 or 60 acres and put it in heart, 29803.—Cultivation for a year would put fallow land in good condition; land lying a long time fallow lost heart and would not support cattle without deteriorating; idea prevailed that it grew richer, it did if feeding stuff were put on it, even sheep were beneficial if they were fed on land; cake was the most fertilising, cotton cake the best, 29805.—Doobeg property tilled at first partly because it was in unusable ridges, partly to get it into good heart; part tilled had been burned; no tillage for the last twenty years because grass paid better; others found the same; land in immediate district broken into conacre, 29806-7.

Reclamation would improve Land in Tobercurry District.

Reclamation would improve land and employment would be provided if Board were to undertake it; large drainage schemes would benefit land, especially lowering portions of Owenmore River, 29807, 29903.

Burning of Land to force Crops.

Land burnt to force crops; ashes supposed to be manure; fires were lit and skin burnt into ashes, which were collected in heaps and spread over soil; clay not so much burnt lately, it burnt well, 29808-17.—Top-dressing done with ashes; it deteriorated the land so much that it took fifty years to recover; the surface was damaged; tremendously good crop got in

PHIBBS, Mr. CHARLES—*continued.*

that way, 29818-22. Witness's crop of 75 tons of mangels got by manure; he stall-fed at the time, 29823.—Land burnt had been let by agent of absentee landlord for conacre, 29825.—Used for oats, sometimes for potatoes; sown immediately after burning, 29826-7.—Ashes put on top of seed; burning gone out of fashion now; witness had not seen it for ten or twelve years, 29828-9, 29833.

Cattle-rearing.

Less labour required for grass than tillage; price of labour had gone up a-third in last twenty or thirty years, 29830-2.—Witness finished cattle and had tilled for that purpose; that sort of tillage did not pay so well as grass, 29834-9.—Witness cake-fed his cattle as well or land would deteriorate; practice very uncommon in Ireland, 29840-1.—When witness tilled he stall-fed cattle, fattened them ready for market and sold them in Glasgow, Liverpool, etc., 29842-5.—Some now were fattened, others were sent to Dublin, 29846.—Could be fattened on grass with cake, 29847-8.—Stall-fed cattle sold from November to May; two year-olds sold in Liverpool before now; bought as yearlings in July, sold following April; that paid very well; they were double the size and weight and sold for three times the price for which they were bought; £5 10*s.* paid for yearling; £19 got for two-year-old, 29849-52.—Good prices this summer with cake and grass for two-year-olds; barren cows fattened after rearing calf; yearlings sold in Dublin, 29853-4.—Two-year-olds fattened on grass not fit in April sold in July, 29855-6.—One had them for different time and season now; those fattened in winter sold in April, 29857.—Yearling bought in October would be highly fed and sent to England in September or October; some sold in Dublin last August and September; year and fourteen months old; killed and sold by weight; mostly small and fattened rapidly, 29858-61; the earlier one sold the better demand for young stock, 29862.—£11 10*s.* got for yearlings of fifteen to eighteen months; they were done very well, 29863-6.—They were all by Hereford bull, some out Angus and mongrels out of Connemara, 29867.—Cattle reared on dams for eight or nine months; bred by witness himself; small men could not do the same; their cattle would not compare with those cattle, 29869-71.—Cattle required a good range to come to maturity and small man had not the necessary area, 29873-5, 29881, 29885-9.—He could not cake-feed them, 29881, 29885.—Calf wanted plenty of room after it was weaned, 29888-9.—Witness's calves were out of small Connemara dams; small man had no such cows, but the big ones too delicate for witness's work, 29877-9.—An acre would feed a cow and calf on witness's land; smaller man could not do it on that, 29883-4.—Small man must sell his milk and make profit from day to day; could not afford to use milk for calves; witness had never seen a small man try what witness did, 29890-4.—He did what paid him best, which was selling milk and rearing calf, 29895-6.—the calves were mainly good, but not the same as those reared naturally, 29897-8.—Witness had got £33 for yearlings in Liverpool, 29899-900.—Black water very mysterious; suddenly forcing animals into flesh produced it; calf well-fed from the first not so subject to it; they were sometimes on grass and in sheds without extra feeding; witness had to put them out on new farm in January, 29901-3.

Doobeg Property—Owners' Improvements.

Doobeg an example of benefit of treating land well, Landed Estates Court conveyance purported to give indefeasible Parliamentary title, relying on which witness fenced, drained, reclaimed, made roads, built dwelling-houses, out-offices, and gate lodge, spending £6,000 over two-thirds of which was for land improvements and gave employment, 29903-4, 29913-5.—He also bought produce of country round, 29903.—No cart or horse in townland when he purchased, hardly a tenant without at least a donkey cart now, 29915.—Money spent on faith of title, if State purchased from him by compulsion, it should be taken into account, 29905-6, 29916.—Money spent on roads all out of witness's pocket, he was not recouped by tenants, road for his own use as well as theirs, 29907-14.—Land trebled in value, and could keep three times the stock it could in 1877, it kept on improving under present system, 29916.—Witness also worked hill farm of eighty-five acres two miles away, unsuitable for tillage, good pasture, used as stock farm, 29916.

PHIBBS, Mr. CHARLES—*continued.*

Question of improvement in breed of Live Stock—Value of a Stud Farm under Government control.

Small farmers' profits would be increased if they bred from better animals, good bulls kept by witness never used, system of forbidding man to keep bulls for service unless certified by Government might be advantageously introduced, stud farm under Government valuable, useless under local control, good boars essential, pure-bred bulls in congested areas would produce cattle for English and Scotch markets, 29916.—County Committee in Sligo had done nothing in district except provision of a few premium bulls and thoroughbred horses, Department should do something, 29917-21.—Stud farm better under Government because they would have skilled managers, local people not skilled enough to manage it, 29922-6.—Committee of Agriculture might do it, 29927-8.—Advice of local men would assist managers, 29929.—No objection to local control if proper men were employed, 29930.—There were some skilful cattlemen in the county, but these were the exceptions, 29932-4.—Government system was by examination, and the business should be done by experts, 29935-6.—Oats and potatoes in district very bad, due to want of change of seed and to bad cultivation, 29937.

Policy of reducing the whole country to a dead level of holdings only just economic.

Unfortunate thing to reduce the whole country to dead level of holdings of £10 valuation, so far as policy was carried out men must be provided with loans to work new land or they would meadow or conacre, or sub-let it, and in a few years it would be run out, and they would be unable to pay annuities, it would destroy competition, possible to carry out such a policy if millions were handed out, 29960, 29962-3.

Migration.

Migration schemes difficult to carry out, most farmers disliked migration, if better holding were on different quality of land, they would need instruction to work it, capital also, people in new neighbourhood would regard them with hostility as intruders, 29937.—Absurd to suggest putting man into new holding without capital, 29938-40.—Hostility due to people wanting land for themselves, witness had case in mind, 29941-7.—People on this estate had already medium sized farms, 29948.—If there were land available on an estate, and tenants on congested estate in another area were offered it, knowing nothing about it, they would not go, 29953.—In case referred to there was a good deal of land to divide, enough to raise holdings beyond £10, there was some congestion on estate, 29954-7.

Emigration of whole families as an alternative to Migration.

State-aided emigration might be tried for relief of congestion if more popular than migration, sons of small landlords and professional men resorted to it, and small farmers should be given the means, if whole families were willing to go, 29960-1, 29964-5.—The young and strong were rushing to America at present, which was deplorable, if the whole family would go the State might assist, 29966-74.

Large areas of land available for purposes of Migration or enlargement of holdings if fair price were given—Protest against Compulsory Purchase.

Large areas of untenanted land available in Sligo if Board or Land Commission offered fair price, compulsion only necessary if people were to be forced to sell for less than land were worth, unfair for owner who was also occupier not to be paid for occupation interest, when tenant became purchaser his valuable occupation interest would not be wiped out; in 1899 witness sold townland to tenants with exception of six acres in his own hands, twenty-five years' purchase of the then existing rents paid for tenanted portion, £1,000 for the six acres, as there was a valuable limestone quarry on it, 29975.—Value of limestone quarry would not be calculated under compulsion, it was not the rule, 29976-8.—Railway companies taking land compulsorily paid more than for land taken

PHIBBS, Mr. CHARLES—*continued.*

voluntarily, but that was for a public purpose by which owner of land was benefited, 29979-81.—Price was settled by arbitrator, 29982.—In case of land purchaser would be buyer and also arbitrator, 29983.—Nothing could justify compulsorily taking land from one man to give to another, however great the evil of congestion, and however necessary to put a stop to it, 29984-91.—Principle of compulsion occurred in Allotments Act, and Labourers' Act, but the holdings referred to were all small holdings, 29992-5.—Land could be sold compulsorily for debt by Land Judge in Dublin, 29997.—The compulsion applied in Australia was on occupiers who had known of the possibility all along, and who had not paid cash for the land, 29998-30000.—No need to grant compulsory powers unless Parliament wanted to force people to sell for less than property was worth, 30001.—Witness had no reason to complain in the case of his dealing with a railway, they paid for loss of rent and occupation value, witness did not put it before arbitrator, he knew price was fair, 30005-10.—Even if there were an arbitrator for estates it would be impossible for valuers to fairly estimate loss, 30011-3.

Owner Striping Lands and offering them for Sale before approaching Estates Commissioners.

Owners might split up lands, put fair rents on them and offer occupation of them for sale, Estates Commissioners had refused in one or two cases to have anything to do with the properties, 30014-16.—Fines had been exacted in some cases before approaching Estates Commissioners, but possibly the process was not in conformity with spirit of Act of 1903, 30017-8.

Method of estimating Fair Prices of Land.

According to witness's proposal of splitting up holdings no one could get in who did not pay a fine, majority of people could not afford that, witness argued as to value of land to owner, 30030-3.

Witness would like to relieve congestion, 30019.—He did not oppose migration where land was voluntarily sold, many landlords would sell voluntarily at fair price, 30024-5.—He could not agree to compulsion whatever the price, 30025-7.—Estimate of price could not be left to professional valuer whose valuation was a mere opinion leaning in favour of his employer, method should be found of calculating price automatically, one and a third poor law valuation should be taken as minimum income, with option to owner to prove that net income during five years preceeding was more, price of estate should be sum which would produce net income if invested at 3½ per cent., 1⅓ times the rating value might occasionally represent more than net income, but seldom, 30034.—Estates Commissioners or Board could not be valuers, as they would be the buyers, 30035-8.—Responsibility would be on the valuation, 30039.—For occupied portion of land net income from tenants might be accepted, 30040.—Rent books showing income and expenditure for period of five years could be produced, 30041.

LOFTUS, Very Rev. Canon.

See pp. 75-7.

General opinion in favour of scheduling the whole of Connaught.

Witness had lived in congested districts all his life, and knew what congestion meant, and the necessity for relieving it, the reason for general opinion that all Connaught should be scheduled was that there were just as poor people in non-congested areas whose valuation was raised by larger holdings in district and who were aggrieved that nothing was done for them, 30043.

Necessity for Drainage of Owenmore River—Damage done by Floods.

Owenmore River badly needed drainage, fitful and subject to periodic overflow, which did incalculable damage, evil influence felt for four or five miles on each side, great damage in summer; when rainfalls occurred ten years ago agitation concerning drainage of the river was begun, there was correspondence with Government and deputation to House of Commons, deputation received by General Sankey, President of Board of Works, he refused to send inspector, surveys made in 1847 too costly, so fell through, nothing had

LOFTUS, Very Rev. Canon—*continued.*

been done, persons who were not professional, but who knew river well, thought £600 or £700 outlay would keep river at ordinary summer level every day of the year, 30043, 30053.—It rose at Kilfree and flowed out at Ballysodare Bay, ten or twelve miles of agricultural land were flooded, the upper reaches being in a congested district, it was a small stream for four miles, then assumed formidable dimensions and did the damage complained of, 30044-7. tressing to see flood come down, it carried away hay and destroyed meadows with mud, Sir J. Gore-Booth reduced rent on portion of property on account of floods, 30048.—Drainage would permanently improve condition of people at no great expense, 30049.—Riparian owners would not object, river sluggish and mud at bottom, so silted with vegetable deposits that few fish came up and were hardly worth catching, 30050.—People had thought Government would give grant at a reasonable rate of interest, 30051.—Very little could be done to improve district until drainage scheme was promoted, 30052.—There were certain obstacles in river, a rock at Collooney was the key to situation, channel there would obviate difficulty, 30053, 30063.—Owners of disused eel weir might claim compensation if drainage were carried out, 30053.—Flooding had been going on from time immemorial, getting worse every year as deposits increased, 30054-5.—Flood come from higher ground, where it was a congested district and damaged lower land that was not congested, turning economic holdings into uneconomic, waters had no free flow into lower reaches, and that effected upper portion, 30056-8.—Two miles were in congested area, thickly populated for ten miles each side, 30059.—Question very important, 30060.—River did immense damage to large portion of County Sligo, it rose in Boyle (No. 2) Rural District, and flowed through Tobercurry and Sligo to Ballysodare, attempts had been made to get it drained, in 1847 drainage district formed and plans prepared by County Surveyor, 8,000 acres to be benefited at cost of £7,000, Government spent money advanced for relief works in other ways before scheme could be carried out; in 1872 Grand Jury employed County Surveyor, he estimated £18,000 to drain area of 3,000 acres, it fell through for want of co-operation of some of the landowners, Mr. Kirwan, the new surveyor, might give estimate now, in August, 1904, meeting held at Ballymote passed resolutions asking for free Government grants, requesting Board and Department to co-operate to carry out work, replies received from the two Boards saying they had no funds, flood in summer months meant damage of £16,000, persons affected were aggrieved that Government gave nothing to them, while giving grants to other parts of Ireland towards which Sligo contributed, Board of Works should be authorised to send engineer to make plans and specifications, and save promoters the expense, Department had said scheme must be initiated by Drainage Board under Board of Works, Congested Districts Board had said Chief Land Inspector should be sent, 30061.—Mr. Carroll was sent, and made a report, 30062-3.—Department should make free grant, and the people would then organise a Drainage Board, 30064-5.

Migration.

Difficulties in the way of migration would disappear if tackled, it must be judiciously done, pace would develop itself, 30065-7.—Uneconomic holders in neighbourhood should be the first to be attended to in dividing large farms, 30068.—No difficulty if family were migrated, Irish attached to their homes, but would move if they had inducement, 30069.—Nothing more required than to take them from a worse position and put them in a better one, 30070.—Credit for tenant right of previous holding would go to establish man in new holding, Board would add something as a free grant or loan, 30071-2.

Objection to merging Congested Districts Board in Estates Commissioners.

Congested Districts Board had the affection of the people, undesirable even to change its name, 30073.—Putting work in a new Government department's hands would affect temper of people, and make work more difficult, 30074-5.—Estates Commissioners could be allowed to operate in Connaught if *modus vivendi* could be established, but things would run more

LOFTUS, Very Rev. Canon—*continued.*

smoothly if left to Board, 30076-7.—Board's hands should be strengthened, 30077.—Disadvantage in having two bodies doing same work, 30078-9.

Supervision required on Grazing Farms when arrangements were made for benefit of Tenants.

Estates Commissioners took over large farms to give accommodation land to surrounding tenants, beautiful grass farm taken over for that purpose at Carrigans, near Ballymote, £200 paid as compensation to a tenant, who had it for one and a half years, purchase money apportioned among tenants to their satisfaction, rule laid down that no cattle should be grazed on it from 1st November to 1st May, date changed to 15th November to suit market, after the first 15th November six or seven tenants sent in their cattle in spite of rule, supervision necessary to prevent breach of rules, arch offender processed, County Court Judge gave decree against him, and witness arranged that he should pay according to winter grade and number of cattle, but could not get the money, witness wrote to Land Commission, who said each of the tenants interested had right to take process against offenders, 30079-80.

QUIN, Rev. B.

See pp. 77-80.

Action of Congested Districts Board Hampered by Existing Laws, Economic Advantages of Purchasing Estates En Bloc.

Congested Districts Board effected many improvements, but their actions were hampered by existing laws, facilities under Act of 1903 not generally availed of, no movement by landlords to sell *en bloc*, consequence was that Board's properties were isolated, and they could not carry out general schemes such as drainage of Owenmore River or River Moy, which did great damage to country, making of roads, turbary, etc., 30082, 30101.—Large sum spent on road to Daghloon, which, if continued through neighbouring property to county road, would be of public utility and could be maintained by the county, expenditure partly wasted, because only one landlord sold to Board, and neighbouring properties could not be interfered with, purchase of estates *en bloc* would facilitate distribution of turbary, as that on a neighbouring estate was sometimes nearer a tenant, and consequently more valuable to him, saving would also be effected in distribution of untenanted land, tenant's house often at opposite end of estate to land, economic distribution only possible by simultaneous purchase of surrounding properties, for all these reasons Board should be empowered by Act of Parliament to purchase on equitable terms all lands required to carry out improvements on scientific and economic basis, 30082, 30088-9.—Simultaneous purchase of estates by Board would not lead to Board being landlord for a length of time, it simply meant that instead of purchasing isolated spots they should buy a property and its surrounding properties, 30089-90.—Less labour in sub-dividing, a survey of a property always meant that of the surrounding ones as well, far easier for staff to work on properties that were together, 30102.—Work could be thoroughly completed, and there would be no likelihood of Board having to return, 30103.—Board should have compulsory powers to purchase estates in any province, 30109.

Compulsory Purchase.

Price the objection to compulsion, enough land had already been sold to fix approximate fair price, landlords could not complain if they got net income, it was a mild type of compulsion, it was time State stopped unreasonableness, mistake to limit purchase powers to Connaught, as most untenanted land was outside, a landlord known to witness offered property for sale before Act of 1903 at 20 years' purchase, tenants waited for passing of Act, and finally bought at 23 years' purchase, terms raised by landlords after Act was passed, 30082.

Scheduling of the Whole of Connaught Proposed.

Board should get additional powers and more funds; all Connaught should be scheduled, 30082, 30108.—Present system of scheduling arbitrary, Branchfield poorer than Pullagh and Mullaghanarry,

QUIN, Rev. B.—*continued.*

yet not scheduled, while the latter were, this bred discontent, and want of confidence in Government, 30082.

Migration of Large Landholders Less Costly than Migration of Small Tenants.

Large landholders of 100 to 300 acres should be migrated to rich lands of midlands, less costly than migrating smaller tenants, grazing plains would thus remain in grass, large farms left vacant, should be divided among remaining tenants to enlarge their holdings, few housese need be built, as uneconomic holdings were mostly adjacent, large farmer did not object to migrating, provided he got a better holding, 30082, 30091-3, 30105-7.—No attempts had been made in Sligo, 30104.—Board did not enlarge holdings beyond £10 valuation, Estates Commissioners had not grasped the evils of congestion, they sometimes enlarged up to £40 even on estates with many uneconomic holdings, and they had allowed landlords to purchase land necessary to relieve congestion on their own properties which the Board had never permitted, 30082-4.

Agricultural Instruction.—Model Farms.

Superior system of agriculture should be taught, model farms good, Department would not have them, Sir J. Gore-Booth offered land for one, but they said they could not take it up at present, Board might use Chaffpool lands as model farm and garden, 30084-7, 30094-6.—Where lands were striped and given to tenants a man should be sent to instruct them, resident instructor better than itinerant instructor, 30097-8.—Model farm should be on lines possible for small holders, 30100.

Agricultural Instruction.—National Schools.

A central National school could be turned into an agricultural one, better to have small farm of two or three acres attached to all schools, teachers would require a practical knowledge of agriculture, 30110.—Either a special training college or a special department in a training college would be required, 30111-2.—The teaching would add to interest of ordinary school work, 30113.—Girls should be taught cottage industries, a good deal done already in way of teaching knitting, etc., more could be done, itinerant instruction under county schemes good, permanent instructors in schools would be better, 30114.—Loss to the country that practical training had not been given before, 30112.

Transfer of Agricultural Work from the Board to Department of Agriculture.

Congested districts suffered from transfer of Board's agricultural schemes to Department, little done to educate people in spraying, live stock scheme not successful, present scheme of placing a few highly-bred animals in county and exercising no authority in case of all the other animals promised to be interminable, county should not be denuded of timber, re-afforestation should be Government work, lands suitable should be vested in County Council, should be Government's care to maintain works of public utility executed by Board, 30087.

CRYAN, Mr. J. M.

See p. 80.

Scheduling of Boyle No. 2 Rural District Proposed.

Necessity for relieving congestion and carrying out arterial drainage, extension of scheduled area suggested, so as to include entire of Boyle No. 2 Rural District, 30116.—Ten unscheduled and three scheduled electoral divisions in Boyle No. 2 District, 30117.—Ten non-scheduled divisions should be scheduled, 30118.—Ten divisions excluded because of high valuation of grazing ranches, 30120.—More poverty in non-scheduled divisions than in scheduled, Templevanny Division, which witness represented, having more than 100 holdings under £4 valuation, 30121.—Grievance that so poor a district should be excluded from operations of Congested Districts Board, 30129.

CRYAN, Mr. J. M.—*continued.*

—Only one property bought at present by Estates Commissioners in witness's division, 30122-4.—The King-Harman, Rockingham Estate, 30132.—Considerable amount of grazing land on it, which Estates Commissioners were very slow in dividing up, 30125-7.—But they were in process of doing it, 30128.—Estates Commissioners not dividing property, but letting it for grazing purposes for six months, 30130.—Land already vested in tenants, 30131.

Drainage.

Arterial drainage would be a great benefit to the country, a lot of land rendered useless by flooding of the Owenmore and other rivers, 30133-4.—More should be done in this direction, 30135-7.

GILMARTIN, Mr. W.

See pp. 80-2.

Condition of Holdings in Unscheduled Area of Boyle No. 2 District.—Con-acre System.

Three electoral divisions of Boyle No. 2 District scheduled, 10 unscheduled, condition of small farmer in unscheduled area just as bad as any in scheduled area, unjust that 10 unscheduled divisions should be debarred from privileges of Congested Districts Board owing to amount of untenanted land and non-residential farms in them, in Drumrath division there were 2,000 acres of untenanted land and non-residential farms, and bordering those were 136 tenants under £5 valuation and 63 between £5 and £10, making 199 living on uneconomic holdings, in many places people were huddled together on patches of reclaimed bog and on refuse or useless portions of fat and fertile land used for bullock runs and sheep walks, same applied to other unscheduled districts, they were studded with untenanted land, while poor people existed on the bogs and mountain sides, Government should take over these non-residential and untenanted lands and re-distribute them among tenants of uneconomic farms, district very mountainous, hundreds of small farmers on reclaimed patches of mountain had not a perch of land to grow a potato fit for human use, 30138, 30142.—They paid £6 to £9 to nearest grass farm for acre of land to grow potatoes, 30138-45.—Paid exorbitant price out of sheer necessity, 30145-7.—Small farmer would get con-acre as a rule for two years, 30156.—The first year he would grow potatoes, 30147.—And would buy artificial manure, 30148-50.—He would not apply artificial manure unless he got the con-acre for second year, 30157.—Second year he would grow oats, and might get land for £1 less, 30151-2.—Rye grass grown the third year, which small farmer might get at a price, or outsider might out-bid him, or owner of land might keep it himself, 30154.—Con-acre holding then taken back to pasture, 30155.—£2 per ton average price paid for potatoes, but this year it would be £5 owing to bad crop, 30158-60, 30173-5.—In Drumrath Electoral Division there were seven townlands, in Baytown townland there were ten tenants of £1 valuation who paid price stated for land to grow potatoes, if they kept a cow they had to pay exceptional price for grass, and in summer for meadow, 30161.—Children in England and America, etc., sent help to enable farmers to pay £9 an acre, keeping cattle would not return sufficient money, 30162, 30179.—Farmers had no cheaper place to remove to, 30163.—It took each year to meet its own demands, and unless they invested in land to grow potatoes they would starve, 30164.—If potatoes were bought they would have no employment, 30165.—It was a pity these industrious people had not good land to cultivate, 30166.—An acre of land in con-acre would return on average four or five tons of potatoes, and £8 or £9 was paid, 30167-8, 30171-2.—Production of potatoes per acre in Sligo not quite three tons, 30169.—Second year farmer was not compelled to put manure on land, he had merely to buy seed, 30176-7.—Instructors appointed by Agricultural Department never attempted to carry out experiments on these wretched little holdings, the inference being that it was useless to cultivate such soil, 30178.

GILMARTIN, Mr. W.—*continued.*

The poor people of those elevated districts looked down on the plains of Boyle on one side, and thousands of acres of non-residential and untenanted land on the other, 30178.

Drainage.

Half the land tilled in Boyle No. 2 Rural District too wet, and could never be successfully cultivated until drained, better to encourage people to drain and improve soil than to make roads and improve houses, the small farmer depended on the soil for everything, if soil was drained and lime was available and properly applied good results would follow; two things necessary to improve condition of small farmer—1st, non-residential and untenanted land should be divided for relief of congestion, 2nd, Government should give a loan at low interest for drainage, 30179.—Loan should be advanced either through Congested Districts Board or given to small farmers themselves, inspector seeing that work was done, 30180-1.—Closed drains suggested, 30182.—Fields were so wet, in many cases seed had gone bad before being put into ground, 30183-6.—Drainage would cost about £8 per acre, 30187-90.—Small farmer should be encouraged, and this would be as good a way as Congested Districts Board or any other body could assist, 30191.—Loan should be advanced at low rate of interest and employed on labour, 30192-6.

Reclamation of Land. Instruction by Department of Agriculture, &c.

Department of Agriculture and Technical Instruction instructed the people in the best way to reclaim land, 30197-8.—Witness had seen experiment plot on bog soil, 30198-9.—Reclamation of land should be the principal industry of Ireland, 30200-1.—Large proportion of land of Ireland used for agricultural purposes had been reclaimed from bog, 30202-3.—Department of Agriculture had demonstrations as to the best way of reclaiming land, but witness would sooner see them experiment on one of the wretched little holdings a small farmer had to live on, 30204.—Witness had seen an experimental plot on a most fertile spot where it was easy to carry out experiments, 30205-7.—Great majority of tenants had a thorough knowledge of reclamation of land, and could make more out of an acre of land than the most scientific man, 30208, 30213.—Department of Agriculture were under just as much obligation to experiment on wretched holdings as fertile land, 30209A-11.—They should not do it at all if they could not experiment on all classes of soil, and it would take them all their time to show the people a better way, 30210-1.—As long as farmers had help from their sons they tried to reclaim land, but sons got a higher price for their labour in England and America, 30214-6.

HENRY, Mr. DOMINICK.

See pp. 82-3.

Scheduling non-scheduled areas in Tobercurry District proposed—Compulsory Powers and additional Funds for Congested Districts Board advocated.

Twenty-one electoral divisions in Tobercurry Rural District, nine scheduled, and remaining eleven should be scheduled, as a portion or portions of them were congested, in Branchfield division, out of thirty-six holdings, fifteen were rated at £5 and under, in Loughill there were forty-seven holdings, twenty-five rated at between £5 and £10, and ten under £5, same conditions existed in other non-scheduled divisions, non-residential holdings rated at £50 and upwards most suited for relief of congestion, witness advocated compulsory powers for the Congested Districts Board to acquire necessary lands and migrate persons inhabiting congested areas, he also advocated placing sufficient funds at disposal of Board, 30217.—There were more poor spots in non-scheduled than in scheduled area, 30218-9.—Places like Branchfield not scheduled, as there was a farm £150 valuation in vicinity, and division was very small, 30219.—If farm was not there rateable value would be much lower than in some of scheduled districts, 30220.—Whole

HENRY, Mr. DOMINICK—*continued.*

of Connaught should be scheduled, and compulsory powers given to Congested Districts Board to rearrange and purchase estates anywhere they liked, same to apply to the seven counties of which portions were scheduled, and to Donegal, 30220A-1.

Enlargement of holdings a remedy for Conacre System.

Conacre system existed in district, mountain holders paying £6 10*s.* to 100-acre farmers for potatoes and oats, 30221.—Enlargement of holdings by removal of three or four tenants would give the rest more land to till and more grazing for their cattle, and so obviate necessity for conacre, 30222-4.—At present they tilled a portion of their holding, and took meadowing, keeping two or three mountain cows and rearing calves, 30225-6.—Some grew potatoes, but some of the land would not grow potatoes fit for human use, 30227-8, 30230.—If holdings were enlarged they would be able to find some portion of it fit for growing potatoes, 30231-2.—Seven miles of land outside Ballymote, where there was no lawsuit for seven years, while all along other side of Ox Mountains was thickly populated, 30233.

M'DERMOTT, Mr. PETER JAMES.

See p. 83.

Treatment of Tobercurry Rural District as a scheduled area proposed.

Tobercurry Rural District should be treated as scheduled area, some portions of present non-scheduled divisions were acutely congested, lands suited to remedy this state of affairs were non-residential holdings, 30234.

County Representation on Congested Districts Board and quickening of operations advocated.

Congested Districts Board should have compulsory powers to acquire lands and be provided with adequate funds, and its constitution should be widened so as to afford county representation, 30234.—Operations should be quickened, and Congested Districts Board should get into possession of an estate in less than two years, 30234, 30238.—It took Congested Districts Board five years to divide and allocate the lands of two comparatively small estates, and work was not yet finished, 30235, 30237.—The estates referred to were the Armstrong and the Dany estates, 30236, 30239.—Congested Districts Board should acquire ownership of property in a year and divide and allocate to tenants in another year, 30240-1.

Wages paid to Board's Workmen.

Low rate of wages paid by Board to workmen and overseers was a drawback to speeding the operations, 30241.—If they paid better wages it would be worth the while of overseers to attend to their position, 30242.—They did not pay lower wages than those current in the district, 30243-4.—But they expected men to work longer hours, 30245-9.

HENRY, Mr. P. J.

See pp. 83-4.

Necessity for Drainage in Tobercurry Parish.

Beatty Estate, Tullycusheenbeg, very congested, no untenanted land on estate, small lake which could be drained at little expense, thorough system of drainage much needed, River Moy running through centre of district, people could not get potatoes and oats into wet lands until May 1st, consequently when blight appeared early, stalks were not fully matured, and potato crop was a failure, loss to farmers along the Moy in a wet year not less than £1,000 in Tubbercurry parish alone, hay and oats often carried away by floods, what remained was useless for feeding purposes, and could only be used for bedding and manure.

HENRY, Mr. P. J.—*continued.*

Untenanted Land in the Parish—Estates Sold and offered for Sale.

Untenanted lands in parish were Ballyglass, 500 acres and lower, Leitrim, about 50 acres, Knox estate comprising townlands of Ballyara, Carrowreagh, Carane, Doomore, Mullaun, Mullaghanarry, Pullagh and Cloonaraha, was offered for sale to tenants about 1896 at eighteen years' purchase, in 1904 at twenty-six years' purchase, and again at twenty-four and a half years' purchase estates already sold were the O'Connor estate, Carrentubber sold about 1886 at fourteen years' purchase, Brett estate in 1894 at fourteen and fifteen years' purchase, Fitzgerald estate in 1903 at sixteen years' purchase, under Act of 1903 following had been offered for sale; Young estate, Cloonacool, in 1904 at twenty-six and a quarter years' purchase; Cooper estate in 1904 at twenty-four and a half years' purchase; O'Hara estate, Longhill, in 1905, at twenty-three and a half years' purchase, Leitrim Estate (in Chancery) in 1906 at twenty and twenty-one and a half years' purchase, tenante on O'Hara estate were much in arrears, and would agree to purchase on almost any terms, most owed from two and a half years' rent upwards, same with some tenants on Leitrim estate, in case of sales of Meredith estate, Sessue, outside landlord (Cooper) bought over 100 acres of best portion of bog and tenants did not understand they had lost bog until too late to object, some tenants on Corsallagh estate were bady treated, and were allotted portions of bog away from holding, and with no right of way, consequently they had to trespass on others, and were often brought before local petty sessions, 30250.

Rents earned in England or America—Advances of Provisions, Clothing, &c., made by Merchants.

Rents were earned by children in England and America, merchants and traders of Tobbercurry supplied outfit, and often advanced money to send children to America, waiting for money two or three years, if these resources were cut off people would be unable to live on land, and merchants would not advance provisions and clothing, &c., if merchants and traders pressed for money they would leave all middle class and small farmers without any live stock on their farms, but they always encouraged farmers to hold on to their stock until they could be sold to advantage, merchants even advanced rent to farmers, as landlords had no sympathy with tenants, and unless rents were paid, tenants were sure to be put under law costs, scarcely 10 per cent. of the tenants got along without assistance, small landholders paid £5 or £6 an acre for conacre, 30250.

Parish Committee.

Congested Districts Board paid for number of years £100 a year for benefit of small farmers to Parish Committees, which enabled them to improve dwellings, build out-houses, &c., number of bye-roads had been made, and wet and marshy lands and rivers drained, 30251-4.

BOLES, Mr. E. G.

See pp. 85-6.

Highwood District.

225 holdings within confines of Highwood branch of United Irish League, County Sligo, 106 over £10 valuation, 89 between £10 and £5, 30 under £5, 30255.

Description of Properties.

Grazing ranch of 120 Irish acres belonging to Richard Gorman in townland of Annaghloy, farm non-residential with herd on it, 30255, 30259-60.—Witness lived within two miles, 30258.—Mr. Gorman lived on his property at Templevanny, eleven or twelve miles away, 30264-5.—He had no other non-residential farm at Annaghloy, but had one at Templevanny, 30266-7, 30271-2.—He let out non-residential farms as grazing to local people, 30268-9.—He put a few cattle on himself, 30270.—Annaghloy ranch bought by auction in 1894 at £2,665, from representatives of owner and occupier, T. Rae, 30261-3, 30273-85, twenty-eight Irish acres owned by Colonel Gethin on Innishmore Island, land held by W. Attison on eleven months' system, a workman of Colonel

BOLES, Mr. E. G.—*continued.*

Gethin's living on island with no land, 30255.—Very small holdings in townlands of Ballinarry and Corrigeenblike, some people with no land, 30255.—On King-Harman property, recently sold under Wyndham Act there were five Irish acres good land in Lower Barroe, this was taken by Gethin family forty or fifty years ago, it adjoined the demesne, and seizure of land deprived tenants of a convenient pass to water, King-Harman tenants in arrears, and paid high purchase price of twenty-one and a half and twenty-three years' purchase rather than pay arrears, majority would be unable to pay annuities, 30255.—Sir G. King estate comprised Ballinarry Upper and Lower Annaghowan, in 1904 tenants asked for terms of sale, landlord demanded twenty-six and a half years' purchase on first term rents, twenty-four and a half on second term, while some neighbouring estates were sold at seventeen years' purchase, terms refused, 30255.—O'Connor estate comprised lands of Carricknagrip, Corrigeenboy, Treenmore, sale demanded by tenants immediately Act of 1903 was passed, twenty-one and a half years' purchase asked, while superior property of Greenagh sold for seventeen, tenants refused offer, as they mostly depended on money from America, which might not continue, 30255.—Colgan property comprised quarter lands of Tullybullawn and Cornmuckla, land inferior, cleared of tenants in 1846, afterwards retenanted, when receipt issued to tenants was dated back half a year, with unwritten agreement that this was never to be charged, in 1897 landlord claimed running gale, and tenants paid three half-years' rent within fifteen months, and but for friends in America they could not have done it, in 1903 and 1904 they asked for sale, which was refused, they were dependent on earnings from America, and were anxious to purchase through Estates Commissioners in order to get inspection, 30255.—Compulsory purchase necessary on above-named properties, 30255.

Kilmactranny Property.

Terms of sale on Kilmactranny property twenty-one and a half years' purchase for first term rents, twenty-four and a half for second, year's rent to be added and arrears wiped out, most tenants owed no arrears, tenants got sporting rights, those adjoining the bog were to have it after turf was cut out, the rest of the tenants were to leave three feet of mud for reclamation, five tenants under 5*s.* valuation, but two had land on adjoining property, four tenants with no land, one had some on adjoining property, property offered for sale nineteen years ago at seventeen years' purchase, tenants would only give sixteen years' at first, after two months, all agreed, but sale had then been abandoned on account of interference of mortgagees, if tenants had agreed at first they would have got 8*s.* in pound reduction, landlord was now getting ten years' purchase more than he asked nineteen years ago, 30255.

Turbary.

150 or 160 acres of turf in Highwood district owned by Mr. Park would be useful if acquired by Board or Estates Commissioners, and divided as accommodation turf, of which there was none, tenants went five or six miles for turf, 30256.

Coal.

Experts had certified coal to be in district, 30256.

Land for Migration.

1,100 acres of land in Geevagh district, benefit if people from such townlands as Cornmuckla and Tullybullawn were migrated there, 30257.

Insanitary Houses.

Number of insanitary houses in Highwood district, Estates Commissioners requested to improve them at time of sale, 30286.

Live Stock Schemes.

County Committee did not select live stock, Department would not listen to representations, and their breeds were not approved of by people, 30286-92.

NICHOLSON, PATRICK.

See page 86-92.

Congestion in Tubbercurry.

Every estate in Tubbercurry district congested; Ballycusheenbeg Ballyglass and Carntubber estates near Leitrim all bad; seven tenants in Ballyglass, with 43 acres between them, three with houses together in same "street" and one acre each; one man had to go 300 or 400 yards to his acre and had no right of way or cartway to public road, 20293-4.—He had a farm and was a farmer, but worked for other people as well, 30295-8.—His wife's people had been evicted from grazing farm in neighbourhood, 30300.—The three houses were not in town or village, only built together, 30419-21.—Man in town with labourer's cottage and one acre not a farmer, 30417.—He would not like to work on a farm, he could earn more in town for less labour, 30418.—No labourers' cottages built in witness's union yet, 30415.

Grazing Farm in Ballyglass.

Grazing farm of 500 acres in Ballyglass where tenants were evicted forty or sixty years ago, 30294, 30302, 30318.—Those on brink of bog remained there; there were 500 acres good land let on 11 months' system; one or two big graziers now wanting to take this land, 30300.—Owners were Ellen Mossman's representatives; tenants did not exactly know who they were, 30300-1, 30305.—The land was in Ballyglass townland, in Cloonacool electoral division, Tubbercurry rural district, 30302-4.—Much bog and coarse land attached to the 500 acres, 30307.

Townland of Leitrim.

Twelve tenants in the other townland of Leitrim; 48 acres 3 roods between ten of them; 7 acres the most any man had; one tenant had ¾ acre given to him as rough bog, he cropped and reclaimed it and now it was good land; one tenant fairly well off with 20 acres, 30307, 30315.—Board had negotiated about a farm in this townland, but were dissatisfied with title, 30307, 30314, 30318.—It was divided; 50 or 60 acres went to tenant who previously had 20; a schoolmaster got 25 acres; both could have done without, 30307-10, 30315.—Popular opinion that professional man was not fitted for land; tenants on estate had prior right; land should be taken from schoolmaster; he could be given some where it was less scarce, 30310-3.—Farms altogether too small, 30315.

Size of Economic Holding.

20 acres of land in Tubbercurry district necessary for economic holding as land was not of the best, 30315, 30459.—Doubtful if man could live on 12 acres even where land was good; impossible at Tubbercurry where it was generally worth only 15*s.* an acre; men could not live on such farms, they had to go to England for three or four months a year with their sons, 30457-8.—No farm should be less than 25 acres, 30456.

Migration of Large Farmers.

Best to migrate larger farmers who were better adapted for it; they owned the best land and were anxious to improve residences, etc.; they would willingly go if offered good farms of 20 or 30 acres, 30315, 30434-5.—They were in position to raise loans from banks to stock farms; only one house would have to be built and 60 or 70 acres would be left available for striping; if small farmers were migrated six or seven houses must be built; every migrant involved a loss of £100 to Board or Estates Commissioners; cheaper to transfer larger farmers, 30434-5.

Non-residential Farms.

Non-residential farms could be acquired if inducements were held out to owners; they could take equivalent land where it was less scarce, 30315.—653 acres in Tubbercurry parish; tenants anxious to buy; landlord's demands unreasonable; large tenants bought direct from landlord; small ones preferred buying through Estates Commissioners, 30432.

NICHOLSON, Mr. PATRICK—*continued.*

Fewer Competitors for Large Farms than for Small ones.

Large farms fetched less in open market; they had fewer competitors; farm of 40 acres recently sold for £200 at private sale, while one of 200 acres only fetched £400 at public auction; 50-acre farm of not very good land sold at public auction for £250; and one of 11 or 12 acres with bottom land on it went for £400, 30432-4.

Value of Land in Tubbercurry.

True value of land in Tubbercurry district about 20 years' purchase of rental, 30321.—Owners paid too much for untenanted lands; without compulsion they would not sell at terms they bought at, 30318-20.—Fair price should be given and both parties considered, 30334-7.—People would be satisfied if value were left to arbitrator to decide, 30322, 30338-40.—Owners expected to get 50 per cent. more than they paid for land, 30325.—Some of their lands had been bought at public auction; some at private sale; true value was what an article would fetch at public auction if there were proper competition; at such an auction things were not bought cheap, 30326-33.

Beatty Estate.

Beatty Estate in scheduled district, 30316-7.

Drainage of River Moy.

Drainage of River Moy required; want of it did harm to tillage along banks; back waters choked up rivulets when flood rose; water remained on land for two days; potatoes got soft and worthless, 30315.—Plans for drainage drawn up some years ago by engineer of Board; fearing opposition from Moy Fish Conservators Board did nothing; plans, maps, etc., could still be had; £1,000 would be saved if they were utilised, 30317-8, 30344.—Obstructions in River Moy had accumulated for years; three or four obstructions in Tubbercurry parish; much damage done, even cattle and sheep got lost, 30341-2.—Overflowing extended for five miles along bank; 574 acres in parish damaged, 30343, 30349.—Conservators were at Ballina; they had water bailiffs to watch fishing, 30344.

Potato Crop.

Potato crop the mainstay of people; poorest suffered most from its failure; pigs, poultry and cattle fed on potatoes as well as people; nothing done to save crop except spraying, which was not always effective; new varieties should be introduced; champion introduced in 1880, the main crop at present; its drawback was its tubers did not form till late, 30317.—Crop of potatoes off light or reclaimed land had not the staying power of that off good soil; crop would be withered and blighted long before it would decay on strong land even without spraying; yield less on bad land; two mouldings given to potatoes on light land; if soil were ploughed the subsoil of gravel would be turned up; at first moulding nothing left to come up for second moulding, with the result that stalks were not properly earthed and weeds came; double the amount of manure needed for bad land, 30361.

Price of Land.

Knox Estate offered for sale to tenants in 1896; 18 years' purchase asked; tenants offered 16 and sale fell through; after 1903 Act was passed 26 years' purchase on second term rents asked, 30349-51.—Four estates in parish sold at from 14 to 16 years' purchase before Act of 1903; four others offered for sale after passing of Act at 23½ to 26 years' purchase; sales not caried through, 30351.

Sale through Board. Fitzgerald Estate.

When Fitzgerald Estate was bought by Board all the good land in centre of estate was in hands of landlord; this was divided among tenants; Board drained, fenced, made roads, and put some of the tenants from wretched hovels into substantial houses remodelled out of farm buildings on landlord's farm, 30351.

NICHOLSON, Mr. PATRICK—*continued.*

Direct Sales.

Estate with bog on it for tenants sold direct; bog bought by outside landlord and taken away; similar sale in which tenants had bog, but no right of way to it; such things should be attended to by Estates Commissioners before money was paid, 30351.

Trespass.

Actions for trespass against tenants sometimes tried, 30351.

Indebtedness to Shopkeepers.

Rent often advanced by shopkeepers; loan being repaid when money came from America in December; large amount came from America which helped to pay for clothing, food, etc.; in bad years people depended on shopkeepers, hoping to repay them when children grew up and went to America; very few tenant farmers who could live on farms without help, 30351.

Conacre.

One or two acres of conacre taken by most small farmers for potatoes and oats; £5 to £7 an acre paid for it to large farmers, 30351, 30383.—Small farmers had good land themselves, but reserved it for cattle; they nursed land till it came to grass again; the last year they had one to three acres seed potatoes, 30351.—If people were migrated from mountain to grass lands they should be allowed to manage their own farms and not be prevented letting in conacre, 30353-5.—Land would deteriorate if so let, but people would not do it if they could help it, 30355-6.—Land would not deteriorate much if it were good; light land could not be used for conacre; good land usually taken, 30357, 30360.

Witness's Farm.

Witness's farm comprised 9 Irish acres of light land and 7 or 8 acres bog, 30358-9.—No staying power in land; if left eight or nine years without digging it would be worthless, 30359.

Parish Committees.

Yearly grant of £100 given by Board to parish administered by Parish Committee; dwellings, out-offices, etc., much improved; formerly few farmers had out-offices roofed with corrugated iron; now there were plenty; some people needing improvements were too poor to take advantage of grant, as only one-third cost was given by Parish Committee; Committee should be able to give half cost where applicant was exceptionally poor and under £4 valuation; several unable to take advantage of grant without neighbours' help, 30361.

Industries.

No industries; employment for girls at 5*s.* to 9*s.* a week and for boys at 6*s.* to 12*s.* would keep thousands from going to America or England for a few months in the year; if money expended by County Councils on live stock schemes, of which independent people got the benefit, were doubled and used to start cottage industries or local factories no one would complain, as that would relieve the poorest and prevent their becoming a burden on the rates, 30361.

Increase in demand for Labour required.

Something wanted to increase demand for labour, 30362.—Creation of 30-acre holdings would help, as the owners would sometimes want extra hands; farmer and his wife without grown-up sons could not do everything, 30363-5.—Man with 25-acre farm and fair proportion of tillage could employ a man almost all the year, 30367.

Tillage.

Five acres tillage out of 25-acre farm sufficient; farmer could not manage more himself; many things to do on farm besides tillage, 30373.—Income not more sure from grazing than from tillage; both in conjunction required; roots wanted for cattle, 30376.—Safe to till 5 acres even with earnings of cattle and selling milk to creamery at profit; 2 acres for

NICHOLSON, Mr. PATRICK—*continued.*

meadow, 30377.—District would not benefit if there were no tillage except potato plot, nor would such a system be profitable; withdrawal of grant-in-aid from rates would be a means of compelling men to till, 30378-81.—People were anxious to till and went miles for conacre when they had no land; they used not to do so, 30382.—They would not till more than necessary; majority would not want conacre with 25 acres; they would take in grazing cattle from neighbours and till the minimum; young people sometimes saved money and bought calf, which they sent to farmer, 30384-8.

Turnips.

Turnips not much grown; soil not deep enough for Swedes, 30388.

Price of Cereals.

Tendency formerly to let tillage run down as price of cereals was low; price of oats now going up, 30374, 30403-4, 30412-3.—Oats used for feeding cattle and for a variety of purposes, 30414.

Tullinsheen.

Five acres good land should be given to people with small farms as was done at Tullinsheen where 5-acre farms were given in centre of grazing ground, 30388.—Tullinsheen the only place striped by Board known personally to witness, 30389.—Board had had it two years and had enlarged the holdings except in two cases, 30390-1.—Previous to that men were all labourers paying for conacre; none had as much as 25 acres and did not employ much labour; only 100 acres divided; eighteen tenants got additions; 19 acres the largest holding, 30392-6.—Holdings tilled; let in conacre the first year to make up fines levied by Board; fines handed back to tenants in most cases, 30397-9.—Men now tilling twice as much as when they had small patches of land, 30400.—Holdings not too large to be worked by man and his family; witness thought there should be more acreage, 30401.

Instruction in Agriculture.

Practical instruction would be useful; lecturer no use; farmers did not believe him and thought they knew better themselves, 30405-7.—Agricultural instruction in schools would be useful, 30409-11.

Horse Labour.

Horse not always kept by farmer with 25 acres; more farmers without than with, 30422-3.—25-acre farmer with horse could till 5 acres, but must get exchange of labour from man without horse; if two farmers with a horse each worked together and tilled 5 acres they could keep a labourer between them, 30424-8.—Absence of horses kept down tillage; more horses would save time and money and allow of more tillage, 30429-30.—An economic holding should be able to support a horse, 30431.—25 or 30 acres necessary to enable man to keep a horse, 30432.

Opinion against all Holdings being of a similar size.

Not good to have all holdings the same size; some should be larger, 30436-8.—No opportunity for man to better himself, 30439-40.

Prevention of too much accumulation of Land in the hands of one Tenant.

One man who had got holding from Board might be allowed to buy from another if more successful, but State should be able to buy back additional farms and prevent him accumulating too much land; fairly good living could be made out of 50 acres; he would not feel the compulsion because he would know that he bought more than 100 acres at his own risk, 30441-50.—This should be continued always; farm of more than 500 or 1,000 acres should never be accumulated, 30451.—People had been driven from the country in the past by that process; it could not be good, 30452-4.—Difficult to prevent tenant from acting as landlord had done if he were put in landlord's position, 30455.

DYAR, PATRICK.

See pp. 93-100.

Witness was manager for Mr. Cook, general merchant, Tubbercurry, 30461-2.

Congestion in Tubbercurry.

District within radius of seven miles of Tubbercurry should be acquired by Board, ecclesiastical parishes of Tubbercurry, Curry, Kilmacteigue, and portions of Mullinbreena and Bunninadden much congested, portions were scheduled, 30464-5.

Untenanted Land.

Land was untenanted whether in possession of landlord, owner, tenant, grazier, or middleman, so long as it was not occupied by resident tenant or landlord, 30466.—So long as land was under grass and not used for dairying it should be acquired, 30467-8, 30601.—Much untenanted land in Mullinbreena and Bunninadden, also in neighbouring parishes of Collooney, Riverstown, Ballymote, and Keash, 30465, 30468.—Line from Bunninadden to Collooney and thence to Riverstown, Ballyrush, Keash, and Bunninadden would give boundary of fertile districts whence tenants were evicted in "forties" and "fifties," enough to provide economic holdings for 500 or 600 families, enlarge present occupiers' holdings and still leave ample grazing lands, 30468.

Compulsory Acquisition of Land.

Authority needed for Board to acquire compulsorily, on reasonable basis of compensation, lands which present owners acquired compulsorily without compensation, 30468.—Reasonable basis of compensation would be what a competent valuer thought just as between owner and tenant; attitude of landowners incomprehensible considering State was buying lands for tenants, 30561.—No witness had given good reason against application of principle of compulsion; only adequate objections would be that Government were going to cheat landlords or deal unfairly with them, for which belief there was no foundation; or that Irish landlords accustomed to wield the power of a king could not see their way to giving up their property altogether, 30562.

Relief of Taxation.

Good might be done by giving County Councils power to withhold exemption or abatement in poor rate at present reverting to owners of untenanted land through operation of Local Government Act, 1898, 30468.—They should have power to levy full rate on untenanted lands and large landholders, any saving thus affected should be applied by them to improve condition of people in congested areas, 30468, 30472-4.—Out of duty of 11*s.* per gallon on whiskey, 6*d.* was set aside by Treasury for relief of local rates; out of an excise duty of 7*s.* 9*d.* per barrel on porter, 1*s.* 3*d.* was given for relief of taxation, 30499.—Part of money raised on tea and other dutiable articles handed back in aid of taxation, chiefly that on whiskey, beer, and porter, 30501.—This money handed over by Government to County Councils was not Imperial money, but had been collected from Irish taxpayer, 30469-71.—This State grant was shared by everyone equally according to his valuation, 30488-9, 30495-6.—Small occupiers consumed dutiable articles and contributed to taxation; in that way 100 acres of land in hands of small occupiers contributed more to public revenue than 100 acres under grass, 30502-6, 30509.—The greater the number of occupiers the more they contributed to the source from whence relief of taxation came, 30510.—This money contributed by poor inhabitants of congested districts was virtually handed over to large grazeirs, the people least in need getting the lion's share, 30468, 30471, 30497.—In future, money should not be distributed equally as it was at present, 30498.—Graziers did not pay taxes on the profits they derived from sale of bullocks, but a merchant selling rolls of cloth paid income tax on profits, 30475-6.—Local taxation based on valuation made years ago, 30491-2.—Each man had to pay certain rate according to his valuation, 30493-4.—Tax of 4*s.* or 4*s.* 2*d.* in the £ paid by man in congested district on valuation of house and garden, while the landowner had 1*s.* 6*d.* or 1*s.* 8*d.* of his rate paid for him, 30477, 30481, 30487.—Landowner paid income

DYAR, PATRICK—*continued.*

tax once on valuation of land, occupier paid one-third; where owner and occupier were the same he pa'd one and a third on valuation, 30485-7.—Local rate on 100 acres the same whether they were occupied by one man or by many, 30507.—100 acres under grass had not the same claim to aid as where it was in the hands of occupiers, 30508.

Operations of Congested Districts Board.

Board at present operating on D'Arcy estate at Doocastle, on Phibbs estate at Moylough, and on Armstrong estate at Achonry; they purchased Fitzgerald estate at Tullycusheen five years ago, striped it and improved it, making roads, fences, etc., it was now sold to tenants who were mostly well satisfied, 30512.

Migration.

Alleged difficulty of migrating tenants did not exist to any large extent; ill-treatment in the past the reason why people were not always so enterprising as inhabitants of well-governed counties; tenants on D'Arcy estate would not move because their means were so small, they were afraid of eviction if they should encounter one or two bad years; tenants willing to pay high purchase price (in instalments) rather than move, so as to keep a grip of the homestead, which was Parnell's advice to them, 30512.—Board met difficulty by migrating larger tenants and dividing their holdings amongst adjoining ones; drawback to this was that holdings though improved were still uneconomic; most desirable tenants, those in prime of life, would generally migrate if reasonable inducements were offered; Parish Committee's advice useful in facilitating migration, 30512A.

Parish Committees.

Parish Committees the most competent bodies for bettering people's condition; much good done in Tubbercurry parish and Curry by means of grants administered by them; people exerted themselves to improve dwellings, etc., and even borrowed money to complete work; grants should be continued and increased; Committees should be empowered to make similar advances for fencing, draining, planting, etc.; local schemes should be left to Parish Committees, unwise of Government Board to carry out work; Government Boards unpopular, could never acquire same intimate knowledge of people, cost of administration greater; cost of administering £100 by Parish Committee only £10, by Government Board it would be nearer £70 or £80, 30512A-17.—Value of work done by £100 was £270, about three times amount of grant, therefore cost of administering £300 was only £10, 30518-22.

Industries.—Peat Industries.

Establishment of industries should accompany schemes for bettering people's condition; peat industry could be developed at Tubbercurry, plenty of bog and cheap labour within radius of four miles, good roads, under proper business management and with co-operation of railway company it would be remunerative and give employment, 30523, 30626.—general peat industry such as there was on the Continent involved selling peat and taking by-products out; Irish people had no experience of it and could get no instruction from Department of Agriculture, 30527-8.

Question of Fuel.

Fuel imported from England while there was abundance of bog, 30529.—No danger of bog running out, 30530.—Landlords would not allow tenants to cut it, 30531.—Reasonable supply should first be given to tenants, enough to supply them at present rate for 100 years; after that bog should be used to create local industry, 30532-7.—In 100 years' time there would be new contrivances for fuel, 30538-9.—Coal at present cheaper from Newcastle than from neighbourhood, owing to bad transit system, 30540.—Turf not used instead of coal because landlords would not allow it to be sold, also uncertainty of seasons affected price and there was difficulty in getting labour to cut

DYAR, PATRICK—*continued.*

it, as men were harvesting in England at time it should be saved, 30541-2.—Better wages obtained in England; good price could not be got for turf unless landlord were willing, 30543.—Turf and peat were different commodities, 30543.—Men cut turf and spread it out, leaving women and children to save it while they were in England, no surplus supply of labour, 30545-6.—No peat industry in Tubbercurry, 30547.—Turf not manufactured, only wetted and dried in sun, peat was manufactured turf, 30548.—Peat industry would make fuel cheaper, 30549-50.—Manufactured peat sent sixty miles by rail and sold in Toronto for 17*s.* a ton, while coal there was 28*s.* a ton, although easy to obtain, 30547.—Peat industry formerly at Coolaney failed for want of proper financial management, 30550.—Peat was compressed hardened turf, 30551.—Other products taken from peat; as result of experiment £4 worth of material had been taken from one ton of common bog, 30552.—No successful peat factory in Ireland; there was one in Germany, where it was used for several purposes, both illuminating and "producer" gas extracted from it, 30553-5.—Col. Warburton had made inquiries of Department's peat expert who replied he knew nothing of production of gas from peat except what was in the Dublin papers, 30556-7.

Industries for Girls.

Nuns of Marist Convent, which had just been built, would be glad to help in establishment of industries for girls such as hosiery or shirt-making; nothing of that kind done as yet, 30523-4.—Lace industry successful, 30524.

Timber-Planting.

Portions of Tubbercurry and Curry in need of drainage and planting; farmers and labourers would benefit if Board planted timber; plantations could afterwards be handed over to County or District Councils at reasonable terms and they would be a source of profit, 30557.

Demolition of Trees by Board.

Board had cut down small plantations of timber at Doocastle and had not replanted them; this was a great loss as district was bleak, 30557, 30602-4, 30612, 30648.—Land cleared of trees used to enlarge holdings, 30605.—Plantation consisted of ten or twelve acres, it was a shelter plantation but not enough to shelter any considerable area, 30606-9.—Holder a shopkeeper, 30613.—Some timber given to tenants to repair dwellings, small amount required, 30610.—People objected to cutting and destruction of a beauty spot, 30649.—Some trees might have been cut down because they were injurious to houses, but not all, 30650.—Ground might have been necessary for striping of land; better to give other land to tenants that did not involve destruction of trees, 30651-6.

Remittances from America.

Tenants of Tubbercurry, Curry, and Kilmateigue were largely dependent on earnings of themselves and children in England and America; during December each year witness cashed £700 or £800 of American cheques, which was a small fraction of amount sent into district, 30557-9.—Without American money rent would be in arrears, 30559.

Direct Sales.

Direct sales in congested districts should not be sanctioned without inspection; in 1904-5 four or five estates were offered at 23 to 26 years' purchase, only tenants willing to buy were those with arrears who would be unable to carry out bargains; those with children in America to rely on refused to buy at that price; in quoting price landlord stated reductions offered, not number of years' purchase; price demanded before 1900 was 17 or 18 years' purchase, 30559.

Potato Crop.

Potato crop of four-fifths of tenants had failed, 30559.

DYAR, PATRICK—*continued.*

Hay and Transit.

Hay crop exceptionally fine, no market for extra supply, 30559.—French crop bad, price £4 to £4 10*s.* a ton, import duty only 4*s.* per ton; market not available for Irish owing to bad transit and to fact that Ireland had lost her direct foreign trade; with proper transit Sligo farmer could sell hay at Sligo and Ballina for £2 10*s.* to £3 per ton, 30560.

Indebtedness to Shopkeepers.

Witness's employer supplied small farmers, 30563-4.—Considerable amount of debt among farmers though their position was better than fifteen years ago, 30565-7, 30569, 30574.—Indebtedness diminished in a good season, 30568.—People's position better at present, but one bad year would eclipse that, 30575.—They were less inclined to run into debt than formerly, 30579-80.—People usually as anxious about price of article whether they paid ready money or not; some were heedless about price, not because they could not pay cash, but because they trusted to honesty of shopkeeper; those who felt they had no claims to bargains unless they had ready money were not more than four in 100, 30581-5.—Man who bought on long credit belonged to a careless class, he would rarely become careful even if he had the ready money, 30587-8.—People buying on credit not necessarily careless, they were more careful and businesslike now than formerly, 30589-90.—They were not quite so independent as those who had cash, 30586.—People on the whole were becoming more hard-headed, and took things more seriously, 30591.—600 out of 900 customers paid ready money, that was to say they settled account at end of half-year, 30599-600.—Debts frequently paid in kind; witness's employer did not buy live stock or farm produce, his own oats and hay were bought by his customers, amount of unpaid debts trifling, 30592-4.—Butter, milk, and eggs, taken by co-operative creamery, cattle sold at fairs to supply rent, 30593-5.

Standard of Living.

Standard of living better now than fifty or sixty years ago, no difference in last fifteen years, 30570.—No more money spent but goods of higher quality purchased, 30571, 30578-9.—Same class of tea and sugar, etc., used better quality clothing; manure and goods for upkeep of farm bought, 30572-3.—No more money being made, improvement came from money earned in England and America, 30576-7.—Spirit licence attached to witness's business, no diminution in consumption of spirits, but less drunkenness at fairs, 30596-7.

Improvement in People.

There was improvement in spirit of people in Tubbercurry district where Board had operated, they were more independent, sober, thrifty, and industrious; men had paid old out-of-date bills since they got under Board, 30559.

Investments for Shopkeepers.

Some shopkeepers held land used for agricultural purposes on which they did not reside, 30614-7.—Nowhere else for him to invest his money except in Post Office Savings Bank or joint stock bank, etc.; men of that class must have some other outlet for investment of capital besides land intended for distribution among farmers; if there were industries in Ireland as in other countries they would have opportunities of investment, 30618, 30620.—Shopkeeper should be expropriated from land, an Irish Government should do it, 30619-20, 30622-3.—Shopkeeper like the grazier was hurrying land to destruction, 30621-2.—If there were an Irish Government, a sufficient public confidence for security of investments in industrial enterprises, with a banking system and Stock Exchange not under threat of British Government and Lord Lieutenant there would be plenty of opportunities, and shopkeepers and others would be willing to invest in enterprises with reasonable chance of success, 30624, 30643.—Limited liability company required to start industry like peat; unless backed by political influence such a company would not get quotation on Stock Exchange, so could not dispose of their shares should they wish to, 30627.—Banking system and Stock Exchange both against them, 30628.—Irish banking system not the same as English, 30629.—Members of Stock Exchange appointed by Lord Lieutenant who had to satisfy himself of loyalty of applicant, 30630-6.—If there were industries in the country investments would be at once available, 30644.

Settlement of problem of congestion urgent, 30637-8.—It could not be delayed till there was Home Rule, 30640.—Witness would prefer expropriation under Irish Government, but would not delay it till then, 30641-2.—Irish self-government the real foundation of Irish industry, 30645-7.

ARMSTRONG, Mr. LUKE.

See pp. 100-104.

Farm in Moylough on Phibbs Estate.

Witness was a shopkeeper in Tubbercurry; farm on Phibbs estate bought by witness about ten years ago from former tenant before Congested Districts Board had acquired it, 30663-5, 30676, 30680.—No particular Act of Parliament required to sanction purchase; it was purchased in the ordinary course, 30681-2.—Valuation, £49 10*s.*, and first term judicial rent, £42, 30666.—130 or 140 acres clear, and 40 or 50 acres bog and waste, 30667.

Witness attacked for not surrendering Tenant Interest of Holding—No one had made an Offer.

Witness had bought tenants' interest and latterly had been attacked for not surrendering it to Congested Districts Board, 30669-70, 30673.—Board had bought the estate, also landlord's interest, and witness was a tenant of theirs, 30671-2.—About a year ago a notice had been sent round by Congested Districts Board stating that they had a number of holdings all over the town; witness had offered to exchange with them and received a query sheet to fill up as to how he had acquired his holding, etc.; he had returned it and had not heard from them since; resolution had been passed by Moylough branch of United Irish League calling on people not to have anything to do with witness till he had surrendered the holding, nor with Mr. Cooke, who had a big farm adjoining witness's, 30674-5, 30678, 30683, 30721-2, 30728-9.—Witness wished to surrender tenancy, but had not been offered anything for it, 30677.

Migration.

He was hardly prepared to surrender the tenancy and migrate, as he was planted in Tubbercurry, but if he got a better farm within reasonable distance of a non-congested area he would not have the least objection, or if he knew he would get a decent price, 30679, 30687, 30730.—Witness had offered to exchange his farm for Chaffpool, but a neighbour of his (Mr. Cooke) had been negotiating for it and was most anxious to get it for various reasons, 30730, 30732, 30750-1.—There were 50 acres at Chaffpool, a great deal of which was wet, 30749.—Negotiations for exchange were dropped as the houses were of no value to witness and they were to Mr. Cooke, 30750.—Mr. Cooke owned about 80 acres of good land at Kilterna, 30751-2.—People nearest the land would have first claim to the 80 acres, 30753.—Chaffpool very little use to a tenant; Moylough a far better farm as far as the agricultural portions of it were concerned, 30754.—Great deal of Chaffpool wooded; these no good to tenant, 30755.—No difficulty in matter of price if Congested Districts Board exercised power of expropriation; witness sold a farm a week ago and got £500 for it freely, 30701, 30710.—He had improved it since he bought it; it had cost him £500 or £600, 30702.

Compulsory Powers of Congested Districts Board.

Witness did not know that Congested Districts Board had power to compulsorily take land, 30717.—He had not seen them doing it anywhere, 30718.—(*Mr. Doran—Board had already decided to exercise that power in witness's case,* 30720).—First thing ought to be to try to make a price, and then if witness were unreasonable they could exercise compulsion, 30724.—Witness had not made people aware that he wished to give up farm; Congested Districts Board should have approached and asked him what he was prepared to sell it at, 30685, 30723.—Mr. Doran had

ARMSTRONG, Mr. LUKE—*continued.*

stated that Board were determined to use compulsion; not one word about an amicable arrangement, 30736.—Board could scarcely call witness's a non-residential holding; he had a good two-storey house put up there and showed every appearance of taking up his residence; only advantage Board could take was that he had not gone there yet, 30737.

Description of Witness's Land.

Witness's farm was tilled and grazed, 30628.—He had his own beasts on it and did not take in grazing; it was a good sheep farm, 30697-8.—Grazing paid better than tillage; tillage nearly impossible to a man like witness, 30769-700.—40 acres was cutaway bog and 16 acres good land; 8 or 9 acres tilled this year, 30690.—Witness let the farm in conacre, which deteriorated it, 30691-2.—He had manured it a good deal with slag and had built a house on it, 30694, 30696.—There was a herd with a farm of about 5 or 6 acres, 30694, 30713.—Witness would be relieved of a certain amount of superintendence if a sum of money were invested, 31714-5.—Suitable to enlarge small holdings, but witness's land was on extreme edge of townland of Moylough that was sold; Mr. Cooke's farm ran between small tenants and witness's land, 30704.—He owned about 80 acres of good land, 30752.—He did not reside on the land; a tenant there had obstructed him in trying to exchange with Congested Districts Board, 30705.—Not in Mr. Coke's power to let them have the land at its fair value, 30706.—Witness would look favourably on any offer of Congested Districts Board provided he got reasonable compensation for his purchase price and improvements; if he could get 5 per cent. for it he would not keep it two minutes, 30707-8.

Necessity for Inspection of Estate.

Absolutely necessary that Board should send down inspector when estate was vested to make enquiries and report to Board, 30734.—He should report upon farms which Board should acquire for relief of congestion, 30735.

Non-Residential Farms.

There were different farms that had been put down as non-residential which were residential farms, 30740, 30756-7.—Two of them belonged to men who had grown-up sons, another belonged to Mr. Boyers, and one to Mr. Layng, 30740.—Mr. Boyers' son was twenty-seven or twenty-eight; he bought his farm six or seven years ago at a publi auction, 30742.—On Layng's farm there was a herd house, a fairly good house; he got a man to build a new house, 30743.—It was started two or three months ago, 30744.—Farm had been grazed for last six years and he conacred it a good deal yet, 30746.—He did not take stock from local farmers, 30747.—As he had means enough to stock it himself, 30748.—Witness could not tell how many cases there were in which owners fitted out these farms for their sons, 30757.—He knew the district well, but he had not the names of the farms, 30758, 30760.—One witness had said there was 500 acres of non-residential grazing land in vicinity, 30756, 30762-9.—Witness contradicted the statement, 30759, 30778, 30781-2.—He had ear-marked those holdings that the witness mentioned and included them as non-residential; witness would call them residential, 30769-71.—Other witness had put on a meaning that no sensible man would consider correct, but it was a mere difference of opinion, 30772-3.—(Occupiers enumerated by Mr. Nicholson, 30774-6).—Twice as many more could be counted if Ox Mountains were taken in, 30776.—There were 5,000 acres on Ox Mountains, 30777.—Witness still persisted in his contradiction, and he would go further and say there were 5,000 acres, 30782.—Sole point of difference was the view taken of non-residential holdings, 30783-4.

Difference between Residential and Non-Residential Holdings.

Witness thought a non-residential holding was one which was held available for a son or a daughter, 30785-6.—Quite a number of cases where it had been held for a brother, but that was going outside one's own family, 30787-8.—Houses were not new; farms had been lately acquired and houses were on them

ARMSTRONG, Mr. LUKE—*continued.*

that former tenants had occupied, 30789.—They were residential holdings at one time, 30790.—Some of the men who owned ranches had grown-up sons who would occupy after them; one man had no sons, but most of them had sons; Mrs. Brennan had a big family, some full-grown, and if land was taken from her she would have to send them away to turn to something else, 30791-2.—If a man had a grown family and had two holdings, one on which he lived, and the other on which he did not live, the second would be residential if he built a house and put his son on it; very unreasonable if it were taken away from him and quite unfair to send him away; he should have first claim to it, 30793-6.—No difference whether son was actually owner or whether he was only acting on behalf of his father, 30796.—Very hard if son spent his time working for his father and the holding was intended for him, though he did not actually reside there, 30797.—Where there was land with a residence upon it it was always possible to turn a non-residential into a residential holding 30798-802.

Effect of Tillage.

Towns would go on much the same if future farming were tillage, which would cause the farmers to employ more labour, 30803.—Witness did not think there would be any improvement, 30804.

Effect of Poverty and Congestion on Trade.

In small towns, generally, the more congestion and poverty the better the trade; where farms were larger people went to the bigger towns; shopkeepers in small towns obtained more money from poor people; richer people went to Sligo, 30805, 30805A, 30806, 30814.—Witness would be very sorry to suggest keeping people in poverty, 30805A.—But he was not in favour of too much land being in hands of any man, 30807.—Very good to have 900 regular customers out of 1,400 customers as one witness had, 30809.—But probably four-fifths were customers also of another shop in town, 30810.—If population were diminished and farms made bigger there would not be so many customers; they would go to Sligo, or further afield, and there would be no trade for Tubbercurry, 30812-3.—Distribution of land would not affect the people much, as long as population was there it would not affect local towns much, 30808.

CONNOR, Mr. THOMAS.

See pp. 104-5.

Doongeelagh Estate.

Estate situate in townlands of Doongeelagh and Coultalough.

Multiplication of Landlords a Grievance.

Multiplication of landlords was the principal grievance complained of; four landlords collecting rent on the estate, 30815-6.—Estate was in hands of Land Judges Court and was divided between the four landlords, 30817-8.—Witness paid rent to two landlords through agent, who gave receipt for each separately, 30819-20, 30822.—Rent was £8, 30821.—One landlord would let rent go for a year, the other would serve process if not paid up to the day, 30823.

Quality of the Land.

Land of the very worst quality; extremely hard to till, and crops even in favourable season were deficient both in quality and quantity, 30824.

Remittances from England and America.

Tenants unable to make a living without constant remittances from America and England, and when these resources fell short they had to bear heavy burden in shape of law costs at suit of the four landlords, 30825.

Migration.

Estate was portion of Tawnagh grazing land; 100 acres at present let as ranches for grazing cattle,

CONNOR, Mr. THOMAS—*continued.*

30825-6.—Desire of tenants that Estates Commissioners or some such public body should acquire the property, and if a scheme of migration was carried out by moving smaller tenants to part of Tawnagh now going to ruin, and remainder of holdings were enlarged by surplus land thus obtained and let to tenants at reasonable rent, they would be in better position and not so much at mercy of a bad season or shortage of remittances from England and America; this part of property was formerly barren waste and considerable amount of labour was expended on it by tenants and their predecessors, 30826.

Price asked for Land. Tenants debarred in some cases from getting Fair Rents fixed.

One landlord had made an offer to sell at unreasonable price of 24½ years' purchase, which tenants refused to accept; a good many holdings had been converted into future tenancies by process of chicanery on part of landlords, and tenants in these cases were debarred from entering Land Court to have fair rent fixed; 5 acres of holding of one of these tenants had been inundated by a small lake and landlords had refused any consideration; eight tenants under £5; eight under £10, and four over £10, 30826-7.

GALLAGHER, Mr. PATRICK.

See page 105.

Non-Residential Farms in Parish of Killoran.

On Dodwell Estate there were 253 acres of non-residential farms; Kelbrillar had 53; Golden, 58; Conboy, 91; M'Corrick, 48; Phipps, 108; representatives of Stokes, 104; Dane Heather, 305, 30828.—Major O'Hara had 357 acres and Mrs. Geddes, 126 acres, 30829.—Total acreage over 1,100, from which several families had been evicted during the forties and fifties, 30832.—Portion of Dodwell Estate let in grass and portion in conacre to local grazier on 11 months' system, 30836-8.—He probably had thousands of acres on the mountains, but no arable land, 30839.—Golden let his farm in conacre and took in grazing cattle, 30841, 30844-5.—He lived about a mile away and had about 50 or 60 acres, 30842.—Conboy lived in County Leitrim; he was a grazing tenant and stocked the farm entirely himself, 30846-7.—M'Carrick lived about a mile away; he had 50 acres and grazed it himself, 30849-50.—Representative of Stokes was living on the land at present; Stokes himself had about 150 acres of home farm, 30851.—Major O'Hara let his grazing land on 11 months' system; he lived within a couple of miles away on his property; Geddes lived about four miles away and had a farm of 500 or 600 acres, 30852.

Uneconomic Holdings.

The districts which comprised these lands were not scheduled; they should have been, 30853.—There were uneconomic holdings in district which needed special treatment just as much as holdings in scheduled districts to which Congested Districts Board devoted their attention, 30854.—Very poor district; numerous uneconomic holdings on mountain slopes; occupiers of which came across the river to these non-residential farms and paid high price for conacre and grazing, 30832.—These farms should be acquired by Congested Districts Board or Estates Commissioners, 30833.—And small holders in neighbourhood should be put upon them or have their holdings enlarged if possible, 30834.

Shopkeepers with Grazing Farms, Question of Expropriation.

None of these holders of grazing farms were shopkeepers, 30855.—There were some men living in the towns who had shops in a small way, but who made their living entirely by land in the country, 30856.—Witness would be in favour of expropriating them from the country and taking possession of the farms as long as they had good position in the town, 30857-8.—Some of these men might till more on the farm than they would if they had not the outlying grazing farm, 30859.—But these men did not live by tillage

GALLAGHER, Mr. PATRICK—*continued.*

or by farming property, but by grazing, 30863.—They used the grazing farms in connection with their home farms, 30860-2, 30864.—Witness would put them in same class as man who takes in grazing cattle, 30865.

Eviction.

There was an evicted tenant on a neighbouring estate in Carnaskea electoral division who had cost ratepayers and State £384 during last fifteen years; she had been ruthlessly evicted and had been confined in Sligo Asylum ever since, until recently, when she died; next-of-kin would be entitled to get the place back from which she was evicted, 30866.

CAWLEY, Mr. PETER.

See pp. 105-6.

Scheduling Carnaskea as Congested advocated.

Carnaskea not scheduled, if it were it would not be in present position, 30871.—One portion of parish scheduled, 30873.—District should be scheduled as congested, there were 103 families in Carnaskea division on the mountain side, occupants of these small holdings had been evicted from non-residential farms, 30867.—Those who did not die were hurled into the mountains, or had to go to America, 30870.—People would like Commission if possible to come and inspect the place, 30867.—Inconvenience and loss of time caused by flooding of the rivers, people could not get their goods to market unless they started the day before, 30867.

Conacre.

There were no roads in the mountain places, men had to come off the mountain and take conacre at from £5 to £6 an acre, and at the time of taking the conacre they had to sign bills for the owner to draw the money from the bank in November, 30868.—When these poor people had taken the potatoes out of the land they had to leave them in pits, until floods went down, 30869.—Necessity of Congested Districts Board purchasing the estate in order to put these poor people on better holdings on the non-residential land, 30869.

Evictions.

There were several cases of people evicted from these non-residential farms, in one case a woman had been evicted sixteen years ago, after eviction agent had ordered bailiffs to set fire to the home, and the poor creature had fled, but had been captured by the police, found to be mad, and taken to Sligo Asylum, she had remained there ever since until her death recently, having cost the ratepayers £384, if she had been allowed to keep her small holding of three and a half acres there would have been no expense to anybody, there was another case of eviction at Colhouna of a woman who had since been in Sligo Asylum nine years at expense to ratepayers of £24 a year, Congested Districts Board or Estates Commissioners should investigate these cases and restore these people, or their next-of-kin to the little holdings from which they had been evicted, 30870.

Price asked for Major O'Hara's Estate.

Major O'Hara had made good roads on his property, but when offering estate for sale he would not sell for less than twenty-six years' purchase and sporting rights, 30873.

M'MANANNY, Mr. PATRICK.

See pp. 106-7.

Cloonloo and Killaraught.

Division was divided by Lake Gara into two portions, Cloonloo and Killaraught, Cloonloo portion was mostly barren land, bog, mountain, and shrubberies and highly congested, number of householders in

M'MANANNY, Mr. PATRICK—*continued.*

Cloonloo was 185, gross valuation £720, on an average of about £3 17*s.* 10*d.* per householder, 96 of these householders valued at £4 and under, 79 whose valuation was between £4 and £10, 6 between £10 and £15, and 4 between £15 and £20, 30874.

Migratory Labour and Remittances from America in Cloonloo.

Large number of small farmers went to England every year to earn for themselves and families, and were it not for this and money they receive from their families in America they would not be able to live at all, 30876.

Breaking up of Grazing Ranches in Killaraught.

Killaraught was all rich land and chiefly composed of grazing ranches, it possessed 900 acres of untenanted land, so that cure for congestion in Cloonloo was at the door if proper steps were taken, these 900 acres would give 20-acre farms to forty-five out of the ninety-six in Cloonloo, whose valuation was £4 and under, and in a great measure relieve congestion, 30874, 30876.

Question of Grants for Reclamation and Drainage.

Even if congestion were removed, a large portion of those left behind would never be able to make a decent living owing to quality of land, and would require special treatment, which should consist of money grants to enable them to reclaim and drain their land and make roads which were much required, taking parish of Cloonloo as a whole, it was no better than the worst portion of Dillon Estate, which was bought at fifteen years' purchase, it would have been scheduled as congested from the start were it not for ranches and large valuation in Killaraught, Commission should visit district and see for themselves, 30874, 30876.—There were two men whose valuation was £413 15*s.* and £404 5*s.* respectively, or £88 more than the 185 householders in Cloonloo, 30874.—These men held 683 acres between them, 30875.

Definition of Congestion Unsatisfactory.

Electoral division of Kilgree had been scheduled, witness represented it on the County Council, 30878.—There were only 202 holdings under £10 valuation, whereas in Killaraught there were 225, which showed that law was defective, and definition of congestion unsatisfactory, but for the grazing ranches in the southern portion it would have been scheduled long ago, 30879.

Advantages of Migration.

Migration recommended as a cure for congestion, 30880.—If two or three small holders were taken away, those left behind would be richer by the amalgamated holdings, 30881-2, 30886-8, 30892.—Man who was left behind might have 100 acres of mountain land, 30893.—Holding as a rule about four or five acres of land apart from grazing rights, all small farmers, some held twenty, twenty-five, and thirty acres, but owing to quality of land they were not comfortable, 30894.

Class of Land.

Depended on quality of land, and how it was obtained whether they could live comfortably on enlarged holdings, 30895-6.—A man and his son could till two Irish acres with a loy and a shovel, 30883.—Not a class of land that ought to be all tilled, in the half-parish only fifty acres on which a plough could run, it therefore had to be done by a spade, loy, and shovel, 30885.—Land would stay in grass about five years, then it would go back to its original nothingness, necessity for drainage, 30889-90.

MORAN, Mr. THOMAS.

See pp. 107-8.

Armstrong Estate.

Armstrong Estate purchased by Congested Districts Board about three years ago, area of tenanted land, 3,524 acres, untenanted, 326 acres, purchase money for whole estate, £44,000, poor law valuation, £1,783 11*s.*, number of years' purchase 24¾ of the valuation; most

MORAN, Mr. THOMAS—*continued.*

of the estate situate in Achonry; seventy tenants under £10 valuation; it would have been scheduled as congested but for waste ranches let to graziers on eleven months' system, thereby depriving poor tenants of any assistance from Congested Districts Board; estate bought over the heads of tenants, who were not consulted in any way and did not know how many years' purchase they had to pay for their holdings; at request of tenantry parish priest wrote to Board to ascertain the price, reply being 20 years' purchase of first judicial rents, 23 years' purchase of second; price excessive as great many of these poor tenants never had judicial rent fixed, but accepted 3*s.* in the £, abatement each year; they owed arrears, etc., and when they spoke to agent about getting fair rent fixed they were told he would process for all arrears, which meant ruin to tenants; they were thus deprived of the benefit of the Act; if they had a free hand they would have obtained five or six shillings in the £, majority of tenants could not maintain themselves for one quarter of the year if it were not for remittances from England and America.

Migratory Labourers.

About sixty migratory labourers went to England every year to earn rent and keep their parents and remainder of family to eke out a living at home.

Inspection before Purchase.

Congested Districts Board should make personal inspection of each holding before purchasing to see if it were security for price they were paying; not done on Armstrong Estate; price paid excessive when compared with price for adjoining estate purchased under Act of 1886; Lord Norbury's estate sold at 16 years' purchase; land far superior to Armstrong Estate, and tenants would get reduction of 2*s.* in the £ at end of every ten years.

First two Estates purchased under Act of 1903 in County Sligo.

First two estates purchased under Act of 1903 in County Sligo were Marginson and Armstrong Estates, former bought at 13¼ years' purchase, latter at 24¾ years' purchase, though amount of untenanted land on Marginson Estate was comparatively greater; 506 acres tenanted land on Marginson Estate, 405 untenanted, £4,412 purchase money, £171 13*s.* 6*d.* rent of untenanted land; on Armstrong Estate, 3,524 acres tenanted, 326 untenanted land, £4,440 purchase money, and £1,899 11*s.* 2*d.*, rent of untenanted land.

Tenants on Armstrong Estate aggrieved at Congested Districts Board—Collection of Rent, Inaction as to Improvements, Importation of Strangers.

Tenants on Armstrong Estate felt aggrieved, for although Board had purchased estate nearly three years, tenants had derived no benefit under sale up to the present; Board had collected full rent for the third year; taking average reduction tenants would be entitled to 6*s.* 8*d.* in the £ as five-sixths of them were first judicial tenants; Board would have extracted from tenants one year's rent, or £1,899 11*s.* 2*d.*; if tenants bought direct from landlord or from Estates Commissioners they would get the benefit of the purchase from the time of purchase as nearly all first judicial tenancies had expired before purchase of this estate and tenants were prepared to go into Court to have judicial rent fixed, but they expected to get benefit of the purchase; very unfair of Board to demand full rent for third year, Board purchased all arrears on this property, some of which accrued twenty-five years' ago, and landlord found it impossible to collect them as people had no means to pay; Board sued all cases for arrears; and there had never been any combination of tenantry against paying rent on this property; people indignant to see Board make a rent-collection machine of itself, sending sheriff's bailiffs to seize on these poor tenants' cattle, 30898.—No benefit from the improvements, 30898.—Board had not improved tenants' land, only the ranches, 30899.—Tenants derived no benefit from the ranches, full rent collected just the same, 30900, 30928.—Ranch not broken up yet, 30901.—Apportioned into economic holdings; Board should not buy

MORAN, Mr. THOMAS—*continued.*

arrears from landlord unless they got a grant to wipe them out; tenants from Mayo had been put in on the ranches before claims of small landholders were considered; it had been promised that no person should be imported into the district until all uneconomic holdings on the estate were enlarged, yet in violation of that promise they imported a certain party in on the demesne lands; if Board wanted to deal fairly with tenants there was no room on the estate for importation; seventy small tenants under £10 valuation, and land available would not suffice to give economic holdings to such a number; there were herds who were evicted on those ranches for refusing to herd for graziers, also young men who left employment of graziers, and their claims should have been considered before Board imported any person into the district; Board would not have been purchasers of ranches but for prompt action of Nationalists of the district, as graziers were negotiating with landlords to purchase tenants' interest of the ranches at time agitation was raised against that pernicious system, 30902.—The ranches had become tenanted land, Board was paying all attention to them, 30925.—They had been handed over to tenants by Board, 30926-7.—Improvement schemes were going on on the ranches that were being handed over to tenants, but not on tenants' land up to the present, 30931.—Tenants' land needed improvements, property affected by the Owenmore, 30931-2.

Compulsory Powers for Congested Districts Board, Proposed.

Congested Districts Board should have compulsory powers to purchase these waste and non-residential holdings at a fair price, and should be supplied with sufficient funds to enable them to carry out propect of planting people on the land of their forefathers; they would be able to give an economic holding to every young man in Connaught and thereby prevent emigration, 30902, 30919-21.

Lace-Making.

No local industry, but lace making; there was a technical hall in the parish where lace-making was taught, it was built free by Sir J. Gore-Booth and handed over to Parish Committee; there was a competent teacher from Banada, 30902, 30907-8.—But Committee had not sufficient funds to work up the industry; witness thought Congested Districts Board should give a free grant to this institution and provide market for the work performed by the young girls attending the class, 30902-3.—Agricultural Board provided market for other commodities, 30904.—And lace industry should not be thrown over for want of market, 30906.—Agricultural Board gave a grant but local people equipped the school, cost left in the hands of Father Quinn, 30909-13.—If there were more funds more pupils could be accommodated, about thirty or forty at present, there could be 100, 30914-6.—If the work was encouraged they would be able to sell the lace, 30917.—No industry which existed in the locality worth carrying on unless it could be done profitably, 30933-4.

Drainage and Roads.

Drainage of the Owenmore an important matter as some of the tenants' lands were periodically flooded by tributaries of that river, 30902.—Roads should be made for tenants and Board should drain the lands on all estates they purchase, which they had not done on Armstrong Estate, except through the ranches, 30922-4.

SLEIN, Mr. PATRICK.

See pp. 108-9.

Uneconomic Holdings in Aughanagh, Valuation, etc.

Witness's holding consisted of about twenty-three English acres in the Boyle No. 2 Rural District Electoral Division of Aughanagh; thirty-four holdings on estate under £5 10*s.*, and in addition seventeen families

SLEIN, Mr. PATRICK—*continued.*

who were unrated; average valuation £2 10*s.*, many of them lived in huts and had to send their children to England and America to earn the necessaries of life; American remittances had been received by almost every person in the division; total valuation of division was £2,126 1*s.*; four people owned £847 worth, leaving, average valuation of remaining 156 at about £8; there were 424 acres of untenanted land of very best quality, which should be divided among these poor people; people paying big rents for bad lands, 30936-7.

Compulsory Powers of Congested Districts Board, Proposed.

Congested Districts Board should have power to purchase this untenanted land and to use it for increasing holdings of small holders; landlords refused to sell, one had asked such an exorbitant price that tenants could not purchase, the other would sell at over twenty-seven years' purchase; compulsion was necessary, 30938-40.

Rent on Phibbs Estate.

On Phibb's Estate a number of people prevented from going into court, about thirteen years ago one townland was held in rundale, landlord had land striped, fixed new rent, and tenants signed new agreements, but afterwards found they were returned as future tenants and prevented from going into court, so they still had to pay exorbitant rent, 30941.

Alteration of Law as to Fixing of Fair Rents desired.

Arrangement made twelve or fourteen years ago, 30942.—People would like to have law altered as remedy for this grievance, two of the tenants who did not agree to the re-striping arrangement went into court and got 7*s.* in the £ reduction, 30943.

Flooding.

There was a lake which caused flooding of about 200 acres periodically, and did great damage; lake should be drained by Congested Districts Board, if this were done there would be no need for expenditure on the road, 30943-4.

DURCAN, Mr. EDWARD.

See pp. 109-10.

Messrs. Knox's Bellaghy Estate.

Messrs. Knox had been asked to sell their estate to the tenants, and the people were told that they might put Congested Districts Board in motion; landlords then asked to sell to Congested Districts Board and people had also written to Secretary of Congested Districts Board asking Board to buy; letter was received from agent of above estate stating that he had been in correspondence with Congested Districts Board office on the subject of a sale, and that as the estate was circumstanced at present and owned in individual shares Board would not purchase; and having investigated into prices usually given for congested estates having no grass lands Messrs. Knox were not disposed to go to expense of furnishing particulars required by the Board because they felt confident price that would be offered could not be accepted; landlords again asked for what number of years' purchase they would sell estate to tenants; reply stating that Messrs. Knox were not at all willing to sell estate and did not see why they should make a proposal, but if some person would make a reasonable offer on behalf of the tenants it would be submitted to Messrs. Knox, 30945.

Compulsory Purchase Bill Proposed.

Government had been asked to pass Compulsory Purchase Bill, to deal with landlords of this kind, otherwise tenants were powerless to deal with them, 30945.

DURCAN, Mr. EDWARD—*continued.*

Inspection of Holdings Before Purchase.

The following instances of sales under the Ashbourne Act showed the necessity for inspection of holdings; Coragon Estate was purchased at from five to eleven and a half years' purchase, averaging about nine years, tenants and landlord had agreed to fourteen years' purchase, but when Government inspector came he found it was not value for fourteen years' purchase; other examples were M'Dermott Estate and Lord Norbury's estate, 30946.

Protest against the Increased Prices asked by Landlords.

Tenants on Knox Estate should not be asked to pay more in 1907 than tenants on adjoining estates paid under Ashbourne Act on first term rents, 30946-7.—Most of rents on Knox Estate were first term rents, 30947.—Sir Granville Brewitt had agreed to sell his estate at fourteen years' purchase nine or ten years ago, now he wanted twenty years' purchase, 30948.—It was owing to some misunderstanding between an adjoining landlord as to a bog that the sale fell through, 30949.

Drainage Scheme Proposed.

Greater portion of land in the district was wet and swampy, and Government were requested to start drainage scheme with a view to having number of rivers sunk which overflowed and caused great damage to crops and loss to farmers, 30949.—Congested Districts Board should undertake arterial drainage, 30950-1.

MAYE, Mr. MICHAEL.

See p. 110.

Powell Estate.

Number of tenants on Powell Estate was seventy-five, and average tenantry valuation £2 14*s.* per holding; three holdings alone being valued at £10, and remainder ranged from 10*s.* to £6 10*s.*; landlord lived on estate, which had not been purchased under any Act, but which was one of the most congested in Connaught and deserved special treatment, 30954.

Turbary.

Large supply of bog on the estate, which could be made more valuable, but there were about twenty-four holders of small farms who were not in possession of any turbary, and who had, in past years, to obtain bog on adjoining estates though landlord had been supplying outsiders, 30954-5,

Grazing Ranch.

There was a grazing ranch of about seventy acres on the estate in occupation of the landlord and division of this would in some measure relieve congestion, but though Congested Districts Board had been approached, nothing came of it, as landlord was unwilling to part with ranch, 30955-8.

Compulsory Powers Proposed.

Necessity for the Board to acquire compulsory powers to take over such ranches, otherwise refusal of individual to accept equitable compensation would render efforts to relieve congestion futile; relief of congestion was essential and could alone be satisfactorily carried out by giving Board conpulsory powers, 30958-9.

Migration.

Unwillingness of tenants to submit to migratory scheme arose from fear of contracting obligations they would not be able to discharge; they felt it would be necessary to incur fairly large initial expense in fitting up a new home; this difficulty could be overcome by making provision for granting a sum necessary in such cases, and tenants would, no doubt, be willing to enter into such an arrangement.

MAYE, Mr. MICHAEL—*continued.*

Water Supply.

Many of the tenants suffered much for want of water during summer and autumn; provision in this respect would prove a boon.

Uneconomic Holdings.

Number of uneconomic holdings at present existed on Cooper's estate brought about by arbitrary action of landlord some forty years ago, he having evicted the then holders and put in their stead "planters" and even after they had been removed land which they reclaimed was subsequently given over to those who were planted in their place, 30958.

M'LOUGHLIN, Rev. PATRICK.

See pp. 111-8.

Congested Districts Board's Operations in Leitrim.

Operations of Congested Districts Board very limited in County Leitrim, total amount of funds expended in county showed correctness of belief, 30962, 30985.

Local Representative Needed.

Limitation of operations partly due to want of representation of county on Board, 30962, 30963.—Some members of Board most kindly disposed to county might have displayed considerable interest, yet witness did not believe they would have intensity of interest required by representative to work projects proposed by the people, 30963.—Board left initiative of works too much to simple people, 30962, 30985.—Peasantry and many connected with them could not initiate schemes or deal with problems, 30986.—No assistance was received in such matters, 30963.—Except from one or two members of Board, 30986, 31046.—When the people or their representatives put forward schemes, or made inquiries, Board always found objections to particular scheme, 30963.—Reasons alleged generally want of funds or that powers and funds were confined by laws and rules, 30963, 30986, 31010.—Peasantry or their representatives would not find out other things to their benefit and so practically everything fell through, 30986, 31004, 31049-50.—Witness did not say the Board had failed, avoided that word, 30985.—Practically everything fell through, 30986, 31004, 31049-50.—Powers and funds of Board should be increased, 30963.—At present there were no local representatives on Board as such, principle very good, but witness would prefer a representative, 30964.—Would like construction of Board changed in such way that at least each county in which were scheduled areas, should have a representative, 30965, 30966, 30969.

Elected Representative would be Best.

In regard to mode of appointment, elected representatives of some sort would be looked for; as a popular representative witness would not deny right of nomination, 30967.—Generally speaking, for a position of the kind an elected representative was best, 30967.—Representatives might be elected in various ways, by representative bodies, not necessarily by individual voters, 30968.

Order in which Congested Districts should be dealt with.

It would never be possible to grant Board a sufficient sum to meet requirements of all congested district counties at once, things should be done gradually, 30970.—Witness did not mean that some places would have to be dealt with before others, but that a great deal of good could be done in each county by taking the work piecemeal, 30971.—When powers and income of Board were increased, even if some places would have to be dealt with before others, it might have done enough already in some, and time of Leitrim should now come, 30791.—If the Board had at their disposal a given sum, supposing there were things on which they ought to spend money in Galway and other things apparently not so pressing in Kerry, no

M'LOUGHLIN, Rev. PATRICK—*continued.*

reasonable person should consider money ought to be spent on things practically unnecessary, 30973.—To a certain extent pressing things should be dealt with first, wherever found, 30974.—Pressure might be relative, 30975.—If a county was pressed it might be given some relief without absolutely depriving another of what it required, if Board had greater powers and funds it might do great deal of good in several counties without doing all they required, 30976.

Possible Disadvantages of having Local Representation.

Effect of adoption of two representatives from each county would not be to divide the funds in Board's possession amongst counties to meet the pressure put upon it by representatives, thereby depriving a particular county where a great deal of immediate work was needed, 30977-8.—If funds were common to all congested counties a representative and his constituents would think they were entitled to portion of these funds, impossible for these constituents to measure their need with that of which they did not know, they would look at their own necessities from purely local point of view, 30980.—Division of funds and consequent deprivation of a county a hypothetical case, 30980.—As things existed it was not a hypothesis witness would consider, 30981, 30983.—Witness had never been in West Connemara, Mayo, or the Rosses in Donegal, and seen their condition as compared with that of his own county, had scarcely ever been out of his county, 30984.

Cattle Scheme.

Improvement of cattle scheme had failed, 30987.—Witness spoke of all the years until the cattle scheme practically ceased in Leitrim as far as Congested Districts Board was concerned, 30988-9.—The Agricultural Department had taken over the whole, 31002-3.—Witness would not now be disposed to say Board had been backward in giving help to the district, 31004.—From want of funds and powers Board was forced to form a scheme, result of which was that farmers who took the leading animals were robbed, 30990.—Price farmers had to pay, system of keep they were forced to adopt, and sum received for animals when disposed of, left them losers for the sake of assisting their neighbours; result was they gave up these things, 30991-3, 31116.—Board's idea was accurate enough, 30993, 30996, 31114.—Breakdown was in financial system, and was due to the Board, not to farmers, 30994-5, 30997, 31000, 31115-6.—Sufficient knowledge was not brought to bear upon the class of bulls suitable to the varying lands, 30998, 31000, 31114-5.—Class suitable to the county generally if not put on best adapted lands deteriorated instead of improving, 31000.—A considerable number of cattle had been placed in Leitrim in the first years, but for the past years they had fallen away badly; Board had changed their schemes somewhat through time, and given some more facilities in the end, 31117.

Matters Requiring Attention of Board.

Amongst matters Board should deal with were the condition of land, congestion connected with it, emigration going on, 31005-6.—And drainage, 31006-7, 31054.—It should partially take initiative in a county like Leitrim, except in very commonplace schemes, 31051-2.—Board, or similar body, should explore mineral wealth of country, 31053.

Deterioration of Land in Leitrim.

Condition of land had deteriorated in the last thirty years owing to various circumstances, 31010-16, 31018-19.—There was more flooded land, and there were half acres of stones on the best land in Leitrim, 31013.

Liming.

More culture and more lime were required, 31010.—No lime had been put upon that part of country for over thirty years, 31012, 31015-6.—Comparing time before the Act of 1881 and since, the habit of putting lime and attending land and keeping it in heart had altered, 31017.—Liming implied possibility of getting lime, and plenty of labour to put it in, 31019-20.—Lime had disappeared, 31021.—Limestone was not exhausted, but the means to burn it,

M'LOUGHLIN, Rev. PATRICK—*continued.*

31022.—Turf was formerly burnt, 31033, 31037.—Falling off in supply of lime was attributable in great part to diminution of turf available, 31023-4, 31026, 31028.—Twenty or thirty years' cutting made great difference with bogs, 31037.—Bog was not to be found in large quantity in the county, in many instances turf could only be got from mountains miles distant, 31025-6.—Whatever lime-kilns were now in the county were fed almost exclusively by the remains of coal, because of scarcity and difficulty in obtaining turf, 31026, 31034-6.

Previously there were several lime-kilns burning lime which farmers bought, 31027-8.—Witness never knew landlords supply anything except processes in his district, 31029.—The farmer set up the lime-kiln and probably had turf on his own farm, 31026.—He might have had five or six miles to go for limestone or have had it beside him, it was sometimes necessary to remove six or ten feet of clay to obtain it; this was now impossible for want of labour, 31030.—Causes of cessation of lime-burning were the poverty of the individual tenant and inability to get together the several elements necessary for production of lime, 31031.—There was more money in one parish thirty years ago than in ten now, 31038.—At that time there was a large population in the country, and two kinds of manure were used, lime and "blue sand" or gravel; people were engaged in manuring the land with the blue gravel in a way unfit for human beings, but by this system the land had been brought into a state of cultivation very different from the present, 31019.—Witness, when a boy, had seen fifteen ricks of oats at individual houses, whilst so much could not be got now from the whole parish, 31019.—Any quantity of corn could then be obtained, 31020-21.—Now none could be got, 31021.

Falling off in Production of Corn.

Falling off in production of corn was attributable principally to condition of trade, 31043.—Sometimes to the price, 31044.—This had, however, risen in 1907 to £1 a sack instead of 15*s.* a year or two previous, but this was useless to witness's district for they had no corn, 31045, 31111.—Each county had different names for the quantity sold, in Leitrim a sack of oats meant twenty-four stone, 31045.

Artificial Manure.

Artificial manure was now used to a very limited extent for potatoes, or a piece of meadow, 31039.—Basic slag somewhat taking the place of lime-burning, 31040.—Not because cheaper than lime, 31041.—But because it should be better than lime if it contained the elements stated, 31042.

Land Available in Leitrim for Relief of Congestion.

Much land had gone out of cultivation, 31102.—There was a large extent of untenanted land in the county, though not so great as in the midlands, 31006.—As regarded grazing tracts that might be available for new holdings, there was much evicted land, 31103.—It was about equally in the hands of large tenants and the landlords, 31104; on a townland in witness's parish there had been fourteen tenants; all had been evicted except two, but the Estates Commissioners had now restored those tenants, except in the case of a large farm recently sold; witness knew of no others, but in other parts of the county they would be plenty, 31113.

Drainage and Reclamation of Land.

A quantity of waste land, or what was little better might be greatly improved if drained, 31006, 31010.—This would be equivalent to the purchase of ranches, 31105, 31136.—Witness believed that by attention to drainage in all the land he knew in North Leitrim a different state of things would obtain, 31010.—The extent of land and bog reclaimable from Largeydonnel River by expenditure of £300 would be several hundred acres, 31105, 31136.—The productive power of farms and the value of holdings would be increased 31138-9.—The value of individual holdings would not enormously increase, 31137.—Those in witness's parish were so small it would be very hard to increase their value to any great extent, 31138.—Schemes for drainage were much required and

M'LOUGHLIN, Rev. PATRICK—*continued.*

the Board should do more, on a large scale, in Leitrim, 31007, 31010, 31054, 31111, 31140.—Both arterial and field drainage were required in the county, 31055-6. —All old drains were closed up, rivers were stopped and closed, 31012.—As in witness's parish, by rocks; hundreds and hundreds of acres of land were flooded; crops were torn away in harvest-time, 31106-7.—Mouths of bridges were choked and floods turned out on the land, 31013, 31108.—The Bonet River, for instance, rising from a little lake in witness's parish, was in great need of a large scheme of drainage, eyes of bridge crossing it as it left the lake, were completely filled, recently, by the flood, getting further up the country; a man had lost his horse and nearly his own life, 31108-9.—Witness's parish was a glen, and when floods came they carried all before them; the same happened in practically all the parishes, because of same natural formation, 31106.—Much land would be reclaimed by edge of lake; river was ruining health of people, owing to its water-logged condition a mist rose over the whole place at night, 31111. —Unless two rocks were removed the water could not be got rid of, 31141.—River must be opened to the sea, 31140.—It entered the latter at Bunduff, where a salmon fishery existed, 31141.—If these rocks were removed river would keep itself clean afterwards, and there should be little or no cost of maintenance, 31140-1.—Board should have charge of drainage schemes, for it alone knew its powers and had engineers at command for advice. 31054.—Witness did not advocate Board doing anything, or all, the people required, but there were certain things Government must do to build up commerce in Ireland as it had in England; people must be protected by laws, facilities be given, and obstacles be removed; only a Board such as Congested Districts Board, could deal with drainage schemes where Fishery Company was concerned, a man like a parish priest would be unwilling to act, 31141.—Witness had heard no objection to improvements on Bonet River by "fishery people," but all knew what these were like, 31142.—The Board of Conservators were one Board, and the men who used the fishery, another, 31143.—Witness knew little of legal constitution of Board of Conservators, only knew he would be afraid to touch a fisherman for fear of being "booked," 31144.

Action Taken by Board in Regard to Drainage Works.

Board had taken question of drainage into consideration, 31008.—Numbers of communications had been exchanged between public bodies of the county, clergymen, members of Parliament and other representatives indicating schemes, officers of Board had visited localities, and engineers had prepared estimates, 31009, 31010.—After the visit of certain Commissioners, Board had proposed to contribute to drainage works in the county on condition of formation of a Drainage Board, 31057-8, 31060, 31063, 31080.—Or offered a contribution to the County Council in certain cases, if Council undertook the work, 31059-60. 31080.—As regards Largeydonnel River, Board had offered £100 conditional on formation of Drainage Board and County Council contributing £200 towards scheme, 31063. Difficulties in carrying out schemes were insurmountable, formation of a Drainage Board was very expensive and so complicated that a parish priest and the unsophisticated people could not approach such a problem, 31061.

Board's Conditions not Acceptable.

It was very difficult even for a County Council to carry out drainage works; Board's condition to its contribution to County Council involved additional rates and taxation, 31062.—Conditions were such as to imply failure, 31067.—Public all said Board must have known this, 31062-3.—People were already very highly and even over-taxed, 31063-4, 31078.—Condition of getting subscription from rates would kill a scheme in that part of country, 31067.

Powers of the Boards and Funds.

Public sympathy would never be secured for any Board imposing additional taxation, 31066.—The contribution promised was insufficient in proportion to that asked from County Council, 31067.—Whatever the Board intended to give for any scheme should be given on its own account, and it should have sufficient power to carry out the work, 31065.—It should have

M'LOUGHLIN, Rev. PATRICK—*continued.*

sufficient funds to execute its own works, great or small, and absolute powers as beneficiaries of the community, 31083, 31133.—All schemes put forward by Board require greater powers to carry them out, 31061, 31111.—These powers might possibly include that of levying a small rate upon a district benefited for the maintenance of works done by money of Board, 31134.—If the Board had sufficient power to carry out a drainage scheme in proper way once for all, the cost of maintenance would be so trifling that either the Board might impose a merely nominal tax or consider one altogether unnecessary, 31140.—Witness preferred not to speak on the question of rates or on those matters that concerned the County Council, 31135, 31081, 31110.—He was a most unwilling witness, and was only present because commanded to attend, 31082.

When Father O'Hara and Dr. O'Donnell had visited North Leitrim six or seven years ago many projects for that district had been discussed with witness; the county had always felt the peculiarly kindly interest of some members of Board, 31046-48. —All these projects had failed, 31049-50.

Road-Making.

At the time referred to large contributions were offered by Board for making certain roads in the district, but, conditional on the rates, 31068.—It had been previously ascertained or was thought that the local authority would provide the balance required, 31069-70.—Practically there were only the two contributors, the Board and the local rates, very likely both parties thought the work would go on, but when the County or District Council met they thought, considering their taxation, the amount demaned from them was excessive, 31074-5, 31077.—Witness was not aware that there was a sum of £2,000 offered by the Board for roads and drains on condition of certain contributions and that this money had not been taken up, 31076.—The County Council in dealing with roads considered two classes, roads already formed and new roads; the Council would undertake the former much more readily than the new, because whilst in case of a new road the Board offered only a contribution to the cost, the Council had to examine how many families the road would accommodate, these might be comparatively few although the district owing to its remoteness might demand the road ;in promoting drainage works or road-making Board practically offered a contribution and left all further responsibility and the cost of maintenance to the local authority. This responsibility, especially that of putting forward the scheme and running the risk of legal claims, the local authority was unwilling to take, and they considered the Board should have the necessary power to save them from this, 31078-80.—In the question of roads, especially where large projects were concerned, the County Council should have a voice, but where there would be only small works involving an expenditure of from £30 to £100, the Board should have absolute power and ample funds to carry them out, 31085, 31145.—A difference should be made between large and small works, because large works would involve expenditure of £1,500 or £2,000 on a long road of 2,500 perches or so, 31085.—Where old roads existed the rights referring to them had already been determined; as regards short cuts to bogs they were not considered rateable property, *i.e.*, works the County Council was obliged to maintain, 31086.—No local authority generally looked after these roads, the few persons going to a bog and having a common roadway kept it up themselves; in cases of serious repairs or to make a road, if the Board gave a small contribution, say of £20 or £30, the people did the work, and the Council should have nothing to say to that as they were not responsibible for further repairs, 31087-8, 31093.—The people in the district maintained such bog-roads, 31097.—Witness was not aware that any other class in the community did this, 31098.—They also paid road rates for other roads, 31096.—System a good one, and with regard to small roads, the Board should make a contribution, allow the people to make the road and impose on them the duty of maintaining it, 31087, 31099.—As regards large roads the District Council must of necessity take them over and maintain them, 31088, 31145.—The County Council should carry out the work and keep it in hand, 31100.—The Board paying a sum of money to the Council, 31101.

M'LOUGHLIN, Rev. PATRICK—*continued.*

—Both authorities should join and make the road, 31146-7.—The County Council should keep it up, of course, but Congested Districts Board got the best of the bargain, 31089-91.—Proportion of cost offered by Board was insufficient, having regard to further upkeep and expenses subsequently arising for which Council was responsible, 31101, 31148.

Parish Committees; Extension of Work Desirable.

Respecting industries to be started, witness favoured Board taking initiative, suggestion had been made by local people and witness about Parish Committees, 31118.—Some suggestions for benefit of people had come from outside, 31120.—For three years the Parish Committees had been working in the place, 31119.—An extraodinary amount of good had been done, people and Committees working honestly together, 31121.

Improvement of Houses.

Witness would like to point out some desirable extensions. Small sum received by Parish Committee, say, £70, was insufficient for improvements; it was seeking to effect where there were so many bad houses; small windows should be replaced by good ones to admit light and air; and old flagged bedroom floors, or concrete and clay floors be boarded; Committees did precisely what Board required, 31122-3.—It was a scheme of subsidy in witness's parish, 31124.—£70 was the sum received by that Committee, 31130.—For that sum three times £70 worth of work was done by the people themselves, 31131.—The year was now closed, 31132.

Planting Suggested.

Work of Parish Committees in congested areas was confined to valuation under £7, this as work developed, should be increased to £10 at least, 31149-50.—If funds in this respect were increased and the Board took partial initiative in improving condition of people, much more could be done through the Committees; in witness's parish, it was intended when the houses were improved, to ask the Board's permission for expenditure of one year's grant on plantnig sheltering belts and beauty spots; fruit trees and bushes, save gooseberries and currants, would not live in the district, 31150-51.

Crochet Industry.

Witness had suggested a teacher for crochet industry at Kiltyclogher, 31126-28.—The class had been a success until witness left the district, 31129.—He had no present information as to its continuance, 31125.—Witness was of opinion that it would be impossible for tenants to pay the present prices of rents in his district, 31151.

MEEHAN, Rev. JOSEPH.

See pp. 118-128.

Neglect of Leitrim by Board.

County Leitrim had been extremely neglected by Congested Districts Board, 31153, 31193, 31222, 31232-3, 31335.—This was to be seen from the Board's reports, which gave separate returns for special districts; witness based his remarks upon the Fifteenth Report of the Board and the Table of Expenditure it contained, 31153, 31224.

Land Purchase.

Total amount spent on purchase of estates in congested districts was £547,847; up to the present one estate only had been bought in Leitrim, at Kirgariff, at a cost of £805, 31153.—The amount was given in the Board's report as £805; the sum of £1,205 might include improvements; it was for the compiler to reconcile the figures, 31155-6.—Witness knew the estate well; it was purchased in 1903, 31155.—Estates and farms in the county had been offered to the Board; three in witness's parish, and there would be many more in other parishes, 31157, 31159.—As regards witness's parish, they wrote to the Board asking them to buy a tenant-right farm in order to carry out the work of migration, and the Board refused, 31157.—The ground for refusal was inability to buy tenant-right farms; unsatisfactory reason, as the Report showed such farms were bought elsewhere, 31158, 31191.—In this case it had been proposed to sell the tenant-right only, 31159.—The tenant farmer, Holmes, had written at witness's suggestion and had the Board's letters, 31167.—Witness had gathered from the reports that the Board could only buy the tenant-right of a farm from its income, whilst in the purchase of an estate it obtained an advance from the Land Commission, 31190, 31192.—This made a difference, 31191.—But it was unfortunate the Board had done absolutely nothing for the county in the purchase of estates, despite its great work elsewhere, 31180, 31193.—The second estate offered in witness's parish was a small one in Lisnagowan, containing three or four farms; the place had been sold within the last four or five years, 31159, 31168.—Witness had written himself to the Board at the request of two or three occupiers, and had kept the reply, 31167, 31169.—Neither agent nor proprietor had communicated with the Board as far as witness was aware, 31170-71.—No communication was made by witness to owners representing desirability of sale to Board, 31172, 31174.—But he had pointed out to the Board that the land was being sold in Court, 31172.—The transactions were presumably under the Estates Commissioners; there were negotiations for sale between some parties, 31173.—The land was good grass land, with mountain ranches beside it, which could have been added to the farms, 31160.—There were no holdings in rundale in County Leitrim as far as witness knew, 31161.—Regarding the third estate, there was a splendid vacant farm, containing at least a hundred acres of very good land, immediately adjoining a congested district, which would have been very suitable for migration schemes, 31162-4, 31176.—The land was still untenanted, 31165.—The estate was Dr. Roden's, in the districts of Drumkeeran, Manorhamilton, lying just along the congested district of Killarga, 31166, 31176.—The matter was brought to the notice of the Board by the owner himself, 31162-3, 31177, 31181.—There was sent a letter of acknowledgment, together with a circular and there the matter had stopped, 31162, 31182.—Witness had examined the circular very carefully to see whether it contained any reason justifying the Board for its abstention, and had found none, 31182.—Witness could not tell whether the circular had been filled in by the owner and returned to the Board; Dr. Roden had stated that he could get no further communication from the Board, 31193-4.—Witness would expect the Board, if anxious to further the work they were engaged in, to supply a little deficiency of the kind in the case of a person selling an estate by making further inquiries; there was a *prima facie* case for the purchase by the representations of the owner, and it should not have fallen through owing to the mere fact of his not having gone through a very elaborate series of replies, 31185-88.—Witness could not say that it had been suggested to the Board to resume the matter; the question was very recent, since 1903, 31139.—Witness had the correspondence in his possession, including a recent letter of Dr. Roden's in reply to witness's request for particulars, 31178.—Witness had not seen in any of the reports that the Board considered it inadvisable to take the initiative in approaching owners, 31175.—He quite understood the disadvantage at which the Board would be put by offering to purchase an estate; nevertheless he regretted that practically nothing had been done for Leitrim, 31180.

All the Board had done for Leitrim was to send a Spanish Donkey and some wretched Fowls.

The initiative should not be put on the people; witness came into his present parish of Killarga in 1895; up to that time, the Board which had been in existence four or five years, had done nothing for the district except to send down a "sort of Spanish donkey," which was subsequently found to have come from Kerry, where it had been for years; in 1897, after some trouble, the Board had sent a lot of fowl, but through some accident they were a wretched set of Minorcas, with spurs of great length; in 1898 and 1899 a couple of fowl were obtained; this was all the Board had done, 31194-5.

MEEHAN, Rev. JOSEPH—*continued.*

LEITRIM PEOPLE IGNORANT OF BOARD'S PURPOSES AND EVEN OF ITS EXISTENCE.

Previous to 1897 or 1895 neither witness nor his people had known anything of the Congested Districts Board, 31194-5, 31338-9.—As far as the people of Leitrim were concerned the Board might as well have been in Mars, 31337.—They did not know the Board was willing to benefit the county, and they were justified in this by the Board's action up to 1896 or 1897, 31341, 31347.—It must have been necessarily totally unaware of the needs of Leitrim, having made no effort whatever to remedy them, 31335.—It was the duty of the people to bring their work and requirements before the Board, but how should they do so under the circumstances, and with sixty-seven or sixty-eight boards in Dublin how should Leitrim peasants have known to which board they should apply, 31337, 31340.—Witness concurred that the Board were working almost heroically and doing their very best, but it had not been in Leitrim, 31342.—For several years its officers never came to the district, 31333.—No member of the Board ever visited the county prior to 1903, when two members came "motoring round on an outside car" as quickly as possible, 31195.—Witness had met the party by pure accident when calling on the parish priest, 31196-7. —It was decidedly fair that the parish priest should be called upon; no complaint was implied; but witness happened to be living in the congested district and had written many times to the Board, not so the priest, 31198-9.—Amongst projects put before the party were those for two roads, 31200-1.—The grant and subsidy asked for were given, 31202.—The grant for the Parish Committee did not come as a suggestion from the party referred to, 31229.—Witness and the district wished to emphasise the fact that it was not the money matter to which they sought to draw attention, but the absence in Leitrim of guidance the Board extended elsewhere, 31215-6.—The Board's efforts in the county were expended almost in no other way except Parish Committee schemes, the easiest way for them as entailing very little supervision, 31330-1.—The principle of encouraging local people to do all they could was good, but the Board's officers were experts and could have done much more than those groping their way could do for themselves, 31332.—A huge staff would not necessarily be required; the present staff might visit the district; it was too bad that it had not done so for years, 31333.

EXPENDITURE ON IMPROVEMENTS.

As regards the improvement of estates, the total sum spent in Ireland was £480,362, that in Leitrim, in Kilgariff was £131 10*s.*; the Board having probably raised £134 from the estate there was no net benefit, 31212.—Witness was aware that the receipts correspond with the expenditure, but regretted that very few estates had been bought in the county, and the very small expenditure on improvements in consequence, 31213-4; the Board improved estates out of the rents paid, allowing 5½ or 10 per cent, 31221.

LEITRIM HAD NOT RECEIVED ITS PROPER SHARE OF EXPENDITURE.

Respecting agricultural schemes, Leitrim had not received its proper share, whether on the basis of population of congested districts or on that of number of scheduled districts, 31215-6, 31222, 31334.—Taking population as the basis, for every £15 5*s.* spent in congested districts in Ireland, Leitrim was entitled to £1, or to 1 in 15; taking the total of 428 scheduled districts in Ireland, Leitrim with 38, or 1 to 11·02, was entitled to £1 for every £11 spent elsewhere, 31215-6, 31326.—Leitrim greatly needed expenditure in many ways, there was no county in Ireland where the capital held by farmers was so small, 31217.—A valuation of 6*s.* per head, such as that of Swinford Union, the very poorest place in the jurisdiction of the Board, was lower, and the claims of such a place should come first, but in Leitrim they were not patriotic enough to sacrifice themselves even for Mayo; comparing the treatment accorded to Swinford Union, where £375,000 had been spent on the purchase and improvement of estates, and much trouble taken in arranging migration, and that meted

MEEHAN, Rev. JOSEPH—*continued.*

to all Leitrim put together, Leitrim had been extremely neglected; the same was the case as regards Parish Committees's schemes, £1,390 having been spent under that head alone in the one parish of Kilmaine, and £7,855 13*s.* 6*d.* in the Swinford Union, 31218-22.

EXPENDITURE ON PARISH COMMITTEES.

Parish Committees were started in other districts and thousands had been expended before they were begun at all in Leitrim, 31231-31310.—It was not right utterly to ignore the district until 1903, 31232-3.—Parish Committee grants had only recently begun in the county, this was indicated by the total of £729 spent, 31222-31306, 31322-3.—These figures, taken from the Fifteenth Report of the Board, included the total expenditure on such committees in Leitrim up to date, 31223-5, 31322.—Witness was not in a position to say positively the grants had been increased, 31306.—The sum expended in year ending March, 1905, was £729 18*s.*; the grant for 1905-6 was £1,090, but included two years, and expenditure was not indicated, 31324, 31328.—Witness, although not sure any figures brought forward by himself were incorrect accepted that of £1,796 for total expenditure prior to 1907 as given by Dr. O'Donnell; as there were however no means of comparing the relative amounts given to Leitrim and other counties, it was useless to put forward such figures by themselves, 31326-9.—The returns showed, not only amounts spent for year previous to 1905, but the whole of the amounts spent by any Parish Committee up to 1905, 31319.—The amounts being made up for the financial year ending 31st March did not necessarily include in all cases the total expenditure, a larger amount might have been received in 1905, because they had not understood things exactly, or might not have been quite in time, 31308-9.—Much money spent on what was practically Parish Committee work not included at all in reports, 31231.—The omission of expenditure from reports was only natural consequence of the system and time of their compilation and publication, the actual expenditure for the year would appear in the next report, 31325.

KILLARGA PARISH COMMITTEE.

There was a Parish Committee in witness's parish of Killarga, which had received a grant of £50 for two or three years, 31226-8, 31233.—With one exception this committee, established in 1904-5, was the first set up in Leitrim, 31311, 31315.—1906-7 was their third year, 31312.—The one Parish Committee existing a year earlier than Killarga, that of Mahana, Inismagrath, had spent £50 before Killarga spent anything, 31315-19.—The grant appeared in the return under the name of Tullycleenan, there was none for 1905-6, Tullycleenan being now merged in Inismagrath parish, 31320-1.—Killarga committee was started and grant obtained on witness's own initiative after his reading the Congested Districts Board Report, a little local agricultural society failing to take up the matter, 31229-30.—The total paid the committee prior to 1905 was £37 16*s.* 7*d.*, or £40 for the first year, 31307, 31313.—The gross grant for 1905-6, the second year, was £50, 31307, 31314.—The work of the Parish Committee was on wrong lines; the great work of the Board was to convert uneconomic holdings into economic; the committee allowed no grant to any person whose valuation was over £7; this was helping to improve houses so as to render people more reluctant to leave them hereafter, and helping to stereotype congestion, 31233, 31244, 31294.

VALUATION LIMIT SHOULD BE RAISED.

Limit of valuation should be extended at least to £10, 31234, 31238, 31241.—It should be £14 or £15, particularly in more backward parts of Leitrim, 31247, 31262.—This had been represented several times to officials of the Board, 31234-5.—The Board itself should have seen the necessity, 31238-41.—Witness strongly insisted on the point that unless the small grant of £50 was increased in a district where almost nothing had been done, it was useless to level up farmers to £10, 31235, 31241.—The grant was available for the congested area of Killarga, all of which was not congested, 31236-7.—Coming for a great

MEEHAN, Rev JOSEPH—*continued.*

many years the sum would do a great deal for the parish, especially if Parish Committee and estate work went on together, 31242-4.

Improvement of Houses, etc.

—Witness would not leave the homes of those under the economic level of £10 or £15 unimproved until the holdings could be enlarged in some way; some of these homes were extremely wretched and should be improved in every possible way; it was the greatest necessity of all, affecting health, welfare and happiness of the people, and more important than drainage even, 31248-53, 31305.—It might be well to extend the improvement of houses to some extent to economic holders, 31304.—Poorest naturally had the greatest claim upon the grant, 31235.—Witness therefore concluded that the committee was doing the right thing, but with a drawback, 31254, 31294.—Parish Committees were particularly good for Leitrim, as there was no other way of reaching the Board at all, 31255.

Size of Economic Holdings in Leitrim.

A holding in Leitrim, valued at £7, would never become economic under present circumstances, or even if drained, 31245-6.—Holdings in Leitrim below £15 valuation could hardly be classed as economic, 31262, 31266, 31271.—Holdings under £15 formed 83 per cent. of the total holdings in Leitrim; in Killarga, 83 per cent. would be uneconomic, 31266.—Killarga consisted of the electoral districts of Cloonlogher, Belhavel, Killarga, Mohalla, and part of Garvagh, 31267-8. The poor holdings could be rendered economic by the addition of land adjoining, if such were available, 31269-70.—Even in the case of the addition of bad land to bad land provided the valuation were thus raised over £15, 31271-3.—The acreage necessary for an economic holding depended entirely on the class of land; in Leitrim, where it was particularly bad, the amount must be very large, especially in mountain districts where 20 to 30 acres would not nearly equal 15 to 20 acres in the townlands, 31263-4.—Even bad land by industry might be sufficient with good meadows, but assuming a large migration scheme by which two out of every three holdings were vacated, there should be a little good land in each; the man remaining, living on his own farm many years, cultivating it to the utmost, should, assuming the land added to be equally cultivated, be three times better off for the addition, 31273-6.—This would entail three times the amount of labour in order to keep up the land to the previous extent of tillage, but with the enlarged holding the farmer might keep a horse and so be enabled to do what three men did before, 31277-8, 31284.—Such a holding could be worked by a man's own labour and that of his family, 31279-80.—It would give a farmer no return to employ labour on any farm in County Leitrim, 31281-3. —It might be a good principle to limit the extent of land given to a man to what he could properly till with the help of a horse, 31285-6.—A man with a £15 valuation would probably keep a horse, 31265. —One reason for their not being used more in the county was that farmers could not afford to do so, 31359.—Sometimes neighbours had a horse between two or three, 31360.—There were hardly any ploughs in the district, and only two or three in Killarga parish, 31265.—Spade labour was almost exclusively used in County Leitrim, 31265, 31277, 31355.—Leitrim farms were extremely hilly, even on economic holdings it would not be possible to plough the land and work a horse on, perhaps, 50 per cent. of the county, 31355-8.—Another reason for not using horses was that the soil was not deep, and it would not suit for a plough to dig up sub-soil of such bad nature, 31359.—The land was bad, practically all millstone grit, very bad for cropping, and extremely hard to work with spade labour. on bad land tillage was more laborious, occupied more time, and there was less return, 31265, 31355, 31370.— The difficulty might account for the small amount of acreage cropped in Leitrim, 31265.—Tillage in the county was practically stationary, labour was becoming difficult to get and therefore there would be a tendency for tillage to go down to some extent, 31353-4.—It might be possible to give a man too much land, but no one would object to having it at a fair rate, 31286, 31300.

MEEHAN, Rev JOSEPH—*continued.*

Restoration of Evicted Tenants.

The people who had been driven from lands, even in other parishes, should, if possible, be brought back, they or their descendants having first claim on such land in any re-division, 31290, 31348.—The very best land in Killarga had been taken from nine or ten people of two townlands, and the houses razed to the ground, 31290.—Forty years ago one of these men was given land which was completely tossocks and bog, and he had brought it into a fairly good farm, others would do the same, 31290-1.

Migration.

There were about 202 families within the scheduled area of Killarga parish, 31287.—Other remedies than migration should be first tried for rendering holdings economic, 31288-9, 31293.—Migration within the parish might take place, and would be preferable, 31295, 31348.—There were about eight or nine farms in Killarga whose holders should be moved, 31296-7.— Mountain land and bogs adjoining holdings should be brought into cultivation by means of loan from Government at small rate of interest secured as first charge against farm, 31288, 31291-2, 31298.

Question of Reluctance to Migrate.

Farmers were said to be reluctant to migrate, numbers of them told witness they would go anywhere to get a good farm, out of their county, or to any part of the world, provided there were no objection in the county or district migrated to, such migration would, of course, be better in colonies than singly, 31349-51.

Local Opposition to Migration.

Witness feared the farmers of Meath or Westmeath would hardly accord Leitrim farmers the welcome extended to those of Donegal, Fermanagh, and Kerry by Leitrim at the time of the Cromwellian settlement, but members of the Commission would be in a better position to judge whether objections might be removed by judicious management, 31351-2.—If lands long untenanted were bought and striped, there was no reasonable objection the farmers of the district could put forward, provided they obtained a fair price, they might even be glad to see their land turned into tillage, grass land, bullock walks being no longer profitable, 31352.

Labour in Leitrim, Wages, &c.

Want of employment and a demand for labour characterised the district, very little labour was to be had, Leitrim's return of 9*s.* 3*d.* a week was the very lowest on Foxe's returns, one gentleman present had told the House of Commons, and also witness, that he could obtain any amount of labour for 6*s.* a week. 31354, 31366.

Labourers' Cottages.

A sum of nearly £2,500 had been sanctioned in the union of Manorhamilton for putting up labourers' cottages, which could scarcely be classed as high as holdings, but were rather temporary homes, the labourer being expected to labour on the land about, 31367-8.—Many of these were tradesmen, masons and carpenters, and went out to labour, 31372-3.—Witness knew of no instance amongst the 325 small holders in Killarga under £4 valuation, of one going out to labour, they would willingly do so, but there was no demand, 31369, 31371.—Tillage on bad land occupied much time, one acre of potatoes cost at least seventy-eight days' work, and forty-eight additional days if the Department of Agriculture's suggestions were followed, 31370.

Railways Needed.

There were other remedies for congestion besides agriculture and its bye-industries, 31302-3.—Railway-making was the principal need of witness's district as shown by an article written by him in the *New Ireland Review*, the Board presumably not having the funds required to carry out the work itself,

MEEHAN, Rev. JOSEPH—*continued.*

should, as in the case of the Killibegs Railway, obtain a grant for the purpose from Government, 31440.

Domestic Science Classes.

Three Domestic Science Classes had been instituted under the Board in the district to witness's knowledge, and was their very best work, he could not say whether any other parishes had applied for classes, many lacking exact knowledge of these things, 31343-7.

Sanitary Inspectors.

Very little was done by the Parish Committee to induce people to remove manure heaps from front of their houses, 31361.—In union of Manorhamilton nearly £50 was yearly paid out of rates and State money for sanitary inspectors, these were sporadically active, as at present, extremely so when an epidemic arose, and slept rest of the time, 31361-5.

Drainage Scheme rejected by Board.

The Board had turned its back on a feasible scheme placed before it, one for drainage of a river running along congested district, witness's letter was answered after six months with statement that the matter could not then be attended to, the correspondence continuing two years without anything being done, if, as stated by Dr. O'Donnell, Board had not requisite power to do the work, all the worse for Leitrim, and witness should have been informed at the outset, 31256-61.

Special Disadvantages of County Leitrim.

Leitrim was practically a non-maritime county, having about a mile and a half of sea coast, it derived no benefit from the fisheries to which the Board devoted a vast amount of attention, 31373-4.—Another disadvantage was the absence of public institutions of any kind, a great annual drain upon it was caused by yearly sum of £7,658 sent out for support of the asylum situate in County Sligo, instead of its being circulated within county, 31375-6.—Emigration constituted another great drain, about 1,000 people leaving Leitrim every year, just when they were strongest, taking £120 a year as their average worth to the country, this meant a loss of £120,000 a year, but the worst feature was the probable deterioration of the Celtic race, 31390-3.

Absentee Landlords.

The vast majority, at least seven-eighths, of the landlords of Leitrim, lived elsewhere, having an agent, an extremely clever man, to deal with the tenants, 31377, 31379-80.—The loss to County Leitrim from this absenteeism was on a very rough estimate £100,000, estimate arrived at by taking total valuations of estates in the county as given in Thom's Directory, and deducting the valuation of those landlords living in the county, 31377, 31382, 31388.—It did not include the large grazing ranches left with nothing but a herd upon them, 31378.—As an instance of absenteeism, Lord Massey took £24,000 out of the county, and no one had ever seen him there; Mr. Clements, of Glenbuoy, had only been seen once even by his agent, 31381.—It was no benefit to Leitrim that Lord Massey lived and kept a large staff in Limerick, witness would prefer his living in Limerick rather than London, and London rather than the Continent, but, before all, his living and spending his money in Leitrim, 31383-4.—Leitrim was by absenteeism much worse off than Sligo, where one of the best landlords in the country, Sir Josslyn Gore-Booth, lived, 31385-6.—It was a decided advantage to a district to have landlords living on their demesnes, they should not only live in their places and spend their money in the county, but take a leading place, 31387, 31394-9, 31407.—Only a man wanting in intellect or energy would not find plenty to do wherever he was placed, 31396, 31400.—One landlord had devoted much time to daffodil culture, this of course implied that he had retained the family home, 31400-1.—With the landlords' power clipped, the people would be glad to have them in the country, but witness would be very sorry to have such a one living there as Mr. Montgomery, in Killarga, who spent his money there, but knew the estate of every farmer, and increased the rent whenever he saw a farmer able to bear it, 31394.

MEEHAN, Rev JOSEPH—*continued.*

Inducements for Landlords to remain in the Country.

In order to induce landlords to remain in the country, it would be necessary for them to retain even a large amount of land, 31408.—Witness had not thought of a general rule, individual cases would have to be considered, 31403-4.—No claim to acquire land within the demesne wall should be supported except where no use was made of it, whilst people were starving for want of land, 31405.—There should be a Court of Appeal of some kind for such cases, 31406.—Landlords should not have land from which tenants had been evicted, 31402.

Sporting and Fishing Rights.

Sporting would be a great attraction to men, especially young men, to remain in the country, 31409.—Game and fish were a national asset not to be reserved exclusively for the landlords, if landlord had exclusive rights to hunt hares, and could enter tenants' lands for that purpose, the tenant would not hesitate to bill a hare wherever he saw one, rural life was dark enough compared to town life, and those who had a taste for hunting should be allowed to indulge it, 31410-1, 31418.—As regards salmon fishing, where a landlord had exclusive right to a salmon river passing through his land, and the land passed to the tenants, landlord's right should not be confiscated, but it would be far better that this exclusive right should cease, and the tenant have an interest in the fishing, 31412, 31415, 31431.—People had the main right to all the fish going past their doors, this was God's natural provision for their food, 31413-14, 31426-7, 31435-6, 31439.—The people of Leitrim derived no benefit from the fishing on the Bonnet and the rivers about except that of nabbing a stray fish, and if they were caught they would go to jail for it, as far as witness knew, the profits went into the hands of some gentlemen in Sligo, 31414, 31417, 31420-22, 31425, 31427, 31429 30.—Witness did not mean that landlord and tenant were to have the fishing rights among them, and anybody could fish who liked, 31416.—There should be some set rules so that anyone wishing to fish must get permission from some authority, if the landlord and tenants had some committee and owned the rights between them, the public spirit of the tenants would cause them to put down poaching, so that they might fish themselves, and the fishing become an economic benefit to the whole district, 31417.—A Board of Conservators such as there were in England, managing fishing in the interests of the people, without question of private rights, was wanted, 31419.—Witness was not a fisherman, and knew very little of the Board of Conservators, his opinion of its constitution was worthless, but if the present constitution was such that the conditions in Leitrim described above was legal, witness was decidedly against it, 31423-4, 31427-8.—The best means of making fishing a national asset would be to transfer it to the occupier on reasonable terms, witness did not know the foundation of present fishing rights in Ireland, but if the landlord had prescriptive rights, they should be confiscated, if such rights were good and of long standing, he should be compensated for their loss, 31432-3.—Sea-fishing was in quite a different position, 31437.—Witness would not admit that if the rights of the landlord to exclusive fishing were bad in the case of a salmon river, those of a tenant would be equally so, or that the man with a holding not bordering on river should have similar rights, in that case there would be a natural right for the French, English, or Spanish to come within the three miles limit of the Irish coast and fish as they liked, 31438-9.

Explanation of Memorandum.

Witness had said in his memorandum that he wished it clearly understood he did "not favour

MEEHAN, Rev JOSEPH—*continued.*

confiscation—righting wrongs by other wrongs," the sentence was not purely academic, though perhaps not very clear and written hurriedly, it was put in to further clear ideas on the subject, 31445-6, 31449-50.—It meant that supposing it were decided to carry out migration, and a man had a large farm he had held for a number of years, which could be utilised for the easement of congestion, the farm should not be taken from that man except at a fair valuation, even if he did not need the farm, to take it without compensation would be a wrong, 31441-2, 31444.—No one had ever suggested such a course, witness had never heard a Nationalist member of Parliament, or any man on a public platform in County Leitrim, suggest the taking of a grazing farm for improvements without giving full value for it; no such case of righting wrongs by wrongs had happened in the county to witness's knowledge, 31445, 31447-8.—The other wrongs referred to were those done to tenants by confiscating their property, driving them to the morasses and mountains, by piling on rents whenever tenant was seen to be strong enough to bear it, 31290, 31387, 31402, 31443.—No people in the world had suffered such wrongs as witness knew them to have suffered in his parish, 31452.—Examples of this treatment and of the duties of bailiffs were given in his memorandum, the landlord evicted when a man showed independence, and had a notice to quit printed on the back of the receipt, the tenants were treated mercilessly, and felt themselves in practical slavery, 31211.—In the memorandum witness had stated that he was not a thorough partisan, and that he had begun to study the land question biassed, if anything, against the tenant, 31203.—Translated into clearer language, this meant that he had approached the subject with a perfectly clear mind, 31207, 31209-10.—Witness had tried his best to find out the truth from all sources, and to tell it now, 31204-5.—He was thoroughly in sympathy with the tenants, but had left it to others to be more energetic on their behalf, 31208, 31452.—He had already given one reason for the opportunities he had had of seeing their side of the question, namely, the fact that his brother had suffered very much from the landlords, 31206, 31208.—The sentence "Personally, I accept the situation, and I humbly urge," meant that witness accepted things as they are, he was utterly sorry for the present position, but the sentence did not suggest that the situation previously existing would be more commendable, the discussion was one on points of rhetoric, not of fact, he decidedly did not mean that he was sorry the tenants had a grip of the land, he was delighted they had, and thought it entirely due to their own exertions, and the exertions of their leaders in Parliament, 31451-4.

Statement put in by Rev. J. Meehan.

The Case of County Leitrim, ... 251

HEWSON, Mr. G.

See pp. 128-42.

Definition of Congestion needed Amendment.

Classification of congested districts a blot on present system; there were slums in Kildare and elsewhere needing re-settlement as much as any other part of Ireland, 31462.—All electoral divisions containing fifty or more families whose average agricultural rent did not exceed £5, or whose holdings did not exceed 10 acres should be provisionally declared congested; final declaration to depend on report of Board's officials, 31488-9.

Board's Duties should not be transferred to Land Commission.

Time had not arrived for transfer of duties of Congested Districts Board to Land Commission; Commission already had more to do than they could manage, 31462.—Further duties were thrown on Commissioners by Bill of 26th February, 1907, 31812.

Constitution of Board.

Congested Districts Board might be increased by, say, three members; half the Board should retire by

HEWSON, Mr. G.—*continued.*

rotation every three years and not be eligible for re-election for another three years; outgoing members should be replaced by persons representing different districts, 31462.—And a small *ex-officio* element would be an advantage, 31462-4.—Work of Board would soon be learnt by new members, who would, moreover, be kept straight by old members, 31465-9.—Witness not at all dissatisfied with present *personnel* of that Board who had looked after their own districts very well, 31471-2.—But he wanted other districts to have their turn and a representative on the Board would see that they got it, 31469-70, 31472, 31485-7.—Swinford district had been extremely well looked after, partly, at any rate, because Father O'Hara was on the Board to urge its needs, 31473-8.—It would not be well to give each congested county its share of funds regardless of its necessities, and there was no reason why local representation should have any such result, 31482-3.—Counties must be taken in some sort of order, the absolutely fair way would be to put their names in a hat and take them out one by one, 31483-4.

Migration: Importance of transferring Migrants to conditions similar to those they were leaving.

Success of any migration scheme depended on migrant being transferred to a district where conditions of life and agriculture resembled those in district he left; as great a mistake to bring a West Donegal man to Roscommon as to take a Meath man to Connemara, 31490-4.—West Donegal (Gweedore) man was used to live beside his turf, have large rights for grazing sheep, and seaweed for manure; in Roscommon, supposing he would consent to go there, conditions would be entirely different, 31495-504, 31737.—Even if he were put on virgin soil he would not understand the class of agriculture required, 31507-10, 31515.—Though as a young man he might have served his apprenticeship in a very good agricultural district, and as far as knowledge of tillage went the Gweedore farmer who had decent land was as good as any other farmer, 31516-8.—Emigration would not present greater disadvantages, 31505-6.—Bog holdings did not give their holders a living; they were merely a kind of accommodation holding, 31512.—Leitrim men who had come to Donegal as herds were all exceedingly poor, 31519.—But witness had no actual case to quote of a Donegal man who moved to Roscommon and failed, 31522-3.—And men moved from a bog holding to a grass holding in same county had succeeded in many cases, 31524-5.—Transfer to another county was different; people were very clannish and styles of agriculture varied widely in different parts of Ireland, 31526-7, 31529, 31759.—Sligo and Roscommon might be grouped together, as conditions in those two counties were much the same, 31528, 31530.—And Mayo as far as Tubbercurry, 31531.—But it would not do to bring a Belmullet man to Tubbercurry, 31532-3.—Most small farmers in congested districts had turf, 31534.—Proximity to bog and a good supply of water a vital necessity for grass lands to be settled, 31738-9, 31747.—People had lived on these grass lands before, but it was a question of environment and habit for migrants, and very often bogs had been cut out, 31740-7, 31760-3.—In the islands of Lettermore turf was brought over in lighters as in Tory Island, 31535.—Turf could hardly be supplied at a rate they could pay to small holders in Roscommon, supposing grass lands were broken up, 31536-8, 31570-3.—Compressed peat had failed for want of a market; migrants might perhaps help the market, 31574-8.

Reluctance to Migrate.

People would not migrate in sufficient number to relieve congestion, 31540.—This was an opinion advanced, not statement founded on actual experience, 31542-7.—People would no doubt go to moderately rented farms ten or twelve miles off, 31570.

Local Opposition to Migration.

Dromard Farm, near Mohill, was bought by philanthropists to provide houses for Massareene tenants; local opposition was too strong and land was finally given to natives who had cut down all the timber, 31570-7, 31581-4.—If farm had been divided among

HEWSON, Mr. G.—*continued.*

strangers there would have been no land left for local people, 31578.—People for whose benefit land was bought were evicted tenants, not congests, 31580. —Congested Districts Board would probably have succeeded no better, 31585.

Migration from unpurchased Estates.

Landlords of congested estates would not object to removal of tenants to better surroundings even if migratory tenants went to one of the Board's estates; Witness's experience contrary to Mr. Finucane's evidence; no reason why notices should not be put in congested districts telling uneconomic holders to apply to Board, 31734-7.—No need to make a gift of tenants' interest to landlord; migrant could sell his interest to adjoining tenant and so secure a little money to start with in his new holding, 31737, 31764-7.—Migration of sons of tenants as migratory labourers to district where new farms were laid out would be very expensive, 31767.

Migration of Tenant Purchasers.

Tenant purchaser would lose nothing by migrating; he would sell holding on which he had already paid, say, twenty-five instalments, at an enhanced price, 31781.

Remedies for Congestion.

Problem of congestion, as a whole, was insoluble, 31539-40.—Impossible to make all holdings "economic," 31644.—Bulk of real distress consisted of cases where old people were left without a family, where husband or wife died leaving a family of young children, etc., which might occur under any circumstances, 31718.—Migration would help a little, 31538. —Board should also have right of pre-emption as at present exercised by landlords; should undertake main drainage and establish a bureau of information as to employment available in England, Ireland, and Scotland; small holders should be encouraged to keep their drains clear and to raise their standard of cleanliness, and sub-division should be prohibited by law, 31539.

Circulation of Money in Neighbourhood Required.

Circulation of money was the great want now that landlords were gone, 31539.—Congested Districts Board should take their place and do the work of a good landlord, 31548.—At present there were many absentees, 31554.—But twenty-five years ago many landlords lived and spent their income in County Leitrim, 31549-51, 31555.—Some landlords spent large sums on improvements, 31556-9, 31600.—Mr. Wynne spent large sums on the railway, 31560.—Forty-two miles of railway made; money raised by local guarantee, 31601.—Mr. Wynne got nothing back, there never was any prospect of getting anything back, 31601-2.—No occupiers joined in guarantee, 31603-5.—Railway scheme had been re-arranged and was now doing very well, 31606-7.—Witness did not know whether proximity of railway was considered in fixing rents, 31608.

Practically no Land available for Relief of Congestion in Leitrim.

Leitrim congested districts peculiarly situated; no fishing; very little land let on 11 months' system; in consequence there was not much land available for migration and practically none for enlargement, 31561.—Not enough untenanted land in Leitrim to put up more than 100 families, 31570.—No congested estates with large farms adjoining, 31781.—Statistics of untenanted land quite unreliable; bulk of it was mountain, 31812.—Rents of holdings not an appreciable factor in occupier's budget, 31561.—System of dual ownership seemed to be impossible owing to legislation, 31561.—Legislation since 1881 had tended to drive out landlords, and the only remedy was to purchase, 31562, 31568-9.—Compulsion not necessary, landlord would be willing to disappear if he got a fair price, 31564-7.—Much could be done in Leitrim by draining and fencing mountains and by planting, 31595.—Coal flags and iron ore in Arigna district

HEWSON, Mr. G.—*continued.*

could not be properly worked for want of easy access to a port, 31595-8.—Witness had advised several clients to sell outlying farms in other counties, but landlords had been unwilling to sell, 31599-600.

Size of an Economic Holding.

Impossible to say what area or what valuation should be held by each occupier, 31570.

Breaking up Grass Lands: Effect on Cattle Trade.

Not likely that migration could be carried out on scale large enough to make much difference to the store cattle trade for years to come; a serious attempt to prevent graziers taking grass lands would affect the trade, 31586.—Large infusion of graziers necessary to well-being of the country, 31587.—Small holders would not be able to finish their stores and do away with middleman's profit; they would not have room, 31589-91.—It was not done in Ireland, 31592.—New holders would probably till as little as possible; modern education made young people disinclined to work land, 31586, 31594, 31644.

Dangers of such an Experiment.

Dangerous experiment to revolutionise whole system of agriculture; till land was broken it was impossible to tell what it would grow; experiences of Famine time ought to be a warning, 31685-92.—There was no sign of a crash in letting of grazing farms, 31812.—Grazing was now profitable and successful and going back to tillage might endanger agricultural prosperity of the country, 31695-8, 31700, 31727.—Witness would like to see people on the land if the scheme would be a success, 31724-6, 31732-3.—They were on the land before, but though in many cases landlords had made clearances in many others it was natural causes that turned holdings into grazing ranches, 31728-31.—Witness did not apprehend danger from addition to grazing lands and diminution of tillage concentrating agricultural prosperity of Ireland in the cattle trade, 31693, 31701-8.

Probable effect of Importation of Canadian Stores.

Importation of Canadian store cattle would ruin the small breeder in the West, but the ordinary grazier would make money by it, 31709-12, 31715.—If it were certain that Canadian cattle would come it might be wise to put men on 20-acre holdings and let them learn to be ready for the change, 31713-4, 31716-8.

Difficulty of selecting Land to cut up in event of Compulsion.

If land were compulsorily taken, selection of which farm to take and which to leave would be excessively difficult, 31718-23.—Suggestion as to cutting up farms of over £50 valuation would be unworkable in many cases, 31781.—Mr. Finucane's proposal to treat everyone alike and if landlords' land would not go round take that of the big tenants was an impossible and unjust one, 31783-8.—The residential tenant ought not to be touched, 31789-94.

Distinction between Land let on 11 Months' System and Land held by Large Farmers.

There was plenty of land let on 11 months' system which could be broken up, but it would be ruinous to do away with the large farmers, 31694, 31699, 31782, 31795.

Conacre Letting.

Large farmer who let land in conacre should not be interfered with either, it was a mistake to interfere with markets and political economy, 31796-801.—If the small tenants were removed the large man would be driven to tillage, 31806-9.

Compulsory Powers.

Compulsory powers should not be exercised except as a very last resort, 31803.

HEWSON, Mr. G.—*continued.*

Creameries in Leitrim.

Creameries were the principal industry started in Leitrim; as a result good butter was made, but a source of employment was taken from the women and breed of cattle was deteriorating from want of proper feeding of calves, 31595.

Small Holdings as a Security.

As an investment large property of small holders, if fairly circumstanced, was preferable to one of large tenants; on many congested estates witness had almost invariably collected the year's rent, one year with another; accumulation of arrears was generally due to mismanagement, 3160-9.—If a congested estate paid as a whole the landlord could probably make more of it in his own hands, 31819-20.

Price of Land.

Price at which Board had hitherto bought land could not be taken as basis for price in future; Board had got cheap lots of what might be called bankrupt stock; there was no reason why other landlords should be compelled to accept such prices except for public reasons, 31611-2.—Landlords were willing to sell at a fair price, that is, one which would not involve them in too much loss, 31613-4.—Witness had himself made losses in four out of six sales notwithstanding bonus, 31615-24, 31626.—Landlords had to pay local rate in case of untenanted land, 31629-32.—Rate of interest on investment was about 3½ per cent., 31625. —In bulk of estates sold at middle price between the zones landlord must lose; he could make money only in case of a mortgaged estate, 31628.—Many reasons why landlords should sell, 31627-8, 31633.—They preferred a fixed income to an investment in Irish land, 31634-5.—They sold at a loss because they could not help it, 31636-8.—Witness did not anticipate fall in value of land, it was a toss up, 31641-3.—Witness could see no ground for Mr. Finucane's proposal to take twenty-six times tenement valuation as basis for price, 31812.—Prices received for holdings had greatly increased within last few years, 31812.—Assumption that Estates Commissioners would not depart from a price already fixed would put them in a difficult position, 31781.

Disastrous to Ireland if money earned by labour in England and Scotland were lost, 31644-5.

Small farming could not be started in Ireland on a large scale without protection, 31644.

Estate sold direct to Tenants in Mayo, Grass Lands used to enlarge Uneconomic Holdings.

Reasonable amount of land at fair price available in Mayo for relief of congestion, 31648.—Witness had sold an estate in Mayo having tenants of congested district on its borders, and he had split up a large farm, 31648-50.—It was a direct sale, 31651.—No philanthropic reasons for sale, it was purely a business matter, 31660-1.—There were uneconomic holdings on estate, and these were being enlarged from grass land; no fines being charged, 31652-5.—If witness had sold through Congested Districts Board or Estates Commissioners there was no guarantee that tenants would get these grass lands, the Board might bring in congests from a distance, 31675-8.—As it was, tenants were industrious and would carry out the improvements needed, 31656-9.—And landlord knew what price he was getting, 31662-5, 31677.—There had been no inspection for value, 31667.—But if tenants and landlords were satisfied there was no more to say, 31668.—In case of default in payment of annuities, default might be borne by rates, but the country got that back at the next payment, 31669-71.

Loss suffered by Landlords through Delays in Completing Sales.

Landlord willing to sell untenanted land ought to be sure of getting his cash in a reasonable time; at present he might have to wait four years and could not let his land during the interregnum; if he did not get cash, State should give him interest equal to his

HEWSON, Mr. G.—*continued.*

average income pending final distribution; if securities in which Land Commission invested landlord's money dropped he lost his money; one remedy would be to allow tenant purchasers to pay off balances owing to State in Land Stock, 31680.—Witness who said that under certain circumstances a landlord with the bonus would get more than his present income at 3½ per cent. had forgotten that vendor had to redeem head rents, pay costs of sale, live for three or four years on 25 per cent. less than his income, and bear any loss that might occur in selling out of securities in which Land Commission had invested his purchase money, 31680, 31812.—Loss of sporting rights was often loss of a valuable asset; cost of selling a small estate was almost prohibitive, 31680. —Action of modern Government in dealing with Ireland was like that of a child pulling up a plant to see how it was growing, 31680-4.

Improvement of Estates sold direct from Landlord to Tenant.

Land Commission should have power to provide for improvement of estates sold direct from landlord to tenant from Reserve Fund; power must exist since free grants were made to evicted tenants in direct sales, 31768-72.—Inability to make loan or advance might be met by an arrangement between landlord and tenant, whereby there would be a proportion of price on which no bonus was paid and tenant would get a certain portion to improve his holding, 31773-8. —Danger of tenants agreeing to pay annuities out of proportion to capacity of land could be guarded against in agreement, 31779.—Provision should be made for maintaining improvements and Congested Districts Board would be a suitable body to make such provision, 31779-81.

Number of Uneconomic Holdings sold.

Statistics as to number of uneconomic holdings sold were not entirely reliable; two or three holdings sometimes sold to same man or additional holding sold to man who had already purchased another, 31779.—Tenant who was absolute owner of his farm could get money from Board of Works for improvements, 31781.—Improvement was more than a question of staff; if carried out in districts where labour had to be imported expense would be enormous, 31812.

Character of Leitrim Peasantry.

Hitherto the people had had no chance of learning how to make the best of their material, or the advantages of steady work; the best remedy was to make the tenant owner of his holding and encourage him in every way to improve it, 31812.

Prices in 1735.

Statistics as to price of commodities in 1735—37 tons 14 cwts. of straw sold for £24 10*s.* 5*d.*; 30 sheep and a cow for £4 10*s.* 3*d.*, 31813-4.—Witness paid large labour bills on several estates, but he had to emigrate his family, 31812, 31818.

Documents put in by Mr. G. Hewson.

B.—Statement as to Payment of Rents, . .	268

O'HARA, Rev. F.

See pp. 142-4.

Work of Congested Districts Board.

Congested Districts Board only Board that had done anything for country, 31824.—It had the confidence of the people, because it had benefited them as far as it possibly could.

O'HARA, Rev. F.—*continued.*

Case of Evicted Farm bought by a Scotchman who wanted to sell it to the Board at a Profit.

One of three properties put before Board to purchase was an evicted farm, which had been left for years, and which Scotchman had bought twenty years ago and built on and then wanted to sell to Congested Districts Board, 31825.—No one would touch the property was the reason Scotchman had got it conveniently and he wanted then to make more profit, 31826.—He was not the man who should benefit, 31827.—If man was unjustly evicted from his home, and had done all he could to keep it, he would like to return to it on honest and just terms, 31828.—And he might have been able to return if the other man had not interfered, 31829-1.—Whatever price was paid for holding, it would be arrears of rent to landlord, 31833.—Owner had not paid for tenant-right, and witness objected to his getting price of tenant-right, 31834-5.—If Congested Districts Board paid him for tenant-right, and restored tenant, he would be paid twice over, 31836.—Evicted tenant came into possession while Act of 1881 was in operation, 31838-9.—Scotchman restored and built house and improved farm, 31840-1.—Witness thought Commission should know particulars of case as it was put forward, 31843.—Foundation of case was wrong and unjust, and no money expended would compensate, 31844-5.

Board should not buy Land from which Tenants had been unjustly Evicted.

Congested Districts Board should refuse to buy land unjustly evicted, and where there was contention and feeling against it, 31857-8.—Prescription would give a right, but in case of Roscommon business it would be very ancient, case referred to happened within last twenty years, and was not forgotten, 31860.

Board should have increased Powers and Funds.

Witness would give more powers to Congested Districts Board, and more funds, 31847, 31854.—Leitrim not very congested, and Board had considered cases put before them and people were well satisfied, 31848-9.

Condition of Board.

Board should have an inspector, which would be better than county representatives, 31850.—Present inspector too much confined to certain districts, 31851.—Satisfactory if Board could hold meetings in County Leitrim, 31852.

Drainage.

Necessity for better drainage in County Leitrim, rivers in bad state, houses flooded, and people had to leave their houses at night, 31851.—About £100 necessary to remedy the drainage, one river surrounded by fairly good land, landlord had borrowed money at cheap rate for remedying drainage, but one or two people had objected, necessity that Board should have absolute power, 31854.

Grants for Cottage Dairies Needed.

Leitrim a county for good butter, if Congested Districts Board could make an allowance or grants for dairies to be built, they would benefit the people, too many applications under £7 grant, 31863.—Increasing amount spent in working cottage dairies through Parish Committees suggested, 31864-5.—Two congested districts in parish of Ross and Ballaghameehan, 31866.

Deterioration of Land owing to Climatic Causes.

Witness had met Professor Baldwin, who had been in Leitrim fifteen or twenty years before, he knew of no part of Ireland that had suffered so much from climatic influences, it was farmers' experience that land had deteriorated at least a fourth in last

O'HARA, Rev. F.—*continued.*

thirty or forty years, 31868-9.—Land had fallen as if it had suffered from earthquake, 31870-3.—Excessive rainfall was the great drawback, 31873-5.

Professor Baldwin's Decisions set Aside.

Although Professor Baldwin was one of the greatest authorities, when he gave his decisions and reductions in rent, his decisions were appealed against, and rents raised back again, 31876-80.

CONNOLLY, Rev. TERENCE C.

See pp. 144-8.

Poverty of North Leitrim.

North Leitrim very poor, had suffered from various causes in the past, had had little done for it, required special care, 900 a year of population lost, average valuation lowest in Ireland, 86,000 less people now than in 1881, 31882.—Population 69,000 last Census, an eighth lost between 1881 and 1891, 31883.

Flax Industry.

Flax industry important some years ago, absolutely disappeared now, three acres of flax in Leitrim, 31883, 31891.—There would be a market if it were produced, 31884-5, 31886-7.—Nineteen scutch mills thirty years ago, none now, 31888.—There was market in Cavan and Monaghan, 31889.—More flax imported from abroad every year, 31894.—Farmers in Cavan took £40 an acre for flax, 31895.—It had been steeped in a hole and scutched, 31896.—White flax steeped in running water as was done abroad fetched higher price, that could not be done in Ireland, 31896-9.—Industry revived a little in northern counties, 80 acres flax in Louth last year, 31900.—Industry might be revived, 31901.

Occupations of Seaboard Population—Kelp Industry, &c.

County had seaboard of nine or ten miles, former kelp industry practically disappeared, 31901.—Price gone down since iodine was produced from other things, 31902-4.—It was not the most economical way of producing it, although people were content with small wage, modern law of commerce was that things must be produced from cheapest and most natural products, 31905-7.—Kelp industry paid a small wage in other parts of Ireland, 31907.—Seaboard district alluded to was in Tullaghan division in union of Ballyshannon, average valuation £3, population forty or fifty, people living by fishing, nothing had been done for them, 31907-8.—They had no landing place, no instruction, and no fishing gear, 31909.—Mr. Green went down eight years ago and talked matter over with people, 31911-4.—They took haddock, whiting, codfish, lobsters, were skilful if they got a chance, 31914.—Pier to suit people might be economically placed at Tullaghan, exact spot could be left to inspector, 31916-7.

Coal Mining—Transit Facilities Needed.

North Leitrim had a valuable coal mining area absolutely undeveloped, coal could be got at pit mouth for 10*s.* which cost 21*s.* or 22*s.* sixteen miles away, only one man doing anything, he employed thirty men every day of the year, 31918.—This was in North Arigna, 31919.—Transit needed to Irvinestown, Tyrone, Ballyshannon, and Enniskillen, 31921-2.—No railway in North Leitrim, 31924.—Sligo and North Counties line ran by, and there was a station at Manorhamilton, 31925-6.—Proposal to connect Arigna with Dromahair not sound, 31927.—People would not give a guarantee after their experience with Cavan and Leitrim Light Railway, 31928-33. 31937-8.—Existing railway was no use to coal district, 31934-6.—Railway should come from Drumkeeran to a mile west of Manorhamilton, then down from Glenade to Bundoran or from Ballaghmeehan to

CONNOLLY, Rev. TERENCE C.—*continued.*

Belleek, carried on across other line, 31939-40.—Not so far east as Kiltogher, 31942.—Dromahair was the nearest point, but once there the line could go no further, besides coal obtained by water trans-shipment would not sell in Sligo, 31941.—£6,759 guarantee paid for deficit on Cavan and Leitrim line; £4,295 got back from local taxation over benefiting area, 31944.

Roads Needed.

Roads bad, Lord Iveagh's motor scheme would benefit the country if roads were made, County Council could not induce ratepayers to improve roads, 31948-52.—Enormous expenditure needed, 31953.—It would be enough to put main roads in order, 31954.—Interest on borrowed money had to be paid by ratepayers, 31955.—And rates were too high to be raised, 31956-8.

Reafforestation Needed.

1,500 acres of forest supposed to exist in North Leitrim according to Thom were not visible, reafforestation was needed, there, very little drainage, 31958.—Land wet and exposed to sea, 31959.—Trees would give shelter and lessen bad results of rainfall by helping the natural drainage, 31960-2.—Large plantations preferred, 31963.—Magnificent to plant two miles of hillside, 31964-5.—Land used at present for cattle and sheep, easy to clear, some tenants too public-spirited to want compensation, 31966-8.—Sheep not paying, they had gone down in North Leitrim, 31969.—Total number, 13,000 last year, Galway had 577,000, Mayo 306,000, Roscommon, 165,000, 31970.—1,000 lost in Leitrim from 1905 to 1906, 31972, 31977.—Sheep would be better, and have better wool if one-fourth mountains were planted in trees, 31973.—Locality would be better sheltered, 31974.

Agricultural Products of Leitrim compared with Roscommon and Mayo.

No proportion between number of sheep in Leitrim and in Roscommon and Mayo, same could be said of other agricultural products, 31985-6.—781 acres of turnips, 300 less than year before, only 271 acres of mangel, 1,000 acres of cabbage less than year before, 3 acres of vetches, 1 acre rape, 5 acres flax, 5,000 horses in Leitrim, that was 200 more than last year, while in Galway there were 28,000 horses, and 11,000 in Roscommon, 31977-80.—Fewer asses than any other county, 31981.—Number of horned cattle gone up, there were 3,000 last year, bacon industry used to be important, and could still be made so, nearly 25,000 pigs in Leitrim, against 38,000 in Roscommon, number had gone up, but was still absurdly low, if agriculture were more prevalent pigs would have better chance, 31982-6.—Mayo and Galway were five and three times the size of Leitrim, but Mayo had large tracts of bog and bad land, while Leitrim had only little lots, 31987.

Manuring and Drainage.

Instruction in manuring and drainage needed; hills were bleached for want of drainage, and much land was not economic, because not properly drained and manured, 31987-8.—Large number of cornmills formerly, two or three now, only 7,000 acres of oats grown this year, 500 less than last year, 31989-90.

Capital Needed.

Serious thing for country that people bought from foreign countries what they could get from their own farms, farmers sold pig at 4½*d.* a pound, and bought Canadian bacon at 6½*d.*, people so rack-rented they had not the capital, and were obliged to sell pig to get ready money, shopkeeper would wait, something should be done to give capital for agricultural industries, drainage, &c., 31991.—Congested Districts Board should do it through Parish Committees within their ambit, 31993.

Definition of Congestion needed Amendment.

Some poor not in scheduled areas, scheduling system absurd, poor men penalised for living next door to rich ones, Board should have power to work everywhere in county with farmer under certain valuation, 31993, 32006-7.

CONNOLLY, Rev. TERENCE C.—*continued.*

Agricultural Credit Societies.

Agricultural Credit Societies good, but very small, and involved a lot of trouble, especially to priest, who was expected to do everything, 31994-2001, 32003.—Witness made chairman by tenants on seven estates, and carried through sales of eight estates, 32002-4.

Success of Parish Committee—Economy in Administration, &c.

Parish Committee in witness's parish doing well, they were good, but should be able to reach poor outside the area, 32005-6.—£5,000 given by Board to Leitrim within last six or seven years, more good done by Board's money than by twice the amount from Department, witness would like Board to get more money, and larger powers and hold meetings in district to get people's views, Board administered money very economically in some cases, through Parish Committee whole cheque reached poor man, with nothing for administrative expenses, 32007-11.—There were supervisors, but one did ten parishes, they were paid 10 per cent. on grant, 32012-15.—Officers were paid for carrying out Board's schemes, 32008.

Agriculture and Industries based on it of most importance for Leitrim.

Agriculture as such, and industries based on agriculture, required closest attention in Leitrim, there was no raw material for factories, 32016-7.

Lace-making and Sprigging.

Sprigging important industry for women some years ago, almost disappeared, 31885.—There should be lace-making or sprigging for girls deprived of churning by the creamery, but the idea was not followed up after Department was started, as those who assisted before thought there was now money enough, Department did it in a sort of way, 32018.

KEAVENY, Mr. M.

See pp. 148-51.

Districts Needing to be Scheduled.

In witness's parish three congested electoral divisions, Mahanagh, St. Patrick's, and Arigna, Drumkeeran, was within parish and should be scheduled, in three scheduled divisions there were 395 persons with holding rated under £7, 109 rated from £7 10*s.* to £10, and 504 rated at £10 and under, in unscheduled division there were 355 ratepayers of £10 valuation and under, some holdings in Drumkeeran valued from £2 to £2 10*s.*, some as low as 5*s.*, 32020.—Garvagh district was very poor, 103 holdings below £7 valuation, 32021.

In Killanummery Electoral Division there were a number of non-residential holdings, 227 registered occupiers, area 5,138 acres, valuation £1,882, of those 227 holdings 17 were non-residential, containing upwards of 700 acres and five of 395 acres, valued at £255 10*s.*, 32022.—This included the mountain sides, 49 holdings valued at an average of £24 3*s.* 5*d.*, 178 at an average of £3 19*s.*, average value of 227, £8 5*s.* 9*d.*, average value of 222 £7 6*s.*, 32032.—These not in scheduled districts, lot of unfortunate people living close to large farms were deprived of benefits of Congested Districts Board, 32024.—Should any large farm be sold Congested Districts Board should buy it to provide farms for parties living in congested areas, 32025.—Non-residential farms, but tenanted, 32026-8.

Land Available for Board to Buy.

One or two farms for sale, application made to Congested Districts Board to buy, but they declined, 32028, 32032.—138 acres belonging to Mr. Hamilton, which witness thought was for sale, would be convenient to Congested Districts Board and advisable for Board to buy but for expense of working property, at a distance from its other work, 32029-31, 32038-9.—Misses Hamilton, the tenants, were willing

KEAVENY, Mr. M.—*continued.*

to sell, but witness did not know whether landlord was, 32033-4.—Farm sold under one of Purchase Acts, 32037.—Hundreds of acres of mountain land in Kilanummery, 32035-6.—There was a farm for sale by auction in St. Patrick's held under Land Commission, no purchasers, as people around were too poor, very useful to district if Congested Districts Board would buy it, 32040-2.—77 acres in it, 32042.—If split up into small holdings it would sell better, 32044.—Only one bid of £280 for farm, 32045.—Rent, £20, 32046.—Well-to-do shopkeepers bought land formerly, but farmers were going to the bad, and shopkeepers had to go with them, 32043.

Development of Industries.

Employment should be found for people in such districts in order to relieve congestion, 32046.—Board doing important things in other parts of country, giving assistance to factories, 32047.—Large number of girls without employment, 32048.—They had to emigrate, 32049-51.—If Congested Districts Board would make a line from Drumkeeran to St. Patrick's an industry might be started in plaster of Paris and fire-clay, extensive industry ten or fifteen years ago, but failed, 32052.—There had been flourishing industry in manufacturing bricks, tiles and pipes, but company started a public-house, and nothing was done right after, 32053-5, 32069-73.—Bricks were exported in a poor way, as there was no railway, 32057.—Industry might pay well, 32056.—If started now on account of line going to Arigna it would not be so expensive to carry out work, nor so expensive to send to Ballinamore and Belfast, 32058.—Drainage pipes made which farmers found better and cheaper than stones, 32061-3.—Good demand, two large steamers employed, and bricks sent on to Limerick, 32064.—Strangers constituted the company and farmers of locality had no control, 32065-8.—Coal found in locality, company started at Spencer Harbour, and Lord Spencer christened the Harbour, 32059-60.—Steamers carried coal to Limerick and took away bricks, 32074-5.

Work of Parish Committee.

There was a Parish Committee which did well, but funds were limited, 32076-7.—And they were not allowed to work outside scheduled area, 32078.—They worked at fencing, drains, and buildings, 32079.—Witness would like funds of Parish Committee increased to £400 or £500, 32080.—365 parties entitled to share of present grant of £100, 32081.

Roads Needed.

Necessity for completion of chain of roads, 32082.—Considerable sum offered as subsidy, 32083.—They were so backward they could do with money for construction of roads and funds of Parish Committees increased, they only got £932 for construction of roads in County Leitrim to 31st March, 1905, 32084.—All Leitrim had for construction of roads from Congested Districts Board since it was formed was £1,674, while Donegal got 26,992, 32086.—Ratepayers in Manorhamilton Union were overtaxed and too poor to accept, £2,000 offered, 32087-8.—North Leitrim was the poorest part in Ireland, 32089, 32102.—Leitrim could still get money offered, in 1905 Parish Committees in Donegal got £2,553 and in Leitrim £21, 32090-2.—If more money could be got through Parish Committee people were willing to earn it, 32093-5.—If industry were again started all would depend on management, 32096-7.—Witness did not think the industry would have to be artificially kept on, 32098.—Money given to Parish Committees would be used in making permanent improvements, 32099-101.

Butter Industry.

They had small industry in Tarmon where farms churned their own milk and sent butter to be manufactured, 32102-4.—Butter was improved and reduced to certain quality and sent away in 56lb. boxes, 32105-7.—Locality so poor and hilly and creameries so far away that butter factory worked better, 32108-10.

Sanitary Work of Parish Committees.

Parish Committees had done much to improve sanitary conditions, removing manure heaps, etc., 32111-2.

KEAVENY, Mr. M.—*continued.*

—£50 spent annually in sanitary officers in union of Manorhamilton to travel the country, and see that manure heaps were a certain distance from houses, 32113, 32116-8.—Man could not get a grant from Congested Districts Board unless manure heap was a certain distance from house, it did not cost Board anything to remove them, 32114-5.

Railway Facilities Needed.

1,400 acres of land untouched for want of railway facilities, 32118.

Poverty of the Soil.

Tillage going down for want of labour, people so poor they had to emigrate, 32121-5, 32127-9.—Farms were small and land bad, witness planted 16 cwt. of seed last year, and had not 20 cwt. to take out of it, 32126, 32132-3.—Years when potato crop was good it would pay them, but there would not be enough for two years, 32130-1.—Man could not rear family on five, six, or seven acres with a valuation of 30s., 32133.—Tilling ground on an enlarged holding would pay better than emigration, 32134-6.

ROONEY, Mr. P.

See pp. 151-4.

Grass Lands Should be Broken Up and Migrants Settled on them.

Suitable grass lands should be purchased and divided into holdings to persons migrated from congested districts, 32137.—In any part of Ireland wherever tillable land would be found, 32138-40.—Heads of families were willing to migrate in most cases, 32141-2.—If landlords refused to sell at reasonable price, compulsory powers should be given to Estates Commissioners and Congested Districts Board, so that untenanted land could be obtained, 32142, 32225.—If not available in congested district Board should have power to acquire in any part of Ireland, 32142. An amount of available land over length and breadth of Ireland, 32226.—If there was not sufficient witness would strike a line at a farm of £50, he would take part away from man who had too much and was not able to labour it, 32227.

Farmers' Sons Should Get Farms in Order to Keep them in the Country.

Farmers' sons under £10 valuation should get farms in order to stop emigration, 32142, 32204-5.—People in congested districts should have first claim, a larger holding would provide labour for whole family, 32205-13.—Persons should be at liberty to inspect farms and if satisfied with terms of purchase, to have the same title to holding as other purchasing tenants; term of repayment for migrated people should be extended in order to reduce half-yearly instalment, 32142.—If migrated family were able to sell interest in little vacated holdings they would have means to stock the new holding, 32144-6.—More advantageous for remaining parties if they got the land for nothing, 32147.—People would have little means to start on new holding, and if they borrowed it would be a heavy sum yearly to pay back, 32150-2.—Loan would be an advantage, 32154-9.—Congestion worst in mountainous districts, 32160.

Mountain Grazing should be Secured for Tenants.

Mountain grazing should be secured for tenants at purchase of holdings, 32160.

Price of Land.

Estates Commissioners should have land inspected before tenants purchased to see if it was worth the price, 32161, 32173.—When a man got a great amount of arrears of rent and was in difficulties he agreed to purchase his holding at too high a price in order to get over difficulty, he was often unable to pay instalments, and many decrees had been taken out where tenants had made

ROONEY, Mr. P.—*continued.*

bad bargains with landlords, 32162-5, 32170-2.—There had been purchasers under Ashbourne Act, but witness did not know of any case where man had been turned out of holding for not paying his annuities, 32166-9.—Estates Commissioners should fix a fair price, and landlord and tenant should be bound to accept those terms, 32174.—Success and failure did not depend on tenant paying 5*s.* or 6*s.* a year more, 32175-8, 32184-6, 32189.—But tenant would benefit by reduction, 32178-9, 32190-2.—Man who paid £3 rental could not maintain himself and family, he had to find some outside sources, 32187-8.—Half the people would not be able to live in the county if they had not help from their children in America, 32180-2.—Inspection might not benefit tenant altogether, but witness wished for it, he had confidence in the Estates Commissioners, 32183, 32193-5.—Rates would be mulcted later if tenant bought at exorbitant prices, 32196.—18 years' purchase under Ashbourne Act was fair, 32197-201.—Under new Act Government was giving a bonus of three years' purchase to landlord, who ought not to profit because tenants got a cheap loan, 32201-4.

Development of Industries Needed.

Industries suitable to each locality should be established, a woollen factory might be established in congested district of Glenarriff, 32213-4.—Enterprising landlord might start some useful industry, 32215-7.

Importation of Cattle.

Necessity that small farmers should be protected, sale of store cattle was mostly all their means of making money, and if foreign store cattle were imported into England without restriction prices would fall in Ireland, and the small farmer be ruined, 32218-20.—Small holder must sell his cattle, he had not the means to hold them over, 32221.—Bigger farmers and graziers made the market for them, 32223.—They all went to England in the end, 32224.

Witness represented one of the poorest congested districts in North Leitim, in Glenarriff division they had 190 holdings under £5 valuation, 51 over £5 and under £10, and 12 over £10, only 12 persons in the whole division that had land enough to live on, 32227.

Sporting Rights.

Sporting rights were of little value to tenants, sons were better employed on working the lands, it was better for tenant to purchase the rights of landlord in case of burning in the dry season, when there would be a claim for malicious damages, 32231.—If tenants purchased sporting rights they should appoint a committee to look after game, to preserve it and sell it, and proceeds go to pay taxes, 32236, 32238.—If sporting rights had been sold proceeds should go to the revenue of the tenants, and not to the Parish Committee, 32237.—Tenants should not be allowed to shoot at will, 32239-40.

REYNOLDS, Mr. P.

See pp. 154-7.

White Estate.

2,072 acres of untenanted land on Whyte Estate and some of it rough mountain grazing, 32246-8.—Estate not sold on account of difference as to price, 32246.—Not fit for tillage; of 192 tenants, 77 were under £5 valuation, and 72 over £5 and under £10; uneconomic holdings on estate could be improved by adding grass lands to some of them, 32249.—Some of the 2,000 acres was grass land and fit for grazing cattle, 32250-2.—Other holdings in division of Sraghmore not easily accessible, could be improved by consolidating two farms into one; in townland of Carrickinero, Mr. Whyte had 119 acres, 1 rood, 16 perches untenanted, of valuation of £47 on land and £7 10*s.* on buildings, suitable for dividing among tenants, 32252.—In Carrickfad Mr. Whyte had 30 acres, 2 roods, 17 perches, and 70 acres, 32253.—They claimed that 70 acres were not the demesne, as he built on 7 acres and took the rest, 32254.—Mansion house was valued at £22 and £4 5*s.*; in Cartron Mr. Whyte had 59 acres, 3 roods 22 perches; 7 acres 0 roods, 37 perches; and

REYNOLDS, Mr. P.—*continued.*

4 acres, 2 roods, 22 perches, with valuations of £27 15*s.*, £3, and £2; in Corray he had 125 acres, 2 roods, 13 perches; in Cornalaghta 3 acres, 0 roods, 7 perches, valuation, 10*s.*; in Curraghan, 42 acres, 3 roods, 31 perches, valuation, £3 10*s.*; in Doonkelly 54 acres 0 roods, 6 perches, valuation, £7, 32255.—Owner took in grazing cattle from surrounding people, 32256-7.—In Doonmorgan he had 36 acres, 3 roods, 3 perches, valuation, £12 5*s.*, some fit for tillage and tenants could be put on to it; 978 acres not fit for tillage with exception of what would make two farms; known as Lecaun and Fawnlion sheep walk, and some holdings made very small and miserable by late Col-Whyte, 32257, 32262.—Some land taken away from tenants in the early sixties, 32258-9.—Very few evicted, but every man curtailed, 32263-4.—No compensation given, the following were a few instances: D. O'Connor lost about 28 acres and only 4½ left; O'Dolan lost 30 acres and 6½ left; P. Dolan 32 acres and only 8 left; T. Murray lost 30 acres and 8 left; rent and rates reduced very little, grass lands had deteriorated since taken from tenants; land taken from 6 tenants and let into one ranch, had only 5 cows on it the last few years, while formerly 20 were able to graze on it; by tillage and manure it might be brought back to former state, but would cost much money and labour, 32265-6.—Overrun with rabbits that ate the roots of the grass away; tenants could be put on to the land again if it was cropped, 32268.—It would not pay landlord to crop it himself, but farmers gave their labour for nothing, 32269-71.

Negotiations for Sale.

There had been negotiations going on for a sale of property under Wyndham Act, landlord had asked 26 years' purchase, and through clamouring of tenants in arrears, tenants had bid 21 years, but bid had been withdrawn, 32291-4.—Landlord had offered the bad part to tenants, and wanted to keep the good part offered, 32299.—Tenants were anxious to buy through Estates Commissioners at what they considered the value when they inspected it; there were 25 tenants' sons who were anxious to get new farms; if they did not, they would have to emigrate, 32291.

Dolan Property.

Dolan property was another estate, of which Mr. Whyte was head landlord; there were 14 tenants on Dolan property, 7 under £4 valuation, 5 under £7, and 3 from £10 to £12 10*s.*; landlord held 114 acres of untenanted land and 18 acres belonged to an evicted tenant; small farms could be improved by addition of some grass land, which was accessible to tenants, but was in the landlord's hands.

Parks Estate.

On estate of Col. R. Parks, of which Mr. Whyte was the head landlord, there were two tenants, the landlord holding 110 acres, all arable land, which he had let on eleven months' system; some of this could go to improve holdings on Whyte Estate, and others adjoining it, five of which were very barren and barely fit for cultivation; remainder would make three or four new farms, 32299.

Size of an Economic Holding.

Witness would not take £5 valuation as a basis for uneconomic holdings; some holdings valued at £10 were uneconomic, because they had not enough arable land for rotation of crops, and consequently they had bad crops, 32271.

Witness's Method of Farming Twenty Acres.

Witness farmed twenty acres and considered six or seven acres arable, 32272-3.—Whole was tilled in rotation about one and a half acres at a time, 32274-5.—He grew turnips and cabbages besides potatoes and had to buy manure and a lot of hay, he spent about £2 on manure, 32276, 32278-9.—And kept five cows, 32277.—And often five calves, 32281.—A man with five cows could only find manure for an acre of tillage on bad land, 32282, 32285.—Witness took a conacre, which cost £5, 32280, 32283.—Some stock were out in summer, but were housed in winter, 32286-7.—Pigs and poultry were kept, his wife made more out of the poultry than he did of the cows, the eggs sold in Sligo, 32288-9.—Congested Districts Board had assisted them, by giving them eggs from the poultry stations, 32290-1.

REYNOLDS, Mr. P.—*continued.*

Migration Prospects.

Some tenants would be willing to migrate if they got a better holding, and if they were given some compensation, 32300.—Witness and his father had expended a lot of labour on his holding, which would be hard to leave, 32301, 32316, 32318.—And neighbours who entered would have to insist to pay annuities, 32392.—He was willing to migrate, 32303-4, 32307.—If he gave up his holding he would do so for relief of congestion, and if he got leave to sell, some man might buy it, the neighbours could not afford to, and congestion would not be any better, 32306-10.—If new holding were large enough, so that he could afford to keep a horse, he felt that he could work it to the fullest extent, 32319-1.—And neighbours were of same opinion, 32322.—Witness did not agree with Mr. Hewson's evidence, he would sooner have twenty acres in Roscommon than 200 acres in Canada, 32323-5.—There were plenty of farmers willing to migrate, 32326.

Reductions of Rent.

Witness wished to mention some reductions of rent in Land Courts and annuities, case of M. Dolan whose old rent was £15 and reduced to £7 10*s.*, and his annuity now was £5 2*s.* 4*d.*, that man had improved his land since he purchased it.

MITCHELL, Mr. P.

See p. 157.

Farm of some middling fair land and some moss or boggy land; employment needed most for people, to keep them at home and give them a living, 32329.—Manorhamilton a suitable place for industries, being nearly central in North Leitrim, 32330.—Some parts of district needed scheduling to give people means to improve farms and houses, 32329.—Portion of road from Manorhamilton to Garrison made by Government in 1846 should be opened up; waste lands in and around Manorhamilton should be parcelled out and distributed among small farmers, labourers and artisans. 32330.

GILMARTIN, Mr. J.

See pp. 157-9.

Bad Quality of Land in Rossinver.

Witness resides in Rossinver on eighteen acres of land, of which five or six were arable, situated on mountain slope; land was bad and not able to maintain beasts of good quality, they died of disease called cruppen; all labour was done with the spade, 32332.—It was not possible to till, manure had to be taken up the side of a hill in donkey loads in a wet season; there were 100 uneconomic holdings, and none large enough except a few where tenants had left in 1846 or 1847; only one farm where horses could possibly be kept, migration was the only means of relieving congestion; there had been a private creamery, but it was closed. 32333.

Creamery Needed.

If congested districts would put up a creamery it would help the people and they would get better prices for their milk, 32333-4.—Agricultural Organisation Society had been asked to help in erection of creamery; an organiser had been down and there were a certain number of shares, but people were so poor it had fallen through; farmers kept four cows on the average, some only one or two; average price for calves reared was £2 or £3, 32335.—Farmers depended on earnings of families or friends abroad for support or else some other industry; holdings too small and inconveniently situated, 32333, 32336-7.—People had to take their cattle up in the morning and bring them back in the evening.

Work of Parish Committee.

Parish Committee was doing good work but funds were so limited they could not meet the demands; only £50 placed at disposal of Committee last year and

GILMARTIN Mr. J.—*continued.*

they could have easily spent £150; number of people who applied got no assistance; works satisfactorily carried out, 32338.—Witness had a salary of £5 or 10 per cent. of grant, no bicycle allowance, 32339-41.—Works on house repairs or outhouse repairs generally carried out, 32342.—They could usefully employ money on drainage and reclamation, 32343.—People did not have cattle in their houses, witness had found young calves in one house and fowls in another, and he had made them provide outhouse accommodation; people of between £7 and £10 valuation needed a grant as much as many under; standard of valuation should be raised to £10 in this parish, 32345.—Grant-in-aid scheme had been working for three years in parish, the people were too poor for the prize system, 32345-8.—Witness made estimate of cost of work, 32349.—Certain amount of money given according to estimate, 32350.—Proportion fixed from a third to a sixth, 32351.—Subject to sanction of Congested Districts Board, 32352.—Works were supervised by an inspector, 32353-5.—Papers were forwarded to Congested Districts Board and supervisor's estimate checked before work was carried out, 32356-8.—When works were completed they were inspected by inspector but supervisor had authority to give a certificate that they were completed, 32359.—Liable to inspection of works at any time, 32360-1.—Witness's estimate had never been altered, 32362.—Complete reports sent of actual grants to be made to particular persons, 32363.—Additional grants made for reclamation and fences, 32365-6.—Applicant would get about a fifth of cost for draining a field, 32367.—Labour was valued at so much a day and actual cost furnished, 32368-9.—Drainage could be done with the farmer's voluntary labour, but if he went in for house repairs he would be money out of pocket, 32370-2.—Stones for drainage were sometimes taken from a distance, and he would do it by his own labour, 32373-5.—Drainage and road-making calculated at so much a perch; two electoral divisions scheduled and in one unscheduled division people were as badly off as the scheduled districts; Ballaghameehan should be scheduled, work done would be about five times the amount of grant received; parish committee was a publicly elected body and the people had every confidence in them, 32391-5.

Agricultural Bank.

Agricultural Bank was doing good work, many of the loans were for purchase and saving of stock; borrowing powers were 250 and should be raised to £400, a third of the stock would not be in district if it were not for the Bank; people were industrious and honest.

Drainage.

Drainage of Lough Melvin of great importance; Congested Districts Board had been appealed to for grant and they replied that if Drainage Board was formed they would consider what amount they could give towards the work; one scheme comprised the Kilcoo River, Lough Melvin and Bundromer River, from twenty to twenty-five miles of work; Lough Melvin was obstructed by a rock in River Bundromer, it dammed up the lake and damaged the land surrounding it, when the lake was at high water; there were two rivers emptying into it, and no outlet for the water, it flowed into people's dwellinghouses, and last August whole crops were destroyed, 32377.—If grant was given they would sink the river, 32378.

Spraying.

Potatoes were sprayed once as a rule, but this did not ensure a good crop, 32379-83.—Witness had been instructed that three sprayings were necessary, but it had never been tried in this district, 32396.—From experience he had found spraying once was useful and twice was better, 32398-9, 32408.—In wet season it was almost impossible to find suitable days for spraying, 32409.—There was a difficulty in getting spraying machines, 32384-5.—Congested Districts Board had been applied to about a scheme, but the Board had given that Branch over to the Department of Agriculture, 32386.—Useful if Parish Committee could have spraying machines to let out and a good mixture which could be guaranteed, 32387-9.—It was clay land and in a wet season potatoes were not worth turning out, 32381.—They had had a change of seed this year, 32390.

GILMARTIN, Mr. J.—*continued.*

Agricultural Instruction without Experiments useless.

Agricultural instructor was not much use, he never put his lectures into practice, so nobody derived any benefit, 32400-2.—Agricultural instruction in this form without experiments was a waste of money, 32404.—Work was done through County Committee, 32403.—And witness's parish was not represented, 32405.

Protest against Direct Sale.

No direct sales should take place between landlord and tenant, if they were continued congestion would remain; Congested Districts Board should see what could be done; migration would be a great benefit, and drainage and other things would relieve congestion; if people had their farms free they could not live on them, 32410.

CONNOLLY, Mr. M.

See pp. 159-60.

Little done by Congested Districts Board.

Witness farmed 33 acres of very rough land, £2 10*s.* valuation and 10*s.* on buildings, only benefit locality derived from Congested Districts Board was through Parish Committee work, but grant of £70 when extended over area of twelve miles was very slight, it covered two electoral divisions, Tullaghan and Gubacreeny, grant should be greatly enlarged, 32413, 32425.—Very large population, registered list of voters in Tullaghan was 400 and in Gubacreeny 350, great number of holdings in both divisions exceptionally small, 32411-3.

Lack of Water Supply at Gubacreeny.

In Gubacreeny division there were six miles without a single well of pure water, great necessity for grant for erection of pump or provision of pure water, 32411-3.

Grazing Lands Available for Relief of Congestion.

Kinough Electoral Division needed to be scheduled, there were grazing lands available which could be purchased for relief of congestion if compulsory powers were given to Estates Commissioners and Congested Districts Board, Mr. St. G. R. Johnston owned a ranch of 414 acres 2 roods 32 perches, valuation £180 and £3 on buildings, there was another holding in same division of 62 acres 2 roods 24 perches, valuation £45 15*s.*, there was no valuation on houses or buildings on the lands, showing that they were unoccupied holdings, there were about 60 small holdings on Dickson Estate, Tawley, with an average valuation of £2 10*s.*, there was a grazing ranch of 260 acres close to these holdings which tenants had used for grazing and conacre for forty years, 32411-3.

Increase in Supply of Turbary if River Duff were Drained.

River Duff should be drained and bogs divided, and road made through the bog, this would be a source of industry, a turf market being available, turf was plentiful in plot referred to, but in other parts it was scarce, there was a co-operative dairy society wrought by an engine and engine was fed by turf, there were 400 acres without a way into it, some on Dickson Estate and some on Dunlop Estate, drainage of River Duff and making of a road would open up this bog, 32411-3.

Improvident Bargains made by Tenants on Dickson Estate.

Improvident bargains had been made by tenants on Dickson Estate under threat of arrears of rent, instances given—J. Murray's first-term rent was £2 10*s.*, he was promised 8*s.* in the pound by consent to purchase, first demand he got in lieu of rent was £2 5*s.* 6*d.*, only allowing 4*s.* 6*d.*, 32413.—Estates Commissioners took no action in matter, estate was in Land Judge's Court, and was sold in Dublin a year ago, 32414.—Promise of 8*s.* was made through the receiver on estate, Land Court refused to accept tenants' offer, and Congested Districts Board had not worked on their behalf as they expected, judge refused to abide by bargain; another instance was that of W. M'Gowan, who paid a rent of £3 first-term, purchase agreement would make it £2 7*s.*, at an application in County Court the rent was reduced to £1 15*s.*, 32415-6.—Improvident bargains would still be made in the future unless they had inspection and interests of tenants were safeguarded, 32417.—Witness wished to show how congested the district was, and that there were grazing ranches in it which could not be got for relief of congestion, extent and particulars of Mr. M'Gowan's holding was—Valuation 17*s.*, 12*s.* on land and 5*s.* on buildings, rent £2 3*s.*, he was only enabled to live by help from America, and others similarly situated, 32418-23.—Maps and valuations could be produced to support this evidence, 32424.

CONNOLLY, Mr. M.—*continued.*

Necessity for Pier or Boatslip on Leitrim Coast.

Necessity for a pier or boatslip for accommodation of fishermen on Leitrim coast, if there was a boatslip at Tullaghan it would help the fishing industry, holdings so miserable and small they wanted some industry to help them to exist, 32424.

GALLAGHER, Mr. HUGH.

See pp. 160-1.

Description of Holdings on the Tottenham Estate.

Witness the eldest of six, no brothers and sisters in America, 32438-9.—His father had two farms 300 yards from each other, 32440, 32445.—One in Leitrim of 23 acres, 32427, 32449.—Valuation £5 5*s.*, 32427.—The other in Fermanagh, a tillage farm of 60 acres, 32441, 32443, 32449.—The two were farmed as one, most people had not two, 32446.—Witness had not been out of Ireland, 32442.—He lived on the Fermanagh farm on borders of Leitrim, 32444.—Leitrim farm was on Tottenham Estate, Fermanagh one on Mrs. Grey's, 32453.—Valuation of latter was £14, 32456.—Witness's father employed labour at certain seasons, 32454.—If 60-acre farm were broken up it would help the people round by providing labour, they were in bad condition on mountain land, 32450-2, 32455.—Majority of land in neighbourhood of Leitrim farm was heather, the country was hilly and incapable of producing crops, the farms were all spade labour farms, district was scheduled, there was one large estate, one small, large estate the Tottenham, famous for evictions in Land War, people too poor to pay rent, holdings uneconomic, men went to England and Scotland to earn rent and support families, 32427, 32466.

Sale of Tottenham Estate.

Tottenham Estate had been sold to tenants, agreements signed, money not yet paid, the people had been morally forced to buy, they were threatened with evictions, and all the tenants were in arrears, mostly five or six years, and threatened with procedure for recovery, 32456-9.—They could not pay rent without paying instalments of arrears, holdings were insufficient to pay rent, 32462.—Rents were fixed by the Court, in some cases there were a number of future tenancies, 32463-4.—75 per cent. had relatives in America, 32465.—Arrears had been increasing for 25 or 30 years, 32467.

Sale of Cullum Estate.

On the Cullum Estate people were in same condition, nine were to be evicted, so they purchased at high price rather than be thrown out, 32468.—Same thing occurred everywhere, 32469.

Migration.

There was grazing land in neighbourhood, farmers would migrate if given better holdings, beneficial to introduce migration system, 32427-8.—Witness and his father would migrate, 32428, 32447-8.

Investigation of Mineral Resources of District Proposed.

Rich minerals in district, people would be thankful if Board sent inspector and started industries, iron mines at Kiltogher pronounced best in Kingdom, transit facilities poor, roads needed improvement, and

GALLAGHER, Mr. HUGH—*continued.*

a railway would be beneficial, 32429.—Iron worked centuries ago at Garrison, 10 miles away, 32430.—Conditions improved since then, 32431.—There was delph clay in district and water power, factory for delph would be a benefit, clay taken to Belleek did not come from there, 32432-4.

No Industries.

There were no cottage industries, there had been a lace class, but the girls emigrated, only a few could turn out lace fit for market, 32435-7.

Drainage Required.

District like the rest of North Leitrim required a proper drainage system, rivers were blocked, and small farms could not be drained till leading streams were opened, flooded lands could not produce crops, tenants would drain if larger streams were opened, 32470-1.

Attitude Towards Congested Districts Board.

Board had people's confidence, little had been done, but the people had hopes for the future, they thought Board willing to do something if income were increased, Board's efforts would be seconded by people, 32471.

Value of a Corn Mill.

Corn mill would be useful, old disused one could be purchased at small expense, corn carried eight or nine miles, there were disused water-power mills in neighbourhood, 32471-4.—Mill witness referred to had been used fifteen years ago, shutting up of mills not due to lack of corn, 32475-6.

GILROY, Mr. JOHN.

See pp. 161-2.

Witness's Farm at Mullagh, Dromahair.

Farm consisted of fifteen acres owned by witness's father, it was mountain two portions of land owned, witness lived on one, cattle and milch cows kept, calves, pigs, poultry, etc., reared, 32478-9.—Milk sent to creamery at Dromahair, 7 cows kept, they did not all calve at regular time, 32480.—Calves fed on separated milk, grass, Indian meal, and flour, cod liver oil too expensive, witness had heard of it being used, 32481-4.

District not Scheduled on Account of 2,000 Acres of Untenanted Land.

District congested and one of the poorest in Leitrim, got no benefit from Board, not scheduled, 32485-6.—It should be scheduled, in Mullagh there were 24 tenants, 17 under £5 valuation, 6 under £10, valuation of one holding was £13, 8 with valuation of 10*s.* to 25*s.* with men rearing families of five or six on two or three acres of bad land, 32487.—It was the Fox Estate, and was not scheduled on account of Whyte Estate adjoining, and 2,000 acres untenanted land in Drumlease, Fox estate bought by Land Commission in 1902 under Ashbourne Act, but it did little good, people could not live on the land, holdings too small to rear cattle, 32488-90.

Other Townlands Near Mullagh which were also Congested.

Bohey, near Mullagh, was also congested, there were 15 tenants, nine with valuation not exceeding £5, mostly from £1 to £1 5*s.* and £2, in Rockvalley, also in neighbourhood, there were 12 tenants, 10 under £5 valuation, mostly from 10*s.* to £1 5*s.*, to over £5 and under £10, 32490-1.

Question of Migration to Moneyduff Grazing Ranch.

Grazing ranch called Moneyduff adjoining was formerly used by people to graze cows for milk, they stopped that, in order to try and force landlord to sell, 32490-1.—Tenants might be migrated to ranch, 32491.—It was over 400 acres, and belonged to C. B. Whyte, he had no cattle on it, and did not use it for agriculture, 32492-4.—People in witness's district used to depend on it to graze cows in summer, they paid for the grazing, 32495-6.—It was tenanted land

GILROY, Mr. JOHN—*continued.*

and waste at one time, tenants were evicted, and land turned into grazing, 32497-8.—Landlord lived in Carrick-on-Shannon, 32499.

Development of Tourist Traffic by Steamer on Lough Gill.

Steamer on Lough Gill would develop tourist traffic from Sligo to Dromahair, and bring cargo as well, 32499-500.—Turf nearly exhausted in Mullagh, 32500.

Question of Railway for Conveyance of Coal.

Railway from Arigna to Dromahair to convey coal at cheap rate would meet want, people could not afford present price of 1*s.* 4*d.* and 1*s.* 5*d.* a cwt., 32500.—Arigna 16 miles by road from any part of lake, 32501.—Railway would have to be made from south end of Leitrim, 32502.

GILLIGAN, Very Rev. Canon.

See pp. 163-165.

Congestion in Kiltoghert—Sufficient Grass Lands available.

Fifty congested families in parish of Kiltoghert, each had half an acre to two acres of land, 32505, 32543.—Lived by going to England and Scotland, 32505, 32518, 32546.—District not scheduled, twenty of the families were near Carrick-on-Shannon, thirty in Gowan district they could be relieved by giving them small farms, with suitable houses and offices, 32505.—Three large grazing ranches in hands of occupiers, which occupiers were willing to sell to Congested Districts Board, 32505, 32518.—Occupiers were Mr. MacDermot, who told witness he was willing to sell, Mr. Vaugh, who would also sell if he got fair price, third owner Mr. Harrison, 32507-8.—500 acres of grass altogether, it lay east of Carrick-on-Shannon, 32509-11.—Witness thought occupiers had purchased, 32515.—The largest place belonged to Mr. Latouche, and it was once occupied by tenants, but they were cleared out in the bad times since 1848, 32516-8.—Tenants constantly evicted all over Ireland, 32518.—No necessity to migrate them in this district, as land was available, they would not like to leave neighbourhood, 32518.—Breaking up grass lands the only way of providing for them, as county was not agricultural, 32518.

Soil of the Parish was mostly Wet.

The soil was wet, with retentive sub-soil, water remained on surface, only nine inches of soil, six foot drain needed to do any good, farmers could not work the land, but it did very well for grass, 32518.—This wet land lay on both sides of road from Carrick-on-Shannon to Jamestown, it was a town park, and belonged to Mrs. Whyte, 32528-30.—Town parks round Carrick-on-Shannon were all wet, the grass lands were due east, they were on limestone, and water got away, 32530.—Unsuitability of soil accounts for failure of tenants, as they could get no employment, 32519.—Few of those evicted in Famine time remained, they emigrated to America, 32520.—Failure of potato crop would be enough to account for tenants' breakdown, 32521-2.—Certain amount of tillage essential to success of small farmer, 23523-4.—The ranches had good tillage land, 32525.—Labourers could not get employment, because it was all grazing, and farmers had not more than they could till for themselves, 32526.—Every farmer had some tillage, he drained part of his land, manured it and petted it, biggest farmers had only a small amount, it was all grazing, 32527, 32551.—No difference between town park and ranch, except town park was near a town, 32531.—Ranches very suitable for allotting to small holders, occupier would only want cottage and offices to get on, 32532.—All the other lands were saturated with water and unsuitable, 32533-4.—Ranch land best in parish, all of it would not be needed for small holders, 32535, 32548.—It was near the small holdings, a mile or two away at most, tenants would leave present cabins, and new houses, &c. would be provided, three or four of the old holdings should be

GILLIGAN, Very Rev. Canon—*continued.*

amalgamated, 32538.—They were nearly all suitable for tillage, 32539.—Two would not be enough to amalgamate, three or four would enable a man to live, 32541.—In such a farm there would be two acres for tillage, and three or four for grazing, 32542.

Congested Small Holders were really Agricultural Labourers.

The fifty congested small holders were really only agricultural labourers, they had only small gardens to grow roots and potatoes, and feed pigs, they were not grazing farmers, 32545.—Ranch land was partly level, partly high, country was undulating, there were some comfortable farmers on it, and no poor, congested people, such as the small holders a couple of miles away, 32549-50.—Small holders grew potatoes, turnips and mangels, for pigs, they had no cattle, with manure anyone could grow roots, they had manure, great pig fairs in Carrick-on-Shannon, 32551-6.—Tenants in Gowan were in one union but in different electoral divisions, Gowan the principal one, 32559-60.—Priest lived in that direction, he could give the electoral divisions they lived in, 32561-2.

Protest against Extension of Railways in County Leitrim owing to burden of Taxation.

Witness wished to fight against railways, they had already put overwhelming taxation on Leitrim, further extension without prospect of return would be fatal, 32563.—It might pay to extend them in direction of coal mines and quarries, in that instance line if opened up might pay and give employment, 32564.

VAUGH, Mr. WILTON.

See pp. 165-70.

Size that a Self-supporting Holding should be in County Leitrim.

Witness paid £800 a year in rent and taxes, £150 of that was taxes, 4*s.* in the pound on most of the lands, 32567-8, 32582.—He knew County Leitrim well, and never knew industrious tenant who could not live and pay rent no matter how small his farm, man with five acres sometimes better off than one with thirty, 32568, 32573.—Man with less than five acres a labourer, who needed outside employment, or his holding enlarged, 32569-70.—An industrious man if he could not get enough from the land would find employment, 32571, 32575.—With proper management every farm should yield enough profit, 32572.—Five acres enough to live on, 32574.—That was the smallest amount possible, 32577.—Witness's chief faith was in the man himself, 32579.—Rather a good man with five acres than a bad man with thirty, 32580.—Every man ought to have twenty acres, 32581.—If a man lost calf or was disabled from any cause he came round in a short time; if he were an industrious man he could always get a friend to help him, 32584.—There was little congestion near Carrick-on-Shannon, but it was to be found in every electoral division in County Leitrim, more or less, industrious men should be migrated on to good holdings, proper men bound to succeed, farms vacated would be used to enlarge adjoining ones, 32584, 32629-31.

Price of Land for Migration Purposes.

Plenty of land to be had for migration if a fair price were paid, witness held farm of 287 acres on King-Harman Estate, when Estates Commissioners bought estate in 1905 he offered to sell at price that would yield his net income when invested at 3½ per cent., 32385, 32587, 32636.—Witness not tenant purchaser, he paid rent to Land Commission who had bought estate, 32585A.—The farm was in County Roscommon on border of Leitrim, Estates Commissioners inspected it and said it would suit, but when

VAUGH, Mr. WILTON—*continued.*

witness stated his price of £3,000 they wrote and said, considering the short time he had been in possession, it was too high, and asked him to take off a third, 32586-8.—Witness's net income was £210, he had bought estate eight years before paying £1,500 for the tenant's interest, 32588-91, 32596, 32615-6.—He did not answer Estates Commissioners' letter, he thought it was no use, 32588.—He was tenant of Land Commission and paid them rent every half year, 32593-4.—Farm well situated, good water, good land, 32595.—Abatement demanded was unreasonable, price paid by witness for estate had nothing to do with Estates Commissioners, if Guinness's shares were bought at £15 and rose to £56, owner of shares would not be asked to sell for £15, 32898.—Witness was prepared to show figures to support statement *re* income, 32600.—If he were allowed to cut farm into thirty-acre lots he would get £5,000, 32601, 32605.—Value of land had gone up, though not so much as Guinness's shares, 32602-2A.—Guinness's merely mentioned as an instance of market going up, 32603.—Because purchaser wanted to know previous price paid, there was no reason article should be sold cheaper than seller thought proper, 32604.—Farm sold in one case for £1,000, that was bought five years before for £700, in another a farm fetched £1,400, that was bought for £1,000, 32608.—Witness had bought his farm cheaper, 32609.—Witness had not argued out matter because he thought Estates Commissioners did not approach him in the right way, short tenure of farm was nothing to them he bought out tenants' interest, 32610-2, 32648.—Rent of farm was £217 9*s.* a year, 32616, 32619.—Valuation £317, 32754.—Lease held on term of three lives and forty years after the last life expired, term not yet expired, 32617-20, 32624.—Some of those lives still existing, 32623.—Reversion was to Estates Commissioners, they had no power to resume while witness paid rent, 32625-6.—If estate were put up to auction he would not sell at £2,000, 32621.—Estates Commissioners' letter not prejudicial to sale, 32622.—Unless Land Commission put on rack-rent, or raised rents, series of years of lease having expired would not affect value of witness's property, they had no power to raise rents according to terms of lease until forty years after the death of last survivor, 32627-8.—Witness thought he came under section of Act that permitted leases to be broken, 32632.—Act of 1887 did not break leases, it gave power to go into court and have rent reduced, 32633.—Witness could have done so if he thought he could gain by it, 32634.—Value of land £100 over rent paid, 32635.—Reason witness made profit out of land due not to his experience and knowledge, but mostly to land itself, 32637.—Farm had yielded same income for years before he had it, 32638-9.—Ordinary farmer would make more out of it, so would witness if he could pay attention to it and stock it himself, he could make £200 a year out of it, 32640-1.—Farm in hands of National Bank when witness bought it at auction, grazing was let to three men, in whose hands witness left it, £110 a year profit got from it, 32642-3.—Sub-let on eleven months' system, 32644.—Rents and tenants never disturbed, 32645.—If farm were broken up and men put into it the return would be more, because more time and attention could be given, 32646.—Such an investment as this farm offered would never be offered again, 32647.—Only basis of price State could go on was net receipts for last five years, 32649-50.

This instance showed chief object in demanding compulsory powers was to compel landholders to sell landed property cheap, 32651.—No necessity for compulsion at all, 32753.

Inquiries by Estates Commissioners concerning Evicted Tenants.

Estates Commissioners had had an inspector making inquiries about evicted tenants in the county for past six months; he had done nothing but raise false hopes; witness had told him he had 500 acres for sale, but had heard nothing further, others also willing to sell.—Desirable to prevent sub-division and reckless cutting down of trees, 32651.

VAUGH, Mr. WILTON—*continued.*

Effect on Cattle Trade of breaking up Grass Lands.

Splitting up of grass lands would not affect County Leitrim, as there was very little there, abolition of large graziers disastrous to country generally, 32651.—Small farmers kept calves till old enough to be fattened, graziers bought them at one to one and a half years old, price would be reduced if there were no graziers to buy, £7 to £8 10*s.* got for good year old, £12 for three year old, 32652-4, 32671-2.—Graziers kept beasts till ready for English and Scotch market, 32655.—Small man would not keep beasts till they were older, even with enlarged holding, he got double profit from small beasts, 32656, 32659.—Big grazier did not breed, 32658.—He would not be troubled to rear cows and keep servants to do milking, 32660-1.—He had to pay for the help, small farmer employed his own family, 32662.—Good range required for maturing year old cattle, 32663.—Could not be provided on small holdings, 32664.—One reason why small farmer did not keep his cattle to maturity, principal reason was that year-olds paid better, 32665.—The cattle had no exercise, 32666.—Scotchmen got all the profits, while the cattle were prepared in Ireland, 32667, 32676, 32684.—Great trade in Scotland for one and a half year olds, 32668.—Large grazier kept year olds a year or a year and a half, and sent them to Englishmen or Scotchmen to finish, 32669.—He bought direct from small farmer, rents of small farmers in Leitrim always well paid, 32670.

Possibility of Stall-Feeding, etc., in Ireland.

Tillage might be tried, and cattle stall-fed if country were in more solvent condition, if small holder were more solvent, witness would prefer him to grow green crops and feed cattle better, and leave stall-feeding to Englishmen, 32674, 32726.—Witness bought cattle from Mr. Lane Fox, of Yorkshire, at £11 10*s.* a head, he sold them for £26, he gave them cake and everything he could, 32676-7.—He carried on operations on a large scale, 32699-701.—The men who made the huge profits were the very large farmers, 32700.—Ireland behind the times, farmers had not the means, 32678.—No reason why it should not be done in Ireland with means, 32680.—Agricultural education not what it should be, 32679.—It was a matter of education and capital, 32683.—A good thing if Ireland could derive the principal profits from cattle she raised, 32685.—Could only be done by feeding and fattening cattle in the country, 32686.—Hard to fatten a calf with other demands on man's time, 32688.—It must be kept in good condition and hand-fed, house accommodation wanted, 32688.—To fatten and kill beasts at two years old, they must be fed continually with meal and cake, &c., from time of calving, 32689.—Big price would be got, 32690.—A number of beasts in England and Scotland, were fattened in that way and fetched 5*s.* a cwt. more, 32691.—No reason why small holder should not do the same, if he could do without money till beast were fattened, 32692.—Knowledge and capital all that was lacking, 32693.—Bank would not lend money for fattening, only for drains and houses, 32694-5.—If man with thirty-acre holding had knowledge, and could borrow money from Board at cheap rate, he could keep beast and fatten it, 32696-8.—Big men made the profits, because they had the knowledge and capital, 32703, 32706.—Small man could, perhaps, do the work himself better, usual to stall-feed number of cattle in one house, two men could feed twenty or thirty, same number required for ten, 32704.—That would make no difference, 32705.—Some men must grow the young cattle, small men would do it so long as it was profitable, 32710.—Somebody must be left to buy them, 32711.

Extent of Land necessary to make Stall-feeding possible.

Unless they got fifty acres each they would not fatten, 32712.—No chance with thirty acres, they could feed three or four young cattle for two old ones, 32713-32715.—Better to keep them if they had capital, 32714.—Twenty to twenty-five acres required for man to live comfortably on, 32716.—Fifty acres good land necessary to make stall-feeding profitable, 32717-19.

VAUGH, Mr. WILTON—*continued.*

Foreign Competition with Irish Cattle Trade.

Cattle dearer than a year ago, competition with foreigner did it, 32721.—Foreigners had done their best and their worst, cattle would not get cheaper, 32722-3.

Mixed Farming Advocated—Drainage the most urgent necessity in Leitrim.

Dairying and rearing young cattle went together, best thing for small farmers in Ireland, 32725-8.—Tillage essential to production of butter, 32729-32, 32736.—Drainage wanted above all things, first drain land, then crop it and feed cattle, then sell young cattle, that was the way to make money in Leitrim, 32732, 32734.—There was a limit to number of cattle to be kept on a property, 32733.—Milk must be had for young cattle, 32735.—Dairying better carried on by small holders who did work themselves, 32737.—Tendency of grass ranches to diminish tillage, 32738.—They should be broken up to increase tillage, every one should till more, not half enough done, 32739.—Mixed farming best, 32740.—System of small holdings better than large ones, 32741.—Connaught should go in largely for breeding calves, buyers would come from elsewhere, 32742-4.—Better not to have to go outside Connaught for grazing, great mistake if it got all over Ireland, 32745.—Prospect for small holdings was principally in Connaught, 32746.—Drains must be maintained by occupiers if made, 32746-9.—Board should appoint man to go around and direct tenants where drains should be, and to give them 6*d.* a perch for making them, 32749.—Nowhere so many rushes as in Leitrim, people would not drain land without incentive, 32750.—Few parts of the county would want large arterial drainage, 32751.—There were main drains to carry off water, 32752.—Small farms wanted draining, and that should be encouraged, 32752.

Documents put in by Mr. Wilton Vaugh.

Page

Statistics as to Payments of Rents, ... 263

MANNING, Rev. JAMES.

See pp. 170-5.

Scheduled and Non-Scheduled Areas in Leitrim.

Drumshambo, part of Kiltogher parish, partly scheduled; twenty-three townlands containing 166 families scheduled; thirty-three non-scheduled townlands with 187 families, population of 990; ninety-five families in town of Drumshambo, population 553; thirty-three non-scheduled townlands should be scheduled; town of Drumshambo had something to do with non-scheduling, it raised rates; scheduled area should be extended; majority of farms uneconomic according to Congested Districts Board's definition; all uneconomic if Agricultural Board's test were applied; whole of County Leitrim might be scheduled, 32757-8

Land Purchase in Drumshambo.

One small estate in Drumshambo parish sold under Act of 1903; price, 21½ years' purchase on second term rents; greater portion of scheduled area purchased under previous Acts; price under 18 years' purchase; at the last sale, prior to 1903, there were a number of first term rents, but they were reduced 6*s.* 8*d.* in the pound and made equivalent to second term rents, 32758-9.—Negotiations were being carried on *re* estate partly in scheduled, partly in non-scheduled area; some of the tenants signed for purchase at 23 years, some did not, others refused to give more than 22¼ years' on second term rents; negotiations likely to fall through, 32759.

Description of the Land—Difficulties of Drainage.

Tenants in Drumshambo all poor; land bad, cold, shallow, and retentive; not 4½ inches soil on majority of farms, 32759.—bluish clay underneath; impossible

MANNING, Rev. JAMES—*continued.*

to drain except drains were brought to the surface or left open; draining with stones was useless; water could not get through clay, 32760-3.—Drain closed with clay became hard as slate; lower portions of land were formerly bog; there was black clay in them; there were small patches of better land in parish, 32762.—Open drains possible with tillage, 32764-6.—District rocky and mountainous; the further up the hill the wetter the land, 32767.

Fuel.

No turf in parish, 32768-9.—Culm from Arigna mines used as fuel, mixed with yellow or blue clay, burnt in lumps, made good fire, price 3*d.* or 2*d.* a cwt., 32770.—People fairly well off for fuel, 32771.—Worse off than those in turf district; they could not get a supply of culm; had to go a long way for it in all weathers with a donkey cart or creels, 32772.

Difficulty of Tenant Purchasers in paying Instalments—Holdings incapable of producing Instalments.

Rents heavy; people industrious; difficult for those who bought at 17 or 18 years' purchase to make both ends meet; they could not do so from produce of farms; people came to witness for assistance to pay instalments, or to write to Commissioners for further time, 32772-3.—State of tenants who had not purchased only a degree removed from legalised slavery, 32773.—In one case a man with big family died and his son came for a loan of 27*s.* to pay half-yearly instalment; the son was only eighteen or nineteen years old, 32775-80.—In another a hard-working young man, with father and mother to look after came to ask witness to write to Commissioners, or help him pay instalment of £2 7*s.*; he asked for 27*s.*; had probably got the other £1 from someone else; impossible to meet instalments from produce of farm, 32781-6, 32789, 32789-91.—These two cases were those of purchasing annuitants under Acts previous to 1903, 32812.—Holdings had been inspected, 32813.—These were special circumstances, 32815-6.—In the one case a death in the family, in the other case money could not be produced from land; application for assistance occurred only once, 32846-7.—The people had no other source of income but farms, unless they went to America, which they did in large numbers, 32787-8.—Help had come from America for the people who had asked witness's help, 32848.—There were holdings purchased in Drumshambo which were incapable of producing instalments, 32792-4.

Fair Method of calculating Price of Land.

Five shillings or six shillings more or less in the instalments would not mean difference between success or failure, but people thought a good deal of it, 32795-8.—Rent had to be got from sources other than land, 32799-800.—Question of sale depended on number of years' purchase; three or four years would make a difference to the people; five or six years would make a difference in negotiations, though they would not militate much against future prospects of people, 32801-5.—Population very poor; great struggle at best to get from America and other sources money to meet annuity from year to year; 5*s.* or 6*s.* made a difference, 32805A-9.—Better to purchase even if they had to pay 5*s.* or 6*s.* more, 32810-11.—Every reason why small occupier should make an equitable bargain just the same as big occupier, 32817-9, 32836-7.—Equity of bargain the important thing from landlord's point of view, that was, to sell at a price that would yield net income if invested at 3½ per cent., 32820-1, 32831-2.—Instalments should not be more or less than would yield that, simply because there was only a difference of 5*s.*, 32822-4, 32833-5, 32838-9.

Compulsion not advocated unless absolutely necessary.

Compulsion not advocated if it could be helped, but if it were necessary it should be applied all round to both landlord and tenant, 32825-8.—Tenant should not have right of determining annuity, 32829-30.—Compulsion might have to be exercised in extreme cases, 32840-1.—People so used to coercion they would not object, 32848.—If there were loss entailed it should not fall on any particular class but on the State, 32843.

MANNING, Rev. JAMES—*continued.*

Effect of Ownership.

Purchasers took more interest in farms and kept them better than tenants who were not purchasers, 32845.

Emigration not the remedy for Congestion.

Emigration in shiploads not the remedy for congestion; it had been tried without success since 1841—in that year Irish population was 8,175,124; in 1901, 4,458,775; in 1906, 4,387,887, being a reduction of 50 per cent. in sixty years; bullocks should be emigrated and people migrated on to the land they occupied, that was the only lasting remedy, 32848.

Continuance of Congested Districts Board desired, with fuller powers.

Congested Districts Board should be continued; it had the confidence of the people, and was the only one of the many boards established that had done good to agricultural classes; Connaught should be entirely handed over to it; Board should have free hand wherever congestion prevailed; its purchase and improvement facilities should be increased; it should have power and funds to purchase wherever it could for migration purposes; additional land must be got for migration, 32848.

Compulsory Powers.

There was a Land Bill passing through House of Commons that would confer compulsory powers and enable Board to get land; principle of Act of 1903 was the land for the people; people had not yet got the land; voluntary sale preferable, but compulsion might have to be resorted to, 32848.

Parish Committee Work.

Parish Committees did work of immense advantage to small farmers, 32848.

Necessity for Drainage.

Main rivers needed draining; the mountain river tributaries of the Shannon that ran down from Slieve-an-ierin overflowed their banks periodically; Board had sent inspectors down, but nothing had been done yet; a few years ago hay-cocks near the river were all carried away, 32848.—Drain was a main drain, not an arterial drain; it was a small river, four or five yards wide, made by man in natural watercourse, it ran into Lough Allen; bed of the river needed deepening to prevent flooding, 32849-53.—It flowed down a steep mountain, 32854.—Obstruction took place on way to smaller lakes through which river passed, 32855.—Worse now than some years ago, 32856.—Drain ran between two properties; sixty years ago landlords looked after it, now it was clogged, 32857.—Nothing done to it now and it did not fulfil its purpose, 32858-61.—Tenants did nothing to it; always wanting witness to apply to Board for help, 32862.—The work was necessary, 32863.—If Board put drain in order they ought to have power to make tenants keep it in order, 32864, 32871.—Easier for tenants to drain their farms if river were deepened, 32865.—Farm drainage difficult, but something could be done with open drains, 32866-9, 32875.—Difficult for Board to conduct many operations it was entitled to conduct, 32872.—They had put up a very useful wooden bridge over same river, through Parish Committee, 32870.—River drainage absolutely necessary in non-scheduled part of parish; small drain 4½ to 5 feet wide destroying crops every year, 32874.—Impossible to drain land unless drain were exposed, 32876.—Difficulty of drainage explained last witness's (Mr. Vaugh) statement, 32876-7.

Brick and Tile Factory at Northern end of Lough Allen.

Brick and tile factory eighteen years ago at northern end of Lough Allen, ten miles away, flourished for some time; market ceased, 32878.

Spraying.

Farmers should be aided in spraying; good thing if Board could aid in supplying spraying machines, 32879.

MANNING, Rev. JAMES—*continued.*

Tree-planting.

Planting of trees also necessary; Board might assist; country bare and bleak looking, 32879.—Trees wanted for shelter and to improve land, 32880.

Benefit of additional Tillage.

Benefit to farmers of growing more food-stuffs, both for themselves and cattle; prizes might be offered as an inducement, 32880-1.

Corn Mills.

More corn mills wanted; none in Drumshambo; one in Carrigallen, 32881.

Agricultural Education.

Agricultural education of people needed attention, 32882.—County Committee sent out instructors who did a great deal of good; people profited more by agricultural education than technical; important to educate people who were to be migrated to advanced state of agriculture, 32883-9.

FOX, Mr. BERNARD.

See pp. 175-81.

Abolition of Dual Ownership.

Abolition of dual ownership desired, land could not under present agricultural conditions support both landlord and tenant, any Commission should try to buy out land on most advantageous terms for tenants, 32891-2.—Tenant did not work farm properly, as proprietor he would have more inducement, 32893-4.

Price of Land Inflated by Excessive Sums Paid for Tenant-Right.

Tenants disposed to pay too much for land, price inflated by retired civil servants, police pensioners, and people returning from America with capital anxious to get back their old holdings, and not paying price on commercial basis, they paid more than farm was worth for reasons of sentiment, 32894-902, 32918-9.—Farmers displaced who had not been able to make profit out of land, 32900, 32902.—Opinion based on experience, 32899.—Witness noticed the excessive prices five years ago, but they had been given within last two years, 32903-5.—Man buying had perhaps smaller family and a pension or capital brought from America, 32906-8.—One-third of the farms purchased at auctions in the district were bought by police pensioners or Americans with capital, 32909-10.—They wanted a residence, they did not put money profitably into land, 32910A-11.—One holding was bought by five successive Americans, and was found to be a total failure after a few years, 32911.—Price went up and down, 32912.—Each purchaser bought tenant-right of the other, 32913-4.—It was all tenant-right, landlord did not come in at all, 32916-7.—Land should go to highest bidder, but sale of land between tenant and landlord was very uneconomic, 32915.—Price of tenant-right induced tenant to pay higher rent, 32920.—Prices paid induced Sub-Commissioners to raise rents, 32922, 33925-9.—Tenant being unable to meet it sold tenant-right, 32923.—With police pensioners and Americans, and when tenants bought their holdings they gave excessive prices owing to competition, 32930.—Witness objected to inflated prices because the people who came in did not work land on commercial principles, 32928.—Price should not be allowed to be forced up, 32933.—Tenant should be allowed to sell tenant-right to whoever he chose, 32934-5.—And Americans, etc., could pay what they liked for it, 32936-7.—Landlord took advantage of high price of tenant-right to demand increased price for himself, 32938-9.—Americans, etc., did not come into competition with purchaser, except as giving impression of price, landlord should ask for his land, 32940.—Under Act of 1903 landlords wished to have as the basis of purchase the reduction which the tenant would get, 32941.

Points that Should be Considered in Fixing Price of Land.

Landlord should be compelled to sell for sum less than would yield his net income, 32942.—Purchaser would lose on increase of foreign competition, that should be considered, 32943-4, 32949.—Landlord did not consider it, 32945-7.—He would not go into particulars of rental or figures to disclose net profits, 32948.—Reduction necessary for increase of foreign competition, the amount had been estimated, second-term rent was on an average 2*s.* in the pound reduction of first term rent, that calculated on 15 years would give it, 32950-2. Third and fourth term rents should be fixed in that way, as causes operating for decay of Irish agriculture would operate more strongly still, 32953.—It was a question of exhaustion of soil, not of price of produce, 32956, 32958-9A.—Value of production affected the whole question, 32960.—Original reductions were reduction from rack rents, not from economic rents, 32962-3.—In estimating value of land allowance should first be made for tenant and family to get decent living, surplus profits might then be divided between landlord and tenant, 32964-8, 32971, 33005.—Number years it would take to wipe out rent altogether depended on introduction of Canadian cattle and many other things, 32969.—Number and strength of man's family a factor in rent, no tribunal would ever consider it, 32970, 32972-3.

Fair Rents—Question of Reduction and of Periodic Revision.

Under Act of 1881 fair rents were fixed, 32974.—Revisable every fifteen years, 32975.—First-term rent fixed for coming fifteen years, 32976.—Second term rent for next 15 years; when Act of 1881 was passed there was no idea of revision, 32977-9.—In fixing second term rents first term ones had been considerably reduced, 32980.—Same reasons for reduction would operate in greater degree in fixing third and fourth term rents, nothing to show that process might be reversed, 32981-6, 32994, 32999.—Under Act of 1881 rents were to be fixed for one period of 15 years, under Act of 1896 they were subject to revision every 15 years, 32987-9.—Allowances to be made in respect of improvements widened by Act of 1896, 32990.—That was one cause of fall in second term rents, 32991-2.—That had not brought the matter to its final stage, 32993.—Prices of agricultural produce might have risen since 1881, 32995.—Causes of reduction of rents were that tenants were unable to pay rack rents, country was going on in same way as when fair rents were fixed, now they were 40 per cent. lower than in 1881, nothing to indicate change in situation in next fifteen years, 32999-8, 33000-1.—Situation not exactly the same as before reductions, 33002.—Original rent was a rack rent, 33004.

In Fixing Annuities Arrangement Should First be made for a Tenant and his Family to get a Comfortable Living off the Land.

Tenant-purchaser should first get a decent living from the land, and annuity should come after that, security of State depended on what was paid to the landlord, 33008-9.—Decent living meant ordinary meals, bread, and clothing for hard-working farmer and family, with education, 33011-3.—That was roughly possible, 33014.—Farmer's budget depended largely on prices of agricultural produce, 33015-6.—Price of produce operated on what he paid for holding, 33017.—Fall of prices went to a certain extent against further reduction of rent, 33018.—Public opinion an important factor in fixing rent, Irish land problem could not be treated from economic point of view, because it never had been in the past, 33019-22.—Holdings that were incapable of supporting man and his family should have no rent, 33023, 33077-8.—They might be charged for taxes, 33079.—Witness strongly opposed State purchasing such holding, 33026.—Labourer with one acre allotment made his living in other ways, 33027-9.—Man with three acres was a labourer, if holding were so small he had to go elsewhere for employment, he might be charged a fair rent, the holdings that should have no rent were those a man was supposed to make a living on, 33030-6.—Witness not a farmer, 33039.

Labourers not Needed in County Districts.

Labourers Act conceived on wrong basis, good in environs of town, no need for labourers in country, farmers unable to pay, and labourers could not live on what farmers did offer 33040, 33052, 33061

FOX, Mr. BERNARD—*continued.*

Breaking up of Grass Lands.

Breaking-up of grass lands into moderate-sized farms would be partial solution of problem, 33041, 33062.—3,000 acres of land and more, available between Carrick-on-Shannon and Roscommon, 33044-7, 33063.—Cutting-up of those 3,000 acres into 20-acre holdings would settle a great many men anxious to become farmers, 33048-50.—Better to settle some than none at all, 33051, 33055, 33059.—Remainder would try and struggle on, and would emigrate, 33055-9.—One-fourth of the 3,000 acres should be tilled, witness believed it to be some of the best land in Ireland, 33064-7.—Labourers would not find employment on tillage developed; peasant proprietors could not afford to pay 2*s.* 6*d.* a day all the year, which was minimum labourer could live on, 33069.—Plenty of room in Ireland to establish peasant proprietors, some of the people might become shopkeepers or go into trade, 33071-4.—Population in Roscommon could be dealt with without emigration, 33075-6.—The 3-acre tenants would be transferred to the 20-acre farms, 33080, 33083-6.—An inspector should first report on the man's enterprise, 33085.—Tenant would sell his three acres, and they would go into surrounding divisions, 33081-2.—Small holders in congested areas the class that should be first relieved, grass lands would be better developed by being split up than at present, which was another reason for giving them to tenants, 33086-8.

Cavan and Leitrim Light Railway.

Cavan and Leitrim Light Railway passed through a portion of the area, and ratepayers in district where it passed paid 1*s.* in the £; governed by Board of Directors consisting of eight members, representatives of shareholders, shareholders got five per cent., and had no interest in economical working, members of County Council of Leitrim also on the Board, greater number not interested in paying of line, £70,000 already paid out of rates since building of line in 1883, railway being in congested district, shareholders should bear part of burden, £3,000 contributed by County Leitrim besides a Treasury grant, ratepayers had no control of line, 33088-92.—Had depressing effect on farmers, 33093.—Line useful, could be more developed under responsible management, directors proposed extension to mineral works at Arigna, *sine qua non*, that it should be put under popular and responsible control, 33094.—Lack of control a greater grievance than paying the money, 33095.—Right control made for better management when there would be less to pay, Board should subsidise line, 33096.—Government gave no assistance towards construction, 33097.—Capital not all paid up yet, 33098.—There was a baronial auditor.—He could not say whether line were economically worked, 33099.—Majority of ratepayers of county did not pay rate for the railway, 33100-1.—County Council appointed four representatives, but majority of County Council represented portions of county not included in railway area, 33101.—Their representatives on Board came from ratepaying areas, but were in a minority, 33102-4.—It was a case of a limited company in which holders of debenture stock ran the entire concern, 33105.—Representatives of ratepayers should be from railway area, and in conjunction with representatives of Treasury, who gave large grant, should control line, 33106.—Original shareholders were sure of their five per cent, and did not need representation, 33107.—Line absolutely independent, had its own rolling stock, and was a narrow-gauge line, 33108-10.—Money could be saved on Dublin offices, business could be done as well in Ballinamore, 33111.

Bridge Needed Across the Shannon between Carrick-on-Shannon and Cootehall.

Bridge across Shannon needed between Carrick-on-Shannon and Cootehall, 33111.—Representations had been made to County Council, who did not see their way to pay the price of £800 or £900, 33112-4.—Cootehall ten miles away, many people coming to Carrick-on-Shannon had to go round by Cootehall, bridge a mile from Carrick-on-Shannon would be a great convenience, people in latter place would give good subscription towards it, as it led to a bog, and there was no bog in Carrick-on-Shannon.—1*d.* sometimes paid for six sods of turf, 33115.—The bridge would be between Roscommon and Leitrim, Leitrim County Council had not considered it, as they were not sufficiently interested, 33116-7.—Inhabitants of congested districts would be benefited, they would get market for their turf, 33118.—Boyle might object to construction of bridge, 33119.

Road Needed in Ballineen.

Road needed in Ballineen district, people had to cross stream, and go by precipitous route to Drumshambo, Board gave sanction for grant if county would contribute, County Surveyor informed them that limit of expenditure under Local Government Act had been reached, so nothing was done, 33119.

FLYNN, Mr. PATRICK.

See pp. 181-6.

Agricultural Schemes in Congested Districts.

Greater part of district congested, 33123.—Valuation, £138,000; population, 69,400, or £2 a head, 33123.—Before Congested Districts Board amalgamated with Department of Agriculture they spent £11,000 a year on live stock in Connaught; now they only contributed £2,000 a year to the Department's grant, 33123-8, 33135.—Congested areas suffering through not getting bulls, 33125, 33132.—Department said they had insufficient funds to meet the deficit, 33129.—£400 allocated for Department's scheme of agriculture in Leitrim during current year, 33131-2.—Supply of live animals practically neglected for first year after transfer, 33133.—Board spent more than £11,000 a year on agricultural work of all sorts in Connaught, 33134.—Big expenditure of £14,700 for current year not made by Department in the past, 33136-8.

Scheduling the whole County of Leitrim proposed.

Only thirty-eight divisions in Leitrim scheduled out of seventy-eight although valuation was £2 per head, 33138.—People as poor and neglected in non-scheduled as in scheduled districts, 33139.—Whole county should be scheduled, 33123, 33140-1.—Several places Board had power to schedule if they chose; they should not stand on ceremony if valuation were for a general election, 33143-5.—£26,000 the valuation of rural districts in Leitrim, 33146.

Local Authority could not provide Roads and Bridges.

At last quarterly meeting witness's district had applications for work amounting to £1,000, in connection with new roads and bridges, three-fourths being from congested districts; all refused as there was no money to do it, 33146-7.—Rate fixed already high, 33148-9.—Demands of people always postponed; there was an application last year, 33150-1.—Taxation on land in district referred to was 3*s.* 10*d.* in the pound for poor rate, county cess, and annual cost of upkeep, not including sanitary rate, 33151-4.—Great portion of congested district paid railway rate, 33155.—Grant from Board promised if district found certain amount; Board should not wait for rate, 33155-6.—Serious to raise rates; they were nearly up to the limit, and the people could not at present bear any increase, 33156-8.

Land available in Carrick district for relief of Congestion.

Uneconomic holdings in other districts besides scheduled ones; 1,300 or 1,400 acres of land in Carrick district available at reasonable price for relief of congestion and for migration, 33158, 33177-8; witness a farmer, 33121, 33159.—He had 45 Irish acres in County Leitrim, 200 in Roscommon, 33160, 33166.—He grazed his own cattle, 33161.—He was a tenant farmer paying too high a rent, 33162-3.—He would part with land for the good of the country, 33164.—Roscommon farm occupied by witness's father and mother, 33165.—It was grazing, with eight or nine acres of tillage; two families of herds on it, 33167-9.—The father and mother were judicial tenants, 33170.—No objection to any part of their farm being taken

FLYNN, Mr. PATRICK—*continued.*

provided they were compensated, 33171.—There were some men who would not give up their farms whatever the price paid, 33172, 33179.

Compulsory Purchase.

Compulsion would be the only thing in that case, 33173.—Those were mostly landlords, 33174-5.—700 of the 1,400 acres not occupied by owners; they let it on 11 months' system, 33177-8.

Employment of Labour.

If a man had 100 or 200 acres and laid out money on it and worked it for benefit of district someone got the benefit, 33180.—In some cases land was only suitable for grazing, 33181.—Witness employed labour all the year; a greater number of men in spring and harvest; they were men with very small holdings, some of his labourers lived on the land and were in constant employment, 33182-7.—Some farmers in Roscommon, with 2,000 acres, often employed only one or two herds, 33188-92.

Cattle-rearing.

Cattle bought in fairs at one to three years old, 33176-7.—Some fattened on land and some fattened in winter ready for the butcher, 33193-4.—Others shipped to England and Scotland, 33194.—Cattle housed in winter and finished on turnips, cake and meal, 33196-7.—Never kept by witness after three years, 33198.—Fattening paid best, 33199, 33208.—Impossible for witness to fatten all his cattle, 33201.—It entailed closer attention and more labour, 33202-3.—Labour necessary for two would feed only ten, 33204.—Paid better to get stores ready for shipping than to fatten for the butcher, as there was good market for stores and not for fat cattle, 33205-12, 33214, 33217-22.—Fattened cattle only sold in local market, 33213-6.—Cattle suffered in going over to England, fat ones suffer more than store cattle, 33223-4.—Witness had nineteen or twenty horses and 100 cattle on 200-acre holding, 33226.—Small number kept to fatten for local market, 33227.—Land kept in heart by putting cake on it, 33228-30.—Witness found it best at present not to have more tillage, as labour was scarce and dear, 33231.—Majority did not treat their land as witness did; they took in grazing and put in as many cattle of other people's as they could, 33232-3.—Nothing put into land of farm worked on 11 months' system; kept under cattle the land did not deteriorate, but might be made more productive, 33234-7.

Landlord refusing to sell rather than allow examination of his Books—Rowley Estate.

Application made to Mr. Rowley by witness, on behalf of tenants, to purchase estate; present income offered if landlords would allow a public accountant or any other independent authority to say what his net income was; result was landlord refused to sell, 33237-41, 33250, 33271-3, 33301.—He objected to tenants' representative seeing his books and knowing his business, 33242-3, 33251.—Offer made through Estates Commissioners, 33240.—Price settled by them would have been paid by tenants, 33246-9, 33302.—It was not suggested that Estates Commissioners should be the independent authority, 33244-5, 33251.—Suggestion was merely that independent expert authority appointed by tenants should find out what net income was, 33252-5.—No person named, 33256.—Any recognized chartered accountant would have satisfied them, 33257-9.—Tenants generally were all second term judicial tenants, 33260-2, 33298.—Price might be second term rents less a little more than 10 per cent., 33263-6, 33268-70.—Landlord had to pay income tax and sometimes could not get rent, 33269-70.—Expenses could be judged by the books, 33267.—Net income offered was to be the net income of the particular year in which the offer was made, 33273.—In 1905 tenants thought rent too stiff and wanted to buy; they offered 22 years' purchase; landlord wanted 24½; witness and parish priest tried to arrange for 23 years' purchase of second term rents; landlord refused, 33274-6.—Hardly any arrears, 33277-8.—A final offer of 23 years' purchase was made, to which the reply was that tenants must take net income from landlord's figures, 33279-80, 33297.—He agreed to drop half a year, 33297, 33303.—20 years' purchase offered for first term rents, 23 for second term rents, 33299-300.—No stipulation made that income must be calculated on five years basis, 33281, 33286-7.—Witness thought he would sell a declining business on present year's income rather than wait longer; that was the landlord's position, 33282-4.—Basis was so many years' purchase of second term rents, or so many of first term rents; impossible to say average of five years would mean any more or less, 33288.—Tenants would not have objected if he had made stipulation, 33289-91.—Times of settling first term rents varied, 33292.—Reasonable for tenants to insist on average of second term rents, 33293.—First offer was to give owner a certain number of years' purchase, 33294.—Second offer to give net income as found out by a chartered accountant; third offer was to purchase through Estates Commissioners, 33294.—Witness himself met owner in Courthouse and made offers, 33295-7.—Offer to sell through Estates Commissioners was refused altogether; tenants even now prepared to buy through them, 33303.—Witness thought tenants offered too much, 33304.—Property large, with hundreds of tenants and no untenanted land, 33305-8.

Cavan and Leitrim Light Railway.

Cavan and Leitrim Light Railway, 33321.—Great portion of Carrick-on-Shannon district paid 1*s.* in the £ for upkeep of railway; 2*s.* in £ paid a few years ago, 33312.—Railway improving; would never pay its way; witness a director representing County Council, 33313-4.—He represented on County Council the barony charged with taxation, 33315.—Amount of guarantee increased from 10*d.* to 1*s.*, but there had been a decrease, 33316.—Decrease fluctuated for some years, 33317.—It was in proportion to earnings of railway; some years there was a large expenditure on rolling stock, etc., for which rate paid; witness powerless as director to do anything for ratepayers as long as shareholders' representatives were in the majority; the latter had no interest in working of railway, as they always got their money from the guarantee; he did his best, 33318-9.—They had offered to give evidence before Railway Commission; time not yet fixed, 33320.—Remedy for grievance if County Council were in majority on Board of Directors, 33321.—Deficit formed mass of rate, 33322.—5 per cent. paid on capital although railway rarely even paid its own expenses, 33323.—Line could not be made to pay, but grievances could be relieved and expenses reduced if County Council had a voice on the Board of Directors, 33324-6.—Guarantee ran for ever, 33327-8.—Money could be got at 4 per cent. as on other railways instead of 5 per cent., 33328-9.—No power on part of anyone connected with railway to redeem; annuities not terminable; debenture holders would want market value, 33330-3.

County Leitrim neglected.

County of Leitrim much neglected by Congested Districts Board; mountain portion of rural district needed particular attention, 33333.—People within mile and a half of Carrick-on-Shannon had to travel nine Irish miles to get to market for want of a bridge, 33333.—Large territory of bog on other side of the river which would be available for Carrick-on-Shannon, where there was no bog, if bridge were built, 33334-6.—Leitrim had no representative; Father O'Hara represented Mayo and was very efficient, 33349-54.—He was put on Board as representative of Connaught because he had interest in work, not because he came from Mayo, 33352-3, 33355.—Representatives might be nominated by an elective body such as the County Council, 33356-7.—And selected by Government from their nominees, 33358.—Each county would have representative and they would know the county's needs better, 33358-9.—Number of congested counties not large, 33360.

Public Opinion should not affect Fixing of Rents.

Public opinion should not affect fixing of rents; they should be fixed by market value of produce in addition to cost of labour, 33336-7.—Before rent fixed by landlord and bailiff, 33339.—After that Land Act regulated it and public opinion; Commissioners did not fix fair rent in witness's opinion, 33338, 33340-1.

FLYNN, Mr. PATRICK—*continued.*

County Representatives desired on Congested Districts Board.

Each congested district county should have representative on Congested Districts Board in order to get more attention, 33343-5.—There were representatives of Connaught on present Board, 33346.—They were believed at the time to be the best representatives, but were found to give more attention to other counties, such as Mayo, 33347.—Mayo got more attention than Leitrim, 33348.

DARLEY, CAPT.

See pp. 186-8.

Rowley Estate—Purchase Negotiations with Tenant.

Witness had been agent of Rowley property for last twenty-five years, 33361.—He remembered occurrence alluded to by last witness, 33362.—Tenants had wanted to investigate books themselves, no question of accountant, 33363-5, 33382, 33406.—Witness was present during negotiations, 33366-7.—Landlord satisfied to get net income calculated on investment of purchase money, at 3¼ per cent., the terms of the Land Conference, 33369, 33402.—Rental and cash account would show receipts, disbursements, and remittances, 33370.—No difficulty in finding out net income from books, 33371.—Accurate account kept, 33372.—No objection to show books to Estates Commissioners, 33373.—It was not done because it was not called for, 33374.—Net income proposal came from Mr. Rowley, 33375.—The meeting was called in reply, 33376.—No correspondence passed as to production of books or employment of chartered accountant, 33378-9.—All done by word of mouth, 33380.—Owner made no proposition as to proviting what net income was, 33381.—If principle had been accepted figures would have been produced, 33384.—Rental and account books together would show net income, 33385-6.—Different thing to have accounts investigated by one person and by every tenant in country round; landlord would probably not object to a chartered accountant seeing his books, 33387.—Nor to an examination by the Estates Commissioners, provided he got net income, 33396.—Landlord willing to submit his books to any authorised person, but not to a person the tenants chose to appoint, 33405.—First proposal to buy probably came from tenants, 33388.—Mr. Rowley when applied to directly offered 24½ years' purchase, 33389.—Negotiations carried on largely by himself, witness met tenants with him, 33390.—Meeting in Courthouse of Drumsna called in order to discuss matter, 33391-2.—No reporter present, it was reported in country press, 33393-4.—It took place more than a year ago, 33395.—No great variation in income of a number of years on second term rents, 33397-8.—There had been no difficulty previous to question of purchase, 33399.—In fixing second term rents railway rates were deducted from landlord, pink schedule showed that, it went to reduction of net income, 33399-401.—3¼ per cent. the basis taken by Land Conference; money market had not gone up since; witness understood that all the calculations were made on 3¼ per cent basis, 33402-4.

CARTER, Mr. MICHAEL.

See pp. 188-90.

Grazing Ranches Available for Purchase by Board.

Witness represented Shanraw, Keshcarrigan; all the divisions were congested, except Keshcarrigan, few grazing or untenanted farms available for enlargement of holdings; no reason for exempting Keshcarrigan from congested districts, tenants as poor as in scheduled areas, 33408.—Parish mountain district with 700 families, 300 on holdings of £1 to £5 valuation, 200 from £5 to £10 valuation; tenants of grazing ranches signified intention of allowing those to be split up, there were 1,100 acres adtogether; a man in Gorteenkelly would give up all his 400 or 500 acres except enough for small holding for himself, small holding more profitable; there were also 300 acres in Knocknagashel which owner was prepared to sell, 33466.—It was in a congested district; two farms of 103 and 173 acres, which were in the market, not in

CARTER, Mr. MICHAEL—*continued.*

congested district, and there was another, Kilmorton Farm; great disadvantage to districts if holdings mentioned could be purchased by Congested Districts Board; there were other small farms; migration would improve them.

Payment of Railway Guarantee by the People.

Railway tax of 1s. in the £ paid by people, not landlord, rents outside guaranteeing area were reduced as much as those within which showed that tenants paid guarantee, 33467-9.

Drainage Needed.

Proper system of drainage needed; hundreds of acres of cropped land rendered useless by flooding every year, remedy impossible without Government assistance, 33408, 33469.—People had presented petition to witness; rivers needed scouring and opening; Parish Committee grant was £50, if doubled improvements could be faced, 33469.

Question of Promoting Industries.

Suitable industries might be promoted; district abounded in peat, if necessary money were available it could be utilised; Slieve-an-ierin in north of parish famous for minerals, efforts to establish mining there failed for want of capital and means of transit, 33408.

Exorbitant Demands of Landlords.

Only two estates purchased since 1903 on account of extravagant demands of landlord which were extraordinary, 24½ years' purchase demanded for Peyton Estate; adjoining property, Fitzgerald Estate, bought out ten years ago at 10 years', and Lloyd Estate at 13 years' purchase; Peyton Estate bad clayey land; O'Byrne Estate offered 17 years ago at 18 years' purchase, 23½ demanded now; landlords' exorbitant demands showed that Board or Estates Commissioners must interfere to ensure tenants getting their land at a fair value; no estate in district which was not clear of arrears; tenants would grasp at any appearance of relief, threat of recovery of arrears would have serious result, abolition of State inspection would spell ruin; many boys and girls emigrated to America to assist parents, those who could not afford passages migrated to England and Scotland, 90 per cent of rents came from those sources which if cut off would reduce farmers to deepest poverty, 33408.

Lawder Estate an instance of the Injustices arising from want of Inspection.

Lawder Estate demonstrated injustices due to want of inspection; tenants had signed agreements to 24½ years' purchase when they found they had to pay a drainage tax and rent for turbary which was before free, these additions left them paying as much as before, 33408.—They were in worse circumstances in fact because the landlord gave them time if unable to pay rent, Government could not, 33408, 33462, 33465.—Annuity would go on for 68½ years, 33409.—It should be such that payment could be made both in bad and good years, 33410-2.—On this estate annuitants were trying to break agreement, 33413.—Tenants on this estate were led to believe that they would get 4*s.* in the £ reduction and some did not get 2*s.*, 33414, 33460, 33463.—At time of sale landlord was anxious to sell and used to go and see tenants and ask them to buy and brought them to his house and gave them drinks, 33421-2.—They led each other to believe they would get reduction, 33464.—Tenants had had judicial rents fixed, and under their judicial rights they had turf; by sale of estates those rights were taken away, 33427.-30.—Landlord had no bog besides what belonged to tenants before he sold, 33431-40.—When the estate was sold he reserved all the bog to himself and made tenants pay rent of £5 to £10 for it, apportioning small plots to them and reserving the rest, 33416-7, 33431-7, 33441.—Tenants had turbary right before sale, 33418-20.—Estates Commissioners allowed them to lose that right, 33441.—Sale took place eighteen months ago, 33442.—Tenants had petitioned Estates Commissioners by letter, correspondence carried on by

CARTER, Mr. MICHAEL—*continued.*

Mr. Smith, M.P. for South Leitrim, 33442-5.—Estates Commissioners had promised to consider the matter, 33446.—Estates not yet vested, landlord had not received his money, 33448-99.—Inspector was going down and something might yet be done, 33450-2.—Tenants thought they were purchasing turbary, 33453-7.—Under agreements they purchased all that they paid for in judicial rent, 33458-9.—When estates were purchased care should be taken to provide reasonable amount of turbary as far as possible for each person, 33416.—Witness a farmer holding 17 acres, valuation, £9 15*s.*, 33425-6.

M'CABE, Mr JOHN.

See pp. 190-2.

Uneconomic Holdings at Gorteenmore.

Witness was a farmer at Gorteenmore, Carrigallen, farm was 32 statute acres, valuation £14 5*s.*, 33473, 33494.—He had two farms under one landlord, near each other, one 8 acres, the other 6 acres 5 roods, the two made about 20 Irish acres, 33474-5.—No house on them, 33476.—Land bad, both grass and crop, 33477.—He could live on it if there were no rent, in fair play he should have none, 33478-80.—Rent £11 15*s.* 6*d.*, 33479, 33493.—Witness was reared on farm, and had worked with his father since he was twenty, was now forty years old, parents had ten acres first, and paid £10 rent with money from America, most people got money that way, and could pay very little without it, 33481-5.—Man's sons and daughters in America sent money till they married, grand-children rarely sent, 33482-4. South portion of Leitrim should be scheduled, majority of valuations under £8, people as poor as in congested districts, 33485.

Price of Estates Offered for Sale in the District.

Mr. La Touche, landlord of estate, offered it for sale twenty years ago at twenty years' purchase, tenants thought they could get it for less, estate now offered for 4*s.* in the £ reduction on second term rents, 5*s.* on first term, Whyte Estate sold at 13 years' purchase under Ashbourne Act, Nichol Estate at 17½ years' purchase under same Act, some tenants found it difficult to pay rents, even with this reduction and a decadal reduction since, 33485.—That was 23 and 25 years' purchase, 33486.—Under Ashbourne Act landlord had to pay 4 per cent., now it was 3½ per cent, 33487-8.—It was an old rent, since reduced, 33491-2.—Tenants had not been into court at time of first offer, 33490.—Rents lower than valuation now, 33495-6.—Twenty years ago they were about even, 33499.—On one of witness's farms rent 20 years ago was £8 1*s.*, valuation £8, that rent had now gone down to £6, 33499-503.

Drainage and Lime the Most Urgent Necessities.

Drainage and lime burning would improve country more than anything, lime burning of use as an industry, 33485, 33504.—Lime was put on the land when witness was a boy, 33505.—Stopped when help got scarce and land worse, 33506.—Plenty of lime kilns then, a long way from witness's farm, 33507, 33509-10.—They had turf in those days, none now, 33508.—Tenants bought lime out of kilns, 33511.—tenant farmers kept kiln going and sold the lime, 33512-3.—Still burned in places, but tenants did not like to pay for it, sand was so wet and lime was of little use without drainage, 33514, 33528.—Draining twenty years ago and twenty-five years was better, and the crop was twice as good as at present, 33515.—Land going back, 33516.—Seasons better now, climate had changed, 33517-8, 22527.—Witness's father did drainage most part of his time, he had witness to help him, could not afford to pay a man, witness had made no drain for fifteen years, when his younger brother and himself helped their father they had a much better crop on 10 acres than nowadays, 33519-21, 33524.—Now he had to pay man in spring 5*s.* a day, 33522.—His son only 12 years old, 33523.—Long ago all tenants made and mended drains and put on lime, no drainage done now, although drainage was wanted, 33525-6.—Open drain no good, as land could

M'CABE, Mr. JOHN—*continued.*

not then be laboured, land wet now, greater part of what had been witness's best field was now rushes, 7 crops of oats taken off in succession after two crops of hay, now second crop of oats not worth cutting, 33527, 33543-4, 33549.—Same thing for six miles round, 33527.—Fifth crop of oats on the good field had been better than second, now after been broken up it was hardly worth the labour, 33545.—Not much manure put in in his father's clay, witness had to mow fourth of land for hay to give cattle to get manure for one field, 33546-7.—The seasons produced the good crops, 33548.—The land was good land, not reclaimed, good was now gone out of it, 33550.

Turbary.

No turf available for lime-burning now, it was formerly cut out of a bog on neighbouring estate and sold by tenant without landlord's knowledge, when he found out he took the people who bought it to the High Court in Dublin without their knowing, and made them pay 13*s.* or 14*s.* costs, man who sold should have been prosecuted, 33529-35.—Injunction taken restraining anyone from cutting or selling turf, 33536.—Tenants then went six miles away, where there was only fifty perches bog, 33537-8.—Abundance where they now cut in County Longford, but they had to pay for it, 33538.

Easier to make money in old days, the old people worked hard, young men of present day more industrious, 33539-42.

SMYTH, Mr. THOMAS.

See p. 192.

Land Available for Relief of Congestion.

One hundred Irish acres of land in Killahurk available for relief of congestion, 300 or 400 acres of bog land on Maguire Estate, would benefit people if worked by a body like the Board, 33552.—Also a farm of 80 acres, another in Drumsilla held by man living in County Cavan, he had two or three large farms unoccupied, 33553.

Rents in Drumbreanlis Locality Mostly Paid with Money from America.

Most of the rents in Drumbreanlis locality were paid by relations of farmers in America, one family received between 1868 and 1893 £400 from Colonies, the people concealed the fact of where the money had come from, they liked it to be thought it was the result of their own efforts, 33554-5, 33564-5, 33566-7.—Everyone knew that everybody else got money from America, 33568.—One man was evicted, but allowed to remain without title, his son of 16 or 16½ borrowed a pound from a neighbour, and went to Scotland, since then he had sent home money which made his father's circumstances more comfortable, two brothers also went, the three were still away, one in Scotland, two in London, 33555-62.—Witness's own uncle would have been evicted were it not for help from America, yet he never told witness himself, 33565.

FLYNN, Mr. THOMAS.

See pp. 192-3.

Land Purchase in Parish.

Townland of Kilgariff purchased five years ago by Board; nothing done on it yet to relieve congestion; two estates had been purchased by Land Commission under Ashbourne Act; two at present in hands of Estates Commissioners; one recently purchased by latter at price of from 8 to 20 years' purchase; nothing so far done to relieve congestion there or elsewhere; parish comprised sixteen small estates, 440 holdings; whole parish congested; three-fourths of the holdings uneconomic; industries the only means of benefiting tenants, 33572.—Witness and Father King agreed on this, 33573-4.

Means by which condition of people could be improved.

Condition of people could be improved by following means:—Purchase of holdings by Board or Estates

FLYNN, Mr. THOMAS—*continued.*

Commissioners; development of industrial resources, as coal and iron ore abounded; construction of means of transit to enable farmers to send produce to market by rail; construction of woollen factory, 33574.—Great wool-raising district, 33574, 33583.—Board gave loan for 100 spinning wheels and sent weaver who taught weaving industry; it would be a profitable business if there were any means of pressing the cloth after it was woven, 33574, 33581.—Witness alluded to congested area compared with Foxford, 33575-6.—No stuff sold because they could not press; it was not smooth enough, 33577-8.—Only one new loom, 33579.—Application had been made to Department of Agriculture and they were promised, but none given; weaver sent once, but not again, 33580.—Looms could be had on loan from Board, 33581.—Woollen mill would be great benefit, 35582.—Much water power, Shannon, Lough Allen, and the Yellow River, 33584.—District wrote to Department about the woollen mill, asking them to equip establishment; they replied it would be considered at a future date, 33585-9.—Board had not been applied to, 33590.—District in question was on east of Lough Allen, below Drumshambo, along Slieve-an-ierin mountain, 33591.

Roads.

Roads wanted; only one road till Board sent assistance; they gave £400 or £500 for one road some years ago, 33591.

Parish Committee.

Parish Committee did a great deal for very poor people; grant should be larger; 70 applicants for last £20; larger grant to be given this year for dairies; nice cottage dairies would be an encouragement, 33593-4.

Creameries v. Butter-making at home.

There was a creamery; witness thought it would not stop; some of the districts were starved, 33595-7.—Everything had to be bought; oil cake for calves, butter for house, etc., 33598.—It would pay better to get 8*d.* a pound for butter than 4½*d.* a gallon for milk, 33599.—Good food sold and inferior bought; 2½ gallons milk yielded a pound of butter; butter bought at 8*d.* or less; 4*d.* or 3½*d.* a gallon paid for milk at the creamery; good butter could be made at home with that 2½ gallons and there would be the buttermilk as well; better value than selling to creamery, 33600, 33604.—Enniskillen the butter market; price paid, 10*d.* a pound, 33601, 33609.—Seldom up to 11*d.* from creamery, 33601.—Expenses of boxes, wrappers and carriage very slight, 33605-8, 33610-11.—There was a certain loss of time in taking butter to market on Tuesday with horse and cart, but it was counted good business, 33611-4.—Witness got 57*s.* last year for butter, 33608.

NEWMAN, Rev. P.

See pp. 194-5.

Necessity for Drainage.

Witness attended as deputy of the Leitrim County Council, 33616.—His residence was in Mohill itself, 33617.—He was acquainted with the district scheduled in that parish, that was, the Breandrum electoral division, which was a poor district and particularly in want of drainage, 33618.—Witness referred to big arterial drains, 33619.—Was of opinion that tenants would be able to make their own smaller drains if the principal drains were improved, 33620.—Drainage at present was a river, which got choked up in the winter when soil was washed into it, and there would be growth of grass in spring and autumn when rains were heavy, and river would not take the water away; witness had seen hay covered up by floods, 33622.—Witness believed state of affairs was getting worse, 33623-4.—If drainage were improved and river put in a better state, say, by assistance of Congested Districts Board, it would require to be attended to periodically, but if put in proper condition a little expenditure would be enough to keep it so, 33625.—Witness's idea was that whatever authority dealt with the matter should provide system of drainage and afterward maintain it from year to year, 33626.—Tenants should be helped to keep principal rivers in proper working order, 33627.—It would not be difficult to get sufficient fall for the improved drainage; it was a question of work, 33629-30.—Witness would desire that such body as Congested Districts Board should have authority to improve drainage of that class; was aware that, as law stood, it was exceedingly difficult to get drainage promoted in the country, 33631-2.—Field drainage would not be so difficult; the individual tenants could attend to that if main drains were in proper working order, 33633.—It would be an advantage to the individual farmer if there were facilities for enabling tenants to obtain loans at reasonable interest for drainage of their farms, 33634.—District to which witness referred contained both hill and valley; part of river ran through flat country, 33635-6.—If these field drains were constructed, in district, into a proper main drain witness considered that condition of farms would be greatly improved, 33637-8.—Until such drainage were carried out it was difficult to encourage agriculture to any considerable extent, 33639.—Not very much of poor district referred to was flooded, but from time to time witness seen considerable quantities of hay and meadow flooded, 33640.—There was a fairly large population in district, the old and the very young; as they reached manhood the sons would leave, not being able to get work at home; there were no industries, 33641.—If arterial drainage were promoted, agriculture would be more profitable; to whatever purpose the land were turned it would be well to have it drained, 33642-3.—A little had been done in the district to improve the main drainage during preceding spring, 33644-5.—A main drain had been cleaned, but no new drain opened, 33646-7.—If main drain were made for benefit of tenants whose land it passed through it would be reasonable that tenants should contribute towards keeping it clear each season, but if there were very heavy expenditure it would be hard to expect them to incur it without help, 33649-50.—A week's work for each tenant would not be too heavy; much would depend on nature of work and what required to be done, 33651-2.—If it were question of each tenant giving week's work to maintain his part of drain it would be quite reasonable for Congested Disitricts Board to make that agreement before doing work, 33653.

Roads needed in Breandrum Division.

Part of Breandrum division was badly in need of roads, and tenants should be assisted to get road in that large district where there was no road at all passing through, 33654-5.—In winter, witness did not know how people got their produce in or out; the market was at Mohill, 33655-6.—Their furthest point from a road in this part would be about an English mile, 33657.—Road necessary to benefit the locality should be over two miles in length, 33658.—In winter it was impossible to bring carts to the fields, 33659.—Only one tenant possessed a horse and cart in this district, 33660.—If there were a road the holdings were so small that others might still not have the horse and cart, 33661.—Witness was not aware that district had ever applied to Congested Districts Board for assistance in this matter, 33662.—Thought they had applied to District Council to have road made, but did not recollect answer, 33663-4.—There was Cavan and Leitrim Light Railway to contend with; a gate house would be required, and objections were raised, not that road was not required, but on ground of expense, 33665-6.—Road was much needed, it being very difficult to get through in winter; the road would not be difficult to make, but was question of price, 33666.—It was required to enable people to bring produce to market, manure land, etc.; it was very difficult to bring pigs or cattle to market; witness had been told that if a man had not enough hay for his cattle he could not get it in there; cattle had to be sold before winter came, 33667.—Holdings in this particular district were fairly large, but witness did not know acreage, 33668.

SMYTH, Mr. T., M.P.

See pp. 195-203.

Scheduling of the whole of Mohill Union and of South Leitrim Proposed.

Witness was member of Mohill District Council, and represented South Leitrim in Parliament, there were 23 electoral divisions in Mohill Union, of which only ten were scheduled as congested, though, to witness's personal knowledge, there was as much poverty in the 13 non-scheduled districts, 33669.—Large holdings in the 13 non-scheduled districts had raised the general valuation per head of population, 33670.—Large number of holdings were very small indeed, in Mohill Union there were 3,205 holdings under £4 valuation, 2,519 over £4 and under £10, 883 over £10 and under £25, and only 141 over £25 valuation, 33671.—Witness had practical experience of whole of South Leitrim, and considered there was not a single part of it which should not be scheduled as congested, 33672.—The standard of congestion was fictitious, the poor law valuation of Mohill Union was £40,000, in which following towns and villages were included—Mohill, Dromod, Cloone, Carrigallen, Fenagh, there were six divisions of Carrick-on-Shannon Union in witness's Parliamentary constituency, of which only one was scheduled as congested, namely, Gortnacullen, these six divisions covered area of 26,931 statute miles, and poor law valuation was £16,493. and, dealing with this district, there were 487 holdings under £4 valuation, 650 over £4 and under £10, 308 over £10 and under £25, and 96 over £25, these divisions included towns of Carrick-on-Shannon, Drumsna, and Leitrim, 33673.—There was portion of Bawnboy Union in constituency of South Leitrim, but witness had not figures as to this district, though he knew that congestion prevailed as much as in any districts scheduled as congested, 33673-4.—Witness had good knowledge of district, as, in addition to being District Councillor for Mohill and representing division in Parliament, his business as auctioneer brought him into contact with farmers; not alone Mohill Union, but whole of South Leitrim, needed to be scheduled as congested, division comprised Mohill Union, six divisions of Carrick-on-Shannon Union, and five or six divisions of Bawnboy Union, 33675.—From existing circumstances, number of small uneconomic holdings, etc., poverty in South Leitrim was such that whole division should be scheduled, 33676.—Witness knew present definition of congestion, dealing with holdings under £7, it came to about thirty shillings per head of population, 33677-8.—Witness maintained that authority dealing with congestion should be able to deal with it wherever found, 33680-1.—Would be glad to vote in favour of giving relieving body discretion to schedule what was necessary, and that all South Leitrim should be scheduled, 33682.—Understood that general definition must apply to whole of Ireland, and that South Leitrim could not be separated, 33683.—Would rather schedule county than enlarge present area of congestion, other parts of Ireland, such as County Longford, of which witness knew a good deal, required to be scheduled, 33684.—This observation applied to special parts of County Longford, in vicinity of Killough, Ballinamuck, and Drumlish, around Durmlish holdings were particularly small and uneconomic, 33685-7.

Suggestions for Carrying Out and Maintenance of Drainage.

Different parts of South Leitrim contained large tracts of bog and marsh, and it would be good thing to drain these and plant with timber, as they were not fit for other crops, 33687.—By drainage witness meant arterial drainage, and drainage of small holdings by farmers themselves, 33688.—If arterial drainage were carried out wholly or partly at public expense great majority of holders would be satisfied to make their own claims through holding into arterial drainage, in some cases there would not be fall for the water, 33689.—If Congested Districts Board made cut or arterial drain tenants should undertake to keep it clear, and if they all did it in a body it would only amount to small portions of work, but it might not be taken up in a proper spirit, 33690.—It would be quite reasonable for Board to have power to compel

SMYTH, Mr. T., M.P.—*continued.*

holders benefited by drainage to do work in future, 33691.—There should be organised effort to maintain drainage and central authority to insist on its being done, speaking of parts witness knew, if farmers got these facilities they would be very glad to avail themselves of them, 33692-3.—There were places in this district suffering severely for want of arterial drainage, land was flooded and there was no fall for the water, South Leitrim was one of the wettest districts in Ireland, 33694.—Gentlemen in neighbourhood kept rain gauges, 33695.—Blue clay in many cases came below soil, 33698.—In cutting drains blue clay was not porous, it made very good permanent ditch, 33699-00. It could not well be filled with stones, being an open drain, when it got through four inches of soil, it was very good drain for carrying off water, 33701-2.—It had to be left open, 33703.—As far as field drainage was concerned, loans would be to occupiers from Board of Works, 33704.—If Congested Districts Board or similar body could be empowered to make loans on large scale for arterial drainage of a district it would be great facility, also powers directed towards allowing farmers to avail themselves of arterial drainage, and compelling them to keep it up, while draining their own holdings, should be obtained, 33705.—It would be equally good for public body to make drains or to have advance of money to Rural District Council, for example, so that drain could be made by local authority, it would be better to advance money to small holders, unless arterial drainage were carried out in many districts it would be practically useless for individual farmers to go on draining, there was no fall for the water, 33707.—If district were large it could not be dealt with by one District Council, two or three might be necessary, 33708-9.—There were portions of three rural districts in South Leitrim, Mohill, Carrick-on-Shannon, and Bawnboy, if drainage were being done between Leitrim and Longford it might be necessary to deal with two County Councils, 33709-10.—It looked as if there should be some authority over large sections of country in general control of this class of work, 33711.—Witness was aware that when people asked to have drainage promoted they were generally told to form Drainage Board, which was expensive to incorporate, 33712-3.—It might come very heavy on people in poor districts, in many cases in South Leitrim people who had bought out their holdings had to pay drainage rates, some practically gaining nothing from reduction in price of land on account of drainage charge, witness knew cases where number of farmers got reduction by buying farms, and it went practically to pay drainage rates, 33714.—They did not know that they would be liable to pay such rates, generally landlords had to pay drainage rates until estates were sold, and then they fell on individual occupiers, 33715-6.—Rate referred to was for grants made afterwards for construction of Drainage Board, 33717.—As a rule people living on properties as judicial tenants were more anxious for Drainage Boards to be got up than tenants who had purchased, as latter would have to pay drainage rates, 33718.—If this drainage were made on large scale, from natural reluctance of tenant purchasers to add to rates, it looked as if body promoting drainage should not expect whole of expenditure back again, some of it should be a grant, 33719-20.—There had been Commission lately on this subject, Mr. Wallace gave evidence as representing County Council of this locality, and all present evidence was brought before them, 33721-3.—Commission had already reported, report had been issued a week or two previously, 33724.

Want of Roads.

Want of roads in many districts was very marked; roads required to be made by Congested Districts Board or similar body, because County Councils and different Rural District Councils had no power to make these roads, which were practically one-end roads going into country, with no outlet; as member of Mohill District Council witness might say that even if District Council or County Council had power to make roads local public authorities would be reluctant to do so, as rates at present were very high; this portion of Leitrim was in guaranteeing area for Cavan and Leitrim Railway and rates for that now were shilling

SMYTH, Mr. T., M.P.—*continued.*

in the pound, and sometimes went up to two shillings, 33724.—They could get power from Local Government Board if applied for, but objection to increase taxation would remain, 33725.—Witness made general recommendation of roads throughout his constituency from extensive personal knowledge, 33726.—Proposed that Congested Districts Board or similar body should bear a portion of expense, and the rates a portion, 33727.—Roads should be constructed by the lending body and afterwards maintained by local body, 33728. It would be easier for local body to undertake construction of road than of drain; legal difficulties were not so great, 33729-30.—Men who were benefited by these accommodation roads would, if they were employed to do it, give large contribution in labour; there were many cases where small grants were given by Congested Districts Board to Parish Committees and a great deal of labour given, 33731.

Tree-planting on an extensive scale in Boggy and Marshy Districts Proposed.

In boggy or marshy districts it would be well to plant trees for shelter, timber purposes, and improving the land, 33732-3.—This would involve considerable outlay for drainage previous to planting, 33734. —Areas so planted would ultimately be remunerative, as concerning timber, which was getting scarce in district; also land would not be so damp, which would have beneficial effect on health of community, in which consumption was rather prevalent, 33735, 33738.—This implied extensive planting, 33739.— Turf was geting scarce in some districts, but on average there was a good deal of turbary in South Leitrim, 33736.—Planting for shelter witness advocated for general improvement of country, 33737.—As regarded timber in commercial sense, no timber was sold except for thinning out plantations, with exception of Mr. Clement's Estate; Lord Harlech's was only estate witness knew of where timber was sold for commercial purposes, and then only to small local carpenters, on small scale; the estate was in Mohill Union, near Dromod, 33740.—Planting marshy ground pre-supposed drainage, but having gone through that expense witness believed that planting, rather than grazing, would be most economical way of getting value afterwards, 33741-3.—Witness contemplated planting of land now held by tenants, both for shelter and variety, as well as doing it on large scale, 33744-5.—On almost every farm there was a little corner of practically disused land where trees for shelter could be planted, but unfortunately, tendency of some farmers was to cut down rather than to plant, so there should be encouragement by large system of planting, 33746. —If this were put in practice there ought to be public authority to protect and encourage necessary care of young plantation; unless well fenced it would disappear, 33747.—As general rule, tenants were twice as anxious to cut timber when it belonged to landlord, as they wished to have every possible advantage from land, for which they paid dearly, 33748.—When land had passed from landlord to tenants they generally regarded timber with greater care, 33749.—This could only be altered by educating public opinion; there ought to be instruction for people in remote districts as to great necessity of trees and of preserving them when planted, 33750-1.—As in case of drainage, this would be largely successful or not according to the machinery by which carried out, 33752.—Some body like Congested Districts Board should have power to plant on large scale, making grants for it and taking profits, if any; afterwards they could appoint trustees for proper maintenance, 33753.—Trees so planted would belong to the Board, 33754.—Small farms of occupiers in Leitrim would not permit of their giving up land for planting, but witness was referring to boggy and marshy districts, 33755.— These were in many instances attached to a farm; witness could not say if owners would be willing to have them withdrawn from grazing for number of years, 33756-7.—It would cost about £50 per acre to plant, in witness's opinion, including drainage, for the Irish acre, 33758-9.—There would be fencing-in to be considered in this estimate, general improvements and maintenance for some time, and paying of man in charge, 33760.—Witness would be delighted if it could be done for £10 per acre, with surface drainage only, 33761.

SMYTH, Mr. T., M.P.—*continued.*

Enlargement of Holdings—Purchase by Congested Districts Board or any other Authority of Large Farms coming into the market.

In some cases, where farms were sold, witness would advocate their purchase by Congested Districts Board or some other body to enlarge small holdings, 33762-3.—Witness was not contemplating anything like compulsory purchase of non-residential land; knew from experience that good farms might come into the market, whose purchase, in order to enlarge uneconomic holdings round, would improve position of small farmers in question, 33764.—This was to certain extent done now by Congested Districts Board, but people of Leitrim had no experience if its being done, 33765.—Suggestion was that when estates like Jones' large Estate, sold some 4 or 5 years ago, came into the market they should be split up into farms and these farms bought by some Board, who would send down surveyor to portion them out to the uneconomic holdings and thus enlarge them, this being on the assumption that they could agree with vendor as to price, 33764, 33767-8.—Witness thought that Congested Districts Board or other authority should secure property, if possible, either by private sale or public auction, 33769.

Question of giving Congested Districts Board the right of Pre-emption.

In case where Congested Districts Board bought property and apportioned it as best they could, being still forced to leave some uneconomic holdings undealt with, if one of new tenants wished to sell, question of pre-emption by Board might come in, but witness did not approve of principle of pre-emption; if landlord wished to buy holding from a tenant Land Commission would often determine value; witness had known cases where right of pre-emption was exercised and where tenants would have got more in open market, 33770-1.—This might open way to holdings becoming small again, but Congested Districts Board might have power over tenants, because if tenant wished to sell farm in ordinary course of events, incoming tenant would be bound to Board in the same way as the selling tenant was for the 68½ years, 33772-3.—Witness would not give Congested Districts Board right of pre-emption absolutely, unless there was some power to fix price, 33774.—It would not be unreasonable to provide that man who got considerable tract of grass land under market price to enlarge holding (there not being enough land to enlarge all uneconomic holdings on the estate), should not be free to sell holding to his neighbour, but should be bound to surrender it to Congested Districts Board at a price in reference to which there should be right of appeal to higher tribunal, 33776.—Right of pre-emption would be retained with object of preventing this land passing away from possibility of serving for relief of congestion in neighbourhood, 33777.—It followed that Court of Appeal would, in fact, have compulsory power on tenant to sell at price fixed in the event of a sale, 33778.—Appeal in case of variance with regard to price would be to authority who would have right to compel tenant to accepted price fixed by itself, 33779.—This was what was done in case of landlord exercising right of pre-emption, 33780—There was compulsion already as far as judicial tenants were concerned, 33781.

Opinion in favour of fixing Occupation Interest at time when Land was bought from Congested Districts Board.

Witness would approve of occupation interest being fixed at time of sale in every case of purchase from Congested Districts Board, so that man would know exactly what he was going to get before he sold interest; it would clear matters, 33782-4.—That was position in original 1881 Act which had been abandoned, 33785.

Compulsory Powers.

In some cases in South Leitrim there were large grass farms which landlords occupied themselves and let for grazing, witness thought they would be willing to part with land if sufficient price were paid, 33786. —Grass lands in such circumstances ought to be bought by public body for relieving congestion by enlargement of small holdings, 33787. If such lands could not be obtained for enlargement of holdings by voluntary arrangement, witness thought public would require exercise

SMYTH, Mr. T., M.P.—*continued.*

of compulsion, 33788.—He was speaking of farms attached to demesnes, held outside demesnes on which owner put cattle, or on which eleven months' system prevailed, 33789-90.—Witness was not aware of large farms of grazing lands held by tenants in his constituency, nor of tenants having grazing land valued at over £100, 33791-2.—Knew districts in Roscommon and elsewhere where there were these farms, 33793.—Would apply compulsion to non-residential tenants, as well as to landlord, in same circumstances and for same purposes, 33794.—If tenant were resident and lived by his holding witness would leave him all land attached to holding, no matter how large, not taking portion for relief of congestion, even with adequate compensation, except it were extremely large holding, 33795-6.—If man's usual means of living were trenched upon there should be compensation, same principle should be applied all round, 33797-8.—In case of a man having one holding and buying another to amalgamate with it, which he worked as one farm, but which were separate holdings in poor-rate books, witness thought if he held on different rentals and paid on different poor rate receipts the second farm should not be regarded as residential holding, but farmer should be liable to give it up in return for compensation to enlarge uneconomic holdings, 33799-801.—The two might be one farm to the man himself, but some men if they had twenty farms would regard them as one holding, 33802.—Circumstance of two farms being entered as two separate holdings in rate-books, in case supposed, was not uncommon, man not exceeding twenty acres had often three or four rate receipts, pointing to fact that at one time all these were separate holdings, 33811-3.—Under Griffiths' valuation every holding became stereotyped as to its value for taxation, 33814.—These holdings were fixed in the fifties for taxation purposes, and that was reason why they were now rated separately, even where they had been amalgamated, although it saved labour and expense to have them all in one, 33815.—In case of farmer's son who bought adjoining holding as outlet, the two being worked together, witness repeated that he would leave residential holding untouched, but an adjoining farm could not be regarded as residential holding, 33803.—A shopkeeper who bought small farm in neighbourhood as result of industry might be allowed to keep it though business compelled him to live in town, provided tract of land was not large, 33804.—Compulsion might be limited in acquiring non-residential lands by the extent of them, perhaps limit might be 100 acres, 33805-6.—Witness would not touch farm under 100 acres except it went to public auction, where Congested Districts Board might compete and give fair value for it, 33807-9.—If anyone bid higher than Board he should have land, witness did not consider Board or anyone else should buy land above value, 33810.—At present no hard and fast line could be laid down as to compulsory acquisition of land, legislation would be required, 33818-33820.—Whatever Board was going to carry out this scheme should be allowed discretion, 33819.—Phrase "hard and fast line" was used as applying to general circumstances of each case, where there were uneconomic holdings, not as to particular area, 33821-2.

Instruction in Use of Artificial Manures Desirable.

With regard to artificial manures it was desirable that farmers should be instructed in their use, many people in backward districts did not even know of existence of such a thing, 33822-3.—Very little was done at present in way of applying artificial manure, some farmers did a little, 33824.—Instructors went round different districts from Department of Agriculture and Technical Instruction, but witness thought those districts were not numerous enough, 33825.—Lectures in some cases were well attended, but were not always held in most suitable districts, there were very few holdings with sufficient manure for working, 33826.—Sometimes beneficial results had been experienced from lectures, want of education caused some people to think old-fashioned methods good enough, 33827.

Resident Instructor of more Use than Itinerant Instructor.

Witness had contemplated advantage of having instructors resident in district as compared with itinerant instructors, and thought more benefit would

SMYTH, Mr. T., M.P.—*continued.*

accrue from former, 33828-9.—One practical instructor was needed for different parts of Mohill Union, showing people practical work, 33830.—It would mean enormous staff of instructors, but different districts could be taken on, say one poor law union for two years, until people were sufficiently educated, it was no good coming to district, and then going away and not returning for twelve months, instructor should give lectures constantly for certain period, and when practical results were derived go elsewhere, 33831.—There were in Leitrim the Mohill and Manorhamilton Unions, with portions of Kinlough, Carrick-on-Shannon, and Bawnboy, 33832.—Witness thought tillage was in normal state in Leitrim without much increase or decrease, 33833.—On the whole witness thought system of agriculture was improving, and some men had adopted more modern methods with good results, 33834.

Theoretical Instruction of Little Use Without Practice.—Model Farm Might be Sold When it had Served its Purpose.

Theoretical instruction was little good without practice, witness would like instructor to have farm of average size in central part, and carry out system of tillage or manuring for people's practical instruction, choosing different districts, cast-iron system was not desirable, 33839-41.—A practical man with small farm free to ask people in neighbourhood to observe on his farm how different classes of land were worked and different classes of animals kept, according to suitability might be good system, but could not be permanent unless man could get farm elsewhere, 33842.—If place were well managed as a farm it could be sold when it had served purpose and brought each locality up to fair standing, 33843-4.—There might be failure of crops, but man who gave instruction could not control weather or such causes of failure, 33845-6.

Application of Lime.

As to application of lime, kilns which had been common throughout Leitrim, were disappearing, witness did not approve of application of lime to land without sufficient manure as well; South Leitrim soil was, besides, not suited to use of lime, 33835.—Farmers had not been able to buy enough manure to use with lime, and now approved more of artificial manures, use of which was being substituted for that of lime, 33836-8.

Spraying.

As to spraying, people were not sufficiently enlightened about it, though it had done a great deal of good in that part of the country, it could be done very well by spraying machine, but in many districts people used besoms or brushes of heather for want of machines, which was far less efficacious, they also thought one spraying was sufficient, it was better than nothing, but not enough to protect crop, it should be done in all cases twice, and witness had seen crops sprayed three times repay owner a hundred-fold, 33848.—Even in very wet climate, such as Leitrim, man could always find days fine enough to do spraying, four or five hours would be sufficient, 33849.—One great disadvantage was want of spraying machines, farmers came into towns to hire them, and there often were not enough to go round, three or four farmers ought to join together to get machine, 33850.

Cottage Industries needed.

With regard to cottage industries there were none in South Leitrim, and their promotion would give employment to young men and women who were now forced to go to England or Scotland to earn living, 33851.—Basket-making from osiers could be taught, with weaving, knitting, etc., 33852.—Witness was quite aware that an industry not self-supporting could not be kept up permanently, but would like to see some started, believing there were some which could be hopefully started, 33852-5.—The osier industry and weaving by hand-looms could be tried, 33856.

Lace-Making.

There had been lace industry class, being in charge of the nuns, but it had to be closed, as it got no assistance from Department of Agriculture, 33857.—It

SMYTH, Mr. T., M.P.—*continued.*

was not in a scheduled area, 33859.—The nuns who had learned art of lace-making were quite competent to give instruction, 33860.—Numbers of girls were anxious to go on, but they were crippled for want of funds, 33861.

Basket-Making.

There was land in this district very suitable for growing osiers, 33863.—There were numbers of small farmers who grew osiers for their own purposes and made their own baskets, 33863.—Those made in district now were not class of basket which could be put in market, when peeled the osiers would make ordinary shop baskets, 33864.—Witness believed there would be demand for baskets if well made, so that industry would be substantial one, 33865, 33868.—There was ample land suitable for growing osiers, which, as witness was aware, were one of most profitable crops possible, given demand for them, 33866-7.—Osiers could be grown plentifully on marshy land, 33870.—Witness was not aware that boxes had almost entirely taken place of hampers in many places in England and Ireland, hampers were as much in demand as ever, 33876.—There were no osier beds in the district, witness saw baskets and hampers used as much as ever, 33877-8.—Witness did not know of any successful basket industry in the county, had suggested basket-making from statistics in connection with trade, which he read from time to time, 33879-0.—Did not think project had ever been brought definitely before any public body, 33871.—Suggested it as an improvement, if not a very important one, which could be introduced into that part of South Leitrim, 33872.—Thought these industries could be made to compete in prospects of remuneration, etc., with attractions of United States, at present cottage industries would be great help and would be means of training people for larger industries, 33873.—Lack of employment and unremunerative wages were chief causes of emigration, 33874.—Methods under discussion to raise rate of remuneration and increase extent of employment would be likely to have material effect upon amount of emigration, 33876.

Improvement in Breed of Horses, Cattle, and Poultry and Instruction in Marketing Dairy Produce Suggested.

Breeds of horses, cattle, and poultry should be improved and people instructed how to market eggs, butter, etc., while instruction should also be given in dairying and kindred employments, 33880.—It had been done of late years in Ireland, but witness would like to see more done, 33881.—Witness had seen benefit from instruction in isolated cases, but it had not yet been done in full detail, he would say benefit was commensurate with expenditure, 33883-4.

Parish Committees, additional supervision suggested—Criticism of constitution of Committees.

Witness wished to touch upon matter of Parish Committees and thought more supervision should be exercised over them by Congested Districts Board; he himself lived in congested electoral division, for which he was District Councillor, and was not notified of single meeting of Parish Committee; there were elections from year to year and witness knew for a fact that grants had been denied to people who would have derived more benefit from them than the people who actually received them; these people who were refused would corroborate statement, 33883, 33885, 33890.—Witness considered he should be *ex-officio* member of the Committee as representative of congested district electoral division, 33884.—Shopkeepers were excluded from Committee, but that was not reason, as witness was not shopkeeper, nor any of his family; it was a matter of local spite, 33885-6, 33900.—Witness had not called attention of Congested Districts Board to it till lately, when writing to them for some facts he got list of composition of Parish Committees, etc., 33887.—Case had not yet been sifted by Congested Districts Board, 33889.—Parish Committee was established about three years ago; at first establishment witness was just co-opted member of Rural District Council, but in 1905 was elected for this particular district, 33891-2.—Was not summoned to any proceedings of Committee when it was started in 1904, but in 1905 got communication once or twice and went to one meeting, which had begun before he arrived, and had received no communication since; notice to attend had been received on two occasions, 33893-6.—No notices had been received since September of previous year; witness could not know when meetings were to be held, 33897-8.—Other members were being summoned, 33899.—Witness had not at an early stage brought this under Board's notice, as he hoped right would prevail in the end; coming over from London in March last had called at Board's office in Dublin and got rules of Parish Committees to look into matter, 33901.—Good work had been done by Parish Committees, and money had been well spent in Roscommon, Leitrim, and other places that witness knew; buildings had been improved and so on, 33902.

Migration.

As to question of migration, witness knew and regretted reluctance on part of Irish people to leave holdings; some evicted tenants would not consent to take any farm but that from which they were evicted; some people were glad to migrate, but greater proportion were opposed to it, 33903.—Sentiment had something to do with this; many people, however, never had it proposed to them, 33904.—Witness did not think migration as means of relieving congestion would be hindered by fear on people's part that they would not be well treated by small holders in counties to which they were migrated; Irish people were very hospitable to each other, 33905-8.

Distribution of Land—Claims of Migrants *v.* Sons of Tenants.

When Congested Districts Board purchased big estate the first claim on that farm or ranch would be that of uneconomic holders in district, 33909.—In considering second claim, whether rest of land should be appropriated by Board to migrants from other districts, or to farmers' sons of the county, witness thought local needs of every district should be best suited by following lines recommended to that district; in some localities young men might not apply, 33910-12.—In case of competition for balance of land by these two classes of people, sons of tenants should get it, as otherwise they would emigrate to America, 33913.—Relief of congestion was more urgent claim than that of sons of tenants; if possible, both should be combined; it was hard to know which should have first claim, 33914-6.—It would seem that body dealing with congestion should not be tied down in certain circumstances to giving holdings to sons of tenants, but should have free hand, 33917.—It was hypothetical case and required more evidence to be given; the circumstances did not prevail in witness's district to any great extent, 33918-9.—Some tenants in that district would be willing to migrate to distance if they got larger holdings, but many would not, 33920.—Case of evicted tenants already mentioned applied to others who would not go to other holdings unless their position were to be greatly improved; this was due to want of education, in witness's opinion, 33921-2.—Witness's view was that authority appointed to relieve congestion must give opportunities for people to escape from misery of district, as far as possible, but if people refused to avail themselves of opportunities public responsibility would then end, 33923-4.

Class of Land.

A great deal of the land was very shallow and quite unfit for grazing and meadowing; would produce no crops at all, except for great care bestowed on it by farmers, 33695.—Depth of soil varied from 4 and 5 inches to 9 and 10 inches, and sometimes was less than 4 or 5; cause attributed was that people had had no manure and therefore used to burn land to have ashes for manure, which reduced land to great extent, 33696.—Cultivation by tenant on land referred to was for grass growing, 33697.

WALLACE, Mr. R.

See pp. 203-7.

Mohill Union should be Scheduled.

Witness resided at Clanmorris, Dromod, and was appointed there as representing the Mohill Rural

WALLACE, Mr. R.—*continued.*

District Council, 33925-6.—Was Chairman of Board of Guardians and of a Parish Committee, member of County Committee and of local Drainage Boards, and Chairman of an Agricultural Bank, considered that Mohill Union should be scheduled as congested district, on ground that it was just as poverty-stricken as area so scheduled, 33927-8.—Parish Committee, of which witness was Chairman, had only one division, Cashel, the smallest in union, adjoining electoral divisons were as congested, in Rooskey, every occupier of land was the owner of it, 33928.—These occupiers had all purchased, and it would be a great boon to them if district were scheduled, that they might get benefits of grant, in Cashel, there would soon be no persons to apply for the grants to Parish Committee, because they would all be supplied, 33929-30.—Position would soon be arrived at that Cashel had done its work as far as Parish Committee could do it, 33931.

Raising Valuation of those eligible for Grants from £7 to £10.

The same principles ought then to be applied to Rooskey, in Cashel also it would be advisable to raise valuation of those available for grants from £7 to £10, as man with latter valuation was often in as much need of grant as former, 33932.

Question of Raising Valuation of Those Eligible for Grants from £7 to £10.

Committee did not help anybody over £7 valuation, but were most anxious to enlarge that limit to £10, even without increasing their funds, 33968-9.—This would decrease amount which could be given in each case, unless grants were increased, which would be desirable, 33970-1.—If Congested Districts Board refused to increase grant for this purpose witness would still be in favour of extending area from £7 to £10, because latter man often needed help equally, some times more than smaller man, 33972.

Discretionary Power for Parish Committee.

Witness thought Parish Committee should have some discretion to deal with men who were unable to take advantage of its help at present by not being able to supply two-thirds of estimate in order to get one-third from Congested Districts Board, 33932.—In case of widow with children who might be unable to do anything for homestead, for example, there should be dispensing powers, 33933-4.—There must be standard but there should be some exceptions, 33935.—Power to make these exceptions might be left entirely to Parish Committee, or to some independent body such as Congested Districts Board, or representation of, and in consultation with Parish Committee, 33936.—Witness would like to see almost whole parish under operations of the Committee, 33937.—The Parish Committee in this district was doing well, witness considered system an excellent one, 33938-9.—They had not yet passed from improvement of homesteads to improvement of farms, drainage had been done in improvement of homestead in some cases, 33940.—Parish Committee could not be improved upon, as machinery through which to give grants and prizes for drainage of poor holdings, 33941.—It took in best men in the parish for the work, and had advantage that local men of public spirit and knowledge had opportunities of suggesting what should be done, 33942-4.—System resulted in getting great deal of work done in proportion to grant, more so than in other systems in vogue at present, 33945.

Sanitary Work of Parish Committee and Public Health Officers.

Grants were not given for improvement of dwellings, in cases where manure heaps were allowed to remain close up to houses, such cases had been found when Parish Committee first started, 33946-7.—It was true that duty of sanitary officers was to see these manure heaps removed, and that Parish Committee was doing what sanitary officers had failed to do, though paid for doing it out of the rates, 33948.—Sanitary officers did not do much in this respect unless their attention was directed to special cases as when there was epidemic, witness did not think work of

WALLACE, Mr. R.—*continued.*

Parish Committee had made them more active, they did not as a rule do very much, 33949-52.—They brought prosecutions, when ordered by the Board, but prosecutions generally failed, this had happened at Mohill on last occasion, 33953-4.—It was fault of bench of magistrates, rather than of sanitary officers, 33955-6.—The best system was to make certain improvements which people wished for contingent upon these sanitary works being previously carried out, 33957.—No grants were made for the sanitary arrangements, Committee simply refused to proceed until they were done, 33958-9.

Drainage Improvements carried out by Parish Committee.

Drainage, improvements to dwellings and out-offices were also carried out through Parish Committee, 33960.—The main drains passing through witness's electoral division, which was smallest division in Mohill Union, were the ones attended to; Committee could not go outside these, 33961.—The drains took away water which before remained stagnant in the fields, 33962-3.—It was really part of arterial drainage, 33964.—It would be excellent way of spending money to deal with drainage in larger way, but arterial drainage was an expensive thing, 33965.—Net amount of grants made to 31st March, 1905, was £25 8*s.* 4*d.*; witness thought three times that amount of work was done, 33966.

Local Drainage Boards and Drainage Charges.

Witness was member of local Drainage Board; there were two Boards in South Leitrim, the Rinn and Blackriver, and the Eslin, 33973.

Recommendations of Arterial Drainage Commission.

Witness had given evidence a year previously before Arterial Drainage Commission in Dublin, who had recommended that there should be Board of Conservators to take charge of main basin of river and of outlet, this Board to be composed of persons elected by owners and by members of County Council; that drainage rate should be collected by County Council and struck as separate rate; and that for smaller drains there should be Drainage Boards electeds by owners; that for main basin of rivers, or larger part of it, there should be grant from Government Department and that drainage of small tributaries should be paid for by rate struck on lands to be benefited, 33973-4.—From witness's experience of Drainage Boards he concurred generally in this report, 33975.—Existing Drainage Board was statutory body, appointed under Act of Parliament and meeting at stated intervals, 33976, 33985.—Its duties were to maintain all the rivers in state of repair to carry away water in connection with works done forty years ago, 33977.

Expenditure by Board of Works upon Rinn and Blackriver.

About twenty years ago Board failed to keep works in proper state of maintenance and Board of Works in accordance with their powers in such case expended £2.700 upon Rinn and Blackriver; at this time Earl of Granard's Estate was selling in County Leitrim and Longford, and year following all small owners who purchased their lands were taxed to repay this money to Board of Works, with 5 per cent. added, this repayment taking twelve years, and leaving drainage charges very unpopular in locality, 33977, 33999.—Wtiness did not know reason of additional 5 per cent., 33978.—Property was transferred from landlord to tenants, before which transfer landlord had been under certain obligations, 33979-80.—It would not be business of Land Commission to arrange, in settling property, terms on which landlord was to redeem his obligation, as the work involving these charges took place just about time of transfer; the landlord did pay up to a certain date, but tenants did not understand matter, at first looking on work as a boon, 33981-3.—It had not been considered whether Treasury might be applied to to remit this expenditure; they had found Board of Works very difficult to deal with, 34001-2.—Board of Works were acting under Act of Parliament; they were now repaid, 34003-4.—Parish Committee had been prevented from making other improvements by this burden, but now rate was being struck for maintenance, 34005.—When work was

WALLACE, Mr. R.—*continued.*

undertaken in 1841, it had involved large capital outlay, 34006.—That sum was borrowed from Board of Works, but had long ago been paid off, 34007-8.—Accumulated work of maintenance, having been in arrear, had to be met, and money raised in some way, 34009.—Expenditure was incurred, not as part of original cost of work, but as rendered necessary by neglect of maintenance, 34010.—Witness's point was that memory of what had had to be paid in connection with Drainage Acts acted as deterrent to ratepayers from agreeing to rate which might be levied for various improvements; in expenditure of this £2,700 witness believed that Board of Works squandered money and that £1,000, properly spent by Drainage Board, would have produced more useful work, 34012.

Local Drainage Board and Drainage Charges.

Since then, Drainage Board had levied rates themselves, about £600 for last few years, on the Rinn and Blackriver; on that river and on Eslin, rate of £200 was levied within last few months to do some work, 33983.—Work was still going on on the Eslin, but was completed on the Blackriver, though badly done, being insufficient and not having had enough money expended on it; for the main river there were Government grants, 33984, 33986.—It was not attended to every year, 33987.—On upper portion of drainage district it was proposed to drain about 2,000 acres, but on lower portion, which emptied itself into Shannon, outfall was bad; the more drainage was done on upper portion, the more harm was done to lower portion; water flowed up more quickly than it could get away, and flooded up to Johnson's Bridge, where witness lived, and spread out on to the lands, 33988.—Drainage rate now struck was only for maintenance, 33989, 34013.—The £200 mentioned in this connection was only debt remaining, 34011.—If maintenance were stopped now, the drainage would get into disrepair, bringing about loss of previous expenditure, 34014-5.—Drainage Board, of which witness was member, was called into existence under Act of 1842, work having been done originally by Board of Works, and duty of Board was to maintain those works in proper condition, and for that purpose to tax lands to be improved, 33990.—Works done by Board of Works had not been properly maintained, and it then became necessary to do something, so that Drainage Board was called in; it was not question of capital expenditure but of maintenance, 33991-2.—Drainage Board would not have authority to make fresh drains, or to enlarge drain to smallest degree; there were portions of country much in need of it, that were not on drainage map, but Board had no power to expend a penny on these, 33993.—Board's powers were not constructive, but maintenance powers, 33994.—There was great difficulty in creation of Drainage Board, which was done by large landowners forty years ago, and could hardly be done now, it was so troublesome and expensive, 33995.—It was very difficult to constitute Drainage Boards now, 33996.—Witness approved of recommendation contained in report referred to that large waterways should be cleared by grants from Government, 33997.—Also that small drainage, immediately benefiting occupiers, should be done with some liability to occupiers to pay for such drainage, 33998.—Commission referred to had not recommended that all existing Drainage Boards should be merged in County Council; 34016.—County Council would practically be responsible for collection of drainage rate, as already stated, 34017.

Lace Class.—Failure for lack of Monetary Encouragement.—Teacher not recognised because she had no Certificate.

As to lace class, it had ceased to work because Department had declined to recognise teacher as qualified, and girls whom she taught did not therefore get capitation grant; work turned out realised high price, 34018.—In order to be recognised as qualified the teacher would have to pass examination and get certificate, 34019-20.—The teacher, a Sister of Mercy, had not passed Department's examination, nor got certificate, 34021-2.—She was an excellent worker, 34023.—At first Department was more lenient on this point, afterwards becoming more exacting as to certificates, 34024.—The school collapsed simply because teacher was not recognised as qualified by Department.

WALLACE, Mr. R.—*continued.*

34025.—It was great loss to district; from twenty to thirty girls were attending and making money out of it, 34026.—Capitation grants to workers were usually endowments to those in charge of school, 34027.—The teacher was competent, and committee in charge did not appoint another teacher, 34028.—Department had never given grant, nor contributed to teacher's salary, 34029-30.—The school was started without any grant or assistance from Department, 34031.—There was then application to pay ordinary capitation grant that was paid to every school, that each girl attending would get so much a week; this was not paid by Department, 34032-3.—School was started through beneficent action of nuns, it was successful, but when capitation grant was applied for it was refused on ground that there was no recognised teacher, 34034.—School collapsed from want of monetary encouragement; it had been started in hope of receiving this, 34035-7.—They were selling lace and receiving fair price for it, 34038.—The lace-making lasted one and a half years; they received no assistance; only money was that realised by sale of lace, 34040-1.—Position was that amount realised for lace went to workers, and the nuns, and other demands upon them, were unable to continue teacher's services without some recognition from public body, 34042

Reclamation of Bog proposed for Enlargement of Holdings in Rooskey.

With regard to Rooskey electoral division, which witness represented, every man in it owned his land; there were 1,100 acres of bog in hands of landlord, the Earl of Granard; witness considered that if Congested Districts Board would purchase this bog at small outlay and drain it it would be most valuable addition to small holdings in neighbourhood, because, to his own knowledge, such bogs, when drained, produced fine crops of potatoes and oats, and even meadow, 34042.—Each small holder should have small portion for turbary, but when there were large tracts the rest should be vested in trustees, 34043.—There was plenty of turf in neighbourhood, 34044.—It was the surplus which witness recommended for reclamation; it would be too long to wait for cutaway sole, 34045.—There were in Rooskey twenty-three holdings under £4; these were all bought, 34046.—People bought holdings of that size because they occupied them and had no more, 34047.—They purchased under the Ashbourne Act, 34048.—All had turbary, 34049.—Purchase suggested by witness, for benefit of small holders, was with object of reclamation, 34050.—There was nothing but heather on it; these bogs were capable of producing better crops than some mountain land, 34051-2.—The bogs were very deep and the gravel a long way down; it was flat, but could be drained, 34053-5.—Witness thought draining bogs less expensive than draining up-land; it was less laborious to open drains, and as the purchase price would not be large it would not be very expensive proceeding, 34056.—It was not of much service to Earl of Granard; he shot over it, 34057.

Distribution of Land.—Claims of incoming Congests *v.* those of Sons of Tenants.

With evidence of Mr. Smyth, M.P., as to grass lands witness did not altogether concur; with regard to large tract of land purchased in Roscommon for purposes of migration witness did not think that sons of Roscommon farmers should get all that, as was disposition, but that there should be some migration from Donegal, Leitrim, or other congested districts, 34058.—Seriously congested districts, wherever they might be, had first claim on Congested Districts Board, 34059.—Witness gave preference to poverty-stricken districts in neighbourhood of Roscommon, but to exclude everybody but Roscommon people would not be fair, 34060-1.—As between sons of tenants and congests in district, congests had distinctly right to preference; holding might be given to son of tenant as reward if he helped strenously in work of bringing in migrants and getting country settled, 34062-3.—A great many sons of tenants might take active part in carrying out this work, but witness would not give farms to several sons of one farmer, 34064-6.—It would be fair to say that until all heads of families living upon uneconomic holdings and willing to migrate had their claims satisfied, claims of sons of tenants should not be considered, 34067.—Man living with his family on uneconomic holding had

WALLACE, Mr. R.—*continued.*

more claim than young son of tenant, but if son did not get something he would emigrate, 34068.—The father would not migrate, but this did not mean generally that he would go on living in great poverty and distress, necessitating application of occasional special State funds; it might apply to extreme West; things were not in such bad condition, generally, 34070.—Witness was inclined to say that these people should be helped before sons of tenants, 34071.—In case of son who prevailed on parents to make way smooth for incoming congests if land were available, after providing for migrants, he should be considered very favourably, 34072-3.

STEWART, Mr. GEORGE F.

See pp. 207-15.

Payments of Rents.

Rents were better paid in Leitrim than in any part of Ireland before sale of Crofton Estate in 1898, on which were 600 tenants round Mohill; out of 2,000 tenants paying £17,000 a year, witness had received practically full year's rent each year for last ten years, 34076-8.

Valuation.

Average of these tenants was £8 10*s.*, though small they were relatively more value than larger farms, as they fetched larger sums where put up for sale, in twenty-five recent cases average of tenants' interest was 23 and 28½ years' purchase, 34078.—On one estate largest rent was £13 14*s.*, highest rent of all was £49, but no other as high as £20, 34079.

Tenant-Right.

Value of a holding could not be measured by tenant-right, but value as security for advance could be measured, 34080, 34085.—Often the smaller the holding the higher the tenant-right, as so many were looking for homes, in Leitrim £10 or £5 farm would fetch more than in other districts, 34082-4.—Security of State was not based on agricultural value, but on ability of population to pay annuity, 34086.—Vacant farms in landlord's possession would sell for as good price as any other, 34087-8.—Tenant-right if sold for more than true value, 34089.—In Donegal farms had been known to fetch 128 and 200 years' purchase, which was absurd, and could not represent true value of holding, only competition in district, 34091-2.—Greater portion of rent did not come from America, as rent was only small proportion of outgoings, 34095.

State Security.

State must base security not upon intrinsic value of land, but upon capability of country for paying annuities, 34096.—Witness thought people in small holdings could generally pay annuities upon them, 34097.—He wished to combat idea that because holdings were small they were therefore uneconomic, and no security to the State, 34099.—There were at present no cases where annuity would not come out of land, 34100.—On Crofton Estate sold in 1898 annuities were very well paid, no application had been made for portion of guarantee fund under previous Act, 34101, 34138.—If holdings would not earn annuity tenant-right might not remain as high in district, or it might make no appreciable difference, 34102.—There was no greater risk of failure to pay annuity on small farm in Leitrim than on big farm in Kildare, 34103.—Average holding in Leitrim was capable of paying rent, 34105.—In witness's experience tenants were honest and paid rents, 34106.—He had no apprehensions with regard to future annuities, 34108.—Large demand for small holdings had enhanced price, 34109.—There was no proof that they would therefore support a family, but it would show security for advance, 34110.—23 to 28 years' purchase were not extravagant prices, 34111.—Competition for small plots was so great that State would not incur any risk, 34116.

Enlargement of Uneconomic Holdings.

Very small holdings should be enlarged before purchase if possible, 34119-20.—If 200-acre farm were

STEWART, Mr. GEORGE F.—*continued.*

divided into twenty ten-acre farms and put up for sale competitors would be much more numerous than if only divided into two farms of 100 acres each, and would fetch proportionately higher price, 34121-2.

Crofton Estate.

Crofton Estate had been sold under Act of 1896 on first-term rents, with 4*s.* 9*d.* or 4*s.* 10*d.* reduction on 18½ years' purchase, 34123.—More than £5,000 a year had been sold, and everyone had got turbary, 34126-7.—Which was in most cases included in the rents, 34128-9.—If bog contained too small a supply another bog further off was put into agreement, 34131.—Right of cutting turf was to last as long as bog lasted, 34132.—Land Commission had supervision of transaction, 34134.—Reason why some tenants paid turbary and others did not was that some rents had been fixed in Court, others not, 34135.—Those who had not been into Court had free turbary, 34136.—Small farms afforded good security for reasonable advances made by Land Commission, 34138.—Only town of Mohill and town parks round it had been retained, rest of Crofton estate had been sold, 34140.—Terms of sale had been good, but not better than would be and ought to be got now, 34143.—Interest was at 4 per cent., 34144.—Now it was 3¼ per cent., 34145.—First term tenants would not buy at 23½ years' purchase, they were ready to sell at six shillings and four shillings reduction; six shillings reduction was only 21¼ years' purchase, 34148.—Those who were buying now were paying practicaly the same as Crofton tenants, as different number of years' purchase made up for larger reduction, 34150.—Under Ashbourne Act 21½ years' would equal 17 years' under Act of 1903, 34151.

Untenanted Land in Leitrim.

Creation of peasant proprietory had resulted in making people improve their holdings, in Leitrim there were no grass lands, Mr. Ginnell's Parliamentary Return was misleading, as lands mentioned therein were either bogs, mountain, or water, 34152.—There was no tenanted land on eleven months' system, 34155-6.—Tenants would not leave homes to migrate to untenanted land in other counties, 34156.—Commission had found that people who could migrate themselves were anxious to migrate, 34158.—In whole of district from which witness was collecting £17,000 rent there was no grass farm, 34162.—The grass in Leitrim was to be found in mixed farms, of which there were many, in farms of all sizes the proportion under grass would be as five to two, 36164.—On Clements, Crofton, and Whyte estates no rent had been received for grass farms, although there was grass on all, 34165.—Unless demesnes like Lough Rinn were taken in there was no land suitable for migration in Leitrim, 34166.—There was one farm of 200 acres with a good deal of grass, 34167-8.—At Dromard there was one grass farm which had now been sold to several people, not tenants, but people who had come in and bought it, but it had never been let on eleven months' system, 34169-73.

Mohill Holdings.

In electoral division of Mohill there were 262 holdings, 84 did not exceed £4 valuation, 83 were between that and £10, only one was over £100, nothing over £200, which showed that large grazing farm did not exist, 34175.—Eleven months' grazing did not come on rate-books at all, 34178.—Value of turbary close to each farm in district was very great help to tenants in district, difficulty was to prevent subdivision of farms, 34179.—In migration supply of turf would be essential, 34181.—As well as good water supply, 34182.—There were coal mines in locality, but people never used coal, 34183-5.—Landowners would be willing to sell untenanted land, not demesnes and home farms, at fair prices without compulsion, 34186.

Industries.

Establishment of industries was required to relieve land, Rev. Mr. Digges had promoted creameries, agricultural banks, and bee-keeping, which had been successful, bacon-curing and textile industry would be serviceable, Arigna Mining Company employed over 100 men a day, 34186.—Purchase of estates had

STEWART, Mr. GEORGE F.—*continued.*

been followed by undue cutting of timber, that ought to be regulated, 34186-7.—Bee-keeping had been successful, and could be made more so near bogs, as heather honey fetched best prices, 34188, 34189.—Arigna Mining Company had satisfactory business, 34190.—Coal went as far as Longford, Cavan, and Carrick-on-Shannon, 34191.—Railway to mine would probably increase business, as coal had to be carted three miles, 34193-4, 34202.—Quality of coal was good anthracite, and area large, it was used on the light railway, 34195-201.—More coal could be disposed of if price could be lowered to meet competition with Welsh coal, 34203.

Question of Zones.

Abolition of zones under Act of 1903, even in congested districts, would be fatal to working of Act, landowners would be unwilling to sell if they were uncertain of price, 34204-5, 34215.—Though estates were passing direct from landlord to tenant which needed great improvement, and that was a bad thing if they were rundale farms, 34206-9.—In Crofton Estate there had been inspection, but it had no effect, as every farm passed, 34210.—Perpetuation of rundale could not be a good thing, 34211-2.—Estate even slightly in rundale might need to be improved, 34213.—Zones from landlord's point of view accelerated sales, gave greater certainty, &c., but from tenant's point of view inspection and consequent improvement was better, 34216.—Witness did not know of any case under his management where it would be any harm to sell the estate direct, as he had no very poor estates to deal with, 34218-9.—In his experience Act was working well, and if zones were taken out of it it would check working enormously, 34221.—Act could be amended to deal with particular estates, but if zones generally were abolished landlords would refuse to sell, as they would not know what they were going to get until after re-valuation, 34223.—Party interested in advancing money would know nature of security, as same authority which fixed rent would value farm, as Land Commission and Estates Commissioners were nearly the same, 34224.—It was the element of uncertainty which would hinder sales, 34226-7.—Signing of agreement was basis of landlord's willingness to sell and tenants to buy, and from that time until sale was completed landlord received only interest on purchase money, 34228-30.—If estate was encumbered landlord had to meet charges, and if after inspection Land Commission did not approve, arrears would have accumulated, as interest was less than former rent, if Commissioners did not accept estate landlord had either to sell at low price or to resume possession with arrears, thus accentuating difficulties between landlord and tenant, 34231-2.—Estate Commissioners were an interested party in fixing price, as they had to secure State first of all, 34234-6.—Land Commission represented Treasury, and were pecuniarily interested as trustees, 34237-8.—Land Commission never raised price of farm, but said that either vendor was asking too much, or that it was all right, 34240-1.—Uneconomic holdings should not be stereotyped, but it was possible to maintain zones, and yet get over difficulty of stereotyping poverty, 34242-3.—Abolition of zones would probably stop purchase, 34244.—Under existing law landlords could not re-arrange holdings or change rundale without consent of tenants, 34245-9.—But with consent of tenants it could and had been done, 34250.—It was unfair that one of parties to bargain should fix price, though Commissioners were not buying for themselves, but for State, if there were substantial loss owing to non-payment of annuities they would be blamed, 34255.—Commissioners were appointed not to make good bargain, but to discharge a public duty efficiently, 34257.—There was danger of County Councils intervening to stop land purchase if there were default, as default would fall on ratepayers of county, 34258.—That would be as serious as abolition of zones, 34260.—Zones applied only to tenanted land, 34261.—They did not apply to Congested Districts Board purchasers, as improvements on congested estates were desirable, 34262.—Board was an improving authority, 34265.—And had not had any difficulty in dealing with owners, though zones did not apply in their case, 34267.

Mortgaged Estates.

Witness thought it unreasonable that mortgaged estates should be sold cheaper than unencumbered

STEWART, Mr. GEORGE F.—*continued.*

ones, as mortgages were often paid off, and tenants were financially gainers by sale, 34267.—Even though they had exchanged indulgent landlord who did not press for rent for strict State, which demanded punctual payment, 34270-1.—Even if tenant's livelihood were precarious he was gainer, as he got whole place for nothing, 34272.—Generations of same family had lived on farms in the past, and probably would in the future, 34273-4.—Tenants on well-managed properties where there was great strictness were better off than tenants whose landlords allowed them to get into arrears, 34276.—Tenants really lost nothing by being under strict enforcement of payment by State, 34278.—There was no machinery under Act of 1903 for relaxation of obligation in case of unforeseen misfortunes, such as famine or fishery failure, but State would have to meet such a state of affairs, 34280-83.—Purchase system was unfortunate in view of unpreventable contingencies, but it had become necessary, 34284.

Flotation of Money.

Difficulty about flotation of money, which meant charging the counties, was one of the gravest conditions which had to be faced, as it was likely to block sales, Land Stock did not stand at its proper price in relation to Consols, it ought to be 93 instead of 85, as it was, reasons given by stockbrokers seemed inadequate, as both were secured by Government, if Irish Land Stock stood at 93 it would ease whole financial difficulty which arose from loss on flotation of stock, Treasury should remedy defect, 34286.—Mr. Mullins, stockbroker to the Bank of England, said reason for difficulty was that Consols were more quickly realisable than Guaranteed Land Stock, Consols had a special market, many banks were forced to hold their reserves in Consols, and that led to demand, financial arrangements of Act had been taken on basis of stock being taken as worth 95, 34287-8.—Land Stock could be registered both in Bank of England and Bank of Ireland as Consols could, if Chancellor of Exchequer were to buy millions of Irish Land Stock yearly as he bought millions of Consols it would help to put price up, 34289.—In Consols there were £700,000,000, in Irish Land Stock only 15,000,000 so far, 34290.—Chancellor could buy up to 95 without loss, 34291.—Witness was afraid that people in England would think that low price of stock was due to default of payment, which it was not, 34292.—Fear was not that call on guarantee would affect stock, but that purchase would be checked, 34293-4.—As what tenants would gain on one hand they would lose on another, 34295.—People might also have idea that Irish tenants were paying too much for land, 34296.

DOLAN, Rev. PATRICK.

See pp. 215-8.

Drainage.

In Aughanas Electoral Division much damage was done by floods from tributaries of Black or Cloone River; drainage needed much attention; about seventy-five parties were aggrieved; to take one example, tenant had meadow and pasture land adjoining one stream, but floods drove in sand and gravel, which injured hay, and some five or six beasts died, and rest of stock had to be sold; losses were sometimes £20 a year; his valuation was slightly over £20 a year, 34297.—Application had been made to Congested Districts Board for help to carry out drainage and they had agreed to pay half, tenants agreeing to do other half; one landlord, Mr. John Madden, of Hilton Park, Clones, refused consent as he was negotiating sale of estate, so Board refused assistance until all legal obligations were satisfied, 34298-9.—Board required consent of landlords to guard against damage resulting from drainage, though tenants had undertaken to incur legal risks on part of Mr. Madden; this delay was causing great suffering, 34300.—Powers were needed to deal with drainage questions, 34301.—People in district had agreed to carry out drainage of river as it passed by their own lands by deepening river and widening banks, 34303-6.—People could manage it themselves assisted by Congested Districts Board, 34307.—Engineers were not required, 34308.—One big piece of blasting was

DOLAN, Rev. PATRICK.—*continued.*

required, but allowance had been made for that, 34311.—Board had no particular obstruction in mind, it was their custom to ask for guarantee, 34312-3. —Local Committee would remain as Standing Committee to look after maintenance from time to time; it would be to interest of people to do it themselves, 34315-9.—There would be no legal powers to compel stupid tenant to do his share, 34320.—But they might be coerced to do their duty, 34322.—Proposed arrangements would have been satisfactory, 34323.—Drainage Board into whose district extra flow was to come were not party to arrangement, 34324.—They had not objected, 34325-7.—Whole thing fell through from want of consent of one landlord, 34328.

Roads.

Roads were badly wanted to enable people to bring produce to market; most of the people lived off main roads, and lanes or passes to their holdings were in very bad condition, 34329.—Congested Districts Board ought to be more liberal to encourage people to improve their lanes;- one-sixth of cost was very small grant and not sufficient encouragement, 34330-3.—Larger grants would mean more useful work, 34334. --People did not contribute money, but labour, 34335-6.—These were not county roads, District Council had no control over them and could give no assistance, 34337-43, 34347-8.—Small roads running from one main road to another were in charge of District Council, 34344.—People could not pay higher rates, they had to give labour, 34349.—Example of bad road was that from Cloone to Carrigallen; it was a mile long and over 100 families lived along it; they had great difficulty in getting to main road, 34352.—It was nominally duty of District Council to maintain road, but they could not attend to all roads without putting rates up, so it was only done very occasionally, perhaps once in five years, 34354-7.—If Board gave grant for such road it would be better to give it to county body, 34358-9.—To prevent division of responsibility, 34360.—Roads ought not to be repaired unless county maintained them, 34361.—Another blind road had along sides about thirty families, it had never been made by county, 34363-6.—Parish Committee was adapted to deal with such improvements, 34370.—Cost would be from one to two shillings per yard, 34371.—If half were given by Board Parish Committee would see work carried out, 34372. —Farmers accommodated would have to keep it in repair, 34373.—Grants to Parish Committees were insufficient, in many districts one-third or one-half would be required, as there was great difficulty in getting materials, 34374.

House Improvement.

Proportion of one-sixth allowed by Board was not sufficient to encourage people to improve premises, 34375-6.—Valuation of those helped should be increased from £7 to £10, 34377.

Technical Education.

Domestic Economy should be taught in homes of people practically, not by lectures, 34378-80.—Staff would have to be increased; public lectures were good in theory, but people did not benefit by them in their homes; instructors should go to certain houses and get as many people as possible to benefit by lessons there, 34381-5.

Emigration.

There was great deal of emigration from Leitrim of the young and strong, consequence was that labour was scarce and tillage was going down, 34386-8.—School attendance was affected, as children were taken to the fields to do the work of older boys and girls who had emigrated, 34389-90.

Congested Area.

Extension advocated, 34390.—Whole of Leitrim should be scheduled, 34392, 34397.—Lord Lieutenant had created one scheduled district in neighbourhood formerly, but witness did not know who had power now, 34394.—Lord Lieutenant should have power to deal with any place recommended, 34396.—If district

DOLAN, Rev. PATRICK.—*continued.*

were scheduled Board's idea was to have Parish Committee in every parish, 34399-400.—Some parts of Leitrim were fairly prosperous, but all districts were poor enough to be scheduled, 34402-5.—Congested Districts Board should have absolute discretion as to where Parish Committee should be established, 34406-8.

Farmers' Houses need Improvements.

Means of improvement should be forthcoming; labourers were getting fine houses, but farmers had no opportunity to improve, 34409.—Difficulty of getting loan from Board of Works was very great; loan was limited to three times valuation, 34410-1.—Congested Districts Board did not lend money and never made grants above £5, 34412.

Documents put in by Rev. Patrick Dolan.

	Page
A.—Notes of Evidence, ...	270
B.—Short Report on Drainage of Rivers in Union of Mohill, ...	273

TRAVERS, Mr. JAMES.

See pp. 218-9.

Description of Witness's Farm.

Witness was farmer with farm of twenty-eight statute acres, valuation £12, two to two and a half acres of which were worked with heavy loy, hand labour, rest was grass, and hay and milking cows were kept, 34414-9.—It was Sir Morgan Crofton's Estate, purchased in 1901 at 18 years' purchase by clear tenants and 19 by those in arrears, forty-nine uneconomic holdings were on property of from four to eight Irish acres of poor, wet, undrained land, drainage of Eslin River was badly needed, road was needed through Aughaumcarne bog, 34419.

Turbary.

Turbary had been fixed at 10*s.* per annum for seventy-one years, but when they were going to break cutaway additional 10*s.* had to be paid, 34419.—This was witness's own experience, as he was tenant purchaser and had been to court, turbary had always been separate from rent, 34420-9.—At time of sale £9 10*s.* purchase added to annuity or 19 years' purchase had to be paid for right of turbary, if broken 10*s.* a year had to be paid for cutaway, 34430-9.—Land Commissioners were forcing tenant proprietors to pay more than had been agreed upon if they wanted cutaway to till, 34440-2.—Fresh agreement had to be signed if bog was tilled, 34447.—Explanation was that only right of cutting turf was given, not turf bank itself, which relapsed to landlord, if turf were exhausted tenant had to be provided for elsewhere and fresh agreement had to be made for cultivation of exhausted bog, 344525.—Witness had understood that tenant purchasers bought turf banks, 34457.

Drainage.

Drainage was much needed on part of property, as Eslin River was only partly drained, some people were paying 18*s.* a year towards drainage, when principal river was not drained, only branch, 34457. —Drained portion really benefited another property though Sir Morgan Crofton's tenants had to pay, estates which were affected by bad drainage of Eslin River were Lord Massey's negotiations for sale of which were completed, though money was not advanced, and on which there were thirty-five uneconomic holdings, Peyton's property, not yet purchased, and in which were eight uneconomic holdings, Mr. Ruthven's property, not purchased, and containing forty-three uneconomic holdings, King's property, not purchased, three uneconomic holdings, Colonel Clement's property, not purchased, and with seven uneconomic holdings, Dr. Crofton's property, not purchased, and with three uneconomic holdings, low lands of all three were flooded by River Eslin, roads through bogs were also needed, 34459.

Compulsory Purchase.

Compulsory purchase must be adopted in Connaught before problem of congestion was solved, compulsion on landlord only, 34459-60.—If Estates Commissioners bought compulsorily Commission should be

TRAVERS, Mr. JAMES—*continued.*

appointed to fix rent, 34461.—If Commission fixed too high rent emigration would be better, 34462.—If Estates Commissioners took compulsorily they would probably fix fair rent if they examined for themselves, 34463-6.—Witness had not been asked whether he considered his rent fair, but he had to abide by it, 34470.

REYNOLDS, Mr. FARRELL.

See pp. 219-21.

Bunnybeg and Drumdoo were electoral divisions represented by witness, 34471.

Holdings in these Electoral Divisions.

Area of Bunnybeg was 3,235 acres, valuation £1,460, there were 58 holdings not exceeding £4, 61 between £4 and £8, 12 between £8 and £12, and 30 over £12, Drumdoo contained 3,841 acres, valuation £1,869, with 60 of the first, 79 of the second, 55 of the third, and 33 of the fourth class of holdings, there were no grazing ranches that could be sub-divided in district, so only relief would be to schedule district and grant relief-in-aid for improvements, 34471.

Drainage.

Drainage operations were greatly needed as tributaries of Shannon flooded large tracts, weir walls of Shannon at Rooskey, &c., should be lowered a foot, which would drain thousands of acres, Eslin River caused great floods, Leitrim was intersected with rivers and drainage was very bad, if rivers were cleaned people would maintain drains through their farms, 34472.

Roads.

By-roads and passes could not be repaired as no funds were available, if district were scheduled and Congested Districts Board gave some relief people would be encouraged to do more for themselves, as they were prepared to assist, 34472.

Sale of Estates.

Portion of Simpson Estate was sold before Act of 1903 at 15 years' purchase, and some at 17, but portion sold under Act was at 23 years' purchase, 34472.—Sales under Ashbourne Act, such as Lord Granard's and Crofton Eestates had been at 16 to 18 years' purchase far better land than was selling under Act of 1903 at 24½ to 27 years' purchase, tenants in arrears were willing to accept any reduction to evade eviction and pressing for payment; on Major Lawder's Estate sale had been direct but purchasers had petitioned Estates Commissioners to exonerate them from liability as they said they were induced to sign agreements they did not understand after indulging too freely in whiskey supplied by landlord's herd, 34475.—Another inducement was patch of bog which tenants were afraid might go to more distant tenants, 34479.—Tenants had not heard terms until they got to landlord's house,, 34484.—Sale had been taken out of agent, Captain Darley's hands and given to a man named French, 34485.—Mr. Lawder still held seventy acres of best land, if that could be acquired and distributed it would settle grievances, on Madden, Brady, and Moore Estates, direct purchasers complained of terms 24½ years' purchase, American remittance arrived, 50 per cent. of farmers were said to send children to America so that they might send them help and shopkeepers gave credit till remittance arrived 50 per cent. of farmers were said to depend on children in America, 34475.—Ninety per cent. of rents came from America, 34486.—Twenty or thirty years ago rents were higher and less money came from America, but prices of farm produce had fallen since then, 34487-91.—Returned emigrants sent up price of land, all land purchased in Leitrim was either by American or shopkeepers' money, none with capital realised off farm, 34492-4.—American emigrants got home-sick, wish to have some place where they returned and so purchased farms. 34495-7.

REYNOLDS, Mr. FARRELL—*continued.*

Rates.

Rates were 6s. in the pound, poor rate was lower than formerly, but district rates were higher, 34473-5.

Industries.

Iron mine, said to be rich, lay in parish of Annaduff, if opened it would give employment to many hundreds of persons, 34475.—If bacon-curing could be started in disused goal in Carrick-on-Shannon it would be great benefit to district as good pigs were raised, 34497.—People of neighbourhood did not put money into it as they were not enterprising enough, 34500.—Returned American emigrants never had energy or enterprise, they seemed to have exhausted their energies in America, 34502.—County Council was very lethargic, 34503.—Whole district of Mohill should be scheduled, 34504.

KELLEHER, Mr. WILLIAM.

See pp. 221.

Sale of Estates.

Witness had nothing to add to other witnesses' evidence about Ruthven Estate, 34507.

Drainage.

Mr. King's property required drainage, 34508.—Also portion of Colonel Clement's 34509.—Also portion of Dr. Crofton's. 34511.

Compulsory Purchase.

Compulsory purchase was needed to solve problem of congestion in Connaught, 34512.

Industries.

Woollen factory, lace-making or manual instruction might benefit people living on small farms, 34512.—Congested Districts Board should send down expert to see what could be done, 34513.

DIGGES, Rev. J. G.

See pp. 221-4.

Department of Agriculture.

Congested districts had suffered through transfer of agricultural functions from Congested Districts Board to Department of Agriculture, as there was much begun by Board which Department could not carry on; Department's policy was controlled by Council of 104 members, 68 of whom were appointed by Estates Commissioners and they were dominated by shopkeepers, chiefly publicans, whose interests were antagonistic to those of agricultural population; County Councils were notoriously influenced by political and class prejudices, while Board were free from such bias, were in touch with the people, and dealt with their needs promptly and practically, 34514.

Bee-Keeping.

Bee-keeping was most profitable of minor industries, it demanded small capital and no land, and paid 100 to 150 per cent. under careful management; some men in Ireland made £100 per annum by bee-keeping; witness knew one labourer, John Doyle, who had bought two large farms with profits made off bee-keeping, 34514.—Congested Districts Board had gone in thoroughly for bee-keeping, which had flourished with them, founding associations, advancing loans, etc., and opening depot in Dublin for sale of honey and wax, employing qualified experts, members of Irish Bee-keeping Association, to instruct people; Department's attempt to deal with industry had been little short of disastrous, they had sent out incapable "instructors," refused to recognize existing associations; lately Department had made rule that instructor in horticulture should be instructor in bee-keeping, with result that it was being quite neglected; Department should make County Councils have instructor appointed in each county; he should be qualified by The Examining Board of Irish Bee-keeping Association; associations should be formed; loans at 3 per cent. repayable in three years should be made

DIGGES, Rev. J. G.—*continued.*

for purchase of bees and hives, etc., and Department should get into touch with Bee-keepers' Association, 34515.

Agricultural Banks.

Agricultural Banks were registered under Friendly Societies Act, 1896; objects were to assist with capital, educate in true uses of credit and foster mutual co-operation; members elected committee, who granted or refused loans which were made on reproductive objects only; mutual liability was principle, each member being liable for debts of society, this produced caution in management; Department advanced £50 or £100 at 3 per cent., deposits received locally at 4 per cent; joint stock banks advance balance required at 4 per cent.; members were charged 5 per cent. and paid interest when repaying loans at rate of 1*d.* in the pound per month; profits went to reserve fund; Department provided gratis, books, stationery and services of accountant; four banks had been established in district, Farnaught, Mohill, Annaghmore, Johnston's Bridge; Farnaught was established in 1902; had never made bad debt; had membership of 188 in 1906; granted 131 loans, total £834; average loan, £6 7*s.* 2*d.*, overdue loans, nil; £90 worth Ulster seed-potatoes had been distributed among members, repayment to be made within a year; Department had advanced £85 at 3 per cent. and sent inspector to examine seed; these banks had been of great service and had largely assisted to overcome evils of "gombeen" system; Congested Districts Board should establish such banks in every parish in Connaught and their functions should be extended, 34515.

Co-operative Dairies.

Co-operative dairies were registered under Friendly Societies Act, 1896, and governed by committees elected by members, who held one or more £1 shares; maximum dividend at 5 per cent. may be paid; first was started at Mohill in 1886; weakness was absence of winter dairying, which kept staff idle for six months each year and sent customers elsewhere; societies should be appointed in each county to promote winter dairying, with instructor to visit districts, 34515.—Farmers would have to be assisted with capital, 34516.—Amount would depend on how many cattle farm would carry, 34417.—In congested districts want of capital was chief difficulty; money should be advanced at 3 per cent. for erection of separating stations, to be repayable out of profits; in 1905, society had been started at Bornacoola, Johnston's Bridge as separating station; in 1905 they did well; in 1906 they made net profit of £300; after one and a half years' work all expenses had been paid and there was balance to credit, 34518.—Fourpence per gallon for milk in Leitrim was good payment, 34521.—That would work out at 10*d.* or 11*d.* per pound for butter, 34522.—Congested Districts Board might advance money, but Department would not start such work as it might be considered Government trading, 34523.

Pig-Raising.

Pig-raising was important industry in county, but profits went to middleman and retailer, not to farmer; system of bacon-curing co-operative factories was required, which would undertake marketing and would return profits to farmers, less expenses and a maximum dividend upon capital of 5 per cent.; these factories should be provided for by loans by Congested Districts Board, 34523.

Arigna Mining Company.

In Arigna district there was practically inexhaustible supply of bituminous coal, rich iron ore, fire-clay and flags; coal was used on Cavan and Leitrim Railway and if there were facilities it could compete with Scotch and Welsh coal; iron ore was excellent quality; when Cavan and Leitrim Railway was projected in 1883 intention was to extend to mines, but through unfortunate mistake that was not done, as result coal had to be carted, adding 2*s.* 6*d.* per ton to price, 34523.—Arigna Mining Company gave employment to 150 men and boys and paid £5,000 per annum in wages; it was very important that mining industry should be developed; in 1905 Mr. Walter Long, then Chief Secretary, had visited district and Government made free grant of £24,000

DIGGES, Rev. J. G.—*continued.*

for extension of railway to mines and from Dromod to Shannon at Rooskey, yet when proposal came before Leitrim County Council for approval they threw it out; cost of bringing railway within touch of mines would be only £12,000; Congested Districts Board and Department had not helped to remove difficulties in any way; Board should investigate, take over £24,000, construct extensions and guarantee ratepayers against loss on working, this would develop an industry, retard emigration, provide profitable employment, and reduce liabilities of ratepayers, 34524A.—Railway Company was not private company and had on its Board representatives of shareholders and representatives of County Council, so they could not make extension themselves, 34526.—Large population in congested districts would be benefited, so Congested Districts Board should do it, 34528.—Difficulty of company making extension itself was small capital, £5,000, which was exhausted, 34529.—If Government thought it worth while to give £24,000 free grant they must have thought Treasury would gain, 34530.—£12,000 of that was absolutely for extension of Arigna Valley Railway, 34532.—It had nothing to do with Newry extension, 34533.—There had been proposal to carry line from Arigna to Collooney, but that would cost £150,000, 34535.—The £24,000 was given for two extensions, each to have £12,000, 34539.—Other bit was from Dromod to the Shannon to get into touch with Roscommon cattle fairs, 34541.—And to give outlet down the Shannon, as boats could take coal everywhere,, 34542.—The £24,000 had appeared in the estimates, 34543.—Time had elapsed, but it could probably still be had if Government were satisfied that extension would be made; Board should take responsibility, 34545.—Line as now worked was making profit of £30 per mile in spite of some losses, and if entirely mineral portion were added, which always carried full load, there would be little chance of loss, 34547.—If it were sound policy for Government to find £24,000 it should also be good policy to secure ratepayers in regard to working expenses, 34548.—Railway rate was 1*s.* in the pound; shareholders got 5 per cent. guaranteed dividend, 34549.—The Treasury were responsible for 2 per cent. and rates for 3 per cent., 34550.—Profits of railway had averaged £1,400 for last five years, and this per cent. on £200,000 (cost of railway) would amount to £10,000, 34551.—So only one-eighth of dividend was earned, 34552.—Tax had come down from 2*s.* 6*d.* to 1*s.*, last year it was 11*d.*, but arrangements for sinking fund had increased it to 1*s.* this year, 34553.—All wear and tear had been deducted from £1,400 profit, 34554.—Shareholders were chiefly religious communities in county, but shares were on Stock Exchange, 34556.—Shares were ordinary £100 Stock, 34557.—They stood at £6 10*s.* on £5 or £130, 34558.—Treasury would gain in reduction of liability for 2 per cent. if £12,000 were spent on railway, as there would be increase of traffic, 34561.—Treasury had not given grant when line was made £200,000 capital had been raised and it was guaranteed by Treasury and ratepayers; ratepayers coming first and Treasury next, 34562-6.

M'ENROY, Mr. BRYAN.

See pp. 225-6.

Character of the People.

Witness was well acquainted with rural district, and knew people to be honest and industrious, 34568.

Compulsory Purchase Advocated.—Exorbitant Prices asked for Land.

Compulsory purchase scheme advocated, 34569.—Act of 1903 after three years fruitless bargaining had failed to settle land question in Ballinamore, 34569-70.—Practically no sales had taken place, 34572.—Exorbitant price had been given in one case, owing to ten or twelve years' arrears, 34571.—Prior to Act of 1903 non-congested Godley estate sold at 16 years' purchase with reductions, in many cases reduced to 13 years on inspection, 34572-3.—Murrough O'Brien estate was sold at 18 years' purchase and congested portion for 15 years' purchase, bonus to be used to bridge differences between landlord and tenant, 34573.—In addition to bonus landlord now wanted two or three years' purchase more, 34573.—Harlech

M'ENROY, Mr. BRYAN—*continued.*

Estate congested, offered for sale about twelve years ago at 20 years' purchase, 34572.—Exorbitant price, compared with Godley Estate, 34572.—After Act of 1903 landlord proposed to sell at reduction of 4*s.* 6*d.* in the £, 34573.

Reduction of Rents.—Fixing of Judicial Rents.

Rack-rents in the 'sixties, rent raised on Harlech Estate three times within ten years, typical condition of all estates in district, 34573-5.—Reduction of rent after Land Act of 1881, landlord made a valuation, and in some cases reduced rent 50 per cent, 34576.—Judicial agreements out of court signed by majority of tenants, 34577.—Large amount of arrears had accrued, 34578.—Terms of valuation sent by Lord Harlech accepted by people, and as arrears disappeared they went into court, 34578.—Many people afraid of going into court, 34580.—This year people got 20 per cent reduction, 4*s.* 7*d.* in the pound, and on some estates 9*s.* in the pound, 34578.—Great improvements had been made on Harlech and other estates, 34578.—Complaints that tenants did not get adequate reduction for improvements, 34578.

Drainage.

Necessity for large drainage scheme, field drainage with closed drains and lime, 34579.—Witness thought it was not advisable for tenants to undertake large scheme until dual ownership was done away with, 34579.—Rents would be raised when holdings were drained and improved, 34580.—People were anxious to buy out at a fair price too poor to give exorbitant prices demanded, 34579.

Poverty of People, Medical Relief Tickets, &c.

Medical relief tickets had to be supplied, as people were unable to pay the doctor, it took all their money to pay rent, 34580.—Ballinamore school was in a bad condition, its mud wall supported by props, 34580-1.

Parish Committee.

Parish Committee scheme had worked well in Ballinamore, 34581.—Very poor people were not benefited, as they could not contribute the necessary proportion in order to take advantage of grants, 34582-4.—Work alluded to was for repairs of houses, etc., 34585.

Roads.

District was badly off for roads, but limit with regard to new roads had been reached, 34585.—Standard rate was 25 per cent. beyond the rate for the three years prior to passing of Local Government Act, 34585.—Standard rate in Ballinamore was very low because of excessive railway rate which had to be paid at the same time, and was not taken into consideration in calculating standard rate, 34585.—Resolution had been put before Local Government Board, showing how people were handicapped by this practice, 34585.—And prevented from spending money on local improvements, 34585.

M'CARTAN, Mr. JAMES.

See p. 226.

Cause of Congestion.

Cause of congestion in Ballinamore was exorbitant rents upon the land, 34591.—Tenants forced to go on bogs and mountains, ill-drained and ill-reclaimed, every patch of good land was in the hands of grazier or landlord, 34591.

Compulsory Purchase.

Remedy was compulsory purchase on terms that would give tenants a chance to live upon the land, 34591, 34593.—Witness advocated compulsory purchase because sale of Godley property after Lord Ashbourne's Act became law had been such a success, 34591.—Average price was fourteen to sixteen years' purchase, 34591.

M'CARTAN, Mr. JAMES—*continued.*

Improvements.—Effect of Ownership.

Improvements made by farmers when they became owners of their holdings, shelter belts planted, land drained and reclaimed, houses built and improved, etc., 34591.—Tenants under landlord rule sometimes had improvements which they themselves had made claimed by landlord, 34591-2.—Ballinamore situated in Bawnboy Union, 34593.

Treasury Grant.

Treasury gave grant of £250 to non-congested portion for relief of distress, 34593-4.—Rural district of Ballinamore was equally badly off, but got no help from Treasury, as it was scheduled as congested, 34593-4.

Railway Guarantee.

Complaint of railway guarantee of 1*s.* in the £ on narrow gauge railway, 34595, 34601.—Promoters of line gave verbal undertaking to farmers that tax would not exceed 3*d.* in the £, it had been as high as 2*s.* 6*d.*, for the last fifteen years highest rate had been 1*s.* in the £, 34595-7.—Witness paid 4*s.* 3*d.*, 34599.—His valuation was only £4 5*s.*, 34598.—Railway was some benefit to country, 34600.—Convenient for passengers, but train fare was very high, 35602.—Railway was badly designed, and did not connect with coal mines, coal had to be transhipped at Dromod and Belturbet, 34600.

Purchase of Non-Residential Holdings for Sub-Division Amongst Tenants Suggested.

Purchase of non-residential holdings by Board and sub-division among tenants suggested by witness as an advantage to congested districts, 34604.—Scheduling electoral divisions in rural district of Ballinamore suggested, 34604.

GRAY, Rev. DENIS.

See pp. 226-32.

Fenagh, a typical parish in Leitrim congested districts, land bad, rent high, people deeply in debt to shopkeepers, 34605.—After two judicial fixtures rent still higher than fifty, or even thirty, years ago; on one holding, occupied by three men, rent thirty-five years ago was £5; they improved it by their own exertions, and rent was raised to £40, it was now reduced to £30, after two reductions; four people lived on it now, and had, on an average, twelve acres; one tenant had the whole, originally, it was subdivided privately, and, sub-division was afterwards recognised, 34606-11.—Parish of Fenagh comprised portions of divisions of Rowan, Castlefore, and Fenagh; Rowan and Castlefore scheduled, Fenagh not, it should be scheduled as well as all Leitrim; average valuations of county lowest in Ireland, poverty admitted, needed great care from Board to prevent it becoming a wilderness, was losing its best population by emigration at rate of 1,000 a year; families reared for America, earnings of sons and daughters there were the only means of paying rent, shopkeeper, etc.; no fisheries or industries except poor form of agriculture, no institutions except workhouses; overtaxed ratepayers had to pay nearly 2*s.* in the £ railway guarantee for Cavan and Leitrim Light Railway; coal no cheaper as promised, outsiders paid 11*s.* a ton, guarantors 15*s.* 6*d.*, ratepayers in minority on directorate, 34616.—£77,000 paid by guarantors in last eighteen years to make up deficit and pay 5 per cent. dividends, 34616, 34728.—Poverty operated against Primary education, 9,000 children on rolls, average attendance 59·6, not because they did not value it as many walked miles regularly to night schools; infants attended regularly except in cold weather, when they had no warm clothes, older children had to stay and help get in crops or they would starve in winter, 34616, 34726, 34729.—Compulsion should not be tried, it would take labour from the fields, as there were only the very old and the very young left, 34727, 34729-30.—Carpentry class attended regularly by youths after day's work, 34616.

GRAY, Rev. DENIS—*continued.*

Second Term Rents not on Equitable basis of Purchase owing to Rack Rents.

Few sales under Land Act of 1903, terms prohibitive, 24½ years' purchase or 4*s.* in the £; better land sold under Ashbourne Act at 13 years' with decadal reductions; second term rents not equitable basis of purchase price in parish on account of tenants' improvements and former rack rents, 34616.—O'Beirne Estate at Castlefore offered for 24½ years' purchase, was formerly owned by Mr. Walsh, who did not have low rents; incredible rise in rents after estate came into Mr. O'Beirne's hands, thirty-seven or thirty-eight years ago; rent of Mrs. Gilhooly's holding under Mr. Walsh, £3 2*s.* 6*d.*, under Mr. O'Beirne, £7 15*s.* 3½*d.*, after two judicial reductions, £3 16*s.*; rent of Rodger Leddy's holding, under Mr Walsh, £4 14*s.*, under Mr. O'Beirne, £10 15*s.* 8½*d.*, now £5 17*s.* 6*d.*; rent of Jas. M'Manus holding, under Mr. Walsh, £14 5*s.*, under Mr. O'Beirne, £32 7*s.* 9*d.*, now £15 13*s.*; no turbary attached to holdings on estate, large portion of land reclaimed by tenants from bog, 34616-7.—Operations of Land Commission had nothing to do with increases of rent from time to time of raising by Mr. O'Beirne till 1881, 34694-5.—Purchase made in Encumbered Estates Court, 34619.

Migration.

Migration the most difficult of Board's duties, necessary for relief of congestion, parish priests should be consulted, 34619.

Compulsory Purchase.

Compulsion the only means of making tenants owners of soil on fair terms; pending compulsion the zones should be abolished and County Councils have power of veto on sales, 34619.—Board should have legal power to buy land required for relief of congestion; there should be a tribunal to value lands and do justice to landlords and tenants and fix fair price, 34620-2, 34720-3.—Landlord would not necessarily get his net income if land were wanted for public good, fair for him to part with it at a loss in that case, 34623-7, 34707-9.—The State had power to take a man's possessions, there were precedents in history, 34628-35, 34639, 34709-10.—Landlord should get fair price, 34640.—Of which tribunal would judge, 34641. Landlord owed restitution to tenants in some cases after exorbitant rents of the past, 34641-2, 34655.—If not he should get fair price and not be a loser through compulsion, 34643-4, 34715.—If a commodity were wanted for public need State had right to acquire it no matter what position owner were left in, 34645-6.—Fuel needed as well as land, 34647-8.—If turf were exhausted State would have right to acquire coal mines for people, fair value should be put on them by tribunal, which was what property represented to owners; State should pay them a price that would return what they derived before, 34649-54.—Owners of land should not be penalised because rents used to be high now they were reduced; one landlord in Fenagh made his tenants future tenants and refused to fix rents, he put on exorbitant rents thirty-five years ago when he purchased property, 34656-7.—Future tenant could not go into court, and could therefore be fleeced by landlord, 34660.—Land Act did not apply to future tenant, no provision for fixing fair rents on them, 34661-3.—One man failed to pay rent, was evicted and re-instated as future tenant, paying three times value of land; witness had spoken to agent about it, he promised to look into matter but did nothing, 34664.—Man had no time to go into court before eviction, 34665.—He was in arrears when Act was passed, and no one in arrears could go into court then, 34666-70.—He had no security of tenure as future tenant, 34672.—Compulsion not to be applied if unnecessary, amicable compromise should be tried first if a man offered to sell at 24½ years' purchase, and tenants did not agree to price, 34674-6.—Compulsion should be applied if necessary for 100 acres of grass land required for relief on congestion, 34677-8.—Tenant farmer would be excluded if residential, 34679-80, 34682.—If a shopkeeper had acquired 100 acres for grazing and did not live on land, compulsion might be applied, 34681, 34714.—If a farmer had a second holding adjoining residential one that should not be taken, injurious to bring everything to dead level, necessary to have someone to employ labourers who lived in the cottages that had been built for them, rent of cottages would otherwise fall on rates, 34683, 34733-6.—Act of 1881 had no retrospective effect, 34691-2.—Witness's views coloured by that consideration, 34693.—All the tenants could not go into court immediately after Act was passed, 34697. Arrears kept them out, 34698.—They could be proceeded against for arrears at any time even after lodging application for fair rent, 34699-700.—Process of eviction could only be carried against them after two years, they could be sued in ordinary court of law for balance, 34701.—Evicted tenants on being restored were future tenants as a rule, could be made judicial tenants by mutual agreement with landlord, 34702-4.—Compensation for disturbance a poor provision for a man's future, his only chance was being fixed to his holding, 34705-6.—Question only arose after 1881, 34725.—Compulsion should apply to tenants with large amount of land as well as to landlords, full compensation not necessary, 34711-3.—Might be taken as a general principle that those from whom land was taken should not be in a worse position than they were before, 34715.—No need for compulsion if land could be obtained at fair price, it was simply a case of reasonable price, 34717-8.—Matter not so formidable as it appeared, 34724.—Compulsion should be applied to landlord, tenant, farmer, and shopkeeper, 34731.—there was a difference between man who worked his own grass and one who let it on eleven months' system, latter should have compulsion applied in any cases, 34732.—Would also apply it to shopkeeper using grazing as accommodation land for townspeople, needs of town not so great as of migrants, 34737-8.—If State carried out a policy involving loss to individuals State should bear loss, 34739.

Amalgamation of Congested Districts Board and Estates Commissioners.

Amalgamation of Board and Estates Commissioners opposed by witness, both not wanted in Connaught, Commissioners should work in other provinces and Board in Connaught, 34619.—Leitrim, formerly neglected, should have representative on Board, 34619.

Beneficial Work of Parish Committees.

Parish Committees doing splendid work, sphere of duties and grants should be increased; scheme the best Board had undertaken, work obtained best value, just what congested areas required. material and mental condition of people improved by it, stimulated self-reliance, strengthened economic and social character of people, no other way in which money could be so productively applied, stimulated poor people to make most out of land; had a civilising and educational effect, once people began to improve houses and holdings they would go on; with increased grants under this scheme land in Leitrim could be made to yield double, 34619, 34688.—Absence of labour one cause of land going back, 34684-7.—If farmer were given enough money to enable him to put labour into land and instruction as to use of manures, drainage, stock, etc., land would yield double, 34619, 34689, 34740.—Action of Parish Committee would keep more labour in country, 34690.—If well presided over and efficiently staffed Committees would turn every farm into a garden, 34619.

Rents should be Fixed on Possibilities of Land as Worked by an Ordinary Tenant without Help of Parish Committee.

Rent should not be fixed on the utmost a holding could yield but on its capabilities with an ordinary man, leaving a margin, 34741-7.—Though holding could yield double with extraneous aid of Parish Committee rent should not be fixed higher on account of that, 34748-53.—Extraneous aid was not expected when rents were fixed, 34753-4.—Many could not work land to utmost capability, very unjust for landlord to get benefit of help given by Parish Committee to tenants, 34755-60.—Reduction of rent not contemplated, 34761.—It was too high, and it would be unjust to keep it so on account of help given by Parish Committees, 34762-5.—Man would be able to pay with their help but not without it, 34766.

GRAY, Rev. DENIS—*continued.*

Mineral Resources of Locality.

Mineral resources of locality should be worked, extensive coal fields in Arigna and Slieveanierin, by that means Leitrim could be raised to wealth, high standard of wealth never achieved by agriculture alone; mineral resources should be discovered by putting down bore holes as had been done in India with great success, best coal seams in Arigna reported to have never been reached, bore hole 500 feet deep would probably be beginning of huge development of mining industry in Arigna Valley, and Slieveanierin mountain, 34619.

Compressed Peat Industry.

Compressed peat would be a useful industry, some such industry should be started, want of peat fuel in many parts, price of coal at Arigna prohibitive, compressed peat easily carried long distances, 34619.

Necessity for Drainage and Roads.

Field and arterial drainage and road accommodation urgently needed in Leitrim, twenty lakes in Fenagh parish, with swamps in vicinity; draining two or three feet of water off lakes would make many acres reclaimable, it could be easily done, 34619.

RODDY, Mr. M.

See pp. 232-5.

Description of Witness's Farm.

Witness's farm comprised 18 statute acres, valuation £9 or £10, it was bog land worked as mixed farm, 1½ or 2 Irish acres tilled, the rest meadow and grazing, cows kept and grazed in winter for hay, crops fed pigs and supplied house, 34768-71.—Milch cows kept, milk sold at creamery for 3*d.* to 4*d.* a gallon, usually 3·14*d.* to 3·70*d.* a gallon, price never the same two months running, 34772-5.—Cows fed on grass in summer, hay in winter, 34776, 34829-30, 34833.

Calf-Rearing.

Calves given natural milk till eight weeks old, then maize and separated milk when they began to get on, 34776-7.—Not much grown for winter feeding, a few mangolds, cows got some half-threshed straw as well as hay, 34831, 34836.—Calves also fed on hay as well as Indian meal, &c., 34834.—No reason why calves should not be good if fed in that way, in spite of creameries, 34778.—No butter in winter, as cows were dry, 34835.

Home-Made Butter v. Creamery Butter.

Selling milk to creameries made about the same profit as home-made butter, saved labour, if there were good butter-makers at home they would beat creameries, ordinary country butter not up to standard, bad butter makers made more by selling milk to creamery, good deal of bad butter in market, 34779-82.

Usefulness of Instruction given in District up to the Present—Parish Committees the only Valuable Institution.

Department of Agriculture useless up to the present and almost everything else, except Parish Committees, 34810.—Lecturer sent by County Committee no practical use, he came so seldom, 34811.—More useful if Parish Committee administered County Committee's funds, 34812.—Good men on County Committee, 34813-4.—Uselessness of present methods has been pointed out, nothing done to improve them, 34815-7.—Lecturer told them a number of things, such as importance of making manure in winter for cropping in summer, and of having crops of mangolds and turnips to feed cattle in winter, and that ravages of the fly kept back growth of turnips, lecture not practical on the whole, 34837-42.—One experimental plot in district for first time this year, on medium land, such as people had, owner of farm gave labour which he applied according to directions of Committee's expert, there had not been much time to look at it yet, 34818-20.—Not cropped last year, the only experimental plot was half an acre of potatoes, lea field could be cropped, and potatoes planted where oats could not be sown, 34843-4.—Witness had never heard of plots off which crops of turnips, mangolds, etc., were taken, 34845.—Potato plot the first and only one in witness's district, 34844, 34846.

RODDY, Mr. M.—*continued.*

Veterinary Assistance Needed for Cattle.

Veterinary assistance needed for cattle, none in locality, except quack doctor, nearest veterinary surgeon in Boyle or Longford, they seldom came, and charged highly for distance, 34846-8.

Suggestions for Relief of Congestion.

Relief of congestion recommended by Aughnasheelan Branch of League by means of land purchase through Congested Districts Board, migration, reclamation of cutaway bogs to enlarge holdings and assistance to holders to improve productive powers, 34783, 34797.—Parish Committee best agency, limits of their operations should be extended from £7 to £10 valuation, 34784, 34808-9.

Migration.

Some holders in district would migrate a reasonable distance, 10 or even 20 miles, perhaps further, 34785-88.—Difficult to get heads of families to go out of Leitrim, young men might go to any part of Ireland, 34789-90.—No hard and fast line, men with families would not like to go far away from their friends at first, 34791-3.—If several families went together they would go 30 or 40 miles irrespective of county, 34794-5.—Migration would relieve congestion, 34795, 34801.

Enlargement of Holdings by Drainage and Reclamation.

Reclamation of cutaway bogs by some agency like Parish Committee would add to holdings, considerable amount available, 34795-6, 34798-800.—Parish Committee could do a great deal in the way of drainage and reclamation, 34802-3.—Mountainous tracts in Greshlaun, 34804.

Congested Area in Ballinamore.

Whole parish of Ballinamore congested, holdings fairly large in one electoral division, outside that they were mostly under living standard, 34805.—Poor men outside scheduled area as much in need of assistance from Parish Committee as those within, 34806-7.

Objection to Direct Sale Under Act of 1903.

Sales between landlords and tenants should be stopped, under pressure of arrears tenants agreed to a price up to 21½ and 24½ years' purchase in order to get relief from arrears, from the fear of eviction, no security for 24½ years' purchase, 34822, 34825.—Not much buying in this district under last Act, some under previous Acts, 34823.—Annuities could never be got from tenants who had not paid rent for 14 years, estates sold under Act of 1903 at 24½ years', and under previous Acts for 16 or 14 years' purchase, 34824.—Old Acts not objected to, 34826.—Under direct sale under Act of 1903, landlord had upper hand, county would have to pay for poor tenant, 34827.—That had not occurred yet, tenants had agreed to price on some estates because they were in landlord's hands, while on neighbouring estates they would not take either 24½ or 21½ years' purchase, 34828.

KANE, Rev. MATTHEW.

See pp. 235-7.

Inadequacy of Grants to Parish Committees.

Ballinamore district congested; people very poor; equally so in non-scheduled districts as in scheduled; district mountainous; crops dependent on weather; potatoes failed last year; Board did nothing except give usual dole to Parish Committees, which were not adequate to needs, 34849-51.—Committees did best they could on their poor means, 34860.—Leitrim got less assistance from Board than any other county, 34868.—Grants to Committees should be increased, and they should be consulted about local schemes, 34869, 34893.

KANE, Rev. MATTHEW—*continued.*

Untenanted Land.

360 acres of untenanted land available for relief of congestion in district, 34851.

Evictions.

Evictions carried out in 1892 with characteristic cruelty by landlord; witness thought all landlords cruel; had never heard of good one; agitation in Stroke in 1892 to get rents reduced after bad year; people unable to pay were evicted; agent was lenient, so special agent was appointed, who burnt people's houses; slated houses built for emergency men put in on 11 months' system, they never paid rent, 34854.

Compulsory Purchase.—Grants to be made from Excess Taxation.

Compulsory purchase remedy for congestion; should be at moderate price; Congested Districts Board should get further grants to be paid out of Treasury; Ireland overtaxed by four millions a year; this sum should be allotted to congested districts; witness thought figure really higher, 34854-9.

Instances of injustice of Landlords.

One landlord before Land Act of 1881 took 4,000 acres of mountain for a grazing ranch for himself; land valuable limestone; fence put round; patches at foot of mountain left to farmers; rent raised 1*s.* in the pound every successive year; one tenant prevented keeping ducks for fear they should eat fry of fish in landlord's pond; another told he would be evicted if he irrigated his field, as fish got out of pond when sluice was opened, 34859-60.—Another agent raised a man's rent £1 because he caught him shooting a magpie, 34860.—Another man made to send his son away because he beat a neighbour's son at boxing; same agent fined tenants who came late with rents; people said he pocketed fines; he also sold landlord's portrait, forcing people to buy it; no peace in country till landlords were bought out, 34860.

Industries.—Cottage Dairies *v.* Creameries.

Drainage and dairies should receive more attention, 34860.—They would be reproductive, 34872.—Home industries necessary to stop emigration; buttermaking the only one, and that was being destroyed by the creameries; only one day's milk kept by the farmers, 34872.—Creameries did harm; home-made buttermilk better for children, the best of tonics; better dairies would secure good milk and butter and industries for people who now emigrate, 34860.—Uniform standard butter could be secured if cottage dairies were built to each house, 34861-2.—Dairies having been built instructresses could be sent, 34863.—Not done before because people could not afford it, 34864.—£8 or £10 required to build dairy; hot water pipes necessary to keep up temperature in winter, 34865-7.—Dairy should be near house, with outside entrance, 34868.—Creamery not so profitable as dairy; creamery started as experiment and was co-operative, no profit, 34873-81.—Price of butter in French War 1*s.* 3*d.* a lb., average price in 1890 11*d.*, 34882-6.—Three gallons of milk to one pound butter, 34887.—3½*d.* to 4*d.* a gallon paid for milk in creamery, 34883.—Cottage dairy better than creamery, 34894.—Witness had been in Leitrim eighteen years, before that in Donegal and Monaghan, 34869.

KANE, Rev. MATTHEW—*continued.*

Protest against breeds of Live Stock introduced by Department of Agriculture.

Department of Agriculture ruining country with regard to breeds of live stock, not suited to country; Board would do better in consultation with Parish Committee to find out local requirements, 34869, 34891.—Breed of carriage horses destroyed by cross-breeding with English; the few donkeys a total failure, unable to carry back load, harder to feed than horses; old Irish donkey carried heavy loads and was easily fed; fowl disease unknown till new breeds were introduced; pigs a failure; old pig with very long snout gave better bacon and used to plough fields in winter; they had not died out, 34870-1.

One agent buying a property borrowed money to do so and doubled rent; tenants had to sow flax every year to pay it; that ruined land, 34870-1.

MULVERY, Mr. PATRICK.

See p. 237.

Parish Committees.

Parish Committee of Currabeer got £50 grant; this was the third year of working; eighty applications, fifty-six persons got portion of grant; very poor people got no benefit; discretion should be given to Parish Committee to deal with exceptional cases, which were few; they could not make exceptions at present; seven-eighths of people could fulfil conditions, but there were some who could not; one-fourth value of improvements given by Committee; witness had already pointed out need to Board; something could be done if they would send inspector, 34895-905.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

MINUTES OF EVIDENCE.

SIXTY-SECOND PUBLIC SITTING.

WEDNESDAY, APRIL 17TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Temperance Hall, Grange, County Sligo.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. HENRY BRENNAN examined.

27370. Sir FRANCIS MOWATT.—What institution or association are you representing here this morning?—I am representing the County Council of Sligo. I am Vice-Chairman.

27371. You have not sent in any memorandum or sketch of the evidence you desire to give?—No; I made a sketch of my own; only merely a sketch note.

27372. Do you propose to give evidence merely on the local requirements of Sligo, or generally on the steps which the Commission may be advised to take?—My evidence would be on the local needs of the county, and particularly the local needs of my own electoral divisions of the county.

27373. Which are those?—Cliffoney North, Cliffoney South, Ross Inver East and Ross Inver West. Of course Cliffoney North and Cliffoney South are congested, but Ross Inver East and Ross Inver West are not congested—a point which I shall make farther on.

27374. When you say not congested, you mean not scheduled as congested?—Not scheduled.

27375. But perhaps it would be the most convenient way of taking your evidence that you should make your statement, and we will ask you questions on any opinions or facts that you adduce to us?—Very well.

27376. Mr. O'KELLY.—Are you here in the dual capacity of representing your own immediate electoral divisions and also representing the County Council?—Yes. I may say we held a meeting in reference to the needs of the local people.

27377. Sir FRANCIS MOWATT.—Then make any statement you desire and we will ask you any questions that occur to us upon it?—Well, the first general statement I would like to make is this. I would like to see congestion scheduled all over Connaught, and, furthermore, my two electoral county divisions which run along the mountain flat, or rather the mountain side, notwithstanding that the rule of the Congested Districts Board does not admit of scheduling them in consequence of the acreage valuation—it is a fundamental rule of the Congested Districts Board that when the valuation exceeds 30*s.* per head the district will not be scheduled as congested—but notwithstanding that the population is less than would entitle them to be scheduled as congested, they are as poor or poorer than those two divisions that are congested.

27378. And what are the exceptional circumstances that raise the valuation over 30*s.*?—They hold more mountain land, and the land, I must say, is of a very inferior quality.

27379. Mr. O'KELLY.—What you mean to convey is that when the Poor Law valuation is above 30*s.* per head the district is not scheduled. It is not on the valuation of the acreage of course?—Yes. The wording I presume on that point is this, that if the population and valuation are taken in round numbers and if the valuation exceeds in round numbers 30*s.* on the population, then, of course, it is not congested. Am I right there?

27380. Sir FRANCIS MOWATT.—Yes.

27381. Mr. O'KELLY.—You are quite right. I only wanted to make it clear.

27382. Sir JOHN COLOMB.—The scheduling is not by the Congested Districts Board but by the Act of Parliament?—Oh, yes, I believe that to be true, but I presume we are here with the object of repealing the Act of Parliament by our evidence or by the report and findings of the Commission. That is one point I would like to bring under your consideration. There are other points with regard to local works in the congested districts, and amongst those local works one of the greatest and most urgent needs in my own district is the draining of the flooded area in Cliffoney North, in the townland of Bunduff, for which I have got a memorial—I think this appeal has been made before to the Congested Districts Board from the people that are the sufferers. It is on the property of the Rt. Hon. Evelyn Ashley.

27383. Sir FRANCIS MOWATT.—What is the name of the property?—Well, they call it the Ashley Estate, and Bunduff is the townland.

27384. Sir JOHN COLOMB.—What electoral division is it in?—The Cliffoney North electoral division. There are seventeen tenants adjoining this, and their lands are flooded, I may say, the whole year round, so much so that the road which leads into their houses is flooded, and they have to go up through the fields even in time of death or sickness, for doctor or priest, and to trespass on other people, and if there is a burial or death in the townland they have to carry the corpse that way, for though there is a road, the road is flooded. And there is a means that could be adopted of relieving this flooding by running a drain through the landlord's property, for which no compensation could be claimed, because it is his own flooding, and it could be run into the Atlantic at Mullaghmore, and the cost would not be very much. I think the Congested Districts Board have been memorialised on this point already, but they have done nothing. They have done nothing for these poor people. I have advised them again and again to apply to their landlord, and they have done so, and their landlord has done nothing. He said he would remedy it, but he has done nothing except to take their rent, and he is very agreeable in doing that.

Apr. 17, 1907.

Mr. Henry Brennan.

27385. Mr. KAVANAGH.—Are the people you are talking of in a congested area?—Yes, and I can give you their names and the valuation, and the memorial. They have made a very strong appeal to me, of course, as a Poor Law Guardian and as a County Councillor, and on all the public boards of the county. I may say I am a member of all the public boards in the County Sligo, and they have made a very strong appeal to me and also to their priest here and the doctor.

27386. Sir FRANCIS MOWATT.—Did I understand you to say that the landlord expressed his willingness and intention to make a drain?—He expressed his willingness to make a drain but he only botched the thing. The tide sometimes comes in but does not affect the flooding. It is merely from the mountain and bog and streams; but the tide has this effect, of stopping the outlet and it comes sometimes and opens a channel and at what we call low tide, but it is merely nominal. It is no labour whatever, and no relief to the bulk of the water. I am a resident there for thirty-one years and take a very deep interest in the matter, and the only relief that could be got would be to run a good open drain, piped and closed after a little time, and take away the flood, and then when this would be accomplished it would not only benefit the tenants but benefit the land for a great distance around.

27387. Mr. SUTHERLAND.—Would the tide come back on the pipes?—No, because you would bring it to a lower point where the tide comes. I think I explained that the tide does not do the flooding, but you take it out at a level below the flooding.

27388. Would not the thing be to make a lock and keep the tide and let it run out at low water?—I am not an engineer, but from conversations I have had about the matter they tell me this could be done, and others tell me other means. Of course I agree about the lock.

27389. Mr. O'KELLY.—With whom had you the conversations?—With these people.

27390. With the County Surveyor?—No; not with the County Surveyor. You see they have asked me to bring it up as a county business. Our county says that the landlord is responsible for these damages and why not sue him, and the answer is that they have no means to sue him, and they are afraid, because they have four or five years' arrears of rent.

27391. And as you could not get the landlord to do it you appealed to the Congested Districts Board?—Yes.

27392. What area, approximately, is under water?—Well, I suppose there are 140 acres more than half covered with water, and there are seventy-one acres that suffer by this.

27393. How many people are affected?—Eighteen.

27394. How many people occupy holdings?—Eighteen people occupy holdings.

27395. It is a scheduled area?—A scheduled area.

27396. What is the answer of the Congested Districts Board to your appeal?—I could not tell you.

27397. You got no answer?—They got an answer, but I have not it.

27398. When did you apply to them?—Two or three years ago.

27399. Surely they must have sent a reply?—I did not personally apply to them. I applied on behalf of the tenants.

27400. You do not know what the nature of the answer was from the Congested Districts Board?—I could not tell you. I think the nature of the answer, if I remember, was that the landlord made some objection.

27401. That the landlord made an objection?—Yes.

27402. What objection did he make?—Perhaps he wants it for his birds or something of that sort.

27402A. What?—The swamp.

27403. Sir JOHN COLOMB.—When you say "they" applied whom do you mean?—I mean the tenants, the sufferers.

27404. Who was the chief tenant. Generally there is one leading man in the case of numerous tenants. Is he coming before us on this matter, as he could give us direct information as to the nature of the communications with the landlord?—I asked him to come, and a tenant adjoining, and I am not sure whether they will come or not, and unfortunately they put more on my shoulders than I am able to carry sometimes.

Sir JOHN COLOMB.—It is generally the case of an active man.

27406. Sir FRANCIS MOWATT.—What you know is that they applied to the landlord first, and that the landlord while recognising that something ought to be done has not done sufficient to get the water off at all events?—No. So I say.

27407. Thereupon they applied to the Congested Districts Board?—To me to bring it before them.

27408. And you, on their behalf, applied to the Congested Districts Board?—I advised them to do so.

27409. You did not apply?—I did not apply personally.

27410. When they asked you you recommended them to apply?—Yes.

27411. And they applied?—They applied.

27412. And you do not know what answer they got?—Except from verbal recollection that they have told me the answer was that they sent down a man and that the landlord made some objection, and I do not know what the objection was.

27413. And that was two years ago?—About two years ago.

27414. And nothing more has been done?—Nothing more has been done.

27415. Sir JOHN COLOMB.—Do I understand that you applied on behalf of the tenants?—I drafted a memorial for them in their name, and they signed their names to it of course.

27416. Most Rev. Dr. O'DONNELL.—Do you think that it is likely that in the course of the day when volunteers are coming forward to give evidence, some men will come from that property to state the tenor of the reply from the Board?—Well, my lord, I cannot answer that, because I really did not urge them to come.

27417. Sir JOHN COLOMB.—Are there any of the men here at all?—I think not.

27418. Is it far from this?—Four miles from this, within a quarter of a mile from Mullaghmore.

27418A. Sir FRANCIS MOWATT.—At present you leave us without any definite information to carry it any further, but perhaps that matter can stand over?—They may come forward Mr. Chairman, in a very short time. Another very important point that I wish to bring before you is with regard to the sea-weed and the making of kelp in this locality. But I beg your pardon, I may just first go into the subject of Mullaghmore Harbour, which is also in the congested district.

27419. Sir JOHN COLOMB.—What electoral division is it in?—It is in Cliffoney North, Mullaghmore Harbour. I have been requested to mention it by all the people who fish there. I think we have about thirty boats, and they asked me to request that something should be done to the harbour. It is a very pretty harbour, and I believe, the property of the landlord as far as I am able to understand; and the length of it is about 120 or 140.

27420. Yards?—Yes. About 700 wide, and it is a very nice harbour, but they inform me that they cannot get any vessels into it of any dimensions.

27421. Sir FRANCIS MOWATT.—Do you think it is a nice harbour though you could not get any vessels into it?—Of course it has been a long time neglected. Of course we do get vessels into it, but we could get larger vessels. We get vessels into it of 100 tons and of 120, with coal and for kelp.

27422. Most Rev. Dr. O'DONNELL.—Is it silted up?—Yes, it is silted up.

27423. Sir JOHN COLOMB.—How deep is it at neap tide?—At neap tide it goes entirely dry, and you could walk through it.

27424. And at full tide?—At full tide it would be about twelve feet.

27425. Most Rev. Dr. O'DONNELL.—Has the Board done anything there?—They have, they say, in 1903. That is another point that I go into further on. In 1903 they say in their schedule that they spent £348. Of course I do not know that they did. I have not seen any work going on or seen any person employed there and I live within a mile of it, and it is opposite my door and I could see anyone working on it.

27426. Sir FRANCIS MOWATT.—What year is that?—1903, for Mullaghmore Harbour jetty. But I fail to see the improvement and I fail to see who did the work on the jetty, whether it was done by the Board or by whom. I asked the question and could get no one to tell me who they were that did the work.

27427. Sir JOHN COLOMB.—Whom did you ask?—I asked the inhabitants of the locality, and there is one thing I find fault with the Congested District

Board for, and I do believe I have grounds for it, that whatever public works are done in the locality the representative of the locality is never consulted with and never knows a word about it.

27428. Sir FRANCIS MOWATT.—You go as far as to suggest that there was a mistake, and that no improvements or repairs were made in 1903?—No; I have not seen any, nor do I know of any construction about the harbour.

27429. Sir JOHN COLOMB.—Do you dispute that the money was actually spent?—I do.

27430. Do you dispute that improvements and repairs to the value of £348 were executed at all?—Yes.

27431. Most Rev. Dr. O'DONNELL.—Would there be any mistake about the date; would the improvements have taken place earlier than the date assigned to them?—There was an improvement, my lord, done to the pier or breakwater running out, and that improvement was merely some cement.

27432. Sir FRANCIS MOWATT.—In what year was that?—It must have been previous to that year, 1903.

27433. Most Rev. Dr. O'DONNELL.—The date assigned to the expenditure may not have been quite the same as the date at which the work was carried out. About consulting the local representatives, might there have been a difficulty in this case owing to the fact that the works at Mullaghmore are private property?—Well, I do not know, my lord, but I speak from my experience of fifteen or sixteen years and knowledge, as a local man, of the work of the Congested Districts Board since its inception. It is becoming now a second Commission of Estates, but in the earlier days I took a deeper interest in it.

27434. Sir FRANCIS MOWATT.—Let us clear this up. You have, for many years now, taken an interest in this harbour and its surroundings?—Quite so.

27435. And you live on the spot or in the immediate neighbourhood?—I live within two miles of it. I may say I take a walk there nearly every day when it is fine.

27436. So that one would say that at all events if a sum of £348 had been spent during that period at any one time on the improvements in the harbour you must have noticed it?—I must have noticed it.

27437. And you never did notice it?—I never did notice it.

27438. But you did notice an improvement to the breakwater?—Yes, I did.

27439. And you do not recollect what year that was in?—About three years back.

27440. That would carry us to 1903, would not it?

27441. Sir JOHN COLOMB.—You gave us the date 1903. How did you arrive at that, because here it does not appear that it was in 1903. Was it from the report?—Yes.

27442. Of the Congested Districts Board for 1903?—Yes.

27443. Sir FRANCIS MOWATT.—I think we have found the explanation of this matter. You stated that that £348 was spent in 1903, but it appears that the expenditure began previous to 1898, and that after 1898, in 1899, it had reached £348, and there has been no construction or work on that since. Therefore, the expenditure of £348 was concluded in 1899. Do you recollect that expenditure?—I recollect no expenditure in fact since the Congested Districts Board was established except this one expenditure that I refer to, of cementing and concreting the sea wall.

27444. Mr. SUTHERLAND.—Was that expensive?—No; the length of that would be 40 or 50 yards.

27445. Was it at the other end?—Yes.

27446. Where the tide covers it?—Where the tide washes over it.

27447. Are you aware that work of that kind is exceedingly expensive?—Oh, yes; I do not question that.

27448. Well, might not the sum of £348 be spent on that?—Oh, yes; but not to my mind.

27449. Sir FRANCIS MOWATT.—But at all events what you say now is that whatever the work on the harbour may have been, it has now silted up, and do I understand that you have any boats belonging to the harbour which cannot get in or out?—Well, larger boats would get in. Of course, in neap tide boats cannot get in at all. For argument's sake, the fishermen have to wait for the tide.

27450. Mr. SUTHERLAND.—Is that because of the filling up?—Yes.

27451. And when it was first made it was deep enough for them, was it?—Oh, quite deep enough.

27452. In Ireland is it the habit or custom that harbours are kept clean at the public expense?—I have not heard that.

27453. Has it ever occurred to you that that is a work that ought to be done locally?—Yes, but we have not got a local hold of it.

27454. You have not a local authority of any kind?—It belongs to the landlord.

27455. Does he levy the dues?—No.

27456. Mr. O'KELLY.—Does the County Council of Sligo contribute anything towards the maintenance of piers and harbours?—Yes but we have not this.

27457. Since the Act of 1898 you have not contributed anything?—Not to this one.

27458. But to any?—Oh, yes, I think so.

27459. Most Rev. Dr. O'DONNELL.—Did the owner at any time endeavour to dredge the harbour?—Not the present owner, but years ago it was kept in order by the late Lord Palmerston and Lord Mount-Temple, but Mr. Evelyn Ashley has done nothing.

27460. Sir JOHN COLOMB.—Is that only since 1881?—He has been in possession only a few years.

27461. That is not my point, but that the previous person did work which the present owner does not do?—Yes.

27462. Was the cessation of expenditure after the Act of 1881?—There could not be a cessation, because he did not do it before or after.

27463. I thought you said before that it had been kept clean years ago?—It was kept clean by the uncle of Mr. Ashley, Lord Mount-Temple. It was kept clean by Lord Palmerston in his day, as far as my recollection goes or as far as I am informed; but Mr. Ashley got possession of this property, I think, as well as I can recollect, in about 1877, and nothing has been done by him since. And, therefore, I shall be safe in saying, I do not know if you have any motive for putting such a question, but I daresay the passing of the Act of 1881 might have prevented him if he had an inclination, but he had not one either before or after.

27464. That is all we want to ask about that harbour. You put that in on your way to some other point you wanted to mention?—Now, I wish to bring under your notice the kelp industry. That is an industry that has been a very successful one and very profitable and very remunerative to the people here. There were hundreds of families that used to gather this weed from the sea and burn kelp, but it has been so monopolised by one buyer that they have dwindled down almost to let it die out.

27465. It has been so monopolised by one buyer?—Yes. On the ground that they cannot get a market for it. They have no encouragement, and they cannot get a market for it. We formerly got as much as £5 or £6 a ton for it, and it is now down to £3, or at the very highest £3 5*s.*; and at the end of the season to 50*s.* and 30*s.* and 35*s.*; and the poor people do not think it is worth while looking after. And it is a very fine thing, and there is plenty on the shore there if buyers would give the reasonable prices of the time when they gave £5 or £6 a ton for it. From information that I have received from others in Glasgow and elsewhere they get iodine and what is extracted from it in a superior condition now.

27466. Sir FRANCIS MOWATT.—Cheaper? But I am afraid they have other means of getting it than from kelp, and what has happened is that the buyers have fallen off, because they do not find it to pay them at that price?—Yes.

27467. Can you suggest any remedy for that?—I would suggest that the Congested Districts Board would either give a grant or seek to establish a market somewhere else, or turn kelp-making into a factory themselves.

27468. Most Rev. Dr. O'DONNELL.—Do you see, Mr. Brennan, that there might be some danger in making that experiment? Is it not the fact that those who control the iodine trade might close up the kelp industry on the Irish coast if opposition was threatened? Might they not refuse to take Irish kelp at all?—Oh, these buyers?

27469. Yes?—Well, my lord, I have not heard that, but I have heard that Spain or Cuba, or some of those places would send in a substitute to England if they refused to buy; but that would be running it on a sentiment.

27470. Sir Francis suggested to you that some explanation might be found in the larger output in other countries. That has undoubtedly occurred in South

Apr. 17, 1907.

Mr. Henry Brennan.

America. It is said, rightly or wrongly, that the production is so abundant that they could dispense altogether with the iodine which is got from Irish kelp. However, I take it that one of your suggestions was that a factory might be tried for the production of iodine and by-products derived from kelp?—Yes.

27471. That is one suggestion. But let me put this view. Has it been complained by buyers that the article is not as good as generally it used to be?—Yes, that has been a complaint by purchasers.

27472. I put it because I am aware on the Donegal coast that there are many complaints of that kind?—Yes, that complaint is made of some that is shipped from Mullaghmore.

27473. They say that on the Donegal coast; there they complain that the article is not as good as expected?—Yes.

27474. In view of that, what do you think of some authority like the Congested Districts Board appointing an inspector here and there as a guarantee to buyers that the article was made up to a proper standard?—I daresay that would be a guarantee to buyers, but you know that the buyers send down a man with instructions to see and test how many ounces or pounds, say, of the extract of iodine he is able to take from a ton of kelp, and, of course, it may be right for the Congested Districts Board to do as your lordship mentions, but the buyer still would buy it merely on the advice of his own man, his own inspector.

27475. Sir FRANCIS MOWATT.—But the difficulty which occurred to me is that in either case he will not buy it except in the expectation that he will make a profit on it?—Just so.

27476. But, unfortunately, if other nations or other people can produce kelp at the highest at £3 a ton there is very little opportunity of our selling our kelp here at more than £3 a ton, and that is the real difficulty. And now you suggest that the Congested Districts Board should make a species of experiment and see whether they could not get more than £3 a ton?—Quite so. I suggest that they should take up the manufacture of iodine themselves.

27477. Mr. SUTHERLAND.—And bear the loss?—You could speculate either loss or gain in it. It is a two-sided question. They should bear the gain as well as the loss.

27478. I suppose you are aware that the whole market for the British manufacture of kelp is about 7,000 tons, and that there is no probability or possibility in the face of Chilian produce to increase it?—I am not aware of the figures.

27479. So that it has not a very hopeful outlook?—I fear it has not.

27480. Most Rev. Dr. O'DONNELL.—You would not be surprised to hear that, as a matter of fact, the Congested Districts Board contemplated such a factory as you have now suggested?—I did not think I was such a prophet.

27481. But you will not be surprised, also, to hear that when they found that those who control the iodine trade might refuse in case such an opposition were sprung to buy Irish kelp, the Board, in the interests of Irish kelp-making, hesitated and did not push the experiment?—Yes.

27482. Mr. KAVANAGH.—Is it only in this locality that the price of kelp has fallen so much?—Oh, no; I daresay it is general.

27483. Have you any idea of what they get down the coast of Donegal, for instance?—A good deal of Donegal kelp comes up to Mullaghmore Harbour.

27484. Would you think that your kelp made here was as good in quality as Donegal kelp?—Oh, yes; they get more for it.

27485. They get a higher price for it than they do in Donegal?—Yes, what is gathered here along the sea coast. There is no better or more productive seaweed got than what is obtained here.

27486. Sir FRANCIS MOWATT.—At its very low price could you say what you could make here?—In the end of the season it comes down. They start at £3 or £3 5*s*., and a company who have been buying many years gave them that. We had very good buying at one time, and it went to nearly £8 or £9. Now it is £3, and at the end of the season it would drop down to 30*s*. or 20*s*., and that disheartens a man, with two or three or four boys, to go out into the sea and gather it, and the industry is dwindling away.

27487. Mr. KAVANAGH.—At what price would it pay them?—Well, they tell me £5 or £5 10*s*.

27488. I mean the producer, not the buyer?—That is what I say.

27489. Nothing less than £5 would pay him?—Nothing less; but you see the way it is in the winter time with the poor people. They have nothing else to do. The people will go out when there is what we call the throw of the wrack in, and they gather it, and put it up, and, of course, it affords employment to two or three boys in the house. It would not be a lot at all, because there is a great deal of trouble with it.

27490. Mr. SUTHERLAND.—Is it a Glasgow firm that buys?—I think it is.

27491. Most Rev. Dr. O'DONNELL.—Do the makers here run it into the solid or sell it in dry ashes?—They run it into the solid.

27492. Sir JOHN COLOMB.—But your kelp fetches a higher price, and therefore they are not so hard hit here as in Donegal?—I suppose our seaweed is a great deal richer in quality.

27493. Most Rev. Dr. O'DONNELL.—There is a great deal of variety in it. The Mayo weed is very good, is it not?—Yes.

27494. Sir FRANCIS MOWATT.—Now we have dealt with that?—I have also been requested, before I leave Mullaghmore, to make an appeal to your Board for a curing-house for fish. The fishermen tell me that they lose almost half their earnings by having to sell at an early hour of the day to what they call local buyers or "cadgers," which is the term they are known by in our phraseology, that is men who come with carts from Bundoran, and shippers, and take them away to the railway. They put out to sea at five o'clock in the morning and set their lines or nets, and they cannot stop out fishing longer than two o'clock in the day. And they state to me, and I believe it is a very sound reason, that if they could stop out till four or five o'clock in the evening and bring in their fish and sell them or get them cured and send them on to market they would make more money, and that from two to five is the time the take is on. That is another point they asked me to bring before you.

27495. When you say a curing-house do you merely mean a cold house in which the fish could lie till morning, or that they should be opened and salted?—A house where they could be opened and salted, such as they have at Dunmore and other places.

27496. Sir JOHN COLOMB.—What fish are you speaking of when you speak of a take in the afternoon?—I am talking of mackerel and haddock and whiting, and the general fish taken in the day.

27497. The taking of mackerel, that is night fishing, is not it?—Yes. They go out at five o'clock in the morning, but they fish all day for it.

27498. But you do not take mackerel in the afternoon?—Well, they led me to believe that they do. I am not a fisherman. I know I was down last summer at Dunmore, and I saw curing houses there.

27499. Has the locality, or this section of the locality, brought this matter before the Congested Districts Board or before the Fishery Branch of the Agriculture Department?—I think not.

27500. Most Rev. Dr. O'DONNELL.—How long have they felt the want of it, has it been for a long time?—Oh, I daresay it has.

27501. Mr. SUTHERLAND.—Do the fishermen there fish for anything except the local needs?—They fish for all.

27502. They sell all the fish in the neighbourhood itself, fresh?—Oh, yes; there are buyers coming from Bundoran and from Sligo.

27503. And do they send the fish away?—Yes.

27504. Where to?—To different places, some of them put into barrels.

27505. Then you want the Congested Districts Board to do something further?—Yes. They send them fresh. Now, there are one or two local buyers, and they come and want the catch. They come from Bundoran and Sligo, and they have to bundle up the fish and put them into barrels and send them.

27506. They do something to them before they put them into the barrel?—I do not think they do.

27507. Do they not gut them out, split them, and put them into light salt?—No, I do not think they do. No, I know they do not.

27508. They send them away fresh?—Yes.

27509. Sir JOHN COLOMB.—You are speaking of Mullaghmore Harbour?—Yes.

27510. You live close to there?—I do not live in the village, but I live in the next village, and I am thoroughly conversant with the mode in which they work.

27511. Mr. SUTHERLAND.—Are you conversant with their idea of how the Congested Districts Board could

go about a curing house?—Their idea is first to establish a curing house, and then to send a man to educate them how to salt and cure the fish.

27512. To teach them the way to do it?—Yes.

27513. And do you think they are not sufficiently aware of these operations themselves?—I do not think they are capable of curing, and if they were capable of curing, they have nowhere to store.

27514. And would they not have to dispose of them after that. Supposing you partially cured the fish, how would you get them away? What is the nearest railway station?—Bundoran.

27515. How many miles?—Seven.

27516. Do coasting ships call there at all?—Well, we have no ships calling there in the shape of coasters except a kelp vessel of about 120 tons, or a coal vessel from Bundoran, about 120 tons, a small steamer. There is no direct trade. They did trade with Belfast, but they gave it up. They failed.

27517. You would use it on any day when there would be a big catch of fish?—Oh, yes.

27518. What is the prevalent fish that is caught—is it cod?—Codfish, a great quantity of it.

27519. During what month is that in?—January and February.

27520. Most Rev. Dr. O'Donnell.—Had the Board a curing station at any point along this coast at any time?—No, not to my knowledge.

27521. Mr. O'Kelly.—Have you any idea of whether they have one on the coast of the County Mayo at any place?—I could not answer.

27522. Most Rev. Dr. O'Donnell.—I suppose the fish carted is herring or mackerel, or cod or ling?—Yes.

27523. Then for any quantity that was in excess of what could be sold fresh there would be need of a curing station?—Yes; and they state to me that they would get more for it. Their grievance to me is this, and I believe it. They say, "If we stop on after two o'clock the buyers go; and we must be in with what we have, when we have only three dozen or five dozen or one dozen, because we would get no one to take them; they would be away. But if we stopped out till five o'clock we would come in with ten dozen, and we could rely on selling some fresh and some cured."

27524. But will there be any of the fishermen here to-day to put before the Commission their practical experience as to what they lose by not having a curing station?—I expect so.

27525. Mr. Sutherland.—Of course, mackerel and herring are night fishing?—Yes, I believe herring, and some mackerel.

27526. Sir John Colomb.—Is not all the mackerel fishing night fishing?—I am not quite sure.

27527. Sir Francis Mowatt.—As regards these two fish, I do not gather that you think there would be any use in their staying out during the afternoon?—I daresay not. Of course, the fishermen will answer that question much better than I. I think I have already dealt with the recommendation about non-congested and congested areas.

27528. Sir John Colomb.—You recommended that the operations of the Board should be extended to the whole of Connaught?—And I said also that I would appeal to the Board strongly as to these two electoral divisions.

27529. Sir Francis Mowatt.—Which are those?—Ross Inver East and Ross Inver West.

27530. Most Rev. Dr. O'Donnell.—The way in which you put the case of these two divisions to the Commission was, I think, that they were as poor as any within the scheduled area? Is that your point?—Yes, that is my point; and poorer.

27531. Mr. O'Kelly.—And you would appeal equally strongly for other districts of the County Sligo similarly circumstanced?—Similarly circumstanced.

27532. Similarly circumstanced to those to which you specially refer?—Yes. I would go into it more fully but that I know you are going to Dromore West, which is also in the County Sligo, and know that you will have evidence there better than mine, I hope.

27533. Sir Francis Mowatt.—What is the smallest division that you consider could be properly scheduled as congested—a townland?—A townland would be too small. I would say at least five or six townlands. For instance, the townland in which I live has only sixteen inhabitants, and the whole amount of acreage is only seventy acres. Of course, that is congested.

27534. What is the smallest unit that you think could properly be scheduled as congested?—Oh, I would say an electoral division.

27535. Mr. Sutherland.—I think you said a province?—Oh, yes, going in for the general congestion of the province of Connaught.

27536. Mr. O'Kelly.—Why do you say an electoral division. I put it to you in this way—which do you think would be preferable to give a discretion to the Chief Secretary or Congested Districts Board wherever the conditions of congestion are themselves apparent to the Board to deal with the congestion, or to bind the Board down by any arbitrary or rigid definition?—Well, the answer to the question, of course, depends on the condition and extent of the holding. The condition of the people and the extent of the holdings are what I think the Congested Districts Board ought to take into consideration.

27537. Which would be preferable, to say to the Congested Districts Board, "Wherever you find congestion deal with it," or, "We bind you by a certain rule to a certain limit of distance beyond which you cannot go." Which is preferable in your view?—Well, I think, for numbers, the electoral division, because you must have some demarcation.

27538. Is it possible to make a line of demarcation satisfactorily by a definition?—I daresay it might.

27539. Do you think it is possible?—I daresay it would be possible. There is nothing impossible in this world if a man puts his brains to it.

27540. Sir Francis Mowatt.—I am glad to see you so hopeful?—Well, I am hopeful, but I am hoping a long time.

27541. Mr. O'Kelly.—I was asking Mr. Brennan whether he would give discretion to the Congested Districts Board to deal with congestion wherever they found it irrespective of any arbitrary line?—My second answer to that, Mr. O'Kelly, is simply this, that they have been given a discretionary power.

27542. What discretionary power have they?—Well, first I presume, they prescribed the scheduled divisions.

Mr. O'Kelly.—It was an Act of Parliament did that. They were prescribed before the Board met for the first time.

Most Rev. Dr. O'Donnell.—The Act of Parliament laid down the definition; but for one year the Board had a right to submit additional divisions for the sanction of the Lord Lieutenant.

Mr. O'Kelly.—That was confined to one year.

27546. Mr. Sutherland.—Mr. O'Kelly's point is what you have in Scotland, where I come from. The Congested Districts Board there works very much on the same lines as yours, but it is left there to the Commissioners themselves to determine, and I daresay it is not such a strange idea; and Mr. O'Kelly thought that possibly it might be better for you in Ireland to have the same discretion.

27547. Mr. O'Kelly.—This is a most important point, and I will put it to you again. Do you not think it would be better to leave it to the Congested Districts Board to say what the congested area was?—Well, I have not entirely my heart and soul in the faith of the Congested Districts Board.

27548. I will dismiss the Congested Districts Board from consideration; but any authority dealing with the question?—If that authority is what I call a representative authority.

27549. Well, is Sligo County Council feasible?—Well, I daresay Sligo County Council would have a good look in.

27550. Would you agree that Sligo County Council should have discretion?—I think a representative ought to be on the Congested Districts Board from every County Council in Ireland.

27551. Mr. Kavanagh.—In Ireland?—Oh, yes; every congested county in Ireland ought to have a county representative on the Congested Districts Board.

27552. You said every County Council in Ireland?—Oh, yes, a Connaught man has leave to talk twice.

27553. Sir Francis Mowatt.—Would you go to the next point?—Referring to that question of extension of congestion, and coming to the representatives on the Board, I think I might refer to another question I see here with regard to the outlay for years in my four electoral divisions, and the County of Sligo at large. From the report of the Congested Districts Board up-to-date, I find that in the County Mayo there has been very close, in round numbers, on

Apr. 17, 1907.

Mr. Henry Brennan.

£10,000 expended, and in the County Donegal there has been very close on £11,000.

27554. Mr. O'KELLY.—Under what head?—Under the head of Piers, Roads, and Bridges.

27555. Sir JOHN COLOMB.—Nothing else?—Piers, Roads, Harbours, and Bridges—nothing else. Well, in the County Sligo there is a small amount for those years, I think 1901 to 1903, the small amount of £640, or thereabouts.

27556. Mr. O'KELLY.—That is for one year, is not it?—That is for three years.

27557. Sir FRANCIS MOWATT.—And you have given the figures for the other two counties for the same three years?—Very close on £10,000 for Mayo and very close on £11,000 for Donegal.

27558. But for the same three years?—For the same three years.

27559. Sir JOHN COLOMB.—£600 for Sligo?—£640 odd.

27560. Mr. O'KELLY.—Was this money expended through the agency of Parish Committees?—No. I am not referring to Parish Committees, but roads and bridges, through the Board itself.

27561. Most Rev. Dr. O'DONNELL.—There would be a comparatively small number of electoral divisions scheduled in Sligo, I suppose?—There are twenty-two in the county.

27562. Mr. O'KELLY.—You know that would be accounted for by the fact that this County of Sligo may not be so backward and may be more progressive, and you have size and other things that contribute to, say, Donegal or Mayo being more backward than Sligo, and they have not done things that Sligo has been able to do?—Well, the way I account for it is that we have been entirely neglected on the Board, and that we have no representative.

27563. It is not so much the question of necessity as the question of requirements that I am putting to you. And might it not be the fact that this County of Sligo, with a more progressive and more intelligent and less backward population, has in the past done on roads and bridges and other things what Mayo and other more backward counties have not done?—Of course, I am not contradicting you. I say it may or it may not, but I know myself, and I have been at a public board and I have passed resolutions and brought them forward and sent them on to the Congested Districts Board again and again for something to be done. Now, for argument's sake, take what I am asking to be done now, the draining and making of roads and other improvements, and drainage and doing something to Raughly Pier, which is out here, but what I find in the figures of the Congested Districts Board is simply as I said. And I know from my own knowledge we have in all seasons asked for some relief. Why in my two electoral divisions of Cliffoney North and Cliffoney South, that are congested, and, I think, as poor as poor can be, our valuation is very low. In Cliffoney North in a contested election that I had at one time, before the Act of 1898, I do not think that out of a population of 400 families, 400 households, there were more than 40 or 50 of £4 valuation; and if congestion is to be relieved and if our scheduled districts are to get their proportion, we must, to my mind, have representatives on the Board, and usually at the sittings of the Board, where this money is all allocated for different works or other necessities, before we get our just claim.

27564. Most Rev. Dr. O'DONNELL.—Have you a Parish Committee?—Yes, we have. I am not referring to our Parish Committees. Our Parish Committees have also their grievance.

27565. About the applications that you made to the Board, can you supply the Commission with a list of the applications and the replies to them?—Perhaps later on another witness will, because I am not on the Parish Committee. I have the misfortune to be a shopkeeper, and shopkeepers are supposed to be ruled out and not allowed to be on those things.

27566. There are other applications to which you refer. Can we have a list of the applications which the Board did not acknowledge?—Of course, there are applications from year to year, and we get resolutions to have this thing done and that thing done, and it would be very difficult to get a list of them.

27567. You were told in the case of the drainage the reason why the Board could not intervene?—The general answer to our applications, my lord, is this:—"No money for any such purpose." That is the general reply.

27568. Sir JOHN COLOMB.—From the Congested Districts Board?—From the Congested Districts Board.

27569. Could you show us any document?—I could have, if I had gathered them up in my desk, plenty of them.

27570. Most Rev. Dr. O'DONNELL.—In considering a reply of that kind we should like to see the application and understand the nature of the work?—The argument that I put forward is on the figures here. We have twenty-two electoral divisions scheduled in the County Sligo, and we have four electoral divisions scheduled in this particular locality, and the argument that I put forward is a proposal that money should be expended in these. Now, may I say another thing, and perhaps if I am going wrong you will call me to order, but perhaps I may say that this money of the Congested Districts Board, which was established fifteen or sixteen years ago—I think this is the fifteenth report—is the Church surplus, the interest of which is about £45,000; and why should not we as a scheduled electoral division get our share? That is the grievance that I wish to have exposed and to have explained; and I think it is a great grievance that calls for some explanation.

27571. Would you be able to make an argument to show that the scheduled divisions as a whole are not given their fair proportion?—Well, if I could go into the figures I would.

27572. To do that you should review the situation all round; you should take all the works into account, and the little industries and the purchase of land?—Is there any purchase of land in this neighbourhood?

27573. Well, there are—not on our property?—The tenants have purchased from Sir Jocelyn Gore-Booth.

27574. You alluded to Raughly. Is there work going on at Raughly?—Yes.

27575. And is there anything being done on Inishmurray? Is there any work done there?—Yes, there has been a school-house built by the Congested Districts Board in Inishmurray.

27576. Sir JOHN COLOMB.—What electoral division?—Cliffoney South. It is an island. And that is another remark I wished to make, for there were, I think, thirteen families on the island, and the present attendance at that school is about eight or ten children, and the cost of that school, notwithstanding that it was built on the very rock and the site quarried out of rock was £618. That has been expended out of the Congested Districts Board's money. There has also been a landing place or pier built there. I do not think that it is a new pier. I think there has been expended £138 on that, if I remember right. Of course, I could give you the figures now with regard to the valuation of the counties which I referred to, Donegal, Sligo, and Mayo, and here are the figures. There has been £141 laid out at Ballyconnell—Ballyconnell Pier, I think.

27577. Most Rev. Dr. O'DONNELL.—I think you will find that it is merely stones that were removed?—Clearing away stones. To that we gave a subsidy by the County Council.

27578. Sir JOHN COLOMB.—Is that at Inishmurray—you are talking of the landing place?—Yes.

27579. That is £146?—Yes.

27580. Most Rev. Dr. O'DONNELL.—Do you think that was not a good expenditure upon the school?—I won't say that it was not a good expenditure. I do say that the children should have had a school there, but I say that the expenditure was entirely over and above the requirements. A school could have been built in Inishmurray for one-third of the cost, £200 or £220.

27581. Mr. SUTHERLAND.—Would it be as good as the present one?—Quite sufficient for the requirements.

27582. Your complaint is that the school is too good for the island?—Too good for the island.

27583. Most Rev. Dr. O'DONNELL.—Would not someone representing the manager, if there is any existing manager, give us some definite information on that subject?—From the priest, Father Kenny.

27584. Mr. O'KELLY.—How many pupils attend it?

Rev. Fr. Kenny.—There are twelve only. The people are clearing out from the island. There were thirty-five some years ago.

Most Rev. Dr. O'DONNELL.—I think we shall have it from some representative of the manager that that grant was the only means of securing any school on the island.

27585. Mr. KAVANAGH.—Would you be in favour of migration for relief of congestion in your district?—Certainly.

27586. Do you think the people in your district would be willing enough to migrate?—I think they would.

27587. Do you think that for certain—have you ever asked them?—I have.

27588. How far would they migrate, would it only be migration to a short distance, or to any suitable land that would be provided for them?—If it could be shown to them that they got twenty acres of good land at a reasonable rent with a capital at a reasonable interest to work it, you would get, I would venture to say, in this parish, 40 or 50 people to migrate to Meath or some of those places. But before coming to that migration question why not, to my mind, buy up the land that is in the immediate neighbourhood?—Oh, certainly.

Sir FRANCIS MOWATT.—That is migration.

27589. Mr. KAVANAGH.—I was only asking as to the principle of migration, whether they would move far or only to a short distance?—If, say, I or someone on behalf of some authoritative man can show that they get a 20-acre holding or even a 10-acre holding of good land you can get people to migrate to it—if you could give them the land and stock it and build a house suitable. But what I unfortunately find in these things is that official expenses, maps, drawing, surveying, and all that kind of thing, is put down against the poor unfortunate tenant, who has to pay the piper, the future payer of these expenses. It is for you to tell a man that if he will go to the plains of Boyle he will get good land there, and you must tell him what he will get it at, and that you will give him so much to buy stock or build a cottage, and you must sum up that you will give it at a nominal rent or nominal annuity.

27590. Sir JOHN COLOMB.—What it is worth?—What it is really worth.

27591. Mr. KAVANAGH.—Then about the other question of what amount ought to go to equip the 20-acre farm?—Of course, we could go into that question easily enough. A man with twenty acres of land ought to get a horse and cart for £30 or £35. And then four cows—you could get that for £60. And I suppose you will give him half a score of sheep, and he will get that for about £20. Then to build a house. I daresay you could build a nice house on it for £200.

27592. Mr. O'KELLY.—For how much?—For £200.

27593. Mr. KAVANAGH.—And farming implements?—We are not going in, of course, for giving the uttermost figure, but farming implements I believe he could get for £10.

27594. Sir JOHN COLOMB.—In the £200 for a house do you include a cow-shed or pigsty and necessary out-offices?—I would let those things come on gradually. I would not frighten the man out of his wits. I would let him build these himself, and do something for himself.

27595. Mr. KAVANAGH.—Do you think the people in your locality are good farmers enough to go to the plains of Boyle and till the land there?—Yes.

27596. Properly?—Yes.

27597. Do they use the spade at all?—Yes, they can all use the spade.

27598. And do you think they are good enough farmers to get on if they are farming that properly?—I think so.

27599. Sir JOHN COLOMB.—You are not a farmer yourself?—No. I have farms, but they are small ones. I am a business man, and get my living by grocery and everything.

27600. Mr. KAVANAGH.—I have totted your figures up to £325, and you think the man should get that, and that nothing less would equip a 20-acre farm?—Yes.

27601. And you have allowed nothing for fences?—I have not allowed for fences. I would let these things be done by himself.

27602. Sir JOHN COLOMB.—Is the interest on that to be charged to the annuity that the man has to pay?—Certainly. I would say that he should get this on the same terms as you buy out the landlord, 3¼ per cent.

27603. Mr. KAVANAGH.—As a loan?—As a loan and annuity.

27604. And the interest of that added to the purchase money?—Supposing the interest was £10 the instalment would be a little more.

27605. Sir JOHN COLOMB.—He would have to discharge to the State the obligation of paying more than the actual loan?—Yes. I would rather see the State become generous, but I think there is very little good in saying that the State should come and equip a farm for every man in Ireland.

27606. What is in your mind as to what is to become of the holding that the man leaves, with regard to its occupation?—I do not refer to his leaving this, but supposing he had three sons I would make a provision for his second son with this.

27607. When I use the word "migration" I am meaning the movement to better conditions of a man and his family and household and everything, from bad conditions?—Quite so.

27608. That is migration as we understand it. But that is not in your mind. You are talking of settlement of the sons of tenants?—Yes, settlement of the sons of tenants.

27609. After removing the tenant?—After removing the tenant out of his stead.

27610. Mr. KAVANAGH.—What I asked you was, would the people be willing in your locality to migrate and when I said migrate I meant the whole family?—I did not use it in that sense.

27611. Mr. SUTHERLAND.—Do you lessen the congestion?—You can lessen it by migrating the head of a family, but I was only referring to the others.

27612. Most Rev. Dr. O'DONNELL.—I think you said you would not have to go so far away to find land for a family?—Yes I did say that.

27612a. But in the case of such a migrant, have you thought what should be done with the old holding?—I would amalgamate it with the next. There is a five-acre holding, and I remove the holder of five acres to a holding of twenty acres.

27613. Would you expect him to give up his tenancy in those five acres in order to get the better holding?—Yes.

27614. You do not think that the migrant moved from the five acres to a better holding ought to have any claim for his tenant-right?—Oh, certainly, I do think so.

27615. Then your view is that you are getting that tenant to move from the five-acre holding on being compensated for giving up his five acres?—Quite so.

27616. Mr. O'KELLY.—That is what he suggested when he referred to a settlement, I think?—That is the very thing that he ought to do, the cost being equally known.

27617. Sir FRANCIS MOWATT.—Whatever the amount of the compensation is he would carry it with him into the new holding?—Yes.

27618. Yes, and to that extent it would not be necessary to give him money?—To deduct that from the money he requires. Of course, if he has money enough he would be very glad not to ask you for money at all.

27619. No, I do not think that?—I do think it, because there are lots of people presently who have made money in America and elsewhere, and if they could get the land, and it comes to the same thing, they would do it.

27619a. Sir JOHN COLOMB.—Do you think there are many people who could afford to buy?—I am not sure there are cases of the class we are referring to where people could buy land of their own, but people who have earned money not by paying rent but in America and elsewhere.

27620. Sir FRANCIS MOWATT.—To make plain that question which was asked you just now, you think that, roughly speaking, a man moved on to another and better holding should, one way or another, be advanced £300?—Yes.

27621. And that would be less any compensation he received for his rights in his old holding?—Quite so. And also in his old holding he would probably have some of the stock. He might have a cow or two cows, or even a good horse.

27622-3. And there again you would not supply him with them over again?—Yes.

27624. And they also come off the £300 you estimate?—Yes.

27625. Most Rev. Dr. O'DONNELL.—In pursuance of the questions that have been put to you by the Chairman with reference to the application of the £300, that would be advanced money, and he should in some way repay that?—Yes.

27626. So that it is not a grant that you ask for, but a loan?—I have been so long asking for grants that I think there is no use in asking for them.

Apr. 17, 1907.

Mr. Henry Brennan.

Sir FRANCIS MOWATT.—So that you now come down to a loan.

27627. Most Rev. Dr. O'DONNELL.—But distinctly, I think, you said the loan was to be one repayable, principal and interest, at 3¼ per cent.?—Quite so, my lord.

27628. So that although you ask for the money to enable the migrant to begin, that money would not be altogether lost to the State?—Certainly not.

27629. It would be repaid to the State?—Repaid to the State.

27630. Had you any definite project before you of enlarging holdings within your sphere of immediate interest here?—Not on the property of the Right Hon. Evelyn Ashley, because he has no land. There are a lot of untenanted lands, but it is not land, it is sand and bog and marsh, and thing of that sort that no person would live on. But in the adjoining parish of Lissadell, on the property of Sir Jocelyn Gore-Booth, which is only six or eight miles from Mr. Ashley's property, there are from three to four thousand acres.

27631. Sir FRANCIS MOWATT.—Of untenanted land?—Untenanted land, and Sir Jocelyn has sold to the Landed Estates Commission and got a high price, 24 and 26 years' purchase.

27632. Most Rev. Dr. O'DONNELL.—That is tenanted land. You were talking of untenanted land?—It is of untenantel land I am talking, but I am stating that the land sold to the Estates Commission is at a rate that under their charges would give 26 or 27 years' purchase.

27633. The tenanted land has been sold?—The tenanted land has been sold, and what I would ask this Commission here to suggest would be, in my view, that the Estates Commissioners do not confirm the sale till at least 2,000 or 3,000 acres of the untenanted land on the Lissadell property be purchased by the Congested District Board for migration purposes.

27634. Mr. O'KELLY.—Who carried the sale through?—The Estates Commissioners.

27635. Were the tenants consulted as to the price?—Oh, yes.

27636. And they agreed to give these terms?—They agreed to give these terms. Yes. I presume so. I would also go further in my recommendation, that legislation should be immediately pushed forward that no landlord should hold more than 600 acres adjacent to or in his demesne, and that out of that land he should at least cultivate a twelfth.

27637. Sir FRANCIS MOWATT.—That is in addition to the demesne?—No, a twelfth of the demesne, a twelfth at least out of 640 acres and should crop that. I say that on the grounds of some experience of my own in knowing how a settlement occurred in the very far back years of the sixties in Australia. I have been conversant with the Land Acts of Duffy, and Hale, and Grant, and they first began with squatters who had settled down there. They then began with 640 acres and then with half that amount—320—and they came down then to 100 acres and to 50 acres and so on. The Government of the country in those days when I was there fenced them and gave them a hut, what they called a shingle hut, a home as it were, and they gave 8 years for paying it, at half a crown an acre, and the land was theirs for ever. Now, I do not see how we can ever hope—and I trust in God we will—to stop emigration if something is not done in like manner or something to that effect, in settling the people at home. And I find in a question of Mr. M'Veagh in the House of Commons about the state of the country that the population is dwindling away. It has gone down from 8½ millions to 4¼ millions or a little over, and if it continues to go down at the same proportion for 70 years we will then have 12 people, not as many as would constitute a Royal Commission in Ireland, in 70 years.

27638. Most Rev. Dr. O'DONNELL.—And no witnesses?—No witnesses.

27639. Sir FRANCIS MOWATT.—And no congestion?—Oh, no, for congestion would be removed right off.

27640 Mr. O'KELLY.—You are aware that legislation has been recently passed in some Australian states with the object of compulsorily resuming possession of the great grass area formerly given to settlers in that country, for the purpose of closer settlement?—I am aware of that. It is 35 years since I was there.

27641. Are you aware that the programme of one great political organization in this country is borrowed, I might say, from Australian legislation?—Well, they are not applying it then. I am afraid they are taking a very bad lesson of it.

27642. I mean to say the programme of the United Irish League, that is the agricultural programme is borrowed from or founded upon legislation in Australia?—I quite agree with you. It is the legislation I was referring to. If you wish I can give you the statistics. There is another point, and it is the last and as I know there are a number of other witnesses. But I see in last night's paper where those who have purchased in the County of Kildare and in the County of Longford, where the County Councils of these counties and not of those counties alone, but of every county in Ireland will have to make good the amount of annuities or instalments that these people fail to pay. Now, in the County Kildare they are asked, or rather they are threatened by a notice from the Local Government Board with a stoppage of £8,000 out of the grant given for the relief of poor rate.

27643. Do you suggest that this is a case of defaulting annuitants?—It states here very clearly that there are two causes. One is the case of non-payment of instalments and the other case is a more grievous case. It is from the downfall of Land Stocks. They say that Land Stocks have fallen down to 85, and that means 15 per cent. They took Land Stock at 100 and put these Land Stocks on the market now and they are £15 per £100 less and they want the principal tenants to pay it notwithstanding this magnanimous Bill that we got from Mr. Wyndham in 1903, when they thought we would never see a poor day again. I wish they kept their Bill and that there was a good honest agitation. If that is the sort of the Bill the sooner that Bill is amended the better.

27644. But the loss from the annuitants is almost inappreciable?—I have heard from a gentleman behind me that there are 20 processes, and if these men get nothing on them, they will come back to the Council who will have to strike a rate.

27645. And that is your point, that it is a great hardship that the tenants should be compelled to make up the loss on the flotation of stock at its present price?—Yes.

27646. And it was not the fault of the people who purchased under the 1903 Act?—The great mistake that the Bill made is that the poor tenant has to pay for it.

27647. And do you not think, then, under these circumstances, that those who are charged with the responsibility of advising the people ought to take care in the future that improvident bargains such as that to which you referred, on Sir Jocelyn Gore-Booth's Estate, should not be made?—No; the suggestion I made is that before a bargain on an estate is made by the Estates Commissioners or the Congested Districts Board, the County Councils, who are the representatives of the people, should meet and at least understand the price and have a word before the bargain is concluded.

27648. As they are the ultimate security?—Because they are the ultimate security. I do not think that it would be one whit less valuable to you, Mr. Chairman and gentleman.

27649. Have many sales taken place in the County Sligo under the Act of 1903?—Not very many.

27650. Have many sales taken place under the Congested Districts Board?—That is a question I could not answer. The only sales that have taken place of any importance here are Lissadell—that is one under the Land Act and according to my knowledge—and, I think, Hazlewood.

27651. You spoke about there being 3,000 acres of grass land on some property?—Yes.

27652. Suppose that the needs of the local congests were relieved, would you have any objection to migrate people from a distance into the surplus that would remain, or would you say that the sons of tenants of the district should have the first claim?—Certainly.

27653. And would you allow the congests at a distance to remain in their congestion?—Oh, where the lands are immediately near them give it to them by all means. Where there is a sufficient quantity of land after you have supplied the needs of the congestion adjacent to this place and that there is land remaining, take them from the congested districts and give it to them. That is my view.

27654. Would you urge that the sons of tenants in the district adjoining these grass lands ought to have a claim prior to and over that of congests from a

distance?—I do, because their fathers and grandfathers were all evicted from them. I know 200 families evicted from the Cartrons.

27655. What do you call it?—The Cartrons. That is Lissadell, the 3,000 acres—more as a matter of fact—that I refer to.

27656. Sir JOHN COLOMB.—What year?—I suppose in 1846.

27657. Most Rev. Dr. O'DONNELL.—I suppose your replies in answer to Mr. O'Kelly were coloured a little by that. He asked you would you put the claim of the sons of tenants from near that place before the claims of congests from a distance, and you said yes?—Yes.

27658. Then Mr. O'Kelly further asked you why, and you said that that was largely a tract of evicted country and that their ancestors lived there, or their forefathers?—Quite so.

27659. Suppose it were different. Suppose that it had not been an evicted country and that there was a question of redistributing it, would you first of all enlarge the holdings of congests in the neighbourhood?—Yes.

27660. That is to say, you would first of all attend to the wants of heads of families in the neighbourhood?—Quite so.

27661. Now, after you had commenced to enlarge the uneconomical holdings along the margin of that tract of grass lands, two classes of people come in competition for help from you. There are congests—heads of families that are congested at a distance, or say, in the neighbouring County of Leitrim, and there are sons of holders whose holdings you have already enlarged. Which of these classes should come first?—I would take the former.

27662. That is the heads of families at a distance?—Yes.

27663. You seemed to put forward the other class first, owing to the fact that the lands had been evicted?—Yes.

27664. And if it were not for that alone would you put the distant people before the sons of tenants?—Yes.

27665. Mr. O'KELLY.—That answer is most satisfactory, Mr. Brennan?—I am very much obliged to you.

Mr. BERNARD HARTE examined.

27666. Sir FRANCIS MOWATT.—What is your address?—Grange.

27667. You appear, as I understand, on behalf of Sligo Rural District Council?—Quite so, and I am going to give evidence upon three electoral divisions which I represent.

27668. Locally?—Yes, Lissadell North, Lissadell West, and Lissadell East. The two former, the North and West, are congested and scheduled.

27669. And the other not?—And the other is not.

27670. Sir JOHN COLOMB.—The other is Lissadell East?—Yes, that is not scheduled.

27671. What Union is that in?—Sligo, all Sligo. Here is a statement which I wish to make.

27672. Sir FRANCIS MOWATT.—Please read it and we will ask you questions as you go along?—The two former divisions, that is Lissadell North and West, are scheduled congested, and I have to complain of the treatment of the Congested Districts Board towards these divisions, as it has never expended any money on improvements in the building of piers, repairing of roads, or assisting them with boats or nets. Fishing is one of the principal industries along the whole seaboard, but through want of proper accomodation—such as landing-slips and proper fishing appliances—it cannot be developed successfully. I would suggest that a landing-slip be erected at Milk Harbour and one at Streeda. Regarding the roads in Lissadell North Division, several of them require repairs, and engineers from the Congested Districts Board visited them and reported as to their bad condition and unfitness, but never did anything afterwards. The tenants in this division all occupy small holdings, and existed formerly to a great extent on the manufacture of kelp, for which nowadays the price realised is not able to pay the expenses connected with its manufacture, having to cart it to Mullaghmore—a distance of 14 miles. There are no bogs in these divisions either, and the tenants have to go from 10 to 12 miles for turf. There is one small patch of bog on Captain Jones's estate, but he will not allow any tenant to cut turf there who served him with a second judicial notice to have a fair rent fixed, notwithstanding the fact that the tenants had the usual existing right of cutting turf for years. The Parish Committees are doing a deal of good with the small grant of £150 yearly placed at their disposal by enabling the poor to make their houses habitable, and I would direct special attention to the necessity of having the grant increased. A small committee started a bank some two years ago with the object of enabling deserving persons to purchase cattle, as a good many were not in a position to purchase any. The bank is financed by £100 from the Congested Districts Board and money borrowed from the Sligo banks on the security of the committee. Advances are made at a similar rate of interest plus clerical expenses.

27673. Is the bank still in existence?—It is.

27674. Mr. SUTHERLAND.—Do I gather that the local bank is used as security to the bank in Sligo?—Yes. The committee that work the local bank here are security to the banks in Sligo for any money we require for lending.

27675. They take you in preference to the actual borrower?—They take us as a body, the committee of the local bank here.

27676. To what extent is your security assigned to them?—It is £1,000 at present.

27677. On the security of your property?—Yes.

27678. And they would not do it to the individual?—Certainly not.

27679. I do not know whether we are going to refer to the condition of the bank; but I should like to ask you how many shareholders have you in the bank?—I suppose about 300.

27680. And you say the Sligo Bank would accept the security up to about £1,000?—It will. It has done it. I may mention to you, sir, there is a Committee appointed from the number of shareholders there as a Working Committee, to work it. They pledge their security to the banks in Sligo, the Working Committee's security, but it is worked by the shareholders. That is how it is.

27681. Have you ever advanced a sum equal to the full amount of your credit—£1,000?—It is fully advanced.

27682. I do not know whether you would like to answer this question. Have you ever desired to increase that credit, and the banks said that that was the farthest limit they would go to?—No; we have never desired to increase it. We think that is quite enough for the Working Committee. If we could get money at a cheaper rate of interest from the Congested Districts Board we could lend it cheaper. They only give us £100, and they charge us 3 per cent., or 3¼ I think, for it. We pay 6 per cent. to the banks in Sligo; but if we could get a larger sum of money from the Congested Districts Board at a smaller rate of interest we would be able to advance it at a cheaper rate.

27683. Is that 6 per cent. a standing arrangement?—Well, it varies with the bank interest.

27684. Mr. O'KELLY.—Does it vary with the character of the security?—No; with the rise and fall of the market.

27685. Mr. KAVANAGH.—How much do you charge?—Well, about 6 or 6½. We do not charge any profit, except what goes to meet the clerical expenses.

27686. Sir FRANCIS MOWATT.—And is the Committee appointed by the shareholders?—The Committee are appointed by the shareholders.

27687. Most Rev. Dr. O'DONNELL.—Have you made any bad debts?—Not up to the present.

27688. Mr KAVANAGH.—And how long have you been in operation?—About two years. The Sligo banks charge from 7 to 8 per cent. on small sums of £5 and £10, such as people in the country are in the habit of borrowing. I suppose they would charge you less on a bigger amount; but on small sums, such as £5 or £10, I suppose 7 or 8 per cent.

27689. Most Rev. Dr. O'DONNELL.—That is at present?—At present.

27690. It was not always so high?—Oh, no.

27691. Mr. O'KELLY.—But have you never less than

Apr. 17, 1907.

Mr. Bernard Harta.

this?—Never. Now I come to the other congested district, that is Lissadell West, which is even more congested, and the tenants principal means of sustenance is by fishing.

27692. I did not think that you were passing away from the banks?—Yes.

27693. Kindly explain to us what you advance the money for?—For the purchase of cattle for poor tenants about the place in order that they may have cattle on their grass, or for pigs.

27694. Were you short of stock before you commenced your operations?—Yes; that is the reason we started the bank, in order to enable them to keep their lands stocked.

27695. But do you anticipate a time when your proceedings in that particular line will be finished?—I hope so.

27696. And then will you turn your attention some other way?—Well, I cannot exactly say that. We will have to wait till events shape themselves.

27697. And are you filling up the stock necessary now?—Yes. The Committee, to a great extent, maintain a supervision over the loans given out. As far as it is in their power to see that the people who borrow will use the money for the purpose that it is borrowed for.

27698. Yes, you can see the cattle there that they bought?—Yes.

27699. And I suppose that the increase of nature by-and-by will fill up the gap as required?—It is to be hoped so.

27700. Do they buy bulls?—No, nothing but cattle or pigs.

27701. Most Rev. Dr. O'Donnell.—Your limit is really an industrial one?—That is right, my lord.

27702. Mr. Sutherland.—And if you thought it necessary you would assist a man to buy a horse as well?—Yes; but they go in for horned cattle.

27703. Is there a want of horses in this neighbourhood now, do you think?—Well, I would not say that there is. I would say that there is a want of horned cattle more.

27704. And is there much tilling amongst the small farmers?—A fair share.

27705. And the greater part of it is spade work?—Well, the majority of it is spade work.

27706. Would not there be far less of manual labour, spade labour, if ploughs were introduced?—Yes; but the holdings and fields are so very small that they cannot generally plough in those small farms.

27707. Is that the principal reason, or is it because the keep of a horse is too great?—Well, it is the principal reason.

27708. That the fields are small?—Yes.

27709. Most Rev. Dr. O'Donnell.—Up towards the mountains?—Yes, up towards the mountains and along the sea-shore.

27710. Mr. Sutherland.—Is there any reclaiming of land going on now?—Well, the people in the winter time do a fair share of draining and sub-soiling according as the fields require it. They are very industrious that way.

27711. But, then, would you turn your attention to financing people for horses and housing cattle?—Well, that would be quite possible. If we saw a deserving case of a man requiring a horse, and having a place to house it, we could advance him the price of a horse.

27712. Are you limited in any way as to the purchase of stock by your regulations?—We are. We would generally give nothing more than £10.

27713. A limit of your own?—Not ours. It is our legal rules.

27714. But there is nothing to prevent you going into a wider field of operations outside?—No; if we could afford to pledge our credit.

27715. Or to go into fruit-growing or anything of that kind?—Yes. Nothing only the certainty, I think, that fruit-growing would be a failure to a great extent among us.

27716. I am not talking so much of commercial fruit-growing as for their own purposes?—Well, there are a good many small farmers about the place that have an apple tree or two in their gardens, but not generally speaking.

27717. Sir Francis Mowatt.—But they are not very common?—There is one in Lisdun and another in Lissadell direction. As I was saying, Lissadell West is even more congested still, and the tenants' principal means of sustenance is by fishing. They suffer very much from want of harbour accommodation. I may state that the Congested Districts Board is building a landing slip off Knocklane, which is situated in this division, and they are assisted by a grant from the Sligo County Council. I visited the place a short time ago, accompanied by Mr. M'Hugh, M.P. We met all the fishermen there, and they were all unanimous that the slip would be perfectly useless to them owing to the place the engineers selected for its erection. In fact they put it in the wrong place.

27718. The engineer was the engineer of the Congested Districts Board?—Quite so. The site would not be selected where the tenants wanted it. There is a similar pier at Raughly.

27719. Mr. O'Kelly.—Did the County Council contribute money to the erection of this pier?—Yes, £100.

27720. Were you present when the site was selected?—No. I was not made aware of it, nor was any local man.

27721. Was the county surveyor of this part of the county consulted by the engineer of the Congested Districts Board?—I would not say he was. No, he was not.

27722. Were you made aware that the engineer would attend to select the site?—No.

27723. You were altogether adrift?—Yes, in regard to it.

27724. When the site was selected was your County Council apprised of the fact?—No.

27725. Do I understand you to say that you walked over there before you got any notification whatever?—Yes, and there was a good deal of it done.

27726. Did you make any remonstrance?—No.

27727. Did the County Council object?—Well, it was idle to object then. It was half built.

27728. Sir John Colomb.—When did you first hear of the work being put in hand?—Well, it would be about two months ago—between two and three months ago.

27729. In the current year?—Yes, this year.

27730. Mr. O'Kelly.—What did the whole thing cost?—About £500.

27731. And the County Council contributed how much?—£100.

27732. Sir John Colomb.—But it had been arranged through the County Council and the Congested Districts Board?—Yes.

27733. Do you recollect what passed between these two bodies; were the details settled as to what the nature of the work was to be and where it was to be?—It was. There went a resolution which I proposed from the Sligo County Council, because the fishermen there were badly off and in want of a pier, and it was going on for some time, and then the Congested Districts Board wrote to say that if the County Council subsidised or gave £100 towards the erection of the pier they would spend £300 or £400, certainly about £400, and that is all we heard about it. An engineer came down from the Congested Districts Board and visited the place, and marked out the site and went on with the work, and that is the only intimation we got of it till the work was going on a good while, and one day I happened to hear a complaint that the people were badly off there and that we could give them employment at the building of this pier, and I met Mr. M'Hugh in Sligo a few days afterwards and I stated to him that the people were badly treated there by the engineer of the Congested Districts Board in not giving them any employment, and that it would be well that we visited the place, and we did, and we met all the fishermen there, and they all said that the pier was perfectly useless to them as a landing-place in stormy weather.

27734. Mr. O'Kelly.—Who maintains the pier?—It is not quite finished yet.

27735. Who will maintain it—the County Council?—I expect it will be the county.

27736. Sir John Colomb.—This was an arrangement between the two bodies. The County Council was to give a grant of a certain amount and the Congested Districts Board was to give two or three times that amount?—Quite so.

27737. And then it becomes an engineering and practical question. And you have got a county surveyor?—Yes. We had one then.

27738. Surely you have got a salaried official expert as the engineer or county surveyor of the County Council?—Yes.

27739. Do I understand you to imply that the County Council came to terms without instructing their engineer to consult and see the engineer of the other contracting party, the Congested Districts Board?—

I do not think the engineer of the Congested Districts Board ever consulted or notified to the county surveyor or the County Council that he was going down there to see it.

27740. But my point is that the County Council, before entering into business terms to contribute towards the making of this work, and therefore to undertake to maintain it for all time, ought to have instructed their official engineer expert to look into the details of this matter and to arrange what the nature of the work was to be. Did they do that?—No; I do not think they did.

27741. Mr. SUTHERLAND.—Did they submit plans to you?—No, they did not.

27742. Sir JOHN COLOMB.—Then they bought a pig in a poke?—It is just the same.

27743. Mr. O'KELLY.—When you speak of this as involving your county surveyor in responsibility for having proposed the pier, the moment you consented to give a contribution for the erection of this pier for which the Congested Districts Board were giving one sum and you giving another it followed that the plans of the proposed pier should be sent to the County Council, and the County Council would then submit them to their expert adviser, the county surveyor?—As far as I know I do not think any plans of the sort ever came to the county surveyor or the County Council.

27744. The Secretary of the County Council?—They never come to my office.

27745. Mr. SUTHERLAND.—Are you the Secretary of the County Council?—Yes.

27746. Mr. O'KELLY.—Well, the County Council did not regard it as necessary to give any specific instructions to their surveyor stating that the Congested Districts Board would send down their plans to your Secretary, who would thereupon submit them to your county surveyor, and they did not do so?—Quite so.

27747. Most Rev. Dr. O'DONNELL.—When the Congested Districts Board provided a subsidy of three or four hundred pounds, did it name where the marine work was to be constructed?—No, my lord, but we named the spot for them at a place called Knocklane, but the particular spot this landing-place was built in we were never apprised of. They sent their engineers, they selected the site, and if they had gone fifty or sixty yards further, to a well-sheltered place, the pier would be more useful to the fishermen. So the fishermen tell me.

27748. There had been no opposition to the construction of a pier at Raughly?—No. There is a pier at Raughly which I will deal with later on.

27749. But about Knocklane, when the Board proposed to expend this money, did the County Council take any action to ascertain the exact site of the proposed marine work?—Well, they did not. No; the only course the County Council took when they got the offer of the Congested Districts Board was to leave the whole thing in the hands of the Congested Districts Board themselves, But of course I need not tell you, my lord, that if I or any other representative of the local body were made aware of the fact that the Congested Districts Board were sending down a man there they would be very glad to go and accompany him and to see that the pier would be put in the place where the fishermen needed it.

27750. Would you say, generally, that any body like the Congested Districts Board, in selecting a site for a marine work along the coast should ascertain the views of the local bodies?—I would, my lord, undoubtedly.

27751. And especially of the fishermen?—Undoubtedly. Those are the men that require it most, and know the need most.

27752. And are you aware that Rev. Mr. Green and some of the officials of the Congested Districts Board have more than once gone over that coast making an inspection?—I believe so.

27753. Do you think that in the course of this inspection they would not hear the fishermen?—Yes; the fishermen said that Mr. Green was there, and that the fishermen were very much there the day this man made the selection of the site, and that he would not listen to their demands where they wanted the slip to be.

27754. Shall we have any of the fishermen forward?—I would not be at all surprised if we had some of them from Magherow here.

27755. You would not expect a public body to construct any marine work on the coast without finding out with all care the views of those principally interested?—No.

Apr. 17 1907.

Mr. Bernard Harte.

27755. But when they had taken all these views into consideration, would you not expect a public body like the Congested Districts Board to put upon their marine engineer the responsibility for selecting the exact site?—Certainly I would, but then I think that the people living along the sea coast know the requirement, and know it better than an engineer going down there from Dublin or anywhere else, and should be consulted, and that the engineer should meet them half way.

27757. Have you any means of knowing what the opinion of your county surveyor would be on this work?—No; we have not, because the county surveyor we had then is retired, and he is living in Dublin at present, and knows nothing at all about the business.

27758. Mr. SUTHERLAND.—Would a county surveyor necessarily be an authority on a pier?—I do not think he would. I would take a fisherman more as an authority than a surveyor.

27759. But on the engineering work?—No.

27760. A fisherman would look at it from a fisherman's point of view?—Yes.

27761. But what the engineer had to do was to carry out the work?—Quite so.

27762. Most Rev. Dr. O'DONNELL.—Might it turn out that if the expenditure contemplated had to remain under £500 this Knocklane work might be the best that could be constructed there?—Yes, if they put this landing slip where the boatmen wanted it.

27763. Mr. SUTHERLAND.—It would be more expensive?—It would be very beneficial.

27764. But would it be more expensive?—No; in fact, it would not be as expensive.

27765. Most Rev. Dr. O'DONNELL.—How far away is the site the fishermen desire from the one selected?—I should say about thirty or forty yards; and if you only saw the sea coast it makes a wonderful difference.

27766. I am glad you mentioned that. If it were merely a question of thirty or forty yards, is not it obvious that the engineer who selected it would be guided by his judgment as to the best site?—I should say he would; but, unfortunately, against the determination of the fishermen he would not be guided, so they tell me. If he put the landing slip thirty or forty yards further into a well-sheltered part they could land in the stormiest weather.

27767. Sir JOHN COLOMB.—I understood you to say that at the time of the consideration of the making of this pier it was thought that it would give a good deal of employment in the neighbourhood?—Yes.

27768. And then the work commenced, and there was not given the employment that was expected?—No; and in fair play, I will say that they could not expect it. It is not a stone work at all. It is a regular slip of concrete, and they could not get the amount of employment that the people expected that they would get, because they must allow it to set for a certain time as it was going on; but the only grievance that I have, and that I want to make plain to you, is that the pier is not as useful to the fishermen as it would be if it was in the site that the fishermen wanted it.

27769. Had any part of the work been begun a considerable time before you heard of the dissatisfaction?—It had.

27770. And, seeing that, they actually commenced it at a point that is now objected to, there was no dissatisfaction expressed at the time—at all events, it had not reached you?—No, it had not.

27771. And after a time the work went on, and there was dissatisfaction that there was not much employment?—Exactly.

27772. And then began the trouble?—Yes.

27773. Mr. O'KELLY.—Where did the people bring in their boats before this was erected?—In the same place.

27774. As the erection of the present pier?—Well, it is in the same place along the seashore that the slip is at present. It has a big cliff overhanging, and it is well sheltered, and there were also big stones that they had to clear away.

27775. And the present pier is erected in the place where the fishermen were accustomed in the past to bring in their boats?—Yes, but not in the exact same spot.

Apr. 17, 1907.

Mr. Bernard Harte.

27776. Mr. SUTHERLAND.—You are a man of intelligence, and you have given attention to this, and you have seen the pier?—I have.

27777. What is it that is wrong with it?—It is not long enough, from the situation of it at present, to be of any use to them.

27778. If it were on the other site and at the same length, would it?—If it were in the other place at the same length it would be all right for them.

27779. Sir JOHN COLOMB.—Have you seen it in different weather and a different sea breaking?—No; I only take the fishermen's word.

27780. Mr. SUTHERLAND.—Is there a different depth of water where it is?—When the tide is in, of course.

27781. Which is the deeper place?—It would not make much difference.

27782. They are both left dry at low water?—Yes.

27783. Mr. O'KELLY.—How far is it from this?—About seven miles.

27784. Sir FRANCIS MOWATT.—Go on to the next point?—The fishermen have very poor accommodation in the way of boats and nets, and several applications have been made to the Congested Districts Board to erect a fish-curing station at Raughly.

27786. Sir JOHN COLOMB.—Mullaghmore, I think, is twenty or thirty miles north-west?—Quite so. There is another pier at Raughly which is useless also, as it does not extend far enough out into the sea, and it gets filled up yearly by sand, and has to be cleaned at the expense of the County Council. This pier was built at the expense of the county by the Grand Jury. The fishermen have very poor accommodation in the way of boats and nets, and several applications have been made to the Congested Districts Board to erect a fish-curing station here, as the inhabitants are sometimes hampered for a market to dispose of their fish. In stormy weather the fishermen cannot venture out for want of proper landing stages. The roads in this division also are in a wretched condition, and many demands have been made upon the Congested Districts Board to aid the District Council in improving them. I may tell you that this particular place is the most neglected place probably in Ireland in the way of road accommodation.

27787. Most Rev. Dr. O'DONNELL.—There has been a statement made with regard to the Congested Districts Board not aiding in improving roads. They do not give a grant except for new roads?—Well, my lord, that is a great pity. The landlord, Sir Josslyn Gore-Booth, offered a grant of £30 towards the repair of one particular road at Cloonagh, which I would respectfully ask some member of the Commission to visit. If it could be done at all, I would say that a grant should be made towards repairing that bad road. It passes through one of the most congested districts in Ireland, Cloonagh, in the Lissadell West electoral division.

27788. Sir JOHN COLOMB.—These roads are under the control of the County Council?—No, sir, they are not.

27789. They are not public roads?—They are public roads, but there is no presentment for them.

27790. By whom were they originally made?—They were originally made in the year 1847.

27791. And have never been taken over by the county?—They have never been taken over by the county. They were made chiefly for the purpose of giving employment to these poor people to help them to live.

27792. And the county never maintained them or gave anything to keep them up?—No.

27793. Had that matter been discussed and considered by the County Council—the people are paying rates there, I suppose?—Yes.

27794. And are the County Council not getting any repairs done to these roads and places they are paying rates for?—No; they have too many roads in the district.

27795. In that particular district?—Well, what I mean by too many roads is this—that the Rural District Council only take up roads handed over to them by the Grand Jury, and these roads have never been handed over to them. They were only simply made for the purpose of giving the people employment, and they have never been put into repair.

27796. Do you mean that nobody has repaired them since the Famine?—Except the people themselves who throw a heap of stones here or there for their own accommodation to fill up the road.

27797. If they were not given over I do not think there could be anything done with them?—But I think, if it were possible, there ought to be a point stretched in their favour.

27798. If the county surveyor stated that the works were of utility?—They are of great public utility.

27799. Then the county could do something?—But the county does not like to have too much taxation.

27800. Is one of those roads a road leading to the pier that the County Council has agreed to give £100 to?—The road leading to the pier is a county road, but this is a road leading to the most congested village over there, and it is a road that I think nothing has been done upon since it was made, except the people themselves, I suppose, throw an odd heap of stones to fill up the road. Sir Josslyn Gore-Booth has offered a grant of £30 towards it.

27801. Most Rev. Dr. O'DONNELL.—Is there a road proposed to the Knocklane Pier?—Yes; that is the other portion of the estate that the Congested Districts Board have bought, and they are making a road to that.

27802. What estate is that?—The Gethins estate, at Knocklane. I have also to complain of the constitution of the Congested Districts Board, as we in County Sligo are denied having a representative on the Board, unlike the counties of Galway, Mayo, and Donegal, and that is the reason, to a great extent, why Sligo is neglected. There is plenty of waste land on the Gore-Booth property to relieve the congestion in those districts.

27803. Sir FRANCIS MOWATT.—Suitable waste land?—Yes; untenanted land.

27804. Sir JOHN COLOMB.—You say untenanted land and waste land. Now is it fallow altogether?—No; grazing land.

27805. Mr. O'KELLY.—Who is the man from Galway?—I do not know.

27806. There is no man from Galway?—I think it is fairly right with you over there.

27807. I do not live in Galway and I do not belong to the Board?—Representations have been made on several occasions to have Dr. Clancy appointed, and it appears there was no vacancy for him. As I was saying, there is plenty of waste land on the Gore-Booth property to relieve the congestion; and I would suggest that in order that the congestion should be properly and permanently relieved that the entire province of Connaught should be scheduled as congested, and that families might be migrated from different districts as a committee conversant with their needs would consider necessary or desirable. I would also like to draw the attention of the Commission to the condition of Lissadell West electoral division. The holdings there are very uneconomic, and this, combined with the want of road facilities and the long distances they have to travel for turbary, renders their condition very poor; and practically throughout the whole year they are in want. I would respectfully suggest that their holdings be enlarged, and that roads be constructed in the district. This would mitigate their poverty to a great extent, and would create prosperity in the district.

27808. Sir FRANCIS MOWATT.—If some of the tenants could be got to migrate you could use the holdings thus vacated for enlarging?—Quite so.

27809. Most Rev. Dr. O'DONNELL.—Have improvement works begun on that estate?—No; it is only last week they were beginning to strip that up.

27810. It is not so long since the estate was vested?—No, not long.

27811. There was delay in the vesting, and it was looked upon with considerable dissatisfaction?—Yes.

27812. The people thought the work should long ago have begun?—Yes, my lord.

27813. Mr. SUTHERLAND.—What is the nature of the operations they are carrying on there now?—It was a big grazing farm taken in there to put people on, and it was used as a grazing farm for years and years; and I believe that since the Congested Districts Board began to work they are striping it up into divisions—that is, all that is habitable of it.

27814. Is it sandy?—It is sandy.

27815 And it is not to be broken up for tillage?—I expect the half of it can be broken up for tillage.

27816. And what the people are getting is what was previously grazing land?—Yes.

27817. Will there be any new holdings at all?—Well, I see no indications of it yet; but there are people from the district who will give you more information.

27818. You expressed your wish that Sligo should get its fair share?—Yes.

27819. What do you mean by fair share?—A fair share of the money of the Congested Districts Board—that nothing has been done by the Congested Districts Board in Sligo.

27820-1. Do you mean that the public money with which the Congested Districts Board has to deal should be allotted to counties in certain proportions, without reference to the pressure of distress and poverty existing in those counties?—And reserving a lot for very congested areas. The area is bound to be in poverty, otherwise it would not be scheduled.

27822. Mr. O'Kelly.—Have you any individual experience of the working of the Congested Districts Board?—That is the only experience I have.

27823. Or of the Estates Commissioners?—No. The Estates Commissioners are not working in our district yet. The sale of this property, the Gore-Booth property, has not been sanctioned yet.

27824. Then you have not sufficient knowledge to enable you to come to a judgment as to the relative merits of both bodies, one compared with the other?—No; I am not able to give an opinion.

Rev. Michael Kelly examined.

27825. Chairman.—You are nominated by the Bishop of Elphin to give evidence?—Yes.

27826. You are Parish Priest of Grange?—Curate of Grange.

27827. What particular points do you wish to bring before the Commission?—Migration, and the fishing industry, the kelp industry, and the lace industry.

27828. We will deal with the points in the order that you prefer?—Yes.

27829. Begin with which you like?—Migration.

27830. Yes?—Well, there is very much congestion in this district. The average valuation is very low. In some places it is only 5*s*., and by means of migration a large number of people must be transferred from the locality and the holdings divided among those that will remain, and I am very glad to be in a position to state that nearly twenty people have agreed to give up their holdings and to go to other places. I have just put the question before them and they tell me that they are anxious to give up the holdings that they have.

27831. Are those young men or married men?—They were landholders, responsible to the landlord.

27832. But did you find that they were a particular class of men or people representative of all classes?—They are farmers, farmers in the locality.

27833. They were not all young men?—No. There were young men in the family. It was the head of the family I consulted in the matter.

27834. They were not exceptionally young men?—With regard to the young men of the family, I went to two young men and they agreed to go.

27835. Most Rev. Dr. O'Donnell.—They were heads of families?—Yes. In Mullaghmore there is a very unpleasant state of things. There are about sixty families there, and except some of them are migrated, and except the fishing industry is improved, I do not know how to deal with them. I think that perhaps the fishing industry might be improved. In the Magherow district I think there are nearly forty families that live by fishing alone, and the average valuation per family there for the whole district does not reach £5, and that includes the valuation of the grass lands that were bought up and divided by the Congested Districts Board on the Gethin Estate, and notwithstanding that fact it does not reach £5.

27836. Chairman.—What place is it?—Magherow district. It is included in Lissadell West Electoral Division.

27837. Most Rev. Dr. O'Donnell.—Explain to the Chairman that an estate has been bought there?—Yes. I forget the name of the landlord. Yes, Gethin is the name. On the estate there was a large grazing farm, and with the valuation of that included it does not bring the valuation up to £5, and I think that under such circumstances migration must take place, and some of the tenants must be transferred to give them what is known as an economic holding. Further, there is extreme poverty in the district. I know cases on the Colville-Jones estate where twelve years' arrears are owed by the tenants, and in Inishmurray Island I think there are fifteen years' arrears owed. And as a proof of the poverty of the district, the credit system is very largely in use. It is common enough for farmers to go to auctions to buy cattle at an auction and to pay the auctioneer's fees and to pay interest on the money, and then to keep the horse or cow they buy on six months' credit and try to pay up at the end of the six months, and I believe that a good deal of the stock is owned in that way.

27838. Sir Francis Mowatt.—They buy a cow and pay the auctioneer's fees and they do not pay for the cow?—They get it on what is known as six months' credit.

27839. And they try to pay at the end of the six months?—Yes, if possible, and anyone passing along the road between Grange and Ballyshannon cannot fail to be struck with the number of notices they see that "Debtors will be prosecuted if they do not pay up."

27840. Mr. O'Kelly.—Is that generally printed?—It is to be seen on the sea coast between here and Ballyshannon.

27841. Chairman.—Does the auctioneer put up these notices?—He advances the money to the man who holds the auction, and he gets interest from the person who buys the cow or horse, and at the end of the six months the man has to pay up.

27842. Sir Francis Mowatt.—The farmer who sells the cow gets paid?—Yes.

27843. The auctioneer pays him?—Yes.

27844. Mr. Kavanagh.—How does the profit go to the purchaser?—Merely that he gets the use of the horse or cow.

27845. On which he pays interest?—Yes.

27846. And the auctioneer's fees?—Yes. He thinks it better to do that than have a farm without any beast at all on it.

27847. Sir John Colomb.—Give us an illustration of the purchase of a cow by a farmer in that way?—Suppose a person bought a cow at £10 he would pay, at 5 per cent., the auctioneer's fees, and I suppose 7 or 8 per cent. interest on the price of the beast. I think he has to pay interest in addition to the auctioneer's fees. And then he is lent a beast for six months and at the end of the six months he has to pay up; but the auctioneer advances the money to the seller then and there at the auction.

27848. At the end of the six months is there any seizure in default, or does it happen that at the end of the six months these people are all fully paid?—I suppose they manage to pay or to get credit for an additional time at all events. It is very seldom that we hear of seizures.

27849. But really such a gamble is a ruinous thing?—It is. I do not believe the people can really pay it and it must keep them in perpetual poverty.

27850. Chairman.—Where does the money come from—from their friends?—A great deal of it from their friends in America, England and Scotland.

27851. Most Rev. Dr. O'Donnell.—And from the proceeds of the stock sold at country fairs?—Yes.

27852. Is that here?—On towards the mountains and towards Cliffoney. Such sales are very common there. With regard to migration, I think there are some farms in the district that could be used for migrating people to. There are three farms belonging to Mr. Ashley at Cliffoney. They are used by the people as grazing for their cows, and then there is a Mr. Jones who owns an estate in the neighbourhood. He offered to sell to the Congested Districts Board some time ago. I think he has twenty-one tenants on the estate, and he offered to sell his estate, which is valued, I think, at £1,753. He has not said anything about it for the last two years; but if the Board offered to take up the estate I think he could be induced to sell, and it would be a good means of bringing holdings up to an economic standard. His valuation of the house and demesne is £175. I do not know the number of acres on the farm.

27853. Sir John Colomb.—At present is it used by the small holders in the locality who could not otherwise keep their stock?—What happens is this. He

Apr. 17, 1907. Rev. Michael Kelly.

keeps a large portion for meadow land and sells the meadow, and gets grazing on the rest of it.

27854. And that grazing is taken by the small holders who want it for their cattle, and if you deprived them of that by dividing it up into farms what would happen to the small holders who would thus be deprived of the grazing?—They could increase their farms by getting a portion of it. There is another matter that would relieve congestion in the district. There is a large strand there that is covered by flood tide and a stream flows through it, and I think if the Congested Districts Board sunk the bed of the river, the shore part of that land would be reclaimed. The stream discharges down through the flooded area and turns out in a northerly direction.

27855. Mr. SUTHERLAND.—That is similar to the case referred to by Mr. Brennan in the Cliffoney district?—Yes.

27856. Most Rev. Dr. O'DONNELL.—Are there any fishing rights?—No. There is no fishing in that district at all.

27857. Mr. SUTHERLAND.—Is there other land injured?—100 acres of strand is lost and some meadow land is injured by the overflow of the river.

27858. And is it submerged frequently?—The tide comes in regularly.

27859. Sir JOHN COLOMB.—Is it on the Ashley Estate?—On Mr. Jones's Estate, and on an estate lately sold by Mr. Barry at Runroe.

27860. Mr. SUTHERLAND.—It could be reclaimed entirely?—I think so.

27861. Most Rev. Dr. O'DONNELL.—Recovered from the sea?—I think it could be recovered from the sea. Then, I think also that the Congested Districts Board could do a good deal in the locality to improve the holdings of tenants even though they could not make them economic. There was an estate sold there some time ago, Mr. Barry's estate. I think there were about thirty-one tenants on it, and only half of them are residential and the other half non-residential. The sale was sanctioned by the Estates Commissioners. I think the price that was paid was about 23½ years' purchase on second term rents; and some of those holdings are in patches here and there and some are held in rundale, and the houses are all in a cluster, and certainly something ought to be done to improve the holdings or to benefit the position of the tenants, and it is astonishing that the Congested Districts Board did not do it.

27862. CHAIRMAN.—They did not get possession of the estate?—As a matter of fact they did not, because the estate was sold and the tenants are as they were before the sale, and I suppose the tenants and their successors will be consigned to that position for ever.

27863. Most Rev. Dr. O'DONNELL.—I think it was the Estates Commissioners bought the estate there?—The bargain was concluded between the tenants and the landlord, and I think he managed to get the sale through in that way, and then the Estates Commissioners were called in to sanction the sale.

27864. They did not buy it themselves?—I think not. A gentleman came down to see what was the purchase money and if estate was security for money to be advanced.

27865. At all events that has passed to the tenants unimproved?—Yes; some of the land is in rundale. They have it in little strips, without any place at all, and then there is a good deal of trouble with respect to disputes and differences and they are in the courts nearly every court day.

27866. Sir JOHN COLOMB.—Do you think now under the circumstances of that estate and the tenants being subject to annuities, owners as well as occupiers, that it would be practically possible to re-arrange that now after a bargain has actually been made?—Well, I think it would be possible.

27867. Mr. O'KELLY.—When was the estate purchased?—About two years ago.

27868. Was it represented to the Estates Commissioners that it was an estate that ought to be improved?—Well, I was never consulted.

27869. Who was it that negotiated the sale and purchase?—I think it was a solicitor in Ballyshannon.

27870. Has any attempt been made recently to invoke the assistance of the Estates Commissioners with a view to having the land improved?—I think not.

27871. Of course, you are aware that the Estates Commissioners can act as a Congested Districts Board on a property where the problem of congestion has to be faced?—Well, I would not get that impression from the way they acted on this estate.

27872. Has any negotiation taken place between those who were advising the tenants and the Commissioners?—I think not.

27873. Mr. SUTHERLAND.—In what way do you suggest that it could be remedied?—I think the holding could be striped.

27874. Striped?—Yes, and the houses could be removed. It is very unsanitary to have all the houses together in a cluster.

Mr. O'KELLY.—In a case of that kind the Congested Districts Board could step in and carry out the work. I have a case in my mind where the Congested Districts Board stepped in, with the greatest possible advantages to all parties, after the tenants had come to an arrangement with the landlord.

27876. Mr. SUTHERLAND.—You were not aware before of the fact which Mr. Conor O'Kelly has pointed out—that the Congested Districts Board could intervene even now?—I was not aware.

Mr. O'KELLY.—I did not say now.

27877. Most Rev. Dr. O'DONNELL.—Have the vesting orders been made out or completed?—I think so.

27877A. If so, then there would have to be a readjustment of everything, and the vesting orders would have to be made out anew, of course.

CHAIRMAN.—By voluntary agreement?

27878. Most Rev. Dr. O'DONNELL.—Only on the agreement of everybody?—Some of them would be satisfied, I believe, but some would not be satisfied.

Mr. O'KELLY.—I think it was by consent that the Congested Districts Board stepped in in the case I have in my mind—of the Roche property.

Most Rev. Dr. O'DONNELL.—I suppose the vesting orders had not been made.

27879. CHAIRMAN.—Will you go to the next point?—The next point is kelp. In the last report of the Congested Districts Board they have not made any reference at all to the amount of kelp produced on the Sligo coast, though they refer to Donegal and Mayo; and there are about 400 or 500 tons of kelp shipped each year at Mullaghmore. It is manufactured from two kinds of seaweed—drift weed and cut weed. The cut weed was chiefly used for the manufacture of carbonate of soda. It, carbonate of soda, is now produced from some other material, and the drift weed is principally used for the manufacture of iodine. Well, I wrote to the agent of the company which buys the kelp here, and I asked him what could be done for the industry; and his reply was that a good deal could be done for it, and that the price could be increased by twenty-five per cent., provided that they used the proper weed in the manufacture of the kelp; and, secondly, that they should not flux the kelp too much, and also that they should keep it clean—it was to be free of sand and stones. And a question was raised to-day about the burning of kelp. As the kelp is burnt here, it is done too quickly, and the heat is too intense, and nearly half the iodine volatilizes and escapes; and I think the Board should teach the people how to burn it profitably.

27880. In what way would you get the Board to act?—By appointing an inspector.

27881. How could you carry that out with regard to the poor men along the coast?—I think the Board should appoint an inspector, and that he should be in a position to see that the proper material was used and properly burned.

27882. Most Rev. Dr. O'DONNELL.—Does that mean that the process of making kelp should be improved?—Of course the iodine could not be extracted conveniently along the coast, but I think it would help the industry very much if an inspector or overseer were appointed.

27883. Sir JOHN COLOMB.—Do you think that they should appoint an inspector with powers to keep the people from burning the kelp wrongly?—I think he should have power to see that it was done rightly.

27884. And in what way would he enforce it?—He should be appointed by the Board.

27885. How is he to exercise his power on behalf of the Board?—He would get authority from Parliament.

27886. By legislation?—Yes.

27887. Most Rev. Dr. O'DONNELL.—This inspector would be able to see the operation, and to say such-and-such a man made his kelp well, and that would help the industry?—Yes.

27888. Mr. SUTHERLAND.—Would regulations—printed instructions—be useful?—I am afraid that it would not be easy to get the people out of their old methods that way, and that they would stick to their old methods.

27889. Mr. KAVANAGH.—Mr. Brennan told us that you get higher prices here for kelp than in Donegal?—Yes.

27890. And that would show that it was made better?—That does not show that it is made in the best way in either place.

27891. Mr. SUTHERLAND.—Are you of opinion that the manufacture of kelp could be largely increased here?—Yes, I think so. This gentleman, the agent, says the supply is going down, and is not nearly as large as it was in former years—the supply of kelp I mean that they send away to Scotland.

27892. The iodine is the principal product?—Yes; but it appears that there is a new manner of extracting iodine.

27893. Sir FRANCIS MOWATT.—Did the representative of this company hold out a prospect of a greater demand if good kelp could be supplied?—Yes; and he held out a prospect that the price would be increased by 25 per cent. He stated, also, that they were not using the proper weed to burn kelp. I suppose they were using the cut weed, which is not of any use for iodine at all. The weed they should use is the drift weed—that is, the weed washed in by the tide; and when the tide is out they go and cut the cut weed on the rocks.

27894. Mr. SUTHERLAND.—That is not the best?—No; that is of no use for iodine at all. The drift weed is the proper weed for iodine, not the other.

27895. That is not my experience?—Well, that is what I say; and I asked a gentleman here, and he said the same thing to me just now.

27896. CHAIRMAN.—Now about the lace-making?—Lace-making was started in this district ten years ago, about 1896; and it was on a very small scale at first, and it flourished very much in the district, and there was a great school here under the Congested Districts Board in 1902, and their supplies of lace were given to the Irish Lace Depôt, of Grafton-street. And then there was a company known as the Hibernian Lace Company, in O'Connell-street, and they used to get £300 or £400 worth from the school, and the teacher got orders from the Congested Districts Board's Inspector not to supply any more lace to this company; and the lady that was in charge of the school here transferred her services, and became an agent in the employment of the Hibernian Lace Company; there was no agent sent by the Board. The school continued for twelve months, and the prices paid by the girl who represented the Hibernian Lace Company for lace and her own personality attracted nearly all the girls away, and the Board stopped the school. Now I would suggest that the Board should re-establish the school, and for the following reasons. The people of Grange have taken a great interest in this lace industry. To show the amount of money that was paid, I take the year 1906, when it amounted to £3,261. We have returns of the sales to the Hibernian Lace Company.

27897. Most Rev. Dr. O'DONNELL.—That is last year?—Yes. I would not say that all that was in Grange, because there were agencies in Kinlough, and also in Cliffoney; but I think it would not be exaggerating to say that £2,000 was paid in the district of Grange itself. There are large numbers of girls from this district engaged in Dublin as well as throughout Ireland teaching lace-making. I should like to draw attention to another point, that not only should the lace industry be taught now, but that drawing and designing should be taught, as the girls cannot qualify to become teachers under the Department without that; and I think it would be a great advantage for the people, especially as they have taken such an interest in the industry, and that they might be able to fall in with new designs in lace production.

27898. CHAIRMAN.—Do not new girls go into the industry now which is being carried on under the auspices of the Hibernian Company?—Lace-making is at present prospering in the homes of the people, but they cannot qualify to become teachers. There is a vacancy for a teacher at Rosse's Point, and there are about eight or nine girls from this locality looking for the appointment, and they are disqualified because they have not a certificate; and I would ask the Board to re-establish the school here, and to send a teacher in drawing and designing to enable girls to qualify for appointments as teachers.

27899. Sir JOHN COLOMB.—Was any representation made by you or anybody else at the time of the withdrawal of this school, stating any reasons on the subject?—Well, with regard to that matter, I was here at the time, but I was not questioned on it; and the management of the whole business was between Mr. Walker, the Inspector of the Board, and the parish priest, and I did not interfere directly or indirectly.

27900. Most Rev. Dr. O'DONNELL.—And the parish priest has since died?—Yes.

27901. And would you take it that the school here was a very great success?—On the admission of Mr. Walker, it was the finest school of all the schools under the Board.

27902. And how many teachers are employed in Ireland from this district?—About twenty-six.

27903. Was not that a fine opening for girls?—A magnificent opening. They get about £1 a week.

27904. Do you think the girls who took to lace-making in this district so successfully gave up household occupations—did they become less useful in their own houses?—Well, the work of the house was done by the mothers or by younger girls.

27905. Are they less capable of doing household work now because they are good lace-makers?—Well, I believe they are quite capable of doing all the household work they have to do.

27906. Do those good lace-makers emigrate out of the country?—I knew one of the best who emigrated to America.

27907. But, on the whole, do they stick on here?—Yes, they stick on here. That was at the crisis that I speak of, in 1902. The school went down, and the Hibernian Company would not give the prices for the lace when there was no opposition, and many girls at the time emigrated.

27908. And do you think that Mr. Walker's management was very satisfactory in this district?—Well, I am not in a position to judge about it, because, as I have said already, I left the matter between Mr. Walker and the then parish priest.

27909. Has Mr. Walker been asked to send back the teacher?—Not that I am aware of. Of course, I did not ask him.

27910. Have you any apprehension that if he were approached on the subject he would give it full consideration?—Well, I believe he would.

27911. And I suppose you want something more than the teachers back?—I also want teachers in drawing and designing.

27912. So that the best of the girls in this locality may be thoroughly qualified and certificated for appointments as teachers?—Yes, that is so.

27913. You have no apprehension that that will deter Mr. Walker?—No.

27914. CHAIRMAN.—What is that girl doing now—do you know whether she is making lace or not, this girl that you say was such a good lace-maker?—She is in America.

27915. Is she making lace in America or not?—I believe she is not.

27916. She has gone to work there in another way?—Yes.

27917. And that is a loss?—Yes and she would be a most competent teacher if she had a certificate.

27918. Sir JOHN COLOMB.—And at this moment there is a great deal of lace-making going on in the homes of the people?—Yes.

27919. And that adds to the earnings of the homes?—Yes; nearly £2,000 last year.

27920. Last year?—Yes.

27921. Most Rev. Dr. O'DONNELL.—Have you a return for the different years?—I have a return of the sales to the Irish Lace Depôt and the Hibernian Lace Company. In 1900, £535 15*s.*; 1901, £1,102 17*s.* 2*d.*; 1902, £2,801 19*s.* 3*d.*; 1903, £2,994 17*s.* 11*d.*; 1904, £1,691 16*s.* 10*d.*; 1905, £3,460 16*s.* 2*d.*; 1906, £3,261 3*s.* 4*d.* That represents the sales to one company.

27922. Mr. SUTHERLAND.—To what area does that apply?—Between this and Ballyshannon. I suppose two-thirds of it applies to Grange district alone.

27923. Most Rev. Dr. O'DONNELL.—To what area in the Grange district?—About five miles each way here. Then we have the particulars of sales to the Irish Lace Depôt. The sales to the Irish Lace Depôt in March, 1907, were £170 17*s.* 9*d.* In April;

Apr. 17, 1907.

Rev. Michael Kelly.

1906, the amount was £104 8*s.* 7*d.*; May, £109; June, £161; July, £1,067; September, £113 1*s.* 9*d.*; October, £91 2*s.* 4*d.*; November, £117 3*s.* 2*d.*; December, £94 14*s.* 6*d.*; January, 1907, £126 2*s.* 6*d.*; February, £155 7*s.* 9*d.*; March, £170 17*s.* 9*d.*

27924. Sir JOHN COLOMB.—Can you give the Commission anything approximately in the way of figures to show how many workers there are and the amount of money they receive, and what was the population among which it was distributed?—In this district alone there are about 500 families; and, taking an average, we allow two girls in each house. That would be about 1,000 girls in the district.

27925. Do I understand you to say that approximately all that money was disbursed amongst 500 families?—No; the money disbursed in the Grange district was. Two-thirds of that money was divided between 1,000 families.

27926. And that represents a population, you would say, of 5,000 altogether?—5,000.

27927. 5,000 persons, not 5,000 families?—About 1,000 families.

27928. Most Rev. Dr. O'DONNELL.—I suppose we do not know fully the circumstances under which Mr. Walker decided to withdraw the teacher?—Well, the reason was because the school was deserted; the girls did not come to the school.

27929. From what you state it would appear pretty evident that the girls in the Grange district are a most industrious class of girls?—Yes, very hard-working, very industrious.

27930. And also that if they are industrious they carry their industry to a very considerable stage of perfection?—Yes, quite so.

27931. And that is the basis of your application for having drawing and some other branches taught here?—Yes.

27932. Mr. O'KELLY.—Father Kelly, do you think that if the school were re-established the girls would attend?—They would, on the prospect that I hold out—if a teacher for drawing and design was appointed.

27933. And do you think that the non-appointment of such a teacher in the past accounts for the desertion of the school?—The higher price given by the Hibernian Lace Company and the personality of the teacher then in charge of the school, who had much influence with the girls in the school. She took most of these girls with her when she became agent of the Hibernian Lace Company. All this accounts for the desertion of the school.

27934. Sir JOHN COLOMB.—What was the amount of the grant of the Congested Districts Board for this school?—I think about £100, but I cannot say exactly.

27935. You are convinced that if the school were re-established, the attendance would be satisfactory?—I think it would.

27936. CHAIRMAN.—At the same time we must get the views of Mr. Walker?—The Congested Districts Board professes to have a special care of the smaller fisheries along the coast. I find that it has done very little for the fisheries on the Sligo coast here from Ballyshannon to Sligo. Now, there are two very important fishing stations, Magherow and Mullaghmore. Magherow is in Lissadell West. About ten years ago, in the neighbourhood of Grange, there were sixty boats fishing for herring and there is no trace of that now.

27937. Sir FRANCIS MOWATT.—Where is that?—About ten years ago there were about sixty boats fishing in the neighbourhood of Grange here for herring. At a place called Luchawn there was a landing place; and now the stations are closed, and there is no trace of the fishery now, and if the Board had taken a great interest in it that would not have occurred.

27938. Mr. SUTHERLAND.—But it stopped long before the institution of the Congested Districts Board?—No; it was going on then. On inquiry I find that it was going on ten years ago and there is no fishing now there.

27939. CHAIRMAN.—Did the herrings go away?—I suppose they did.

27940. The Board could not have controlled that?—In Lissadell West there are thirty ordinary fishing boats and thirteen trawlers. Now, these boats, they say themselves, make about £70 or £80 a year, and the trawlers make about £2 a day. The complaint these fishermen make is that the Board ought to supply large decked boats, and if they did that they would be able to go off to the deep sea fishing, and to follow the herring fishing in the different seasons of the year. Then I would suggest, certainly, that the Board should send down large boats and an instructor.

27941. What do you call a "large boat"?—About five tons I suppose, to be able to go to the deep-sea fishing.

27942. Five tons?—Well, of course I do not know much about the fishing.

27943. Most Rev. Dr. O'DONNELL.—Is it deck-boats?—Yes; those are the boats.

27944. Mr. SUTHERLAND.—Yes; boats of about fifty or sixty feet keel?—Yes.

27945. CHAIRMAN.—Will you go on?—I think that if the Board sent down one of those boats and an instructor for these men who take to fishing very earnestly, it would do a great deal of good to the district, and the people are most anxious for it too.

27946. Mr. SUTHERLAND.—If the fishermen earn £2 a day do you not think that they might after some time accummulate capital enough to get better boats than they have?—But they would not know where to get the fish, a great many of them, and I think if an instructor was sent down they would know something in that way, and the Board would do something to support the industry at all events.

27947. But why should not the fishermen do it for themselves?—They do not know where to go. These men are scarcely ever from sight of land. Then, also, they do not at present know how to manage these large boats if they had them.

27948. Sir JOHN COLOMB.—I have repeatedly looked at the chart of this coast, and I was impressed very much with the want of water—the shallowness?—Yes; that is a complaint.

27949. Is not it the case that that fact rather militates against the use of large boats?—Well, the fishermen want that done. They want the entrance of the harbour at Mullaghmore sunk in order to admit those boats.

27950. Then the harbour has not water enough in it for their boats?—Yes, that is a point I intended to mention in my evidence.

27951. Most Rev. Dr. O'DONNELL.—At present there is not a sheltered harbour for deck-boats?—There is one at Mullaghmore, but it is not sunk deep enough.

27952. CHAIRMAN.—Is it dry at low tide?—It is.

27953. Most Rev. Dr. O'DONNELL.—And it is silted up?—Yes.

27954. Sir JOHN COLOMB.—It is a very shallow bay judging from the chart?—Yes. On the island of Inishmurry there are at present thirteen families, and they do very little in the fishing line. They say themselves that they are not equipped with boats big enough to be able to carry on fishing successfully; and they say, furthermore, that they have no landing-place. The Congested Districts Board built a pier or landing-place which cost £146, and the people of the island say that it is perfectly useless to that district; that whenever the wind blows from the east no one at all could land a boat there, so that the money spent on the pier is lost, at all events it should be extended more out to sea, and an "L" turned on it. And they say that they have great trouble when they come in to get their boats out of the sea, and that the Board should also build a slip, and I think the money would be very well expended.

27955. Most Rev. Dr. O'DONNELL.—I gather that if this extension were made the past expenditure would not be quite useless?—Yes, that would be a relief to the poor people on the island.

27956. CHAIRMAN.—Did you say the population of Inishmurry had fallen off?—Yes.

27957. And there are thirteen families now?—Yes.

27958. How many were there a few years ago?—I was looking through the rate-collector's list and I found sixteen families in it. I was speaking to a late teacher on the island, and she told me that in her time there were thirty-five children attending the school, and at present there are only twelve. And five years ago, when I arrived here, there were three skilled crews, where at present you could scarcely get one skilled crew. At present the manhood of the island is going to America, and they have to resort to a very demoralizing practice; they resort to illicit distillation of spirits to maintain a livelihood.

27959. For which the island is peculiarly well suited geographically?—Yes; to escape the police.

27960. Do you know what has happened to the land that has been vacated by the three families that have

gone?—Well, there is a good deal of land on the island that is perfectly useless, barren rock; and with regard to the land indicated, I expect that the people sell it to some other one, or give it to their friends on the island.

27961. It has been merged in the other holdings?—Yes.

27962. Do you know whether the people who have had the addition to their land have done any better since they have got it?—There are only two inhabitants on the island who are in a way at all to make a decent livelihood for themselves. The others are in extreme poverty, and I say no addition of land could help them very much.

27963. The north and west sides of the island are swept by storms?—Yes; it is only on the southern side that they can safely land.

27964. Most Rev. Dr. O'Donnell.—With regard to the school?—That was built by the Board. It was a magnificient school for the money that it cost.

27965. Why did it cost so much?—Because it is very expensive to convey material from the mainland to the island. I suppose you could hardly get a boat to take a cargo of cement at less than £1, and tradesmen have to be brought too, and I suppose the school could not have been constructed for less. All things considered, I do not think the expenditure was so very extraordinary after all.

27966. Mr. Sutherland.—Is there a teacher's residence?—No.

27967. Nor a second room?—No.

27968. Sir John Colomb.—I suppose it is difficult to get a teacher to go across?—Yes.

27969. Chairman.—What parish is Inishmurry in?—It is in the parish of Ahamlish.

27970. There is no resident priest on the island?—No; it would be rather hard on the priest.

27971. Sir John Colomb.—It is rather hard to get there sometimes?—Oh, yes. I have to go there occasionally.

27972. You would be delayed by bad weather?—Yes.

27973. Mr. Sutherland.—You talk of fishing in Inishmurry. Supposing they caught fish, what would they do with them?—I often see them selling dried fish here at Grange.

27974. Dried in the sun?—Really I do not know the exact details, but I often see them selling it at the fair.

27975. Ordinary salted fish, split open?—Yes, I think so.

27976. Sir Francis Mowatt.—In an ordinary day and an ordinary sea, how long would it take a boat to get in from this pier to the mainland?—From this point where we go to the island would be an hour, pulling all the way, and it would take half an hour's sailing to the island if the wind was favourable. It would take an hour or an hour and a quarter to pull. It is four miles.

27977. Is there anything like a road along the island?—There is a road, but it is not kept in very good repair. The houses are all on the south side of the island.

27978. Chairman.—There is one thing I would ask you about. Under the head of "Industries" you say, "Our Franciscan Sisters of Loughglynn, if encouraged"?—They offered to come down here and establish a house here, and promote the industries of the locality if they get any encouragement, I suppose if the Board helped them. They consider that owing to the great population of this locality it would be a very useful thing, and that they could do a good deal for the people as they have done for the people in Loughglynn.

27979. To whom did they make this offer?—To the Bishop, Dr. Clancy, two years ago.

27980. Was it communicated to the Board?—I am not aware of that. He told me about it, and he told me to mention it in my evidence, but I forgot till just now.

27981. Did they get any direct financial aid from the Board?

Most Rev. Dr. O'Donnell.—Rather, my lord, it has been the Department. The Bishop, Dr. Clancy, has made an arrangement with the Department of Agriculture, and what the details are I do not know.

27982. Chairman.—There is nothing else that you want to say?—I do not think there is anything else except to speak of Parish Committees and Banks, and these have been discussed already. This is an account of the Barry Estate.

Mr. Henry L'Estrange examined.

27983. Chairman.—You, I think, appear to give evidence at the request of the Landlords' Convention?—Yes.

27984. You have, I think the management of a considerable amount of property about here?—I have, not immediately round this neighbourhood, but in the County Sligo generally.

27985. Is that Markree?—Yes, that is my principal agency. The evidence I wish to give on behalf of the landlords is to prove that they have, generally, in the County Sligo, expended very considerable sums of money in improving their properties.

27986. Are you speaking now since the Act of 1881?—Yes. Prior to it and since, principally prior to it.

27987. Do you mean that in the County Sligo money has been spent on the improvement of estates since the Act of 1881?—Yes, most distinctly. And also other principal evidence that I can give is evidence to show that rents although small have been well paid in this county.

27988. What sort of improvements have been effected during the last twenty years?—During the last twenty years, repairing of roads, reclaiming bog, draining bogs, planting timber, building of cottages, labourers' cottages, and such like, and loans to tenants for the purpose of improving their lands and houses.

27989. By the landlords?—By the landlords of this county. I think, however, my principal evidence is with regard to the Markree estate, which is the principal estate that I manage; and I know, of my own knowledge, that smaller landlords, with less incomes than the landlords of Markree have also, to a very considerable extent, dealt with their tenantry in the same way on their properties. The figures that I have to show to bear out what I say with regard to the improvements and expenditure of money I took principally from accounts in my office, and they show more than has been actually expended in my experience which is only seven years, that I have been acting as agent, but I took into account the period that my father managed before me.

27990. Sir John Colomb.—Was your father agent before you?—Yes, and my brother—my elder brother. They show more than has been expended during the seven years.

27991. Chairman.—Let us go through your evidence from the beginning. You say, "There is a considerable quantity of land on the properties which I manage in this county which is entirely unsuitable for tillage"?—Yes. By that I mean land—and there is a very considerable quantity of it, and a pretty good area of it—of a rocky nature, where there are rocks; and also low-lying land, too low-lying for drainage purposes.

27992. "Grazing is practically the only use to which these lands could profitably be put." You do not think these lands could be profitably broken up?—No.

27993. The fact of there being rocks would not be in itself sufficient to prevent tillage?—Not to prevent it if they were only loose rocks, but I mean solid rocks.

27994. Sir John Colomb.—Bare rock?—No; limestone, coming shallow up to the surface, within six inches.

27995. Chairman.—You know the Rosses in Donegal?—No.

27996. You see some remarkable tillage efforts among the rocks there?—I see a good deal of that too on the properties that I manage, that they do take crops out of it, but I class that rather under the second head with regard to grass land that can be tilled but not with advantage, not with profit because the labour entailed is so great. On the properties that I manage there is a good deal of rocky land that is tilled, but it is all spade labour and I consider it is not profitable.

27997. Mr. Kavanagh.—Are you speaking of untenanted land?—No; of tenanted land.

Apr. 17, 1907.

Mr. Henry L'Estrange.

27998. Not of untenanted land?—Well, I mean both, but not altogether of untenanted land.

27999. CHAIRMAN.—Practically the whole of your first paragraph comes to this, that there are two kinds of land which you have in your mind, which are unsuitable for tilling, that is, first, land which is of such a rocky nature that it could not be profitably tilled, and the second of such a stony sub-soil that the amount of labour that would have to be exerted would make it unprofitable?—Yes.

28000. You rule out those two classes of land and then you say that "There are a few places where proper tillage would be more profitable and beneficial to the land than the present system of grazing. Parts of these are now of a heathery nature, and unless well cared would revert to their original condition"?—Yes.

28001. Have those places never been tilled—are there no traces of former tillage?—Oh, yes. I refer to a pretty large extent, as it were, between absolute mountain and the low-lying ground which I believe may be fairly easily reclaimed, but unless constant attention is given to it it will revert to the original state it started from. One sees that.

28002. I suppose that applies to all sorts of boggy land, does not it?—Yes, it does.

28003. Land which is tilled in Donegal, and Mayo, and elsewhere?—I should say it does, but it is largely used at the present time as rough mountain grazing.

28004. But is not it a fact that a boggy soil very often grows extremely good crops if well looked after?—Yes, and often a good rich crop.

28005. And therefore if it is well looked after there is no reason why it should not be profitably tilled?—No; none whatever.

28006. Then do you suggest that it should not be broken up because you have thoughts that it would not be properly tilled?—I think it requires more attention than other tillage land would, to prevent it's reverting to its original state.

28007. But surely there are heaps and heaps of that sort of land all over the West of Ireland that is only kept from reverting by the industry and work put into it by the people?—Oh, I should say that there is. There is a good deal used at present to produce rough grazing, because the labour that it entails to keep it in tillage is not forthcoming; but they can till it to a certain amount, not to any great extent.

28008. Sir FRANCIS MOWATT.—Are these all tenanted lands that you are speaking of—are they all now held by tenants to graze instead of tilling?—Not all; no, I include both in that.

28009. But is a large portion of them held by tenants?—Oh, yes; just as much tenanted as untenanted.

28010. And they graze instead of tilling—they find it better?—Yes.

28011. Sir JOHN COLOMB.—What you mean is that you are dealing with land which on the face of it is not tillage land?—Yes.

28012. And you are not dealing with the question of whether the land is tenanted or ought to be striped or anything else. You are merely dealing with the classification of land in relation to its nature and working. Is not that it?—Yes.

28013. And I gather that A, B, and C refer to land which may be described as grazing land and may not be adapted to tillage?—Yes.

28014. And undoubtedly much of this land was in former times tilled?—I do not know what proportion. I would hardly use the term "much," because there is such an enormous extent of it.

28015. But in your opinion it would not pay to till now?—I do not think so.

28016. And, therefore, it is really economic causes and the causes of necessity that have driven this class of land in these days into grazing and away from tillage?—I think so.

28017. CHAIRMAN.—Why should it not be tilled now? I am not talking of land which is unsuitable, which you can see is too stony, but land which is available for tillage, which only requires hard work to keep it from reverting—why should not that be tilled?—It is rather difficult to get hard work, to begin with. They do not like hard work on the side of the mountain, these fellows, and they generally have sufficient of a different class of land that is more profitable to deal with.

28018. But then your objection is a human objection, not so much to the land as to the people who till it?—It is that they have allowed it to go back because they do not consider it profitable to till.

28019. You say it would not pay to till. I want to know why it would not pay to till. I can quite understand that you would think that they could not till it sufficiently to make it pay, and that is an answer to my question; but is there anything in the land which would make it unprofitable to till?—I do not think there is.

28020. Sir JOHN COLOMB.—The class of land that Lord Dudley has mentioned that may be described as what you would call very hungry land, you would have to put a great deal of stuff into it to keep it up?—I would say so.

28021. And is not that one of the causes that, owing to the nature of the land, having hilly elements upon it, so much has to be put into it to get a real profit out of it, that it would not pay to do it?—Quite so.

28022. When you say "well looked after," you do not mean merely the fact of an active man giving all his energy, but a man having capital and energy and means of putting into the land what the hunger of the land demands to get a profit out of it. Is that what you mean?—Yes.

28023. The other point is this. It is the case, I think you mentioned it, and I want to ask you, taking bog-land now, that although undoubtedly you can get good crops out of boggy soil, reclaimed bog, still that is very hungry stuff, and you mean that the attention it demands is not merely human attention but the means of renewing the fertility of the bog which swallows up everything in the way of manures and that sort of thing?—Yes.

28024. And that is what you mean. It is not merely to attribute it to any defect of human will, but really to economic conditions that demand all these things to be put into that class of land to make it pay at all?—Yes, supplies of manures.

28025. CHAIRMAN.—If this land is such hungry land and wants so much put into it, would not it be more likely to be fertile if beasts were fed in stalls and the straw and manure was used for the improvement of this land than under the system of grazing?—You ask me would it be more likely?

28026. If the land is what Sir John calls hungry land and requires a good deal put into it before it will give a good crop, is not it more likely to do that if you have a proper system of manure?—Yes.

28027. And is not that proper system of manure much more likely to come about if beasts are put in houses and the manure used than under the grazing system?—Certainly it would.

28028. Sir JOHN COLOMB.—Is not that a question of a man having capital?—And means and stock.

28029. CHAIRMAN.—But still that would be a better system for hungry land because you put more manure into the land?—Yes; but the extent of land that I speak of is so great that it would require an enormous amount of capital and number of stock to have any appreciable effect.

28030. Why should a man want so much capital to have a shed on the ground to put these animals in—why should he want so much capital?—Well, you would want the animals.

28031. You might even have the same amount of animals that are now used, and if they are kept in a house and the manure properly used the land would gain more than it does at present?—It would; it would improve in a small degree.

28032. Where does the capital come in beyond building a byre in which to keep those animals?—Yes; it does not come in unless you want to do it on a large scale. It is some improvement.

28033. Sir JOHN COLOMB.—To practically illustrate what I mean, say you take A, and say there are 30 acres of this land you have described, and say the man builds a shanty for his cows and makes fences and even drains the land, and then in order to begin, this land must be manured?—Yes.

28034. And the plot of land will not, at first at all events, carry stock to make manure, so it must be a gradual progress?—Yes.

28035. And it is only after years of that progress that you can expect the whole 30 acres, after using capital and time, to be a fairly mixed farm?—Yes.

28036. Mr. O'KELLY.—You stated a while ago, in reply to Lord Dudley, that the land was capable of being tilled, this land that you describe as of a rocky nature?—Some.

28038. I think you went on to say that a lot of those fellows on the side of the mountain were so lazy that that would be an obstacle?—Well, it would entail more labour than what they, I believe, are prepared to expend on it.

28039. That is your experience?—Yes.

28040. Would you be prepared to say that the character of the great number of the small farmers would answer to your description of them as being a lot of lazy fellows?—No.

28041. To whom would that description apply?—I did not call them a lot of lazy fellows.

28042. I took your words—A lot of those fellows on the side of the mountain were too lazy to crop it. To whom did that apply?—My point is that it requires more labour than they or anyone else are likely to give to it.

28043. On what experience do you base that opinion?—Not on any actual experience beyond seeing that they allow it to revert to the old course of things.

28044. Who allows it to revert?—The people who endeavoured to reclaim it and use it.

28045. Do I understand you to say that the people who get rent fixed on their holdings allow them to revert to the original condition?—Not at all.

28046. What is the experience you speak of?—My experience is that where they have land that is suitable for tillage and comparatively easily worked, they have allowed some of this rough ground that I say is unsuitable for tillage owing to the amount of labour that will be required to till it and to improve it, to revert, and they use the suitable land naturally in preference to the other, as they are not going to do more work than is absolutely necessary to raise such crops as they require.

28047. Is the argument that you now give us based on any actual experience on the properties that you manage?—Yes.

28048. It is?—Where they have reclaimed some of this land such as I speak of, and have other land and have allowed the reclaimed part to go back.

28049. Mr. Sutherland.—Who reclaimed it?—The occupying tenant, and he has sufficient for his own purposes of other land that is more suitable.

28050. Mr. O'Kelly.—But the reverting of this land to its former condition to which you alluded you attributed entirely to the laziness, as you say, of those fellows on the mountain?—I may have said laziness. It may have slipped off my tongue, but lazy they are not. They are not lazy, these mountain fellows.

28051. And do you not think that, taking the County Sligo as a whole, you find the small farmers in it as industrious and energetic as you will find in any part of the West of Ireland?—Yes, I do. I think them a very good class.

28052. And therefore you modify if you do not entirely withdraw the description you gave of them a while ago?—By using the word "lazy" I did not mean it. The word must have been a slip.

28053. Mr. Sutherland.—Is it a fact, in your opinion, that land is now being tilled that ought not to be tilled by these people?—No.

28054. That is not the fair construction to put upon this statement, is it?—No.

28055. That is not your complaint?—No, no.

28056. Then may I ask you what is the general bearing of your evidence?—I mean that there is land available for the purpose of tillage that is at present used as grazing, and that if sufficient labour and capital were expended upon it that land might be profitable to work.

28057. Sir Francis Mowatt.—As tillage; but it would only pay to a very slight extent, as it requires so much labour.

28058. Mr. Sutherland.—You are limiting your opinion now to a sort of easy labour?—Yes.

28059. And, taking the case that we are dealing with, the relief of congestion, are there not other parts of the country to which it applies and not little bits of an estate? Is this general all over Ireland?—No; I deal with land that may be improved, not the extent of it.

28060. On your estates?—On estates that I manage; that the spade can be put into comfortably.

28061. And is that land now capable of tillage?—There is a large extent not capable.

28062. And that extent not capable should be available for the purpose of giving a profit rent to those men that your estates belong to?—Yes.

28063. Most Rev. Dr. O'Donnell.—Is not there this advantage in tilling land as against grazing, that in the hands of a small occupier tillage tends to employ the whole family?—Yes.

28064. Whereas there is comparatively little for the boys and girls connected with it under the grazing system. There is that advantage?—Yes.

28065. Then does not tillage give employment to artisans in the district?—Yes.

28066. To some extent?—Yes.

28067. Now, you have said that you have noticed land reclaimed by an occupier go back to its original condition?—Yes.

28068. Would this to some extent be the cause? Is there a great want of practical agricultural instruction in this locality?—Yes, I should say there is.

28069. Would it tend to keep these lands under a healthy system of cultivation if a practical agriculturist were planted by such a Board as the Congested Districts Board in the neighbourhood with the object of showing practically how this tillage was to continue?—I believe it would. I cannot say.

28070. And indicating the various methods of improving stock and dealing with it?—I think it certainly should, whether it would or not.

28071. From your observation of the people, are they not very willing to take up anything suggested for the improvement of their condition?—Yes, I should think so.

28072. Therefore, that tendency to allow the land to revert after having been reclaimed might be explained by the fact that we have not progressive instruction for the people in agriculture?—Yes; I think it would be a great advantage if it were developed more.

28073. Chairman.—Now, Mr. L'Estrange, so far as that first point of yours is concerned, may I take it that these are roughly your views: That there is a certain amount of grass land which in your opinion had better remain in grazing rather than be tilled; that there is another class of grass land which could be profitably tilled but which would, of course, in order to be properly tilled, require a steady amount of labour applied to it, and also a limited amount of capital?—Yes.

28074. And that you have no reason to suppose that the nature of the people of this district is such that they would not be able to put in the labour that would be necessary to profitably till that land?—No.

Mr. Sutherland.—It is difficult to understand why the worst land is in cultivation, the best out of it.

28075. Chairman.—You say "about 16 or 20 acres of fairly good land should be sufficient to enable a small occupier to live"; and "I am strongly of opinion that the introduction of strangers into a locality would be very much resented by surrounding tenants, as the tenants of any locality are generally anxious to obtain, and think they are entitled to, every possible foot of land for their own use." Now, when you speak of that, do you mean that you think that the tenants bordering on the grass farm would desire to have their holdings so much beyond what I may call an economic standard as to have no margin for migration?—Yes; I believe they would. On any property on which I have had any experience of that sort of thing the tenants on that property have given me to understand very clearly that they would resent any outsiders coming in on lands in the owner's hands if they were divided, notwithstanding the fact that their holdings are economic as they are.

28076. But do you mean that, supposing there was a grass farm surrounded by holdings already economic, in that case they would resent the introduction of strangers to that grass land?—A great many of them would. I mean that where there are economic and really substantial farmers, not the very independent men of the class that would have two farms, but the tenants that you speak of, having economic holdings, that is small tenants, industrious fellows, who get on and thrive, they would expect to get it. I do not mean to say that if there was a larger farmer, an absolutely independent sort of man, that he would be anxious to get it.

28077. Sir Francis Mowatt.—A man of a 30-acre holding?—A 30-acre holding if it was good land. I do not expect that he would.

Apr. 17, 1907.

Mr. Henry L'Estrange.

28078. CHAIRMAN.—The small men on the margin, economic and uneconomic alike, would object?—I think they would expect to get some.

28079. Do you think they would carry their resentment to such an extent as to make it too hot for the strangers to come in at all?—It is rather difficult to say. They would make it very hot for them, I should say. It varies a great deal in different parts of the country, that sort of thing.

28080. Do you think that public opinion might change, or anything like that? Do you think that they would realize that unless they were prepared to take a patriotic view of these people living in congested areas no remedy could be found for their present condition?—You ask me do I think that they would change in their opinion?

28081. Do you think rather that that is a question for education and enlightenment?—It is difficult to say whether they would or would not.

28082. At any rate, I suppose you would not be disposed to disagree, would you, with the view that migration must play a very large part in the solution of the congestion problem?—No. I admit that it must.

28083. That it must play a very large part?—Yes.

28084. And the first condition of any scheme of migration is the possibility of obtaining grass lands on which to put the people?—Quite so.

28085. So that if there was a general parochial view such as you describe it would be difficult even to get land on which to migrate people from the poorest districts?—Unless it was land that was surrounded by large holdings or other grass lands or immediately outside demesne land, that is land that is in the hands of a number of tenants that are literally small farmers with 30-acre holdings. Smallish men, and there are plenty of them, who would consider only 20 acres or 15 acres uneconomic, would expect an increase if the untenanted land were situated on property of that sort.

28086. Sir JOHN COLOMB.—You say 16 or 20 statute acres of fairly good land would be sufficient to enable a small occupier to live fairly comfortably?—Yes.

28087. When you say fairly good land, do you mean ready for the plough?—Yes.

28088. Now, you have given us the acreage. Can you give the Commissioners any idea of what would approximately be the value of that land in rent—what would be the rent per acre of what you describe as fairly good land—just merely to have something to refer to in our minds?—I should say a rent at the present time of about 15*s.* or 14*s.* per statute acre.

28089. Now as regards the description you gave to Lord Dudley in answer to his question about that sort of feeling with regard to bringing in strangers. Do you anticipate that besides this claim of the smaller occupiers to have a benefit from the land appropriated for the purpose of migration there is any probability that there would be a claim from fairly large occupiers for some of that land being striped and given to some of their sons?—I think they would probably claim it.

28090. Do you think that it is likely that in the case of fairly substantial occupiers in the neighbourhood of grass farms taken up for the purpose of migration, the general feeling of the district would be that the sons of tenants ought to have a claim on that land before people from Galway or Mayo?—That is of a substantial man?

28091. Yes, of a fairly substantial farmer in the neighbourhood of the large farm?—And that he would consider that his son should be preferred to an outsider?

28092. Do you think that he would consider that rather than have a man from Galway or Mayo there, one of his sons should have it?—If he had a lot of sons he probably would.

28093. Mr. O'KELLY.—You spoke of resentment towards strangers. Have you any case to illustrate the point in your mind?—No, I have not. Not to mention the name of any particular estate, I have had experience of where I have been given to understand by the tenants on a property that there would be objection taken to a stranger coming there.

28094. Kindly tell me the name of the property?—Well, I will give it to you if you wish, but I think I ought not to be called upon to do that.

28095. But you made a statement, and I am at liberty to test the statement by asking for the case?—Well, I will give it to you if you wish—Major Phibbs's property.

28096. Now, why do the people on the Phibbs' property object, or why do you think they would object to the migration of people from a distance?—I did not ask them why they objected, but they did object.

28097. What was the nature of the objection?—Because there are lands there that are in hands.

28098. Is the property in a scheduled area?—No, I think not.

28099. It is not?—No.

28100. Who bought it?—The tenants have bought it. The lands in hand are being sold to the Estates Commissioners.

28101. And they say that they would object to the incoming of emigrants, that they would resent their coming in?—Yes.

28102. Would not it be a justification of their feeling that they themselves were the owners of uneconomic holdings, and that they thought that they had the first claim for fresh holdings, and that as soon as their necessities were met and their holdings made economic they had no objection to the surplus lands being handed over to people from Timbuctoo?—That may be. I did not question them.

28103. Do you not think that it would be proceeding rather on wrong lines if the available land on the Phibbs' property were handed over to people from a distance, however worthy, while on that same property there were holdings that stood as much in need of improvement as the holdings of those whom you proposed to migrate?—Yes, but they do not stand in such need. If that were so of course it would.

28104. If that were so on the Phibbs' property?—I think if they were in circumstances similar to those that the people from the scheduled areas are in they ought to get the preference of course.

28105. Over anyone from the scheduled areas?—Yes.

28106. But you admit the justice of the view that migrants from a distance ought to have a prior claim over the sons of tenants?—You mean sons of tenants living on economic holdings?

28107. Yes?—I do.

28108. I am quite sure you did not form your conclusions in these matters without having given a great deal of study to the facts. Is there anything else that led you to the view that you expressed, that if such migrants came there would be great resentment?—That is the one and the only one which I have mentioned to you. It is hearsay evidence.

28109. And from your knowledge you admit that there is a great deal of justification for the expressed resentment of the tenants?—Not a very great deal.

28110. Why?—Because they are on economic holdings.

28111. What is the average holding on the Phibbs' property?—Is it the average rent?

28112. Yes?—I cannot say. I have not gone into it, but I can very easily supply you with the actual figures.* I have not gone into the average rent, but I should say £9 perhaps—£8 or £9 perhaps. I am only giving it to you approximately.

28113. In fact, I am very much obliged for the enlightenment that you have given. Now, what would you describe as an uneconomic holding?—A holding that a person cannot live fairly comfortably upon.

28114. But what sort of an uneconomic holding in size or value?—Well, yes, I should say a small holding that one person cannot keep his family fairly comfortably in and meet his debts and so on.

28115. Ten acres?—That would depend on the quality of the soil. I suppose fifteen or twenty acres of fairly good land would be sufficient to enable a small occupier to live.

28116. How many holdings are there on the Phibbs' estate?—About ninety.

28117. How many of those would answer to your definition of economic?—Well, I should say fifty.

28118. Fifty would be economic?—Fifty or sixty.

28119. And forty would be uneconomic?—Yes.

28120. And what is the extent of the grazing land on the property, do you know?—I regret that I have not gone into the figures of this.

28121. But approximately?—I daresay 400 acres.

28122. Now you have forty holdings uneconomic on the Phibbs' property, and you have 400 acres to distribute amongst the owners of them. Do you

* See page 242.

think it unreasonable—because this is a most important question for the Commission—that those forty occupiers on the property should resent the incoming of people from a distance while they themselves stood in need of the 400 acres?—No, I do not think so.

28123. You do think it is unreasonable?—No, I do not think it is; but I am only giving you these figures without having gone into the matter at all on this estate, and I could furnish you with the exact figures to-morrow if you wish.

28124. Mr. SUTHERLAND.—They would not be substantially different?—But with regard to forty uneconomic holdings it is difficult to say that. People do not carry a rental about.

28125. Further on you say, "In my opinion, sufficient land necessary to relieve congested areas in County Sligo could readily be obtained in said County without resorting to compulsion, provided a fair purchase price was given for it." The land meant is grazing land, I presume?—Yes.

28126. You are speaking of grazing land?—Yes.

28127. I suppose it would take some years—ten years at all events—before grazing land could be brought into profitable tillage occupation?—The lands that I refer to are lands that could be tilled right away and that would improve under tillage.

28128. And that it would pay to cultivate in the second year?—Yes.

28129. I asked you for this reason, because it seemed to me that in making such a change a man would be living on his capital for the first year or two, though you say—and I daresay you are quite correct—that a crop could be got out of it the first year. What I was referring to was land that would take a couple of years perhaps before it got into profitable cultivation?—No; the land I refer to could be easily tilled.

28130. CHAIRMAN.—Would not it be a perfectly reasonable thing for a man to do if he went into the new holding which he intended to till but which he could not till altogether the first year—would not it be a perfectly reasonable thing for him to break up as much as he could manage and also take in cattle on the rest of it or let it out in meadow for a year or two till he could actually extend the area of his tillage?—Certainly. I do not think, no matter what land he had, he would probably till more than three or four acres at a time. The remainder would be in grass or meadow.

28131. And he could get it to yield an income, even the new farm, by treating it in that way from the very start?—I think so.

28132. And have you had any experience of that being done?—No, I have not.

28133. And we have been told by several witnesses, by Mr. Doran and others, that that has been done by migrants?—I have not the least doubt that it could be done on the lands that I think of, but I have not had experience of that kind, there being so little congestion in the neighbourhood of the properties that I manage generally.

28134. He would either meadow it or——what is the word for taking in cattle?—For agistment purposes, for grazing.

28135. When you say that in your opinion sufficient land could be obtained in the County Sligo without resorting to compulsion, that assumes, does it not, that all landlords in the County Sligo who had lands which were needed for this purpose, for the relief of congestion, would be willing to sell them at a fair price?—Yes.

28136. And that there would be no people in that position either asking a price that was so high as to be practically ridiculous, or else refusing to sell on any terms whatever?—I do not think there is a likelihood of it.

28137. I am not disputing your opinion, because you have got much more means of judging than I have, but why do you say that, as a matter of fact—what grounds have you for thinking that no landlord would refuse to sell at all?—Well, if the land were not immediately either inside of or attached to or worked in conjunction with his demesne, they would, I believe, sell.

28138. That they would be willing to sell at a fair price?—Yes.

28139. But I suppose it has occurred—it has occurred in certain counties, has not it, that a man, for sentimental reasons, or other reasons, has refused to sell at all?—Yes. That may be. I don't know of it in this county. I have not heard of it. It is not any one of my clients.

28140. If such a case did happen, suppose your prophecy was to be erroneous, how would you propose to deal with a man of that sort unless you had some power of compulsion. If a man did take the line, "I won't sell at all," how would you propose to get the land that you need for the relief of congestion?—I think that is a question that won't arise. I do not know how you would deal with it.

28141. But suppose it did arise, suppose that there was a great tract of land that was absolutely necessary for the relief of congestion, suppose the landlord took up an unreasonable attitude, and said, "I won't sell at any price," how is that to be dealt with except by compulsion?—I do not know any other way.

28142. And supposing he, knowing how necessary that land was for the purpose of relieving congestion, asked the Congested Districts Board a price so large that it was out of all proportion to what they could recover from the tenants, how, in that case, could you get the land without paying him this exorbitant price?—Well, I think some arrangement by arbitration could be arrived at.

28143. Well, that is compulsion, is not it?—Yes.

28144. Then you get the element of compulsion, you see, apart altogether from the price. You say to him, then, "You have got to sell?"—Yes.

28145. So that supposing there were landlords who either adopted an absolutely unreasonable attitude or demanded an absolutely extravagant price, it is difficult to see how you could get the land unless you did have some sort of compulsion?—It is.

28146. Mr. KAVANAGH.—How would you propose to arrive at what you call a fair price?—It seems to me that the most reasonable plan would be to deal with it on the basis of valuation, on the same lines as the income tax.

28147. Untenanted land I am talking of now. Do you think that would be a fair basis?—Yes. Take the Poor Law Valuation. First of all, you would have to go on the basis of what the income derived out of the land is, and to go on that similarly to the manner in which income tax is assessed. I go on those lines.

28148. Not the income that he gets from the land for eleven months?—Well, it might be. I do not know which way. I think it would be a matter of arrangement. I think it would apply more generally, perhaps, to land in the landlord's own hands. As far as my experience goes, I should be perfectly satisfied to deal with it on either of those lines.

28149. But the landlord would get more for an eleven months' letting than for tenanted land?—Yes.

28150. But it is not as certain?—No.

28151. And he has also to pay taxes, and the repairing of fences, and such like?—Yes.

28152. And you have to take that into consideration?—Yes; I should take the net income.

28153. And your basis to arrive at a fair purchase price would be the Poor Law Valuation?—Yes, in accordance with the income tax, that is one and a third, under Schedules A and B.

28154. Sir JOHN COLOMB.—Am I right in taking your opinion to be this, that there would be no difficulty in obtaining untenanted land if a fair price were given, but that there may be cases where under no circumstances would the landlord be willing voluntarily to sell, but, as a rule, the landlords are willing to sell at a fair price?—Yes.

28155. Then, to put what Mr. Kavanagh said, there may be cases where the value of untenanted land to a landlord may be greater than to anybody else, if he works that in connection with other land in a general scheme of farming upon which he relies for his income. That is so, is not it?—Yes, I should say so.

28156. It does not follow that there may not be cases where the landlord puts on a price, or asks for a price that is above what would be the value of the land, on abstract grounds, and he asks for it by reason of the fact that its sale would seriously militate against a general system of carrying on business in connection with other lands?—Yes.

28157. CHAIRMAN.—Would you just illustrate that?—If he has an outlying farm that he works in conjunction with his demesne, and if perhaps he has not got sufficient inside the demesne, or he makes use of this outlying farm for a certain time of the year, for the use of stock, and takes them in, say, three times in the year; and if this were taken from him, it would take away from the value of the land that is near his house. It would diminish the grazing value of his demesne in greater proportion than

Apr. 17, 1907.

Mr. Henry L'Estrange.

the amount of land taken would do. Well, I am stating that there may be some exceptional cases in which there is valuable land outside his demesne, and that the land actually in his demesne is not as good for grazing purposes, and that he has to work one in conjunction with the other to get the best results. Otherwise, the demesne lands may be a bad class of land, and in that case I say the landlord would naturally ask a price that would probably be considered excessive.

28158. In a case of that kind, supposing there was compulsion, or anything of that sort, that would be a legitimate case for the landlord to state a case for the Arbitration Court, or the people who should have to fix the price, and if he could state a case and show that land of this kind was more valuable than other land would be, the people fixing the price would certainly take that into account?—Yes. I would say, let the landlord make that case for the arbitrators, and give them the facts, and let them give the award accordingly.

28159. Sir JOHN COLOMB.—That would be a case where a Court of Arbitration might justly on the facts find that something more than the valuation of 1½ on the basis of the income tax might be allowed?—Might be.

28160. Mr. O'KELLY.—If the landlord gets a fair price, and that the tenant is willing to give a fair price, you think that there should be no obstacle to sale and purchase—I mean that land purchase should go on smoothly?—That is, talking of tenanted holdings?

28161. Yes, talking of tenanted holdings. If the tenant were willing to give a fair price, you do not think there would be any necessity for compulsion?—No, not if the money was forthcoming; and I think the Act has worked well enough. I think, if the purchase money had been available in this county, there would have been lots of land sold.

28162. But if the landlord is willing to accept a fair price, and the tenant to give it, land purchase ought to go on smoothly in the country?—Yes.

28163. And that in that case there would be no need for compulsion, and I think I understood from one of your references that the way of ascertaining the fair price would be the valuation and the tax the landlord pays on his income?—Taking tenanted lands, I would assume that the basis to go on is what the landlord's income was as shown by his books.

28164. By the income tax books?—I did not say that, but the office books.

28165. I presume the landlord pays income tax on his income?—Yes.

28166. On the full amount of his income?—It is on the Poor Law Valuation.

28167. Anyway the fair price would remove all difficulty. How many properties do you manage—half a dozen?—In this county?

28168. In the county of Sligo?—I think fifteen.

28169. Have any of the tenants approached you as representative of the landlord with a view to sale and purchase?—Yes.

28170. Have you sold?—Yes.

28171. How is the fair price ascertained in those cases?—Well, by considering how the net purchase price invested in trust securities would compare with the net income.

28172. Give us one property in point?—I do not know that I am compelled. Am I asked to mention the names of my clients?

28173. You can say A, B, and C; you sold the property of A, for instance. Or may be I should not press it?

CHAIRMAN.—Well, I would not.

Mr. O'KELLY.—But, in any case, you sold a number of them?—I sold two in this county, and the third is in course of being sold.

28175. With regard to the other twelve, have the tenants approached you with a view to sale and purchase?—Yes, some of them have.

28176. And is the obstacle in the way the difficulty of ascertaining what the fair price is?—No.

28177. But, in any case, you tell us that, if the tenants are willing to give a fair price on the properties that you manage, there would be no difficulty whatever in transferring the property to the tenants?—No, not a bit.

28178. Most Rev. Dr. O'DONNELL.—With respect to untenanted land, what deductions would you allow. Do you observe that the owners of property are escaping many things?—I do not mean mere management, but local rates?—I suppose that would have to be deducted.

28179. CHAIRMAN.—We must ask you now to finish as quickly as you can, because time is getting on?—I should like to come to my evidence of the improvements.

28180. You say, "The compulsory taking of grass lands on an estate, and the introduction of strangers to it, where negotiations for sale were proceeding, would stop the sale without the least doubt?"—You mean that if the tenants were asked to purchase the tenanted portion, whereas the grass part is sold to, say, the Congested Districts Board for the purpose of migration, the tenants of the tenanted part would refuse to buy merely their own holdings without any prospect of getting the grass land?

Mr. SUTHERLAND.—Is that the meaning?—Yes; that is my meaning.

28181. Sir JOHN COLOMB.—What you mean is that, as regards tenanted land, the landlord should, after making deductions, have his net income from a capital invested at 3½ per cent., and that for untenanted land you take as the basis the income tax basis of one and a third?—Yes.

28182. CHAIRMAN.—You also say, "On one estate alone which I manage the owner has expended several thousand pounds of late years in improving tenants' holdings and buildings." Now, on that estate that you speak of, is that since the Act of 1881?—There has been a considerable amount since.

28183. Actually on the holdings and buildings?—Yes; drains, draining bogs, and loans to tenants to improve their houses.

28184. But when you say "expended," do you mean in the way of loans or do you mean actual out-of-pocket expenditure?—I mean both. And road-making.

28185. Merely for the sake of curiosity, what advantage can an owner possibly gain in spending money upon tenants' holdings or buildings since the Act of 1881?—I don't think he gains anything, but it has been done.

28186. Then it is pure philanthropy. It cannot be done for estate purposes, can it?—No. Loans or advances have been made to tenants.

28187. But it is expenditure upon yearly tenants. Where does the advantage come in—But you say you have known it?—And he made roads and assisted in draining bogs. And he drained bogs, to develop the bogs.

28188. But they were not holdings. That was to create tenancies, was it?—No; it was for the purpose of supplying turbary to the estate.

28189. Turbary which was in his hands—in the landlord's hands?—In his hands.

28190. And he made a road to the bog in order to enable the tenant to cut the bog?—Yes.

28191. And I suppose he charged them something for the turbary?—Yes, nominal charges, less than those charged by the Commissioners.

28192. Well, that is a different point. In that case the owner owns the turbary, and in order to practically develop his own property, he makes a road in the interest of all who want to get it. But do you really know of cases in which landlords have actually spent money since the Act of 1881 upon the buildings or holdings of tenants that became under the Act of 1881 judicial tenants?—Yes, on buildings certainly, but it was in the shape of a loan, a repayable loan.

28193. Keep that apart; but actual expenditure of money not in the shape of a loan. Do you know a case where a man spent £50 or £100, or any sum you like, not in the form of a loan, but, say, to improve the house of a tenant or to improve the holding of the tenant when that tenant was a judicial tenant under the Act of 1881?—No; not except as a loan, and the tenant asked for it.

28193A. Sir FRANCIS MOWATT.—That the tenant came and said, "Will you lend me £50?" and the landlord lent him the £50?—Well, yes.

28194. But is not that different from saying that landlords have spent several thousands of pounds in improving tenants' houses and holdings?—But I did not put into my statement that it was subsequent to the Act of 1881. It was prior to that.

28195. Then you do not mean the words, "of late years," to refer to a small number of years. You say "of late years"?—I did not mean since the Act of 1881 at all; in fact, I meant since 1873. I have taken the figures from the estate books.

28195A. CHAIRMAN.—Then it is the case that since the Act of 1881 you do not know a case in which a landlord has spent money on holdings and buildings of tenants except in the form of a loan?—Except in the form of a loan.

28196. Mr. KAVANAGH.—But the loan is a benefit to the tenant, and a large benefit; and also it is lent at a small rate of interest, not a remunerative percentage?—Five per cent. is all they charge; and they can pay at any time they like, £5 or £10.

28197. CHAIRMAN.—But that act is not the act so much of a landlord as a friend. It is not an estate transaction?—I call it a very generous act.

28198. But you do not contend that it is an estate transaction?—It has always been done through the estate books, as it were, and that is why I bring it up. It has been done through my office.

28198A. Most Rev. Dr. O'DONNELL.—Is there any loss to the owner on these transactions?—Not a bit.

28199. He gets his five per cent.?—Yes.

28200. CHAIRMAN.—It is merely a friendly act from man to man, not from landlord to tenant?—Well, then, there is, in addition to that, the fact of having made roads absolutely to benefit the tenants. I have known that.

28201. That is to the bog?—Not all to the bog, but to their own holdings where they live, where they were a long way off the road, and no road to their holdings; and the late Colonel Cooper spent money on making these roads, some of which have been taken over by the county since, from the main road to the houses.

28202. Sir FRANCIS MOWATT.—Since 1881?—Yes.

28203. CHAIRMAN.—Did he get any return for that at all?—Not a penny.

28204. Mr. SUTHERLAND.—On whom is the making of roads conferred by statute in Ireland?—I suppose it is the County Council now that are responsible for it; but I know that on this Markree Estate that I speak of a large number of roads were made by the landlord in the old days, and taken over by the Grand Jury.

28205. I was reasoning by the analogy of Scotland, where the landlord has to make the road, and where the county authority takes it over afterwards. Is that the case in Ireland?—I think not. I think it has been a rule of their property.

28206. Most Rev. Dr. O'DONNELL.—You say some of them were made since 1881 by the landlord?—Yes.

28207. Do you say that any one of them was made up to the house of a tenant subsequent to his fair rent being fixed?—I think so.

28208. Are you sure?—Yes; I am certain. They were made in 1895.

28209. Sir JOHN COLOMB.—I presume that was a general rule and a matter of determined policy the making of roads by the landlord since the Act of 1881. It was not merely to give an advantage to one tenant, but to a group of tenants?—Yes.

28210. But as a matter of fact, and from your experience, the Act of 1881 did dry up the sources from which money was spent upon holdings, and upon the general advantage of the estate. The Act of 1881 had that effect. Is that so?—Yes, I think so.

28211. Perhaps you are going to give us some figures to test what I want to know. Previous to 1881 was it customary in properties of which you have access to the books, that there was a very great expenditure, in some cases, at all events, by the landlords on the improvements of the tenants' possessions and holdings?—Certainly, it was.

28212. And can you give now for twenty years previous to 1881 anything like approximately what to your knowledge was spent by the landlords?—Upon tenants' holdings?

28213. Upon the general improvement of the estate that was to the advantage of the tenants in their holdings?—Since 1873, and I have it down in each year. Colonel Cooper spent over £31,000 upon building roads, planting trees (which have done well, by the way), and drainage, one year with another. I have taken the figures from the estate books.

28214. You say 1873, do you?—That is where I commence.

28215. Do you mean between 1873 and the present day, or between 1873 and the Act of 1881?—1873 up to 1906.

28216. Can you tell approximately or within £1,000 how much was spent in 1881—the amount naturally will be down?—Yes, I have each year. A very large amount was spent for buildings.

28217. Mr. O'KELLY.—Buildings for tenants or buildings for himself?—A large amount of it was spent upon buildings for tenants in villages and labourers' cottages.

28218. And in planting trees. Were those trees in his own demesne or on the holdings of the tenants?—The trees were on the outlying mountains, as it were.

28219. CHAIRMAN.—Does that £31,000 include loans?—Loans for building purposes.

28220. Mr. O'KELLY.—The trees—were they on the holdings of tenants?—No.

28221. They were not on the holdings of the tenants?—No.

28222. Therefore they were not for the benefit of the tenants?—Except in the way of employing labour.

28223. What kind of buildings were put up?—Labourers' cottages, for one thing.

28224. But that was an investment?—Yes; this building was all an investment.

28225. Which brought Colonel Cooper a fairly good percentage?—Yes; five per cent. in the case of loans to tenants. And were not they lucky to get it?

28226. Mr. SUTHERLAND.—Why is the year 1881 so important in the history of Ireland—for continual references have been made to it to-day?—Because under the Act of 1881 the tenant got credit in the fixing of his rent for improvements that were made prior to that.

28227. And then is it to the point that the landlords changed their conduct since the passing of the Act of 1881, and showed resentment?—No. Judicial rents were fixed.

28228. But they were all less subsequent to 1881 than before, were not they?—Yes.

28229. Or the same as before?—Not the same as before, because they were reduced.

28230. They were reduced because they were too high, I presume. The Act of 1881 is part of the law of the country, and do you mean to say that a class of people showed their resentment on the passage of an Act of Parliament by changing their policy?—I do not quite follow.

28231. You say there was a larger expenditure of money by the landlords prior to 1881 than subsequently?—Certainly.

28232. What happened in the interval—was it that the Act of 1881 was passed?—Yes.

28233. And then their expenditure ceased from that point?—Because they had no guarantee or assurance that they would get credit for improvements if they now spent money on the land.

28234. Would not they get the fair rent?—They had no guarantee that they would get a fair allowance for the money that they had spent in the fixing of the fair rent.

28235. It would not be a fair rent?—They had not sufficient confidence in the people that were fixing the rent.

28236. Most Rev. Dr. O'DONNELL.—You can give us some idea of that £30,000. Was not it an investment? I think it was all an investment, except apparently making grants for roads?—Well, I suppose so, except the expenditure for the benefit of the tenants.

28237. Do you mean as regards the benefit of the tenants that the only grants would be for roads—is that so?—I would not say the only, but the principal. I have known several small gifts.

28238. Can you say how much was expended as regards the small grants?—Yes. Between 1880 and 1898 there was about £1,900 spent on roads.

28239. When the cases would come for hearing for the fixing of second term rents would there be evidence to show these roads were made as an improvement made by the landlord?—Yes.

28240. Therefore, if that is so, does it not look as if the road also was an investment?—It is an investment to a certain degree.

28241. Now, with reference to money for houses you mentioned that the owner who borrowed the money at five per cent. lent it to the tenants, and for this, in addition to the rent, he charged six per cent.?—Five per cent.

28242. Exactly the same?—Yes.

28243. And has there been any loss on the transaction?—No. I think the fact of making the roads benefited the tenants very much more materially than it did the landlord as an investment. They could not get to the places where they lived conveniently without such an improvement.

Apr. 17, 1907.

Mr. Henry L'Estrange.

28244. I was anxious to know whether all these things might not be looked upon as investments.

Sir JOHN COLOMB.—With regard to that may I ask you this. Take the period previous to 1881. I presume that when the landlords were planting timber and improving, whether for investment or not, that they had a number of artizans there—an estate staff?—Yes.

28246. And that brings in the interests of other people—the artizans and the skilled labourer. Now, can you tell me has the effect of the Act of 1881 producing the results which you describe been to reduce at all events the expenditure on artizans and an estate staff. Have I put it sufficiently clearly?—Yes.

28247. That where the improving landlords were executing certain works they kept or maintained in one form or another an estate staff to do that work or employed local tradesmen?—Yes.

28248. Can you tell me has the Act of 1881 had the effect of stopping the employment of artizans and tradesmen and other people who are not tenants, but who live by their skill?—It has reduced the staffs.

28249. And therefore it did away with that class. The fact of the landlord being deterred from carrying on these improvements reduced the prospects of employment and the prosperity of the artizans and skilled labourers?—Yes. I find on another estate a similar state of things. I find from looking into the books as far back as 1833 that the landlord paid his tenants to make drains and fences on their holdings at that time.

28250. Do you think that that at all accounts for the fact that the Census discloses of the diminution of the artizan and skilled labourer class in the rural districts of Ireland since 1881?—I do not know.

28251. At all events—you will correct me if I am wrong—I understood you to say that the fact of the landlords ceasing from 1881 to carry out those improvements has reduced the employment of artizans, carpenters, etc.?—Yes. The staff that I refer to were men of a labouring class, paying rent and working at fencing and other things on the estate which they were paid for doing. That was on the estate of my uncle, Mr. O'Hara.

28252. Therefore the Act of 1881 has in its results reduced the employment of the artizan and labouring class?—Yes.

28253. Mr. O'KELLY.—The money which was expended so liberally in loans to tenants was borrowed from the Board of Works?—Not all, but some.

28254. A good deal. And the landlords were able to get the money from the Board of Works at 3½ or 3¼ per cent., and lend it to the tenants at 5?—At 6 per cent., not 3½.

28255. You got it from the Board of Works?

Sir JOHN COLOMB.—It filtered through the Board of Works.

Mr. O'KELLY.—I will put my question in another form. You have been getting it at 5 per cent., and the tenants might be called upon to pay 6 for it? You think it was possible?—Of course it was possible, but I do not think it was, in fact I am certain that it was not, the case.

28257. In any case this one fact remains that the money that was expended was got from the Board of Works and was not spent by the landlord out of his own private income?—I say more was spent by the landlord out of his own private means than was borrowed from the Board of Works.

28258. Is that your information or knowledge?—That is my opinion from what I have taken from the books that are in my office.

28259. What have you taken?—That a large amount of money was spent by Colonel Cooper direct out of the rents that were received into the office, and it was only occasionally that loans were applied for to the Board of Works for other purposes.

28260. Am I right in saying, Mr. L'Estrange, and if I am you will inform me, that in many cases on Colonel Cooper's property the interest charged to the tenants went up to 8, 9, and 10 per cent.?—No.

28261. Why do you give me that answer—is it founded upon a knowledge of the facts?—Well, I should have heard of it and I never heard, nor is it in any of the rentals or books.

28262. From whom would you hear of it?—From my brother, who was acting before me, and my father, before him, and from the books, which speak for themselves.

28263. They were not charged those rates?—They were never charged a single penny more than 5 per cent.

28264. Most Rev. Dr. O'DONNELL.—Would not there be this difference between these things? There is a difference between the interest charged to the tenant and the Board of Works' charge for the loan, which is 6 per cent., to cover both interest and sinking fund. The amount charged to your tenant does not cover the sinking fund, and he will have the whole principal to pay?—He could pay that.

28265. Five per cent. would not, to any substantial extent, cover the sinking fund?—Yes.

28266. The 6 per cent. to the Board of Works covers the principal as well as the interest?—Yes.

28267. Mr. KAVANAGH.—The Board of Works' loan is one per cent. for a sinking fund, and 5 per cent. for interest? Is not that so?—Yes.

28268. CHAIRMAN.—Did I understand you to tell us or one of the Commissioners that part of that £31,000 that had been expended since 1873 had been borrowed from the Board of Works?—Yes.

28269. Can you tell us how much of it was borrowed?—Well, I know that in 1880 and 1881 there was £1,000 borrowed from the Board of Works for drainage purposes, and spent upon tenants' holdings alone.

28270. Yes; that was £1,000, but you have not given us the figures which would tell us what was the gross amount borrowed which is included in the £31,000?—No; I have not got those figures.

28271. Would it be £10,000 of the £30,000?—Yes; I think it would be. It might be half. It would not be more than half. It might be half.*

28272. Yes; then what is the exact position. The landlord borrows from the Board of Works, and he is responsible for the repayment to the Board of Works, and he re-lends to the tenant?—Yes.

28273. And the tenant is responsible to him?—Yes.

28274. So that if the tenant fails the landlord would still be responsible and bound to the Board of Works?—Yes certainly.

28275. Now, you made a remark that a wood that had been planted had done well. Can you go into the history of the planting of these trees?—I know when they were planted and how many years they have been planted.

28276. What was the land used for before the plantations were made?—Some of it was of poor value for any purpose. Much of it was used for mountain grazing.

28277. Was it in the owner's possession, or did he have to come to some arrangement with the tenants?—In some cases perhaps it was already in his own possession, and perhaps in others the tenants had a right of grazing over this, and got compensation for giving up the right of mountain grazing.

28278. Have all those plantations succeeded?—Yes.

28279. And they have all grown well, and they are now bringing in a revenue to the estate?—Very trifling, for one thing, the timber is only getting saleable now, the larch for instance, and they are in out-of-the-way parts of the property, and it is difficult to get a price for it.

28280. When you say they have done well you mean they have grown well?—Yes; they have grown well. They are still too young for sale purposes.

28281. Would you say, looking at them as they are now, and judging by the present price of timber, that they will pay, that it will be worth while having planted them?—I should say yes.

28283. Sir JOHN COLOMB.—Taking the present price of timber?—Yes, if it is fairly convenient to the market to dispose of. Some of these are a long way from the market and consequently there would be the problem of access; but the timber itself is sufficient to realize a good market price.

28384. There has been a considerable outlay annually to keep them in order?—Yes; and there has been the expense of putting up a good fence.

28285. And there has been a certain amount of labour in addition?—Very little.

28286. Did you get any sale for the thinnings?—Locally, but not in those out-of-the-way districts. Still one does in and around the demesne, but not in these localities that I speak of.

28287. CHAIRMAN.—Are they all larch?—Yes, principally larch.

28288. Sir JOHN COLOMB.—With reference to the great question we have about afforestation; I suppose the situation is sheltered on the side of the hills facing away from the sea?—Yes, to a great extent.

28289. You avoid planting on the surface of the hills exposed to a north-westerly gale?—Yes, generally a southerly aspect.

* See page 243.

28290. CHAIRMAN.—Now, you have, of course, had considerable experience in managing fifteen estates. Do you believe that at the present time, under present conditions of tenant right and all the rest of it, it would be possible now to do on any of these Irish estates what Colonel Cooper did in the way of planting trees?—Yes, and that has been done, to a less extent; but generally it has been done for shooting purposes. And they have done extremely well.

28291. But do you believe that any plantations on a large scale are now possible?—I do, on those mountain slopes.

28292. You do not think that the tenants' grazing rights would interfere with your being able to carry out schemes of plantation?—Not as far as I know. I do not think it would interfere.

28293. You have always compensated them?—Yes, we had not any trouble. I suppose the more you develop that the greater the opposition or hostility would be; but my experience has been only in a small way with regard to the mountain side or an area of 300 or 400 acres. If it were going to be all along I take it that there would be some opposition.

28294. But supposing the Congested Districts Board were to buy an estate with a good deal of mountain land of that sort, and were to start trying to plant larch and other trees on those slopes, and compensating the tenants for the mountain grazing lands, do you not think that there would be dissatisfaction and grumbling, and that it would be more difficult for a Board or the Government at present to do a thing of that kind than for private owners?—No; I do not think it would.

28295. Sir FRANCIS MOWATT.—From your experience of this planting, should you say that, assuming places for planting were selected near roads, that reafforesting could be carried on with any hope not of an immediate but of an early success?—I believe it could. I have been given to understand so. I am not an expert myself, but I have been told that larch would do very well.

28296. Sir JOHN COLOMB.—I see that you say that rents have been paid punctually in Sligo notwithstanding the fact that the holdings are comparatively small. That, I presume, you put in to show that in your opinion there is no ground for apprehension at all about the payment of annuities?—No.

28297. Is it that where the rents have been punctually paid you have no apprehension at all as to the security of the State in these transactions?—Yes; that is my point, and I have figures which perhaps I will hand in to show that that has been the case within the past ten years, taken from my books for the last ten years.*

28298. CHAIRMAN.—Does that apply to all the estates that you have managed?—Yes. it does.

28299. I think the last witness told us that the arrears in Inishmurry were ten to fifteen years?—Well, that is an exceptional case.

28300. And an exceptional place too, perhaps?

Mr. SUTHERLAND.—Is that the advantage of the Act of 1881?—What?

28302. That the rents were punctually paid?—Oh, they were punctually paid before.

28303. CHAIRMAN.—Where you get places like that, with a number of years' arrears owing, do you think that there is in that sort of place any security for annuities to be paid to the State?—Yes, I do think so, with the reduced amounts.

28304. But when you get a place which is so very poor that you have a list of arrears of ten, twelve, or fifteen years, does not that show that the land is not capable of paying rent at all?—I daresay. It is outside my experience. I have not got any of those estates.

28305. But *prima facie* it looks as if the land could not return any rent at all?—Unless there is some reason why they were allowed to get into such a state, some mismanagement.

28306. But supposing that land is so poor that under any land system rent cannot be paid, under a State purchase system annuities are very insecure of course?—It is quite possible, but it is quite outside my experience.

28307. You have no instances in your management where there has been an accumulation of arrears?—The only one on which I have had any difficulty is Major Phibbs's, and the others are all well off. And it used to be paid, well paid, before the Act of 1881.

28308. And it has been less well paid since the Act of 1881?—Yes.

28309. Mr. SUTHERLAND.—Were there arrears due at the time of the Act of 1881?—They have not been paid so well since.

28310. Were there arrears in 1881 when you know the Commission had power to deal with arrears?—Yes.

28311. And did they deal with the arrears on this estate?—I am sure they dealt with the owner.

28312. Do you know how much?—I have not got the figures of that estate because I have not dealt with it. I have dealt with ten estates—principal estates.

28313. CHAIRMAN.—Is there any particular reason why rents should be paid less well since the Act of 1881 than before?—No.

28314. Mr. SUTHERLAND.—It is the other way, is not it?—Yes.

28315. What is the difficulty of this particualr estate?—I think it was partly perhaps owing to mismanagement. After a few years they got into arrears and into a slip-shod way of paying rent and we hoped they would pay better, and there was a difficulty to get them back to the old way of paying rents.

28316. Sir JOHN COLOMB.—In the case of arrears say, of fifteen years, it is the case that by law the landlord cannot recover by process of ejectment beyond two. Is not that so?—Yes.

28317. Mr. O'KELLY.—Did the tenants on the Phibbs' estate take the landlord into court?—Yes.

28318. Twice, I presume?—Yes.

28319. Consequently the amount payable after the fixing of the rent was less that the amount paid to the landlord before the Act of 1881?—Yes.

28320. And although the tenants were punctual in the payment of rent before 1881 they were less punctual in the payment of the reduced rents?—Yes.

28321. And you attribute that to what you call mismanagement?—To a great extent.

28322. Who was responsible for the mismanagement?—I think it was owing to the death of the owner and a change of hands, and in that way.

28323. To what extent was there default on the part of the people. You say they got into a slip-shod way of paying rents. Did that apply to all the tenants?—Well, the majority of them.

28324. I suppose they were proceeded against in ordinary process of law?—Oh, yes. It was principally owing to the Land League that the rents were badly paid. It was a combination against payment.

28325. And some people would suggest the other way round?—Yes.

Sir Josslyn Gore-Booth examined.

28327. CHAIRMAN.—If you would go through the heads of evidence which you have prepared we could ask you any questions which occur to us upon them?—Very well. As I think they may be of use to the Commission I hand in short statements dealing with the following:—(1) Voluntary striping of grazing lands. (2) Price of grazing lands. (3) The growth of the Co-operative Movement.† With regard to (1). In the year 1901 I was asked by the neighbours to stripe a grazing farm of 153 statute acres, I replied, "Certainly, provided I do not lose by the transaction." They agreed that this was very fair, and the problem was tackled at once. This farm had been used to take in grazing cattle from the neighbouring farmers. It was agreed that the net income should be taken in a five years' average of the returns from grazing, less expenses, *i.e.*, Herd's salary, rates, etc. Rough rules were drawn up as—although the farm was not actually situated in a congested district—there were on the property several small farmers whom it was desired to assist. These rough rules were embodied in an agreement drawn up by my agent, Mr. Cooper, and as this agreement sets forth in clear language the basis on which the whole transaction was conceived and carried out, I give herewith copy of this‡. It is only right to mention that I was offered far larger sums in fines from neighbouring farmers whose holdings I did not consider required enlargement.

28328. Sir FRANCIS MOWATT.—Does that mean that neighbouring farmers would give a larger sum if it

* See page 242. † See page 243. ‡ See page 245

Apr. 17, 1907.
Sir Josslyn Gore-Booth.

were given to them?—Yes; the land was divided on the basis that I was to get out of it the average net income that I had got during the previous five years. When the grazing land was set to them on second term rents it was found that the second term rents did not come up to the average of the five years' grazing. Therefore the people were asked would they pay fines which, if invested, would make up the difference between the grazing profits and the second term rents.

28329. CHAIRMAN.—What sort of sum did they have to pay?—That is set out in the schedule referred to in the agreement herewith. It gives the tenants' names and references, the fines paid in cash for occupation, the previous acreage before striping was done, and the addition to same with the fair rent and the total acreage when it was all finished.

28330. The fines were about £30 per head to make up the difference?—Yes.

28331. That was the difference between what might be called a fair second term rent and what you derived from the grazing?—Yes; the net profit I made taking in grazing cattle from neighbouring farmers. The tenants were helped to raise these fines in the local bank by the Parish Priest and I understand from him that these have long since been paid off. All the people who got these additions have done well and worked their land with great energy. It may be mentioned that in one case a holding situate about two miles from the grazing farm was equally divided between two small adjoining tenants, the latter paying for the tenant right of each half. The tenant selling was then provided with a new and better farm in Streamstown, paying the fine mostly with the money already received by him. He has already built a new slated house on this farm. The point which I wish to emphasise with regard to this striping is that it was done voluntarily on business lines with the people who required enlargement. No one has lost any money by this striping, and I am certain that the people are not only materially, but morally the better for the transaction. On a visit some time ago I was immensely struck by the pride which the people took in their additions.

28332. Was this land striped among neighbouring holdings?—Yes, neighbouring small farmers. It was on the same lines as the Congested Districts Board's work.

28333. Most Rev. Dr. O'DONNELL.—Except that the new tenants remain new tenants. They are not peasant proprietors?—Yes.

28334. Sir JOHN COLOMB.—They are judicial tenants?—Yes. This was done in 1901.

28335. Sir FRANCIS MOWATT.—Is that the only experiment of that sort you have carried out?—Yes.

28336. Is it the only one you have attempted?—It is the only one I have attempted. I was never asked to stripe any other.

28337. Mr. SUTHERLAND.—Was it to overcome the disadvantages of rundale?—No. It was a grazing farm situate a long way from where I live. So long as I got that income out of it I did not care what happened to it, when the people wanted it.

28338. Was it adjacent to their holdings?—It was. I might say in one case we removed a man two miles.

28339. So you did migrate?—We did migrate one man. There were two neighbouring small holdings. One occupier came in, the other got a farm in Streamstown.

28340. Did he build a house?—He did.

28341. Do you know how he was financed?—I do not know as regards building the house, but I know in some cases the local parish priest backed the people's bills in the local banks to find the money to pay the fine, and most of them have been paid off.

28342. But a new house has been built where there has been a migrant?—That was the only migrant. In all the other cases the additions were sufficiently near the existing holdings of people who had already houses of their own to live in.

28343. Are they all contiguous to this?—Practically. I have a map here showing the original holdings (*produces map*). I have also another map showing the additions to the holdings (*produces map*). That is the first lot of eight holdings. With reference to the price of grazing land, I am of opinion that a great deal of the grazing land would be immediately available for the enlargement of holdings if the prices offered were fair ones, taking into consideration the previous average net income made by the landlord out of the farm. I would go further and state that in my opinion many large graziers who have acquired judicial tenancies in their grazing lands would voluntarily give them up provided they got fair compensation. The Commission can judge for themselves as to the unreasonableness or otherwise of the owners and occupiers of grazing lands hesitating to offer same to the Government when they peruse the following cases which have actually happened on my own estates:—Case No. 1.—Area, 147a. 3r. 3p.; Poor Law valuation, £105; Average net income, £145; Price as valued by our Valuer, £3,368; Price offered by Land Commission, £2,100 (25 times Net Income would be £3,625). I may mention that my late father bought the tenants' interest in this holding for £953 at the request of the adjoining tenants in order to provide them with accommodation land.

28344. CHAIRMAN.—How does that work out?—The average net income was £145 and £2,100 was what the Land Commission offered?—Yes.

28345. What would that return?—At 4 per cent., which you could not get if you were a tenant for life, it would return £84 as against £145.

28346. Sir JOHN COLOMB.—I notice that the average net income you got was 1⅓ times the Poor Law valuation?—Yes, a little more. Now take Case No. 2. Area, 243a. 1r. 14p.; Poor Law valuation, £183 15*s.* 0*d.*; Average net income, £122; Price as valued by our Valuer, £3,314. This grazing farm together with mountain land:—894a. 2r. 18p.. £85 5*s.* 0*d.* valuation—the total valuation therefore being:—£269—was offered by me to the Land Commission. The price offered by them for *all* = £1,739. Case No. 3.—(Farm in tenants' hands jointly offered for striping)—Area, 354a. 0r. 8p.; Poor Law valuation, £250 5*s.*; First Term Rent, £240; Landlord's interest at 21½ years' purchase, as agreed with tenant, £5,169; Price offered by Land Commission, £5,635, leaving for tenants' interest, £466 (or less than 2 years' purchase). I may mention that I have seen that Mr. Bryce stated in the House of Commons (in reply to a question asked by Mr. M'Hugh) that the prices paid by the Congested Districts Board varied from 28 years' purchase of the annual value of untenanted land to 29 years' purchase for 1906, with an average for the six years of 27¾ years.

28347. Most Rev. Dr. O'DONNELL.—Was that of the valuation?—Of the annual value.

28348. Fixed by their own valuer?—Here is the extract from the paper giving the answer to the question. *Re* No. (3). With regard to the possibility of improving the agricultural industry I should like to give an instance. This is a good dairy county and I give the following figures taken from the audited accounts of three co-operative creameries in this neighbourhood for the years 1900 and 1906.

No.	Share Capital.		Turnover.		Net Profit after Depreciation.		Bank. Amounts Overdrawn		Bank. Cash in Bank.		Reserve Fund.	
	1900.	1906.	1900	1906.	1900.	1906.	1900	1906	1900.	1906.	1900.	1906.
	£	£	£	£	£	£	£	£	£	£	£	£
1	712	891	7,662	9.326	71	170	642	80	124	959		
2	475	810	4,240	8.041	47	178	295	300	43	209		
3	428	542	3,698	6,163	18	90	349	209	95	365		

Practically every farmer within reach of these creameries supplies milk, is a member, and the creameries are owned by the farmers themselves. The figures prove that they are a business success, and I give them to show what the people can do to help themselves. The only assistance they got was the teaching of the Irish Agricultural Organisation Society. The people themselves have found the necessary capital, and are working these creameries through committees of farmers elected by themselves. The possibilities of co-operation, especially amongst small farmers, are enormous, but, unfortunately, the Irish Agricultural Organisation Society has not the necessary funds to carry on an active propaganda. To sum up with regard to (1), I believe that grazing lands can mostly be striped without loss to anyone, except in certain cases in congested areas. I understand that even the Congested Districts Board in many cases charge fines in congested areas. On the

other hand, the policy of the Land Commission in presumably much richer districts, is, I am informed, to charge no fines whatever, and give away a valuable asset for nothing. With regard to (2), it is too early to ask for compulsion to acquire untenanted land, when, as in my case, a fair price, taking into account the previous net income, is not forthcoming for grazing lands voluntarily offered.

28349. CHAIRMAN.—Your argument appears to be that because under a voluntary system the offer made you was far short of the actual profit received by you, therefore it is too early to ask for compulsion?—If compulsion is going to be fair——

28350. Is there any reason to suppose that the price paid under compulsion would have any relation to the price offered in cases such as you mention?—You mean would the price under compulsion be a fair one?

28351. It might be a great deal higher. It presumes that the price under compulsion would be a fair one. The whole basis of these instances you give us is to show that the price offered was not a fair one?—Quite so.

28352. Sir JOHN COLOMB.—I suppose what you mean really is that the price offered you has been so infinitely below the actual value of the property that you are afraid compulsion means compelling you to take that price?—That is what it looks like, anyway.

28353. Most Rev. Dr. O'DONNELL.—According to this return the average price for untenanted land paid by the Congested Districts Board for six years was 27¾ years' purchase?—Yes. In this No. 1 case I have actually sold that land at the lower price to the Land Commission in order to get the tenanted land declared an estate; so that practically there was compulsion. The price was £2,100.

28354. Sir JOHN COLOMB.—Am I to construe that answer of yours, that there was indirect compulsion?—In that particular case if I had not taken that price for the untenanted land which I voluntarily offered they would have flung me back all my tenants. They would not have sanctioned the sale of the estate.

28355. Mr. SUTHERLAND.—At how many years' purchase was this estate carried through?—It is 14½ on the income of this untenanted land.

28356. CHAIRMAN.—Don't you think it is probable that a system of indirect compulsion, such as you have shown us, might be much more unfair than a system of direct compulsion, where a fair price is the basis of the arrangement?—Quite so. I am not a bit afraid of compulsion if it is going to be fair; but it does not look very hopeful for compulsion on those figures.

28357. It is quite conceivable that direct compulsion would be more fair than indirect compulsion like that?—Quite so.

28358. Sir JOHN COLOMB.—I take you to mean this as illustrating indirect compulsion of a pernicious character?—Yes.

28359. Most Rev. Dr. O'DONNELL.—Have you the number of years' purchase of the rent at which the tenanted land was sold?—21½ of first-term rents, and 24½ of second term rents.

28360. What was the figure for non-judicial?—24½. These non-judicial were the equivalent to or less than second term rents. With regard to (3), I cannot do better than quote the following paragraph from Sir Horace Plunkett's Memorandum, page 10:—"What we now need is a policy which has as its constant aim not only the inculcation of the principles of self-help and self-reliance, but the making of these principles vital and operative through a broadly-conceived scheme for improving the conditions of the people in rural Ireland." Just one further point. As I have seen it stated before this Commission that no landlord in the West of Ireland ever did anything to improve his property, I wish to state that with regard to my estates this is entirely inaccurate. In giving the foregoing evidence perhaps I should mention that I am doing so merely as a private individual.

28361. CHAIRMAN.—When you talk about improving your property, do you mean that since the Act of 1881 you have yourself spent money on the improvement of your estates?—Yes, I have.

28362. May I ask you what did you do it for? Was there any advantage, from your point of view?—It is very hard to say. I only bring this forward simply because I saw it stated in the newspapers that it was not conceivable that a man in the West of Ireland could ever have done anything for his estates. As a matter of fact, I joined with the Congested Districts Board in their first scheme. I have done one-third of drainage work in cases like that in order to get the thing carried through to help the people.

28363. The drainage of holdings of judicial tenants?—Yes. Where a number of tenants were interested in keeping a drain open, and joined together on these parish committee schemes to get a grant from the Board. In some cases I have joined with them, and given one-third of the grant.

28364. May I put it in this way: you gave that money not to improve your estate as a landlord?—No; as a neighbour.

28365. It is exactly the same way that you would subscribe to a work of utility in the neighbourhood?—Quite so.

28366. It is not in the least from an estate point of view?—No. I have done other things since 1901. I have given the tenants lime, timber, and things like that to help them to fix their houses.

28367. Since the Act of 1881?—Yes. I only succeeded in 1900.

28368. Most Rev. Dr. O'DONNELL.—Would not that come up in fixing the rent?—I don't see how it would personally.

28369. Might not evidence of that improvement be given by anyone on your behalf?—I don't think I have ever, as a matter of fact, given evidence of that; but you could, of course. As a matter of fact, very few of my tenants have been into court at all.

28370. I would like to ask you in reference to the land in your hands, whether you have ever offered any to the Congested Districts Board?—Not to the Board—to the Estates Commissioners.

28371. Have not you still a large quantity of land?—Yes.

28372. Would you offer that to the Congested Districts Board?—I have offered these farms, I stated here, to the Estates Commissioners, but not to the Congested Districts Board.

28373. If a price could be arranged, would you be willing that the grass lands in hands should be striped and divided among congests?—I have offered all my *bona fide* grazing farms to the Estates Commissioners already. If the price is right I will take it.

28374. How many acres would be available if a price was arranged?—The three cases are 147, 243, with 894 acres of mountain land added to that, and 354 acres.

28375. These lands are not in a scheduled district?—They are not.

28376. That is why you offered them to the Estates Commissioners?—Yes.

28377. Someone told us to-day you had 3,000 acres in your own hands? What have you to say on that subject?—I am working it myself.

28378. Would you be willing to part with that?—No; certainly not. It is demesne land.

28379. Is it all within the demesne?—Yes.

28380. CHAIRMAN.—This 1,300 acres that you speak of here, is that land that you would sell?—Quite so.

28381. Besides that you have other grass land that you work yourself that you would not sell?—I have home farms and a demesne, which I work myself. I am working it energetically.

28382. Is that inside the demesne wall?—There is no demesne wall round my demesne anywhere.

28383. Where do you fix the limits of the demesne?—That is what is called the demesne, and it has been used as demesne. It is marked as demesne on the map.

28384. Has that never been tenanted?—Certainly, in old times.

28385. Mr. SUTHERLAND.—How long ago?—I could not tell you without looking it up

28386. Are the marks of the tillage still there?—I don't think they are.

28387. Most Rev. Dr. O'DONNELL.—Someone said that in 1847 it was tenanted, and the tenants were all evicted?—I did not hear the evidence given here to-day. I have not gone into these things. I have the records in my office.

28388. Would not that be an inducement to people it again with tenants, where it was once occupied?—I don't think so.

28389. You would have a field for your beneficence in showing model agriculture in their midst. With reference to that farm which you striped, you managed to get the annual income by adding a fine to the second-term rent?—Yes.

28390. Did it occur to you that if there was a sale of the enlarged holdings to the tenants the annuities would be scarcely larger, if larger at all, than the

Apr. 17, 1907.

Sir Josslyn Gore-Booth.

second-term rents? An annuity to cover everything, purchase money, interest and fine included?—I don't quite follow that.

28391. Suppose, instead of enlarging these uneconomic holdings, and allowing the men to remain as tenants, you enlarged the holdings, and sold the enlarged holdings to the tenants under the Purchase Acts, so as to enable them to come under annuities instead of continuing to pay rent, would not that be a more advantageous system?—(*Mr. Cooper, witness's agent*).—They would rather pay less in the instalments and pay the fine down. That is what was done. The matter was discussed with the tenants.

28392. Apparently, if these holdings had been sold to the tenants the annuities would not exceed the fair rents, which they are now to continue to pay for ever, even though the annuity covered something for that fine which they paid for increasing their holding?—(*Witness*).—You are asking me why I did not sell it right out?

28393. Yes?—The Act of 1903 had not come in. This was done in 1901.

28394. Sir JOHN COLOMB.—With regard to the second and third cases, where you asked certain sums, and you were offered sums of considerably smaller amount, did it occur to you that you might try the Congested Districts Board with regard to these two properties?—Numbers 2 and 3 are not closed yet. It is only No. 1 that is closed, and that is a long way from a congested district.

28395. You know that the Congested Districts Board have power to acquire land outside of congested districts?—It did not occur to us.

28396. Mr. O'KELLY.—You spoke a while ago about your willingness to sell what you call genuine grazing farms?—Yes.

28397. What do you mean by genuine grazing farms?—What I mean is *bona fide* outlying grazing farms—that is farms outside demesne land.

28398. When you speak of *bona fide* grazing land you want to exclude what you call your demesne—is not that it?—Quite so.

28399. Do you think the description of demesne applied to the 4,000 acres of grass land is fair?—I don't think it is more than half that.*

28400. About 2,000 acres?—Yes; and a great deal of that is under timber.

28401. But a great deal of it is under grass?—A certain amount is under grass, and a certain amount of it is tilled. More and more of it is tilled every year.

28402. Was there portion of this grazing land ever occupied by tenants?—Yes; I think there was.

28403. I suppose you have no objection to seeing it occupied by tenants again?—Certainly.

28404. Why?—Because I am using it as part of my business. I am using my demesne as a business.

28405. How recently is it that you began to break up grazing land?—In 1900 I succeeded to my father, and ever since then I began to develop it.

28406. Did you break up what you call demesne land in 1900?—Yes. I have more and more tillage every year since I succeeded in 1900.

28407. You said a while ago you did not care how the lands were used so long as you got your net income?—It was an outlying grazing farm.

28408. But you would have an objection to disposing of this 2,000 acres of grass land or that portion of the demesne under grass, even though you got your net income from it?—Yes. I would object to disposing of anything I work as part of my business.

28409. It was not worked as part of the business of the estate until you succeeded?—It was to a certain extent, but it was more under grass. It employs more labour now.

28410. How much is under grass at present?—I could not tell you. I have not the books with me. I could get you the figures if you want them.

28411. Is it in a scheduled area?—The actual demesne is not, but there are scheduled areas along the sea coast.

Mr. Cooper.—A very small portion of the demesne is in a scheduled area. The remainder is in an unscheduled area.

28412. Mr. O'KELLY.—Would I be right in suggesting that it is unscheduled because of the value of the grass land, which raises the figure for the whole district, so that it is not scheduled?—The congested district is near us.

28413. Suppose you were to exclude the valuation of the grass land which you regard as portion of your demesne, would the valuation per head of the small holders who would be left come under the thirty shillings standard? Lissadell East comprises the great bulk of this property. Would I be right in suggesting that the reason Lissadell East is not scheduled is because of the high valuation of your demesne, but that if the demesne were excluded these other holdings would be under the thirty shillings limit?—No; you would be wrong in that.

28414. Can you give me the figures?—I have not got them now. I can get them.

28415. Do you know what the valuation of the electoral division is?—No, but I have looked into that question before. The congested district lies to the west of Lissadell.

28416. I am talking of the district not scheduled as congested, and suggesting as the reason why it is not scheduled the high valuation of the grass land in your hands?—You are wrong in that.

28417. In any case I am quite sure you would like to see the people kept in the country. You take a great interest in the revival movement?—Yes. I think I am doing something to help to keep the people in the country as it is.

28418. Is not one of the best ways of keeping the people in the country to provide them with land?—And to work the land energetically.

28419. The first indispensable condition is that you get it?—It is not necessary.

28420. How can you work the land if you don't get it?—If another man works the land is not it as good?

28421. Do you think the employment you give upon the land you have broken up that you call a demesne is equal to the employment that would be given if the people had the land themselves?—I should say it was. I have not gone into it. I don't wish to make a statement I cannot stand by, but I believe, as a matter of fact, it is.

28422. Anyway the broad fact remains that although what you now call a demesne was occupied by the tenants years ago, they were evicted in the forties?—I don't think they were evicted, as a matter of fact, at all. I never looked into this, but I always understood that these tenants were compensated and their passages were paid to America, and I am quite willing to go into the records I have at home and take those records.

28423. Sir JOHN COLOMB.—At present, working this demesne as you do, I understand that in the process of development by tillage you employ a considerable amount of labour?—Yes.

28424. Of various sorts, skilled and unskilled?—Yes.

28425. Do I understand that supposing your demesne were taken and split up into so many holdings there would not be the same demand for labour that there is at present?—There would not.

28426. Unless the labourers got the land those labourers would cease to have employment?—Quite so.

28427. And then they could only look for employment by going away and leaving the country?—That is so, I believe.

Mr. PATRICK MEEHAN examined.

Mr. Patrick Meehan.

28428. CHAIRMAN.—What is your address?—Liggan, Cloghboley.

28429. What is your occupation?—I am a farmer's son. My father owns the farm.

28430. What are the valuation and acreage?—About £20 valuation and 20 acres.

28431. Is he a tenant purchaser?—The land is in the hands of the Congested Districts Board at present.

28432. It has just been bought. It is on the Gethins estate.

28433. Most Rev. Dr. O'DONNELL.—It is being rearranged now?—The works are begun.

28434. CHAIRMAN.—What would you like to tell us?—I appear on behalf of the Magherow Branch of the United Irish League. The branch which I represent comprises the electoral divisions of Lissadell East, West, and a portion of Lissadell North. There is no untenanted land in Lissadell North as far as it runs into our parish. Road accommodation is badly needed in Lissadell West. We have in the townland

* *Note by Witness.*—I should like to add that I have since ascertained that the total area of demesne is 1,885 acres, which includes grass, tillage, plantations, etc. J.G.-B.

of Cloonagh sixty-one families without road accommodation. The same may be said of Carrigans, Ballyconnell, and Kilmacannon, in the same district. In the electoral division of Lissadell North the townlands of Aughagad and Cloonelly have no road accommodation. The fishing industry might be greatly improved along the coast by the erection of suitable landing places and improvement of boats. Inspection of estates when being sold, and before the purchase money is advanced by the State, is most desirable, and we know that the sale of the Gore-Booth property was concluded at an advanced price on account of tenants in arrears being too glad to close the bargain to get immediate relief. About two months ago the tenants on the Gore-Booth property proposed memorialising the Estates Commissioners, and a number of the tenants refused to sign because they were afraid if the sale was broken off the landlord would press them for the arrears, and ruin them. In the possession of Sir Josslyn Gore-Booth there are 206 acres 1 rood 31 perches, at a valuation of £149 5*s.*, while there are 216 families under £10 valuation, portion of whom had been evicted in 1873. In the electoral division of Lissadell East there is 1,121 acres of untenanted land, with a valuation of £845 4*s.*, in the possession of the landlord, Sir Josslyn Gore-Booth, while there are sixty-seven families under £10 valuation. In the electoral division of Lissadell North there is 77 acres 3 roods 30 perches untenanted, with a valuation of £3 19*s.*, in the possession of the landlord, Sir Josslyn Gore-Booth. In the electoral division of Lissadell West there is 373 acres of untenanted land, with a valuation of £98 5*s.*, in the possession of the Congested Districts Board.

28435. Most Rev. Dr. O'Donnell.—At what place exactly would you erect the boat slip or pier to help the fishery?—At present there is a boat-slip being constructed at Knocklane.

28436. We received complaints to-day about the position of the boat slip?—Yes. I believe it is more an obstruction to the fisherman than anything else.

28437. Are you a fisherman yourself at all?—No. The men think it ought to be placed thirty or forty yards further west to have its centre in Knocklane Head.

28438. Is there much fishing off that coast at present?—Not at present.

28439. There is a large number of boats?—Thirty or forty small boats and thirteen trawlers.

28440. The trawlers are not from this coast at all?—The trawlers come from Roughley.

28441. What do they trawl for?—Flat fish.

28442. Were the seven tenants to whom you allude or their predecessors evicted from this grass land?—I believe so. Some of them were.

28443. Would they be willing to pay a fair price for any addition to their holdings?—Certainly they would.

28444. Sir John Colomb.—Have they got money, or what do you mean by saying they would be willing to pay a fair price?—If it was bought over by the State.

28445. You mean they would be prepared to agree to a price in the shape of an annuity?—Yes.

28446. Mr. Kavanagh.—Are you in a congested district yourself?—I am.

28447. Would you or your neighbours be willing to migrate supposing land were provided for them at a distance away?—I think they would.

28448. Have you ever asked them?—No; I never asked them.

28449. The question has never been discussed among you?—No.

28450. Would you yourself go, for instance?—I would with a heart and a half.

28451. How far would you go?—Anywhere through Ireland that you sent me.

28452. Sir John Colomb.—As I understand you are the son of a tenant. How many in family are there?—Two more along with me.

28453. And your father and mother?—Yes.

28454. Chairman.—You are the eldest son?—Yes.

28455. Sir John Colomb.—Would the whole family go to any part of Ireland?—I don't say but they would. They would not be afraid to go any way.

28456. Do you say they would wish to go?—I won't say they would wish to go.

28457. You mean you yourself would be willing to go?—I would.

28458. Do I understand you answer for your family, that the whole family would start out root and branch to another part of Ireland?—I don't think the whole family might shift.

28459. You would like yourself to have a farm in some other part of Ireland?—Yes.

28460. Is that what you mean?—Yes.

28461. Most Rev. Dr. O'Donnell.—Is Magherow a poor district?—A very poor district.

28462. Your father's valuation is £20?—Yes.

28463. Suppose you were migrating, a good farm of £30 would be an attraction to the whole family?—It would.

28464. Is Magherow one of the poorest localities on this coast?—It is.

Mr. John George Quilty examined.

28465. Chairman.—Where do you live?—At Drumcliffe.

28466. What is your occupation?—Shopkeeper and small farmer. I was appointed by the North Sligo Divisional Executive of the United Irish League, at a meeting held on the 7th inst., at which Mr. M'Hugh, M.P., presided, to attend as witness at this Commission. I represent particularly the small North Sligo farmer, whose holding is uneconomic, the agricultural labourer, and the sons and daughters of both, whose only hope at present, generally speaking, is the emigrant ship, and who are regarded by the United States and the British Colonies as most desirable for colonization purposes. I am a small tenant and shopkeeper myself, living on an estate the majority of the tenancies of which are uneconomic, and come in daily contact with the tenants. I may remark that they are most desirous that I should appear here; still a better selection might easily have been made. The little estate on which I live, Logan's estate, is a typical Western estate, and, I think, the best information I can give the Commission is a particular description of it and the economic condition of its tenantry, for such tenants are the backbone of all Irish agrarian agitations. It contains about 500 statute acres, mostly reclaimed bog land. This is divided between thirty-two tenants, and the holdings vary in size from two acres to one hundred acres. The total rental amounts to £240. The greater part of this estate was primitively a boggy waste, which the present tenants and their immediate ancestors made productive. Formerly turf was cut and saved on it. According as they brought it into a state of cultivation rent was charged, or raised if already charged. Sometimes little holdings were confiscated and given to favourites. In the year 1864 an all-round raising of the rents occurred, the tenants being ejected under a notice to quit and reinstated at the increase. Their landlord is an absentee, but they are practically reminded of his existence every year by the estate bailiff, the agent, Mr. Roe, coming from Dublin to receive the rent. If they fail to pay they are at once processed and put to additional cost. They have been treated most harshly in the past, without the least sympathy and they naturally dislike landlordism. Some twenty-seven years ago the Drumcliffe Branch of the Land League was started by some of these very tenants who were discussing the then political situation, sitting one evening on the battlement of Drumcliffe Bridge. Immediately a treasurer was appointed and 17*s.* subscribed by those present. This, they say, was the first branch established in the county, and it exists yet. The estate is well watered, Glencar River running through it—too well watered, the tenants say, and much in need of drainage. Some of them borrowed money from the Board of Works for this purpose, but they say it robbed them. They, and farmers like them, should be assisted in reclaiming and improving their holdings. The tenants are very industrious, otherwise they could not possibly live, for the majority of their farms would not support them three months out of the twelve, and they are compelled, by extern labour on the part of themselves and children, to add to their incomes. If these men had good farms they would be model farmers. Their principal industry is producing milk for the local creamery, all their land being in pasture and meadow except what is necessary to raise vegetables for their own consumption, and a

Apr. 17, 1907.

Mr. John George Quilty.

little straw for thatching, etc. As soon as their children reach the adult age, through the scarcity of employment, they join their uncles and aunts and cousins in the United States, one son remaining on the farm; and if the parents do not get him married before they die he generally sells out and goes, too. Thus the country is bleeding to death. I have prepared, in tabular form, a statement of the economic condition, etc., of the tenants of this estate.* There is no turbary on it, and fuel and light cost about £7 per tenant. The statement to which I refer shows that twenty-seven holdings out of the thirty-two are uneconomic. I prefer to give the present rents instead of the County Council ratings, as the fixed rent is the latest valuation, and I consider every holding rented at less than £10 uneconomic. It will be seen by the above table that the income of a farmer on an estate such as this, where Sir Horace Plunkett's creamery system has been adopted, depends almost entirely, as far as his farm is concerned, on the number of cows he can keep. The grass of this estate, being generally poor in quality, the milk yielded is also poor. If the sum drawn by one of these tenants for a cow's milk amounts to £6 for the season it is considered good. The calf is sold in September for about £4. The value of the milk and calf, therefore, amounts to about £10 for the season. But it will cost about 30s. in meal, bran, etc., to feed the cow (stuffs not produced on the farm) after calving, and 10s. at least to feed the calf. I might safely say that the net average profit on a cow is about £8. If you multiply the number of cows by £8 you have a fair idea of the net profit derived by one of the above-named tenants from his farm, for every £1 he can spare is now, since the introduction of the creamery system of producing butter, put into a cow; but, of course, the number he or she can keep is limited by the size and quality of the farm. The farmer may also have one or two tons of hay to spare for sale in the local market, and two or three pigs. But they say the profit on pigs is very light—about £1 per head after feeding them for four months, on account of the extra stuffs they must buy—and hay this year was hardly worth carting to market, hay of inferior quality, such as is generally produced on the above-given estate, being sold at £1 a ton, and from this must be deducted cartage and other little expenses. The tenants on this estate in general do not keep pigs, and do not have hay to spare; on the contrary, if the winter be very severe they are compelled to buy it. Take the case of a farmer keeping three cows. His net profit on them and their calves would be about £24; to this might be added, say, £4 for extras sold off the farm. His total income from the farm would be £28. Out of this he would have to pay £6 10s. rent at least, £1 rates, and £7 for fuel and light, and, say, £2 10s. for seed and special manures. Deduct these items, and the sum of £11 is left to feed and clothe himself and his family for the year. Such a man could not live without assistance from his children abroad and extern labour. Then, if a cow should die, it means the loss of one-third of his stock and profits. I have known farmers to grieve almost as much over the loss of a cow as they would over a child. I asked an old farmer, who owns three cows, if one should die how long it would take him to get the better of it. He replied, "It would take ten long years, and perhaps never." Thomas Mitchell (No. 11 on the tabular form) in 1860 married a girl who possessed a farm of twenty acres on this estate, a farm that consisted then of unreclaimed bogland. He brought about £90 to the place, which he spent in reclaiming and improving it. The greater part of the money he had earned in the United States, but hard as he wrought there, it was quite easy, in comparison to his toil on this farm, he says, trying to make ends meet. One of the Land Commissioners, when inspecting it for a fair rent, specially complimented him on his improvements and signs of industry. He is, he avers poorer now than when he first took possession, and all his children had to leave the country except one, as there was no work to be got for them. The original rent was £8, but when he was about four years in the place the rent was raised to £10. In 1884 he entered the Land Courts and it was reduced to £8, and he again entered in 1893, when it was further reduced to the present figure, £6 10s. In 1884 he borrowed £50 from the Board of Works for drainage purposes. This is how they treated him:—All they gave him was £47 10s., and they charged him first 10s., and after 6s. expenses. For the last twenty-two years he has been paying £3 5s. per annum, concluding his payments last autumn, and has paid a total sum of £72 6s. for an advance of £47 10s. I asked him how he managed to live and rear a family on the miserable income derived from his three cows, and pay an exorbitant rent and these loan instalments as well. He said he did not know, and that it was only latterly he could keep three cows. Surely such estates should be scheduled as congested, so that such tenants might get assistance. After the passing of the Wyndham Act the agent of the typical estate (Logan's estate) entered into negotiations to sell to the tenants. His first offer was a price that would bring them a reduction of 4s. and 2s. 6d. in the £1 on first and second term rents respectively. The tenants, however, offered seventeen and twenty years' purchase on first and second term rents, and refused to give more. Some time after he offered to sell at 6s. and 4s. in the £1, reduction; this they also refused, and his last offer is 6s. and 4s. 6d. in the £1, reduction. On condition that they got all the rights of the property (game, fishing, etc.), they agreed to give eighteen and a half and twenty-one and a half years' purchase. This he would not accept. They have gone back now to their original offer of seventeen and twenty years' purchase, and say they will struggle along paying rent, discontentedly. The women, I may add, are even more determined than the men, and their children in America and elsewhere so advise them. The first agrarian plan of compaign that offers will get their support. I very much doubt that the landlord and tenants of such an estate as this will ever come to an agreement—the sale must be effected by compulsion and inspection. About nine years ago the tenants of a neighbouring estate, known locally as the "Coolbeg estate," bought, under the Ashbourne Act, at seventeen years' purchase. The estate is exactly similar to Mr. Logan's, and the tenants think, naturally, that they should buy at the same price. There are no arrears on this estate, for the tenants were always treated mercilessly if they did not pay on demand. The Lissadell estate, in their neighbourhood, has recently been bought by the tenants at twenty-one and a half and twenty-four and a half years' purchase (Wyndham Act), but the landlord, Sir Josslyn Gore-Booth, is one of the best landlords, undoubtedly, in the province of Connaught, and takes some interest in the welfare of his tenants, a good many of whom were in arrears of rent, which were wiped out by the purchase. Twenty-four processes for the non-payment of the interest on the purchase money have been served on tenants on this property for the present Quarter Sessions. The tenants are also memorialising the Estates Commissioners not to sanction the sale. The Government have a bad security for purchase money advanced on these uneconomic holdings, and there must be a failure in payment if the tenants have no extern employment. The Coolbeg tenants (seventeen years' purchase), pay their purchase instalments without a hitch, though their holdings are uneconomic, simply because they have more or less extern employment to get; the Lissadell tenants (twenty-four and a half years' purchase) are already beginning to fail, at least some of them are, because, I suppose, their holdings are uneconomic and they can get no employment outside. In reference to this estate, I am informed that about fifty years ago the tenants who held the best of the land—some eighty-two acres—of the townland of Barnarobin on this property, were ejected under a "Notice to Quit," and their farms given by the then agent, a Captain Dodwell, to the estate bailiff and under-bailiffs, they getting in lieu a part of the townland that was an unreclaimed waste, at a rent of 24s. 6d. per acre on the average, the size of the new holdings being about seven acres each. Part of the mountain of Benbulbin is at the back of this townland, and the tenants had it as a commonage for grazing sheep. The agent divided the mountain land into two and gave the better part of it to the bailiff. The tenants had it rent free before their dispossession, but after the division they had to pay £5 5s. rent for their portion of it. This is an instance of the manner in which the tenants have been treated on this estate before the advent of Sir Josslyn Gore-Booth and his father, Sir Henry. These Barnarobin tenants say they must fail to pay their purchase

* See p. 246.

instalments, as their holdings are all uneconomic and they have no labour to get outside of their farms. They also expect ultimately to get farms on which they can live and pay their way out of Sir Josslyn Gore-Booth's ranch land. They, in addition, state that one and a half years' rent (half-year's rent due and one year of arrears) was added to their purchase price—that the landlord is really getting twenty-three and twenty-six years' purchase. On some estates in North Sligo, for instance, the Hippisley estate, near Grange, the landlords absolutely refuse to sell. The tenants of the estate mentioned say they endeavoured to negotiate with their landlord, Major Hippisley, but he refused to part with it on any account. The landlords of other estates, such as the Middleton estate, would sell part and retain the rest. The tenants, however, will not, I understand, agree, unless all is sold. That part of the Wynne estate situate in Carney Electoral Division has been omitted in the sale to the tenants, as the tenants would not give twenty-seven years' purchase for their bogland. It may be observed that the tenants of the Logan estate have already sent twenty-eight children abroad, principally to the United States. Those that are growing up will go also, for there is no chance, as far as their parents can see, of employment for them at home, and they will assist by sending over part of their earnings. The Christmas American letter is now a necessity, and the more children in America the better. The passage ticket comes from America, too, a brother, sister, uncle, aunt, or cousin sending it. England is a foreign country to the Western peasant; the United States is his harbour of refuge and the home of his friends. There is no use in trying to deflect this emigration to Canada by Blacksod Bay schemes, cheap assisted passages, and short routes. The best thing to do is to stop it, for Irish emigration is an evil to Ireland and a danger to the British Empire. If the young people had employment to get at home it would cease. Out of all who emigrate from this district very few return. There is some emigration to Scotland also, but only from amongst the very poor and those who have no friends in America to send the passage, and they, as soon as they have earned sufficient to pay their way, cross also to New York. These emigrants attribute their being in exile to landlordism and the support given it in the past by the Irish Executive Government. On the subject of industries the only farm industry I may say in North Sligo is butter production, principally on the creamery co-operative system. There is practically no land in tillage, and that is the reason the young people are flying away to America, especially since the co-operative creameries were introduced. I am not saying anything against them as they are really good in principle.

28467. CHAIRMAN.—You say the result has been that there is more land in grass?—It did away with tillage certainly.

28468. Sir JOHN COLOMB.—Mixed farming gives you better produce in milk than a grass farm?—I doubt it. The quantity may be increased but the quality will be affected. Roots flavour disagreeably the milk.

28469. Mr. SUTHERLAND.—How do you feed the cows in winter?—They hardly feed them at all. The tenants of uneconomic holdings practically let them starve and can't help it. They grow hay on part of their little farms, and give it to them.

28470. Sir JOHN COLOMB.—They don't grow cabbage or roots of any sort in order to increase the amount of milk to send to the creameries?—The kind of land we have here would hardly grow roots at all. It is reclaimed bog and would require a large amount of farmyard manure. Some of the creameries close in the winter.

28471. CHAIRMAN.—It would grow roots better than it would grow grass?—They give the cows hay in winter until they calve. After they calve they feed them with a little extra stuff. It is not well that a district should depend solely on one industry, and if the American flour and meal and bacon were stopped through war or trade disputes this district would starve in a short time. I may say, however, that the majority of the farms of Western estates (reclaimed bogland) are not capable of growing wheat, and the wheat land of Connacht is locked up in the grazing ranches. Formerly flax was cultivated here on the better part of the land to a small extent; might not its cultivation be revived? The fibre could be sent to the Northern factories, and the seed might be used for the feeding of calves and the fattening of cattle. The linseed meal used by the farmer here, is, I am given to understand, imported from Russia. Some poultry are also kept by the farmers' wives in North Sligo—generally a couple dozen hens and ducks—but the men do not like them. When the grass is soiled with their droppings the cattle will not eat it, and, besides, they are destructive to tillage; the farmer cannot afford to allot part of his little farm specially for their use. My suggestion as to untenanted land is that it should be partly tilled to give employment.

28472. How are you going to compel them to till it?—By law.

28473. Sir JOHN COLOMB.—Are you going to summons men and punish them if they don't till a certain amount?—No; I would give the owners two years, and if they did not till a certain amount by that time I would then take it up by compulsion.

28474. You would take them without giving anything?—No. I would compensate them. Tillage is required to stop emigration.

28475. Most Rev. Dr. O'DONNELL.—Would you suggest increasing tillage by instruction in agriculture?—I would compel those who have ranches to till one-third of the land, as they have the best of it and the necessary capital; they also should show a good example. Any system of agriculture you read would tell you that tillage would improve the land.

28476. Mr. SUTHERLAND.—Could not you teach the people that that is the fact?—There is no use. The people living on uneconomic holdings have not the necessary farmyard manure and capital, besides they could not devote time to root-crops. If one neglects his extern work there are a dozen others ready for it. If you examine the country you find all the ranches are grazing cattle, but if Scotch or English farmers come to settle they will till a half or one-third.

28477. CHAIRMAN.—Why won't the people here do the same?—They won't unless you compel them. The coast industries are fishing and kelp-making. The fishermen require better and larger fishing boats and suitable gear for deep-sea fishing. A boat for this purpose was sent to Raughley by the Congested Districts Board some time ago. It arrived at the Christmas season when no fish were to be got, and the weather so stormy that they dared not venture out. After staying a week or so it left and was never heard of since. A pier is very badly needed at the Rosses Point. About a hundred boats would make use of it. Between Mullaghmore and Knocklane peirs there are seventeen miles of congested district coast line and no landing place. A pier might be erected at Streeda, which is about central; the boats of the Innishmurry islanders would make use of it, as it would be the nearest point to them. Also a suitable pier should be built at the north-eastern corner of Innishmurray, the only spot at which a landing can be effected. The fishermen should be consulted by the engineer before the work of construction is commenced. In reference to Innishmurry, notices have been served on the guardians of Sligo Union to the effect that three of the islanders are to be evicted for non-payment of rent. I have a fair knowledge of this island. It is about a mile long and a half mile wide, being oval in shape, the centre of it being boggy. A short hard grass grows upon it, but no trees or shrubs, as far as I could see. The mainland is eight miles from the islanders, who number ninety souls—men, women, and children. Salt is everywhere; you can even scent it. If you touch a stone with your tongue you feel the taste of it. When a storm arises (a very common event here), the spray of the Atlantic sweeps right over the island. The crops grown on such a place must be precarious and bad, for though a little salt may be a good manure a shower bath of salt water frequently is rather too much. The potato blight and rats are unknown, for the Atlantic does all the spraying necessary, and poisons with salt the microbe, and, I am sorry to say, often the potato plant; the rat dies from starvation shortly after landing. Only in very calm weather can the islanders attend to their fishing or a landing be effected; therefore the rate-collector cannot get any rates. A force of police and a gunboat will now be sent, I suppose, to carry out evictions at this place, and the ratepayer and Sligo Union be put to expense. How they came by a landlord at all, and how rent is got from them I cannot imagine; but as he is the only gainer by them, and does not pay their rates for them, he should evict them himself. His next application will be, of course, for a police barrack to herd the holdings, and that will be

Apr. 17, 1907.

Mr. John George Quilty.

another £400 on the rates, for as soon as the evictors leave, they will re-take possession. The landlord is one of those who refuse to sell to their tenants their estates. The children of the peasants on such an estate as the Logan property should be taught little cottage industries. Formerly fancy baskets, garden chairs, cradles, and such were woven from osier rods, which grow plentifully around here, by some of the cottiers; but emigration and want of encouragement killed the little industry. Some fifty years ago, old people tell me, earthenware crocks, milk pans, flower pots, etc., were manufactured here by a family named Irvine. The pit from which the clay was taken can still be seen. I remember, a few years ago, old men hawking through the streets of Sligo door-mats woven of bent grass. I never see any now. At the Market Gate, High street, Sligo, formerly on Saturdays, you would see men and women standing with large rolls of flannel manufactured by themselves. This they retailed by the yard, carrying a yard-stick for the purpose, and one yard of it was worth six of the flimsy stuff sold in the shops. They came from the parish of St. John's. They, also, have disappeared. Why should not children be taught, who live at the sea, to pick up fancy shells for decorating little gift boxes, picture frames, etc., and their fathers and elder brothers to make the articles during leisure hours? Little ornaments, pipe heads, brooches, etc., could be carved out of the bog oak waste in our bogs. Our hills and wastes are covered with whin and heather, and our valleys filled with flowers; but the honey manufacturer, the bee, is absent. There are a dozen other industries as well. The Congested Districts Board should establish and protect such industries, and find a market for their produce. I hear much praise from the peasantry of the crochet-knitting industry recently introduced. You have examples of these industries in France and all over the Continent. I should like to say a word in particular regarding the kelp industry, as it is next in importance to the fishing. About three shillings per cwt. was got for it last season, and it barely pays to burn it at the money. I am told that a half dozen agents have divided the Western coast between them, and can, consequently, as there is no competition, give whatever they like. I am also told that the kelp burners—at least some of them—in endeavouring to get even with the buyers, are beginning to adulterate the kelp. North of Sligo borough boundary, including Calry and the Wynne estate, there are exclusive of original demesnes, marked in the Parliamentary Blue Book containing the return of the untenanted lands of Ireland, 10,600 statute acres of untenanted land. There may be wood on part of this area, and also part of it may be mountainous, but the greater part is arable, and is, in fact, the fat of the land in this part of the county. This should be utilised for migration purposes and the enlargement of uneconomic holdings. The small farmers want it, and certainly it is only natural that those living in the district on uneconomic holdings, and who are constantly on the verge of famine, should covet this ranch land. I may remark that none of it situate in North Sligo has been surrendered for economic purposes by the landlords except the Ballyconnell Bent, on the property of Captain Gethins. Anyhow employment should be given to the people by compelling a certain portion of it to be tilled annually. In Canada a settler can acquire 160 acres of land, in addition to his original allotment, on condition that he plants the one-fourth of it in timber. Might not a variation of this principle be applied to these ranches and non-residential farms compelling the possessors to cultivate, say, the one-third of the areas annually for the purpose of giving employment and stopping emigration, or else to throw them up for a compensation. If such a rule were made there would be a large number of these grass ranches surrendered to the Estates Commissioners. Of course, I refer to land only fit for tillage, land valued at ten shillings per acre and over. A migrant also getting a farm from the Estates Commissioners or Congested Districts Board should be compelled to till a portion, the third of it, annually. Two new homes would thus be created, for he would be obliged to keep a permanent agricultural labourer on the farm. Large residential farms might to a certain extent be brought under the same rule. When a farm is valued at, say, over £50 in Connacht and £80 outside of it, the farmer might be compelled to till the one-third of the acreage over that which amounts to the £50 or £80 valuation. A large unwieldy farm, one difficult to be worked speedily degenerates into a grass ranch. It would be only fair to the nation to enact this, for land constantly used for grazing purposes deteriorates, and a market for roots and fresh vegetables is at our door in England if we would only cultivate them. Anyhow, the roots could be used to stall-feed cattle for the English market. Most of the cattle shipped from these ranches go over to England in a half-finished condition. This is a loss. The Irish labourer wants employment at home, the land cultivation, and the English people fresh beef and vegetables. Also the untenanted land under 10s. per acre should not be neglected. Ireland is almost denuded of woods, and the Canadian idea of setting the one-fourth in timber might be applied with benefit to this kind of land. After the enactment of a law such as this, shopkeepers and Government officials and others who have amassed money would not be so anxious or greedy for land as they are at present, and there would be a stoppage to excessive emigration, more trade and prosperity in the country, and less objection to labourers cottages being erected under the Act of 1906. Of course the establishing of farmers in the ranches surrendered and the paying of compensation to those entitled to it, should be done by the Government and will take some money. However, it should not be forgotten that in 1834 the then Government bought out, in the interests of humanity, the West Indian slaves at a cost of £20,000,000. The empire is richer now than then, and we shall soon see whether the Irish peasant or the West Indian negro is most thought about by our rulers. My solution of the problem of congestion, emigration, and constantly-recurring famine is—1st, compulsory purchase, at least in Connaught; 2nd, creating of labour by compulsory tillage; 3rd, the scheduling of all Connacht and the counties of Donegal, Clare, and Kerry as congested; 4th, the establishing of cottage industries; 5th, migration to the ranch lands when thrown up, and the enlarging of uneconomic holdings; 6th, cheap transit for agricultural products and the building of railways where required. I hand in a statement received by me from the Middleton tenantry.

Mr. Patrick Joseph Rooney examined.

Mr. Patrick Joseph Rooney.

28478. CHAIRMAN.—Where do you come from?—Lecklasser, Cliffoney. It is in Ross Inver East.

28479. What is your occupation?—I am a farmer.

28480. Have you got a farm of your own?—I have.

28481. What size is it?—Seventy-one statute acres, but the greater portion of it runs to the mountain. The valuation is £31 11s. and I pay £11 1s. 11d. half-yearly to the Estates Commissioners. It represents 3½ per cent. on the purchase money agreed on. The place is being sold. It is on Sir Josslyn Gore-Booth's estate. It is not scheduled as congested. The sale is not yet completed.

28482. How do you work your farm?—In grass and tillage.

28483. How much tillage have you?—About two English acres. There is not much available for tillage. The greater portion of it runs on the side of a mountain.

28484. Is there anything you wish to tell us about it specially?—It is not scheduled, the reason being, in my opinion, the effect of the grazing portion of it. I think it should be scheduled.

28485. Most Rev. Dr. O'DONNELL.—Owing to the valuation of the grazing portion the general valuation is put up?—Yes.

28486. What are the suggestions you have to put to the Commissioners?—I would like to have the division scheduled. Some of the divisions scheduled are far better off than the people in this place.

28487. There are townlands in your division as poor as many of these that are scheduled?—Yes.

28488. CHAIRMAN.—What is the valuation per head?—Outside the grazing portions I don't believe it is 30s. I think there are 900 or 1,000 acres in the grazing portions.

28489. The people there are very poor?—Yes.

28490. What would you like to see done if it were scheduled?—First, I would like to see the grazing portions cut up and divided among the people. There is a river running through the division that does a

wonderful lot of damage. It is flooded occasionally. Part of that river in some places is eating away the land to a considerable extent on some of the poor people. It is impossible for them to repair the damage done to that river without assistance from outside.

28491. Mr. SUTHERLAND.—Is it eating away the banks?—Yes.

28492. On both sides?—Yes.

28493. What river is it?—The Duff.

28494. Has it much of a fall?—Not very much.

28495. Generally a river going that way goes from one side to the other?—In some places it is eating both sides.

28496. Is it sandy?—Yes, and stony.

28497. Would planting trees on the bank help it?—No. In some places planting trees would not do any good. It is too much eaten away.

28498. So you would require to rebuild it?—Yes. Every year it is getting worse.

28499. CHAIRMAN.—Is there any other point?—The district is badly off with regard to roads. Where the people cut turf there is very bad road accommodation. Often for nine or ten months of the year they can get no turf if the season is wet.

28500. Has the District Council been told about this?—Yes, but the Sligo District Council have not passed any new works for the last six years, with very few exceptions.

28501. In your district?—No, nor in any other district.

28502. What reason does the District Council give for not making these roads?—On account of the rates being too high.

28503. You think if the district were scheduled the Congested Districts Board would give assistance?—The District Council would help the district.

28504. You want it scheduled that you may get assistance from the Congested Districts Board?—Yes.

28505. Sir JOHN COLOMB.—Is your farm close to these grazing lands?—No.

Mr. DANIEL GALLAHER and Mr. WILLIAM DUFFY examined.

28506. CHAIRMAN.—You come from Mullaghmore?—(*Mr. Gallaher*).—Yes. We walked it up. I am a pilot in the harbour and can give you all information about it.

28507. You are a pilot in Donegal bay?—In Mullaghmore and Donegal Bay.

28508. You fish from Mullaghmore?—Yes.

28509. You keep a boat there?—Yes.

28510. What size is it?—A two ton boat.

28511. Sir JOHN COLOMB.—What does she draw?—One and a half feet of water.

28512. CHAIRMAN.—How many boats are there there?—(*Mr. Duffy*).—Twenty-five boats. (*Mr. Gallaher*).—What we call Greencastle boats.

28513. Most Rev. Dr. O'DONNELL.—Twenty-five feet in keel?—(*Mr. Gallaher*).—Twenty-six.

28514. CHAIRMAN.—What part of the coast do you fish?—Donegal Bay.

28515. Do you go up around Killybegs?—Yes, I go as far as Teelin.

28516. What do you fish for principally?—Mackerel, herring, flat fish, and cod fish during the winter season.

28517. How have you been doing lately?—We did very poorly for the prices we were getting. In the mackerel season we must fish only four days in the week. On Friday and Saturday we cannot fish. No buyers come to us on Friday or Saturday. (*Mr. Duffy*).—We haul up the boats on Thursday evening.

28518. Mr. SUTHERLAND.—Must you haul it up?—(*Mr. Gallaher*).—Yes. It is a very rough harbour to leave the boat alongside. (*Mr. Duffy*).—They would be broken if we did not.

28519. We heard this afternoon from Mr. Brennan that it was filled up?—(*Mr. Gallaher*).—It is filled up with stones and gravel.

28520. Is it a very good harbour?—It is a very good harbour, splendid. It only requires cleaning out.

28521. Do you say generally you are interfered with in the pursuit of your industry by the harbour being allowed to become useless?—Yes.

28522. It is practically useless to you?—Yes.

28523. Do any vessels other than fishing boats come?—Yes, schooners; those coasting vessels from Liverpool and Glasgow.

28524. How do you account for it not being properly maintained. Are you ever asked for harbour dues?—No. There are no harbour dues in it.

28525. Most Rev. Dr. O'DONNELL.—Is it considered private property?—Yes. It belongs to Mr. Ashley.

28526. Sir JOHN COLOMB.—Did he build it?—Lord Palmerston built it.

28527. Most Rev. Dr. O'DONNELL.—How long have you lived there?—All my life. I go away an odd time.

28528. I suppose you remember thirty years ago?—Forty years ago.

28529. Did you ever know any effort to clear it out at all?—No.

28530. Was it always dry at low tide, as long as you remember it?—It was.

28531. What is the difference between the depth of the water now and what it was when you began fishing?—Six feet.

28532. How did the silting up occur?—In the winter season the tide comes across the wall, and shoves stones and gravel in from the bay.

28533. Mr. SUTHERLAND.—It is not sand?—Clay, and gravel and stones.

28534. Surely it is an easy matter to get away the silt. What is covered only by tidal water does not require dredging?—From the point of the jetty to within six yards beyond the breakwater must necessarily be dredged to keep the harbour clean.

28535. It is a pity, after all we hear about the absence of harbours, that when there is one it is not maintained properly?—It is a splendid harbour if it was kept properly. We are also badly off for the want of a curing station there.

28536. Sir JOHN COLOMB.—Have you lost the means of selling fish by the want of having a curing house?—We lost hundreds of cargoes of fish of these yawls by the want of a curing station.

28537. CHAIRMAN.—Has anybody ever written from the fishermen of Mullaghmore pointing out that to the Congested Districts Board?—I could not tell you that.

28538. Sir JOHN COLOMB.—Did you never ask your priest to write to the fishery people or the Congested Districts Board?—We used to speak to our priest about this curing station, and the harbour also.

28539. CHAIRMAN.—Did he write?—He did, I believe.

28540. What happened?—I could not tell that.

Mr. Brennan.—I brought it before the Chief Secretary in Dublin last October, at a deputation before Mr. Bryce, and he promised that something would be done.

28541. Sir FRANCIS MOWATT.—You say you never can recollect anything being done to that harbour?—I saw a little pointing, and that was all I saw done.

28542. Because in 1899 they spent £348 on it?—(*Mr. Duffy*).—There was not much more than six shillings worth of stuff on it, to the best of my opinion. (*Mr. Gallagher*).—A vessel broke down the jetty, and it was repaired.

28543. Sir JOHN COLOMB.—The jetty was repaired?—Yes.

28544. Then the breakwater was pointed?—But that was no good to the harbour.

28545. That was work done, and it is very expensive work?—But that would be no protection to the harbour all the same.

28546. Mr. SUTHERLAND.—It kept it standing?—Yes.

28547. Sir JOHN COLOMB.—Has not Mr. Green been around here?—He has.

28548. I suppose you had every opportunity of speaking to him—did you?—I did not.

28549. Did any of you?—Except the chief officer of Mullaghmore. They were saying he did.

28550. You knew that Mr. Green was there?—Yes.

28551. And that he was the man to advise the Congested Districts Board and the Department. Did any of you go to Mr. Green?—I don't think myself any of the fishermen spoke to him. They might have been speaking to him, but I heard no word about it.

28552. Most Rev. Dr. O'DONNELL.—You could still send on your representation stating your wants?—We are badly off for a curing station.

28553. What would you cure?—Mackerel, herring, and cod fish.

Most Rev. Dr. O'DONNELL.—Send on the application then.

The Commission adjourned.

SIXTY-THIRD PUBLIC SITTING.

THURSDAY, APRIL 18TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Workhouse, Dromore West, County Sligo.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Dr. HENRY MARK SCOTT examined.

Apr. 18, 1907.

Dr. Henry Mark Scott.

28554. CHAIRMAN.—You are medical officer of Easkey No. 2 Dispensary District?—Yes; in the Dromore West Union. It comprises the parish of Castleconnor and the parish of Kilglass, in which there are congested districts; the electoral divisions of Rathmacurky, Castleconnor East, and Castleconnor West. These are the three congested divisions.

28555. Castleconnor West is not scheduled?—No; but Castleconnor East is.

28556. Is there anything special that you wish to bring under the notice of the Commission?—What I wish to say to the Commission is this. As regards relieving people in the congested districts, I would desire that these people should get employment at home. The majority of the valuations of landholders in Rathmacurky and Castleconnor East are very low. The land is very poor. It is a place in which the people have small holdings, not sufficient to support their families. What I would suggest is, if there was direct labour on all the roads of the country these men, who have some of them two sons and some of them three sons, would earn on an average 10*s.* a week. If a man with a small holding of five or six acres has two sons, each earning about 10*s.* a week, it would mean about £50 a year additional to that family, which would put them in a more comfortable position than they now occupy.

28557. What do you mean by direct labour on the roads?—To be employed directly by the County Councils.

28558. Sir JOHN COLOMB.—Not by contract?—Not by contract. I look on the contract system as a sweating system.

28559. CHAIRMAN.—What is the contract system?—The contract system is this: all the roads are published for contracts. Men come forward and take a road, perhaps a mile, or two or three miles.

28560. Sir FRANCIS MOWATT.—For making or maintaining the roads?—Maintaining them—keeping them in order. The men who take these roads employ other men to do the work, and want to get as much profit as they can out of it. My object would be to have nothing between the County Council and the labourer. Even though this might be a little bit more expensive, it would be for the benefit of the country in the end. It would be for the benefit of the poor, and would help the poor.

28561. You want to get rid of the middleman?—Decidedly. If a man takes a contract he is generally a man with forty, fifty, or sixty acres of land. I consider that that man should be able to live on his land.

28562. CHAIRMAN.—I suppose that there is nothing to prevent the County Council doing what you suggest?—Up to the present it has not been allowed, except in a few counties in Ireland, such as Tipperary.

28563. Do the Local Government Board prevent it?—No, but the Local Government Board may not sanction it. It has not been applied for. I saw not long ago in the County Roscommon that it had been applied for, but whether it is accomplished yet or not I cannot say.

28564. Do you know whether in England and Scotland the roads are maintained by direct labour?—I saw not long ago that there was a report that in Scotland, in a county as big as the County Mayo, the roads are maintained by direct labour. The wages are a great deal better there than in the West of Ireland, being about £1 a week, and still the difference in the cost of maintaining the roads is very small, indeed. I forget the name of the county at the moment, but it is as big as the County Mayo.

28565. Is not a question of that sort a matter for the County Council and their electors?—You see the way the roads are kept. If you had direct labour on the roads not only would you give more labour to the poor, but you would also improve the roads.

28566. I daresay you might?—You would have a different class of road, and that would be a blessing to a man like me, who drives 200 or 300 miles a week in a trap over roads that are kept in bad repair.

28567. Is it not then a matter which ought to be made a question at the County Council elections when they come on; should not the electors then see that the County Council would apply for powers to do this?—There are two ways of looking at that. There is a great deal of power in the hands of the landholding class—the forty and fifty-acre men who take roads by contract—and they don't want to do away with the contract system.

28568. Sir JOHN COLOMB.—By the landholding class you mean the tenants?—The large holders. They are, of course, in a minority when you take the whole county into consideration.

28569. Mr. O'KELLY.—Small farmers are labourers themselves?—Yes. I want to provide for the permanent labourer and the small farmers' sons.

28570. CHAIRMAN.—Surely the men who are in a position to take these contracts are not in a majority?—Then there are men who take contracts down to twenty acres. They work with sweated labour, and I want to do away with that.

28571. I should have thought that the people you wish to benefit would be in the majority?—I want to keep the men in the country. I want also to see that this man with the small holding of land gets an opportunity for his children of earning their bread, so that they can live more comfortably than they have done in the past. A man with twenty acres of land can make something out of it.

28572. Mr. O'KELLY.—The majority of the contractors in County Sligo are small farmers?—They are all farmers, but not such small farmers; some of them have forty or fifty acres, and so on.

28573. Mr. SUTHERLAND.—They require to be men of capital?—Yes. They must be men of a certain amount of capital, and there must be a certain security, so that if they do not conform to the contract they can be made do so. The county surveyor can come in, and compel them to do so. If there was direct labour on the roads each man working would make about ten to twelve or fourteen shillings per week, and remain at home instead of going abroad.

28574. CHAIRMAN.—You say the system of direct

labour, although it would have more advantages, would be more expensive. Why do you think it would be more expensive?—I have not thoroughly considered why it should be; but, of course, you would have to pay the county surveyor something extra, and you would have to pay a few other men. You are at present paying assistant county surveyors. They are paid large sums. All they do is going about inspecting the roads once in three months. If there was direct labour I suppose you would have to have men over them, who would constantly superintend them, and see that the work was done properly.

28575. When the grand juries kept the roads did they have direct labour?—No; and it is the curse of the country they did not.

28576. The grand juries put out the roads under contract?—They did, unfortunately.

28577. But, I suppose, under the direct system you would save the profit of the middlemen?—You would, and you would have better roads.

28578. A better road might cost more than a bad road?—It would pay in saving wear and tear on all sorts of vehicles to have a better road in the end.

28579. That would hardly be a benefit to the County Council, but it would be a benefit to the owners of vehicles?—They are the ratepayers.

28580. Sir John Colomb.—With reference to Lord Dudley's question as to whether the direct labour or the contract system is the better, the matter is purely one for the decision of the County Council?—I know; but what I would do is, compel the County Councils to have direct labour on the roads.

28581. Chairman.—In order that I may understand it, the County Councils are elected?—Yes.

28582. And every man who has a holding has a vote?—Yes; and every man who has not.

28583. When you say that the big farmers and landholders have all the power I find that the number of holdings not exceeding £10 in the two congested electoral divisions you have been speaking about is about 70 per cent. Therefore, the balance of power is entirely in the hands of the small holders?—I quite agree as far as that is concerned; but you don't take into consideration the multiplicity of brothers-in-law, nephews, sons-in-law, and all the rest, with holdings from £10 up. In a great many of those instances it is a case of a family party.

28584. On the face of it, it is still true that in this very congested electoral division you represent the proportion is two to one?—Yes; but I am talking of the whole county. That would not be fair at all, because we all know why these districts are congested is because the small landholders are in the majority.

28585. Taking the whole county, do not the returns show that the small landholders are in the majority of voting power?—That may be; but they are not instructed in what is best for themselves; and I think you will agree with me when you think the thing over. There are so many thousands a year collected in the rates of the county. You want good roads, and you have a right to see the thing well done, and to see that the ratepayers get the best value for their money; and if you possibly can do it you have a right to benefit the labourer. The man who actually does the work is the man to be benefited.

28586. What you really advocate is ignoring popular government?—No.

28587. Because I understood you to say that there should be a law to compel County Councils?—I advocate direct labour on the roads for the simple purpose of giving the small labourer a chance.

28588. Yes; but as the elected body will not do it, do I understand you to say that some other authority should step in and do what the local authority, popularly elected, will not do?—I think that the higher authority ought to recommend the local authority to do it. I think if it was pointed out to the County Councils that it would be the best thing to do for the small landholders they would do it.

28589. Mr. Kavanagh.—Has it ever been suggested in this county?—Not in this county.

28590. Why not?—I assure you I have not anything to do whatever with the matter in a political sense. I don't interfere in politics in the county in any shape or form. I have nothing to do with politics. Had I to do with politics, I might get up and speak on the subject, and bring it before the constituents; and, perhaps, if it was put before them very strongly the people would insist on it, as they did in Athlone and elsewhere.

28591. There is one reason why it is not done, because it would raise the rates very considerably?—I don't know that it would.

28592. You don't know that it would not?—No; I have not calculated the thing, but I look upon it as the best way of spending public money. I think, when there is public money to be spent, it should be spent for the good of the greatest number.

28593. Would it affect the small farmer who is the direct contractor, who takes a contract and does the work himself?—I would not interfere with him, for this reason, that he goes and works on the road himself just as a labourer.

28594. That is quite different from a man taking a contract and then paying day labourers to do it?—He could take a small contract if he chose.

28595. Mr. Sutherland.—Do you consider that the roads are kept well enough at present for the money that you spend on them?—I do not think so.

28596. Do you know what sections of the road are in the contract?—One, two, three or, perhaps, four miles, and when you consider the condition of the roads in the West of Ireland, you can see what a benefit it would be to have them properly kept. The way I look at it is this; you may have large numbers of small occupiers of perhaps 5 acres of land, at a rent of, say, £2 10*s*., and they will have families of two or three big boys and some girls in the house with nothing to do. The result is that the children have to go off to Scotland—Glasgow, Govan, or some place like that, while if these boys were employed at from 10 to 12 shillings a week they need not be sent away.

28597. Do these contractors work themselves or employ labour?—Both.

28598. Are you satisfied with the wages they pay?—Decidedly not.

28599. If there were direct labour, do you anticipate that the wages would be higher?—About double. A man must have a profit, or he would not take a contract.

28600. Are you certain that there is anything to prevent the County Councils from doing it at present if they wished it?—I am not aware. There may be, for all I know.

28601. Do you think the roads are better now or worse than in the old Grand Jury times?—About the same. Of course there is an amount of improvement in this way, that they have made more roads since the Grand Jury times. They have increased the mileage considerably.

28602. They have made new roads and extensions?—Yes.

28603. Sir Francis Mowatt.—You say that if there were direct labour on the roads, you would expect the labourers to be paid from 10 to 12 shillings a week?—Yes, and perhaps up to 14 shillings.

28604. What are they paid now?—They are paid now between 7 and 8 shillings; some of them less.

28605. Chairman.—Is there any other point you wish to bring before the Commission?—That is the point I wish to bring before you.

Mr. Michael O'Neill examined.

28606. Chairman.—You live at Culleens, County Sligo?—Yes.

28607. You are Secretary of the Kilglass Branch of the United Irish League?—Yes, and District Councillor for Rathmacurky Electoral Division. It is a scheduled congested electoral division. I have an opportunity of knowing the conditions under which the tenant farmers in Rathmacurky and the surrounding divisions live, and I wish to give evidence on several subjects.

28608. You have given a little sketch of your evidence: would you like to go through it?—I sent in a statement as Secretary of the United Irish League in the first place, and as a voluntary witness in the second place. As Secretary of the United Irish League, I had opportunities of knowing the circumstances of sales of land that took place. In Kilglass parish several sales have taken place under the Land Act of 1903. Up to the present the tenants have not been declared tenant purchasers, but they expect to

Apr. 18, 1907.

Mr. Michael O'Neill.

be. They are paying interest on the purchase money. To my mind, the condition of the people there will be very bad if something is not done in the way of giving them an increase of land. The majority of the people cannot live on the land that they have. It may be expected that they could live on all the land that they have, but on some of the estates the land is of very inferior quality. No matter how hard the tenants work it is not enough. The tenants in the Kilglass district are very industrious. There is no doubt about that, not only at home, but also abroad, for they often have to go away. I knew farmers with big families who had to go to the United States of America to earn a living for their families and pay the rent to the landlord.

28609. Most Rev. Dr. O'Donnell.—Tell us the size of the holdings?—The majority are between 5 and 15 acres.

28610. What would the valuation or the rent be?—Take the Campbell Estate first. It is in Rathmacurky Electoral Division, in the Union of Dromore West, and the majority of the rents are from £4 to £5, some being about £3 and others up to £10. On the Rathmacurky portion of the estate the people live in a village. The land is held in rundale. There are 19 tenants on that portion. Of these, three may have economic holdings, but the remainder of them have very miserable holdings, some of them as low as fifteen shillings. The highest rent, except in two or three cases, would not be more than £4, and the valuations would range from 15 shillings to £4.

28611. Sir Francis Mowatt.—There are in Rathmacurky 235 holdings, and of those 123 holdings are less than £4. That will save your taking particular holdings?—These people have entered into purchase agreements without fully considering what they were doing. The result is that if the money coming from America and other places were withdrawn the tenants would be unable to meet their annuities.

28612. Most Rev. Dr. O'Donnell.—How used they supplement their income from the land to pay the rent up to the present?—They almost all got money from America, England, or Scotland, and in one village on the Hale Estate where there are twelve tenants, I find that the amount of money coming to these tenants in the year would, taking a rough estimate, amount annually to about £108.

28613. Sir Francis Mowatt.—Are all these twelve tenants below £4 valuation?—Yes.

28614. Most Rev. Dr. O'Donnell.—You say they got £108 from England and Scotland?—Chiefly from America.

28615. Was any of this money earned by migratory labourers who went over to England or Scotland, and came back?—Not at present, but in the past few years there were migratory labourers. Almost all the people have gone to America, save old people. There are left only old people and children.

28616. The connection is with America rather than with England or Scotland?—Yes; at present very many of them go to America.

28617. Is that Hale Estate in two portions or all together?—It is in two portions—the tenanted land in Culleens and the untenanted land in Knockagower, Castleconnor. Both portions were sold at the same time, in the spring of 1904, to the Congested Districts Board.

28618. Did they buy land for enlarging holdings?—Very little. There were only three holdings made out of the eighty acres of grass land bought. Two tenants migrated, and their holdings have been divided among six persons whose holdings were very small—between three and four Irish acres.

28619. That process is good as far as it goes?—It is, but it does not seem to work so well. If the people got grass lands nearer home, anywhere from three to five miles, they would rather get plots of land. The recommendation of finding plots is intended for persons who would not volunteer to migrate. There would be a large number of volunteers if grass land was available.

28620. Sir John Colomb.—For grazing?—No, but for tillage. For conacre they pay from £3 to £5 an acre.

28621. Most Rev. Dr. O'Donnell.—Grass land at a distance connected by a road with home would be quite convenient?—Yes.

28622. Would those three or four acres at a distance of some miles form portion of the farm?—They could be used for agricultural purposes as conacre places are at present.

28623. You would look on the road as making one farm of the two pieces?—Yes.

28624. Mr. Sutherland.—What is the limit of distance you would go?—Four miles would be far enough.

28625. Sir John Colomb.—Do you think a small farmer could carry on tillage four miles from where he lives?—I think he will. I know people have to go five miles for conacre, and pay £4 and £5 an acre for it.

28627. Do you mean for tillage or grazing?—For tillage purposes. Small farmers with only a few acres of worked-out reclaimed moor land have to go a distance for conacre.

28628. Mr. Sutherland.—Who takes the conacre, people with no land at all?—People with only a few acres of land are very glad to get conacre, but as a matter of fact conacre does not pay.

28629. Pay whom?—It only increases the supply of provisions for the winter in the shape of potatoes and some food for the cattle. If they were to pay for manure, labour, and rent, and estimate the profit made on conacre I am sure a man would not make a shilling a day on his labour.

28630. Most Rev. Dr. O'Donnell.—From what class of people do they take conacre from?—Middlemen who have large farms of from twenty to one hundred acres, and these people all cultivate their own holdings to the last extent before they take conacre.

28631. They have reached the limit of profit of their own holdings first?—Yes.

28632. There is a large annual return from the little plots that are let out in conacre?—Yes.

28633. Mr. Kavanagh.—And for corn crop they take a second acre?—They take a corn crop off the first year, and then potatoes. Persons who can afford it take two or more acres, so as to give their own worn out holdings a rest.

28634. They take it for two years?—Yes, and for five years.

28635. What manure do they get?—They do not get farmyard manure. They use artificial manures.

28636. Chairman.—You want to tell us about Colonel Howley's estate?—Yes; but with regard to the Hale estate, only six of the tenants have got their holdings enlarged. The small plots they have got are of very little value to them. That leaves twenty-five or twenty-six other tenants without holdings large enough to be economic. Now the Congested Districts Board has done very good work on the Hale estate. It made bits of roads, and did all it could to improve the condition of the tenants, but after all they could do they had not sufficient grass lands to get the benefit. The members of the Congested Districts Board cannot feel satisfied that they are stopped on the Hale estate for want of sufficient land.

28637. When did they buy this estate?—About three years ago, but I think the estate was only vested in the Congested Districts Board about a year or a year and a half ago.

28638. Would you say that the fact of a great many of them being left out is due to the want of land available?—I think so.

28639. You don't suggest that the Congested Districts Board could have done any more?—The Congested Districts Board could not do any more at the present time. What is needed is grass lands in the locality or migration to other districts. The Congested Districts Board might have given the loans and grants for the reclamation of cutaway bog; and thus have made some of the existing holdings economic.

28640. I see on my map that the Hale estate appears to be in two portions?—Yes.

28641. Separated from each other?—By a river.

28642. Is the grass land on one side, and the tenanted land on the other?—No; both sides of the river are tenanted land, but the grass land is five or six miles away from the tenanted land.

28643. Where is the grass land they have bought?—At a place called Knockagower, within one and a half miles of the little town of Inniscrone.

28644. Is that on the property nearest to Killala Bay?—Yes. It is six miles nearer to Killala Bay than the tenanted land.

28645. Is there no demesne house on the property?—No. This is the Hale estate.

28646. The grass land is some distance from the tenanted land?—Six or seven miles. Three men migrated from Culleens to Knockagower; two houses were built, and a third is to be built.

28647. The land which they leave is divided among the others?—Yes.

28648. In no case does a person leaving one place hold land in another?—Not up to the present.

28649. Most Rev. Dr. O'Donnell.—That was a suggestion of yours?—Yes, from the small farmer's point of view. I have an opportunity of knowing the place.

28650. Sir Francis Mowatt.—You say five miles is the limit at which you could give an additional piece of land?—Yes.

28651. This is beyond that distance?—It is. With regard to other farms purchased by direct sale in that parish a great many of the tenants are small holders. I instance the Campbell estate. I am sure if something is not done in the future to provide them with sufficient land the condition is this. These tenants have very small holdings, the smallest in the district. They have purchased at seven shillings in the pound off, but that means nothing to them only a few shillings in the year, so that they have no prospects before them.

28652. They bought direct from the landlord?—Yes. It is at Culleens, adjoining the Hale estate.

28653. Chairman.—How far off are these two estates from here?—About four miles.

28654. Then these tenants on the Campbell estate are in very much the same position as the tenants on the Hale estate who have not had their holdings enlarged?—Yes. The reason why they are so is because there was no grass land. Grass lands may be available, but there was no element of compulsion in the Land Act to enable the Estates Commissioners or any body to purchase these grass lands for the tenants.

28655. Was there any attempt made to sell the estate through the Congested Districts Board?—I think they suggested to the landlord to sell either through the Congested Districts Board or the Estates Commissioners, and the landlord refused to sell to either of these bodies.

28656. He preferred to sell direct?—He preferred to sell direct. It has been the same way on all the estates purchased. The Orme estate was purchased in Kilglass, and in the case of the Duke estate and four or five others it was the same. The tenants were very poor, and in need of an immediate reduction, and on account of the few shillings that they got off their rents they agreed to purchase. In all cases there was a year's rent added to the purchase price, so as to enable the tenants to have the benefit of a year's rent. This was two years ago. It was a year of exceptional distress in the district, and the tenants embraced the opportunity of immediate relief by saving that year's rent.

28657. Were there many arrears of rent on the Campbell Estate when the sale took place?—There were some arrears. The year's rent then due was added to the purchasing price. All other arrears were wiped out on the payment to the landlord of one year's rent subject to a reduction equivalent to the reduction secured by the purchase.

28658. Were there any intermixed plots on the Campbell Estate?—Yes; Rathmacurky is all in rundale. Each tenant may have five or six plots sometimes, and have to go one and a half miles to a small plot of a half acre or a rood. Each tenant has several small plots.

28659. How do they propose to settle that estate now that they have bought?—I don't know unless something is done by the Estates Commissioners, or some body having power under the State to stripe the land.

28660. Can they stripe it voluntarily among themselves?—I think not.

28661. Would people of that sort, who have already bought, allow the Congested Districts Board, or any body, to come down and divide the land for them?—At present the holdings in the hands of the farmers would not be worth striping, they are too small. Unless grass land is available, or some of the tenants migrate, it would not suit to stripe.

28662. Even supposing that no land was available for the enlargement of holdings, would it not be an advantage to have the holdings solid?—It would.

28663. That, you think, can only be done by some outside body?—I think so.

28664. It cannot be done by themselves?—It cannot.

28665. Would they allow the Congested Districts Board to come in and do it?—I believe they would.

28666. Voluntarily? I think so, if they were able to get more land.

28667. My point is if they are not able to get more land?—I cannot say they would, because it happens at the present time some of them have better land than others. A great part of the land is moor land, and cutaway bog, and land not reclaimed at all, and I am perfectly sure that the persons having better land would not be willing to take on a portion of bad land instead.

28668. Does it come to this, that except a rearrangement of land in rundale can be effected during a sale, it is very difficult to do it when the sale is carried through?—I do not know if it can be effected under the present Land Act.

28669. After the land is sold, can it be done at all unless there is more land added?—It cannot be done so as to give satisfaction.

28670. Most Rev. Dr. O'Donnell.—If more land were available for the enlargement of holdings, that would be sufficient, in your opinion, to induce the tenant purchasers to agree to the re-striping of their holdings?—It would.

28671. Mr. Sutherland.—Is it adjacent, that land?—There are plenty of grass farms in the parish. I can read, if you wish, a list of grass farms.

28672. Could these holdings be enlarged without lifting the people away?—Yes, if all the grass lands in the parish were purchased.

28673. That is, they are surrounded by grass lands?—Yes, not so much in this electoral division, but in the next electoral division, Kilglass.

28674. Chairman.—Are you speaking of the Campbell Estate?—Yes.

28675. There is grass land available which can be bought?—Yes. Colonel Campbell had two estates in the Kilglass parish. One was known as the Frankford Estate. This was all grass farms held by non-residential tenants. I have a list of the tenants, the rent and the valuation of the holdings. It has been sold recently to these non-residential tenants. In all I think there were about 300 acres sold last November.

28676. Is that Colonel Campbell of Sligo?—Yes.

28677. Sir John Colomb.—How many tenants were on that 300 acres?—Seven; each of these tenants has a residential holding on some other estate.

28678. They were judicial tenants like everybody else?—Yes.

28679. They worked this land in grass and not in tillage?—Yes.

28680. They were judicial tenants who preferred working the land in grass?—Yes.

28681. On an average, they have about 40 acres at present?—One has 61. The same person, I find, has in an adjoining townland, 71 acres, and he has a residential holding beside. The same state prevails all through the parish.

28682. Mr. O'Kelly.—How far does he live from those non-residential holdings?—A mile or two.

28683. Most Rev. Dr. O'Donnell.—Had he any tenancy of these non-judicial holdings before he bought them?—I have got a list. On this list they are given as untenanted lands. Of course, there is no residence on these lands.

28684. Sir John Colomb.—Can you give us the valuation of that 300 acres of land, that is, what it works out at on an average; the total valuation of the 61 acres is £34?—Yes. In all it comes to over £120 or £125. What I have said about the Campbell Estate applied to the Orme, Duke and Rashleigh Estates. They are also sold direct.

28685. Under the last Act?—Yes.

28686. Most Rev. Dr. O'Donnell.—In those cases some non-residential grass farms were sold with the others?—Yes; there were.

28687. Are they also in rundale?—No; there is no rundale.

28688. On any of them?—I think there is not much.

28689. They are small holdings?—The majority of them are small holdings.

28690. Holdings on which the people cannot get a living from the holding itself?—Yes.

28691. Sir John Colomb.—Were there any houses on these grass lands you speak of?—Unless a herd's house, there were none.

28692. There were some men getting a living out of the places by living on them?—Herding.

28693. Chairman.—These estates that you speak of, the Rashleigh, Orme and Duke, were they grass lands?—No, but there were some. On the

Apr. 18, 1907.
—
Mr. Michael O'Neill.

Rashleigh Estate a few of the tenants had large farms, but the majority had small farms. In the Carranduff village there are ten rented under £10 and one over it, and three are valued under £10 and eight over it; so the rent and valuation do not compare very favourably in that place. The same system with regard to rents and valuations prevails all over the division. The people are fully as poor as in the scheduled divisions, and it ought to be scheduled.

28694. Most Rev. Dr. O'Donnell.—Do you say that on that Rashleigh Estate there were some grass lands sold to non-residential tenants?—No. I did not say that.

28695. Were there any grass lands that might be availed of to enlarge those small tenants to which you have called attention?—Not on the Rashleigh Estate.

28696. Were there any grass lands near it?—Yes. There were plenty of grass lands near it.

28697. You seem to suggest to the Commission that before small holdings are sold to tenants a distinct effort should be made to find land for their enlargement?—Yes.

28698. Would you go so far as to say that the money of the State ought not to be available to enable non-residential tenants to purchase those grass lands, especially as long as there are small holdings needing enlargement?—I think and believe that were the small holdings enlarged it would be a greater advantage to the government of the country to have a number of prosperous small farmers than to have a few graziers, because the graziers are not making the most out of the land. A small farmer with 30 acres of land might make as much out of his 30 acres of land as a grazier with 100 acres. A judiciously managed small farm of 30 acres would be as valuable to a tenant farmer, I believe. When the people of the country are prosperous the State would be prosperous, and this 30-acre farm would be as valuable to the State as 100 acres of grass lands.

28699. Sir John Colomb.—Do you think that tillage pays better than grass lands?—Yes, if judiciously worked.

28700. You have got a farm yourself?—Yes.

28701. Do you find it pays better by working it in tillage than in grass?—If a tenant has some capital to expend on the farm, and manages it judiciously, it would pay better, because the tenant of 30 acres of land might fatten cattle and get the full profit if his farm is judiciously managed, whereas now he has to sell them as stores and not get half the amount.

28702. What is the size of your farm?—My farm is a small farm. The area is over 30 acres. The quality is very bad. A great part is unreclaimed land.

28703. What is your valuation?—Very low; only £3.

28704. Do you, with your experience and the great intelligence you possess, find it better to work in tillage rather than keep it in grazing?—Yes.

28705. What proportion of your 30 acres do you work in tillage?—I till the whole of it in a five-course rotation. Of course, I leave fields out for two or three years for grazing purposes, and some for meadow, and I till the remainder in a five-course rotation.

28706. What is your rent per acre?—The rent is very low.

28707. Sir Francis Mowatt.—You say a large portion of your land is practically unreclaimed?—Yes.

28708. Do you till that?—It would require a large expenditure, of £10 an acre or so, to reclaim it.

28709. Do you manage to find the capital to till that; does the whole of your land pass through the alternate crops?—The unreclaimed portion does not, because I cannot till that.

28710. Mr. Sutherland.—What proportion of it is unreclaimed—half and half?—Yes.

28711. Most Rev. Dr. O'Donnell.—So you have 15 acres under rotation?—There might be 15 statute acres.

28712. How many of those acres did you reclaim?—All that is reclaimed. It was reclaimed within the last generation.

28713. By you and your father?—Yes.

28714. Sir John Colomb.—As tillage involves the expenditure of capital, do you think the enlarged holdings would be worked in tillage; that there is capital enough in the hands of the small tenants to carry on tillage?—I do.

28715. Do you think the class of tenants we are speaking of have capital sufficient to put into tillage if they had sufficient land?—I don't think they have all the capital, but if they had——

28716. Chairman.—Where is your farm?—In Culleens.

28717. Most Rev. Dr. O'Donnell.—Could you live at all if you allowed your land to grow grass and did not till?—I could not. Inside of ten years it would be growing heather and rushes.

28718. Tell the Commission what you take off that farm from year to year?—I take potatoes, but they don't yield a good crop. They are little more than half the crop that would be got on land of better quality.

28719. Sir John Colomb.—What stock do you find you can keep?—I might keep more had I the means to do so. Five or six cattle and a horse are as much as I can keep.

28720. Sir Francis Mowatt.—Do you keep a horse?—Yes. I could not manage rough land like that without a horse.

28721. Sir John Colomb.—Do you think a holding can be considered an economic holding which is not horse-farmed; do you think a holding which cannot keep a horse can be called economic?—I do not.

28722. Chairman.—Sir John wants to know whether you think a man can ever get a living off a holding if that holding is of such acreage that he has to do all his cultivation by spade work?—I think he cannot. The occupier of a spade-labour farm situated near a town might make a living on it.

28723. Sir John Colomb.—At what age do you find yourself compelled to part with your cattle?—At one and a half or two years old.

28724. You cannot keep them beyond that?—No, because land of that inferior quality cannot grow root crops that would fatten. Even if you could afford to keep the beast to fatten you could not grow the crops.

28725. You are compelled to part with your beasts at a year or a year and a half by the circumstances of your farm?—Yes.

28726. Chairman.—Is there a creamery near here?—No; there is no creamery in this district. There is no industry whatever, except quite convenient there are some small tenants with two or three acres of unreclaimed bog land and they cut turf and sell it here. It is not a very remunerative industry. I don't believe it pays them a shilling a day. There is the pig breeding and rearing and the egg industry, which are not profitable on account of the distance to the nearest railway. Pigs have to be sold at less than they would realise in Sligo or other towns.

28727. Is there any particular reason why there should not be a creamery?—There is; the people cannot feed their milch cows well enough to keep up the required quantity of milk, and there is very little milk to be had during the winter months.

28728. Would a creamery answer in these places?—I believe it would. At the present time the small farmers who make butter have, in the majority of cases, to sell it at sixpence a pound to the local traders.

28729. They make butter themselves?—Yes.

28730. Most Rev. Dr. O'Donnell.—The housing conditions are not good for making butter?—No. The housing accommodation for the people themselves is not good, and the dwelling-houses are not what they should be.

28731. Chairman.—Is it a general thing here for the small holders on the Campbell and Hale estates to make the butter themselves?—Yes. They all keep one or two milch cows.

28732. They all make butter?—Yes.

28733. If that is so why is there no creamery?—I cannot say. I suppose capitalists do not think it safe to invest money. The people are not sufficiently advanced to start co-operative industries, or they have no capital. Such industries were started here and ended in failure. The present condition of the small farmers is such that they could not produce milk in sufficient quantities to supply a creamery all the year round. The grass is poor in summer time, and the land is unable to produce roots for winter feeding.

28734. Mr. Sutherland.—Has a creamery been a failure here?—No.

28735. What industries do you refer to?—In Ballina a boot factory was started and failed. It requires a man with capital to keep an industry like that going.

28736. Who started these industries?—In Ballina Father Quinn and some of the local clergymen started the boot factory.

28737. Mr. SUTHERLAND.—Did the Congested Districts Board start anything?—No.

28738. Mr. O'KELLY.—Can you account for the failure of the Ballina boot factory?—I cannot well account for it.

28739. Sir FRANCIS MOWATT.—How long did it go on?—About one and a half or two years. I am sure they had not sufficient capital and perhaps they found it difficult to get a market for their boots. There is no body to foster these industries when started; so generally they fall through.

28740. Mr. O'KELLY.—Had the Department of Agriculture anything to do with these industries?—I cannot say. Lord Dudley knows something about it. There was a grant given by the Government to start it.

CHAIRMAN.—I understand not. I believe that they only gave instruction.

28741. Mr. O'KELLY.—Was the selection of the manager of the Ballina industry left to the Department of Agriculture?—I cannot say. I don't know much about it, but my idea is this, that when an industry like the Ballina industry fails it causes persons with capital to refrain from starting industries.

28742. You don't know anything about the causes of its failure?—No.

28743. Most Rev. Dr. O'DONNELL.—In every district such as this milk and butter are very important products. You were asked about creameries. Would it be a great improvement if little cottage dairies were attached to the houses of the small occupiers?—Yes.

28744. Do you think would that meet the wants of a place like this rather better than creameries?—It would if there was a way for the people to get a market for the butter manufactured there. The want of a market is the chief cause. The distance to the nearest butter market, Sligo, is 27 or 30 miles, and the cost of the journey with a horse and cart leaves a very small margin of profit. With railway communication and cottage dairies the butter industry would become profitable in the district.

28745. Don't you think the market, though very desirable, would come close on the heels of the improvement in the produce?—I believe it would, if the industry was fostered by some body; but an industry started by poor people, on their own responsibility, as a rule does not get much of a chance in this country presently.

28746. You described something of the way you work your farm; what help have you on it?—I have only myself.

28747. Are you a married man?—I am. I do the weight of the work myself.

28748. Have you a hired man occasionally?—Occasionally, but I could not afford to pay a hired man the whole year round. As a matter of fact I have to manage very carefully to meet my calls. Everyone in the locality has, from time to time, to trust to the generosity of the local shopkeeper.

28749. Your family is small at present?—Yes.

28750. That is the critical time?—I have only one child, my wife, and mother. If my family was larger it would be impossible for me to hope to make a living.

28751. You have not any holidays in the year?—I have not.

28752. You work the whole year?—Yes, except Sundays and holidays.

28753. You work the whole day?—Yes, I work from about half past six or seven o'clock at the latest until very often ten or twelve o'clock at night. I have to work inside to look after cattle and pigs, to help my wife and mother at night and in the early morning, and I work on the farm during the day.

28754. I think it is most admirable?—I am sure the same thing can be said of every other small farmer in the district.

28755. You think so?—From what I can see.

28756. They are industrious?—Very industrious.

28757. If the farms were larger, if they got economic holdings, they would till them, to the best of their knowledge?—Yes, if they got something to start with, but it is not easy to make an uphill fight getting credit for everything, and paying maybe from £20 to £100 for it.

28758. CHAIRMAN.—You told his lordship that in your opinion a small dairy attached to those cottages would suit the conditions of this district better than creameries. What reason had you for saying that?—In the district I come from the grass lands are in the centre, and the tenants' land is up towards the mountains, and the distance that the milk would have to be carried to the creamery, which would be situated near the grass farms, would be very great, so that the profit would not be much on account of this loss of labour. Moreover the holdings are so small and of such inferior quality that a sufficient supply of milk could not be kept up.

28759. Have not many creameries got a system of daily collection?—I don't know. I am not acquainted with the system. There is no creamery within twelve miles.

28760. There are rough roads in these places?—There are. In the mountain districts, in some places, the roads are very bad.

28761. Mr. SUTHERLAND.—Of course they get a better price for their butter if made in a creamery than for butter made under the existing conditions?—I believe so, but I do not know; I live at such a distance from the nearest auxiliary creamery down at Skreen, ten miles from me.

28762. CHAIRMAN.—Have you ever thought, supposing there was a small dairy attached to the house and the tenant went in for dairying what the smallest number of cows he could get along with would be?—As a rule the people cannot keep more than two cows, and these two cows they have to house-feed a great part of the year, and in winter time, in the mountain districts, they have to buy turnips, meal, and bran to keep the cattle, and very often hay.

28763. Do you think an individual dairy, such as his lordship suggested should be attached to the house, could be made to pay on two cows?—I think it would be better if something could be got up on a co-operative scheme for the locality. The co-operation I mean is co-operation in exporting the butter.

28764. That is a different thing. That is the creamery idea. I understand you prefer an individual dairy connected with the house, everybody doing his own dairying?—I know this case, where there are two or three cows kept, and there happens to be a dairy, the persons who keep them make good butter, exhibit it at the local shows, and get fancy prices in the Ballina butter market. I am sure that pays them fairly well, and if some such system were carried on through this district it might be remunerative.

28765. Most Rev. Dr. O'DONNELL.—A cottage dairy does not involve a change of system. It merely involves better treatment of the milk and butter?—Yes; that is so.

28766. It is better to get the milk into a separate apartment outside the house, and keep it in pans until it is made into butter. That would not involve any considerable expenditure in the upkeep, but it would enable the occupant to give more fair play to the important products of milk and butter?—I believe that by that system the small holders would make double.

28767. Sir FRANCIS MOWATT.—How often could you churn with two cows, one giving milk and the other perhaps out; could you churn twice a week?—They do.

28768. You would not have your milk very fresh for your butter?—There must be at least three cows.

28769. Sir JOHN COLOMB.—Where do you sell your butter at present?—In almost all the local shops. They buy it in small rolls.

28770. Is there any competition among buyers?—There is not very much competition; the same price all round.

28771. Sir FRANCIS MOWATT.—Sixpence per lb?—Sixpence to 7½*d.* That is the highest I know it to go in these places.

28772. CHAIRMAN.—Do they pay sixpence for good and bad butter alike?—It seems to me they do. Of course where there is very good butter they take it to market and get the highest price. They sell it to *bona fide* buyers.

28773. Is there very much variation between the butter that is made by one house and another?—There is.

28774. There is a great deal of variation?—Yes. There is a great difference in the quality of the butter.

28775. If there is a great difference in the quality of the butter don't you think it probable that a great deal of the best butter does not fetch a good price because of the bad quality of the butter that is also sold?—It does not.

28776. If a man has to pay a uniform price because of local feeling he is probably getting the best butter very cheaply?—He is.

28777. Would not the quality of the butter be more

Apr. 18, 1907.

Mr. Michael O'Neill.

uniform under the creamery system than under the individual system?—I cannot say. I know nothing of the creamery system.

28778. If you have a creamery with a person in charge of it who knows how to make the best sort of butter is not it more likely that the butter turned out there would be of better uniform quality than butter made under those various conditions where some people may know all about butter and some people may know very little about it?—Certainly; it would be of more uniform quality.

28779. Then would not it command a better price than is now obtainable as a whole?—Yes, if the difficulty of distance could be got over. The untenanted land is in the centre portion, and five or six miles away along the sea-shore, and in the mountainous districts the place is very thickly populated.

28780. Most Rev. Dr. O'Donnell.—In winter could you feed any cows to keep up the supply of milk for the creameries?—The tenant farmers as circumstanced at present would be unable to keep suitable cows and feed them properly so as to keep up a sufficient supply.

28781. Have you heard that with creameries there is a tendency to send off all the milk to the creameries and to leave little for the family?—Yes; and I am also told that the skim milk coming from the creamery is of very little value to the farmer as a food.

28782. You alluded to the amount of capital necessary to start migrants on a new holding. Did you consider, with reference to those migrants on the Hale estate, what sum would be absolutely necessary to start a man?—A great deal would depend on the circumstances of the tenant before he migrated. On the Hale estate the persons migrated had each a horse and farm implements and a few head of cattle. Yet they would require about £50 to place them in circumstances suited to the size of the farms.

28783. Sir Francis Mowatt.—There is a house?—Yes.

28784. Some sort of a cow house?—Yes; but the out-offices built there are large enough to meet the needs of the incoming tenant if he keeps sufficient stock for the needs of the farm.

28785. There are already houses?—Yes, there are two houses built, with out-offices. The out-offices are small. They have no accommodation for pigs, but accommodation for a horse and two or three head of cattle.

28786. Chairman.—These are built by the Congested Districts Board?—Yes. I know on the Hale estate one of the tenants about to migrate was offered £30 of a free grant and £25 of a loan if he would undertake to build a house there himself. If each of these tenants in congested districts got £25 of a loan, payable on the same terms as land purchase loans, I think, apart from the Hale estate, it would be a very good scheme to improve the housing accommodation of the people, as most of the dwelling-houses are small, low, and insanitary.

28787. Most Rev. Dr. O'Donnell.—Suppose a man like you is migrated to a holding of fifteen acres of fair land for the purposes of tillage, and the house is put up on it, and out-houses, not in great plenty but sufficient for a start, and suppose you have no money whatever from the sale of your own farm, how much would you require in hand to provide stock for that farm and agricultural implements and manures?—I think £50 would be a very low estimate if I had no money of my own along with my present stock and farm implements. It might vary between £50 and £70. I would not want to be extravagant.

28788. Mr. Sutherland.—You would not like to go into debt?—Not too deeply. But some tenants are more industrious than others, but, on the whole, they are all industrious. I would like to go as far as I would be able to meet.

28789. Mr. O'Kelly.—What are the items making up the £50?—Assuming a man has no stock of his own, or money, he would want two milch cows. The cows he would buy for £20 the pair would not be good cows. He would want a horse. He might buy a horse suitable for the farm for between £10 and £15.

28790. Take it at £12 10*s*. What is the next item?—If he had no farm implements he would want £10. Then pigs would be required. A person beginning life like that would require four or five pigs. That would be £4.

28791. What about sheep?—What I was building the £50 on was that he might have some stock of his own to migrate to his holding. He would require about £100 if he was without cattle of his own if migrated to an economic holding; and I believe he could afford to pay the annuities on that £100 out of the profits of the farm.

28792. Chairman.—Take the circumstances of any estate you know about here. Take the case of an ordinary man, paying £5 or £6 a year rent—what sort of stock has he got?—A great deal depends on the value of the farm. These small farms are not alike. A farm of four or five acres would be equal in some cases to a farm of ten acres.

28793. Take a man of £5 or £6 rent—what stock has he got?—About four or five head of cattle and a horse—in some cases he has not a horse—and pigs.

28794. Would he possess a plough and harrow?—In almost all cases they do.

28795. Suppose that man was migrated in that position; suppose he was migrated to a better farm somewhere else, would not it be perfectly possible for him to start for a year or two on the capital and stock that he already possesses?—I think it would not; because on a larger farm he has to meet larger calls. He has more rent and rates to pay, and he has, in order to be in a position to meet all these charges, to wait until the stock produces stock. That might be too long. Then there are losses connected with the rearing of stock. If a man has only two or three cows something might happen them. They might die before he realises them.

28796. Cannot he get the little necessary capital to meet the increased rent, and so on, by letting out the balance of his land in meadow or taking in grazing?—I am sure he could get the most of it; but I think it would suit him better if he had cattle of his own, and laboured the land for himself.

28797. I daresay it would, but until he is in a position to extend his operations, until the natural process of stock producing stock has been arrived at, don't you think he could make up what he wants by letting out the land?—I am sure he would be able, at a little disadvantage.

28798. But is it absolutely necessary for him to have more than he possessed on his former holding?—It is.

28799. You don't think a man could be migrated to work successfully unless he has got some capital?—I think he could, provided he got capital on the same terms as the land purchase loan—payable on the same terms and at the same rate of interest. That would work very well, because it would not be very heavy on the tenant. The feeling among the people is not to take more than they would be able to meet; and men not industrious, or not inclined to improve their position, would not, with very few exceptions, go in for a loan.

28800. Mr. Sutherland.—Have you ever heard of an arrangement by which premiums repayable on advances are delayed for two or three years; by which the repayment of the loan is delayed at the beginning for two or three years and added on at the end of the term—would that meet those cases?—That would be a good arrangement.

28801. You are aware that an arrangement like that exists in Scotland?—I am not aware.

28802. That would meet the case, you think?—I think it would. It would give the tenant room to make a good start.

28803. You say your individual case is typical, and that you have to part with your stock at a year or a year and a half?—Yes.

28804. I suppose you sell them at local fairs?—Yes.

28805. Who are mostly the buyers at these local fairs?—The local graziers, who buy store stock; and strangers come in to buy the stock. They reap all the profits while the small farmers rear the stock.

28806. Do you live altogether by your farm?—I do; but it is a great struggle to live. I have to be very careful; and as I am, I have to run into debt, and it is very uncertain with such means as mine if I am able to meet it. I hope I may.

28807. Chairman.—What is the next point?—The next matter is the Howley estate. In the first case the tenants, I believe, entered into an agreement with Colonel Howley to purchase their farms. The holdings are of very inferior quality, mostly of bogland, tillage bogland, with reclaimed moorland of very

inferior quality. I believe it was rented cheaply, but if the tenants got it for nothing I am sure there are some tenants in Ireland would not come to live on it, because they would not expect to make a living on it. Colonel Howley offered to give the tenants grass land sufficient to make their holdings economic, but when the time came for having the agreements signed none of the grass lands would be given; then the tenants murmured, and got the Estates Commissioners to interfere. The result was that some of the grass land on the Howley estate was sold for distribution among the tenants, but there was not enough of it sold.

28808. Sir FRANCIS MOWATT.—Whom was it sold to?—It was a private sale of the owner. The Estates Commissioners stepped in. I don't know whether the Estates Commissioners or the tenants purchased direct from the landlord. A great many of the tenants did not sign the purchase agreements for the landlord. On the understanding that they were to get grass lands they signed purchase agreements. At first the tenants' agreements fell through. In the end, the agreement signed was with the Estates Commissioners.

28809. CHAIRMAN.—Where is the Howley estate?—On the Rathmacurkey division.

28810. How near is it to these other estates?—It is about a mile apart or two miles. There were upwards of fifty tenants on the Howley estate. Thirty-two got their holdings enlarged by the Estates Commissioners. They got between four and seven acres. I have a list of the increases. Those of fairly high valuation, from £5, got their holdings enlarged. Others, with valuations ranging from 5*s.* to £3, have not got any of these grass lands. It would appear to most people that if the Estates Commissioners had grass lands to divide the persons to have first claim on it would be the small occupiers.

28811. Most Rev. Dr. O'DONNELL.—Your point is that those who got the enlargements were not those most in need of the enlargements?—Yes.

28812. Sir JOHN COLOMB.—The tenants first agreed with the landlord, and then some of them thought better of it, and wrote up to the Estates Commissioners, and through the action of the Estates Commissioners the grass lands were sold by the landlord as well?—Yes.

28813. Then came the matter of the additions of grass lands given to certain tenants by the Estates Commissioners?—Yes. For instance: Maria Kennedy with a valuation of £4 19*s.* 0*d.* got 6 acres 3 roods of an increase, while on the other side Phil Atkinson, with 2 acres 0 roods and 6 perches, and no valuation, got no increase of land. It is bogland. He was living on a lot of bog, and it would be valued on Colonel Howley or else the valuer did not see any value in it.

28814. Was there any offer made to the very small men to migrate, or anything of that sort?—I never heard of it.

28815. Mr. O'KELLY.—Has all the grazing land been divided?—It has not.

28816. Does not that suggest that there is some hope that those tenants may get an increase yet?—But this sale has been fully completed now. Some of the tenants refused to sign purchase agreements. They were brought by the Estates Commissioners to two or three sessions in Easkey and Sligo, and were decreed, and forced to sign, with the exception of one, who held out; and he is now declared a tenant purchaser against his will.

28817. Sir JOHN COLOMB.—The vesting order has been received by the tenants?—Yes. The one who refused to sign the agreement has been declared a tenant purchaser. On the Howley estate, I am informed on very reliable authority, there is 365 acres of grass land in Cooga and an 11 months' grass farm in Kilgarvin, County Mayo.

28818. Mr. SUTHERLAND.—Did the Estates Commissioners buy the land?—I believe they purchased it. The bargain was agreed to at first by the tenants.

28819. Did they propose to make any rearrangement of the land?—It seems they did not.

28820. Mr. O'KELLY.—How long have the Estates Commissioners the property?—They have it upwards of three years. It is vested in the tenants for some time. The last of the tenants who held it, Pat Brady, with 4 acres 2 roods and 5 perches, and a valuation of £1 5*s.*, who refused to sign, has been declared by Act of Parliament a purchasing tenant.

28821. CHAIRMAN.—I think you have now told us practically all you have to say. At the end of your evidence you want to go into the question of roads and drainage, and that sort of thing, but we have heard so much on that point that I don't think there is any necessity for it?—All I would say is that in the west of this Dromore West district in the congested districts along the mountains they are very much in need of roads. Some persons have to travel three or four miles through the mountain for want of road accommodation of any sort. Another matter of great importance that I would recommend is a harbour at Poulaheeny. It is a splendid natural harbour. The proposed work would very much improve the condition of 300 or 400 families, all under £5 or £6 valuation.

28822. All fishermen?—Yes; they could not live on the land. I have here a map of the place drawn by a man in the district, and also a statement of the necessity for the proposed pier, and the use which it would be in developing fishing and helping the kelp industry. It is signed by about a hundred occupiers of holdings in the districts of Carrowmacbrine, Rathlee, and Cabra. Opposite the signatures are particulars of area, valuation, rent, and number of persons living on each holding. From this it will be seen that the interests of over 500 people are represented by those who have signed the memorial, and that the tenants who have signed all live on very small holdings. (*Hands in memorial*).

Mr. WILLIAM MITCHELL examined.

28823. CHAIRMAN.—You are a member of the Rural District Council of Dromore?—Yes.

28824. You appear here to represent them?—Yes.

28825. What is there particularly you would like to tell us?—I would like to inform you with regard to the uneconomic holdings in my district, and also to give you information regarding the grass lands and anything else that might be useful to you that I might be able to tell you about.

28826. Take the uneconomic holdings first?—I have got a list of holdings of certain valuations, not exceeding £20, £15, £10, and £5. That is only for the three parishes of Templeboy, north and south, Skreen and Dromore East and West.

28827. Give the result of all those?—Holdings not exceeding £20 number twenty-nine, £15 are 128, £10 are 142, and £5, 178. Holdings above £20 I did not take into consideration, as I thought you did not care about the large holdings. In the same district I will give you the total amount of untenanted lands taken from the Blue Book as 2,175 acres in the three parishes at a valuation of £736 12*s.* Another very important case occurred within a mile of this place. It is a property that was under consideration of sale to the Congested Districts Board. There are thirteen tenants, nearly all very uneconomic, in the place, and a certain gentleman, a shopkeeper, walked in and bought it over their heads. The average valuation of these poor people is only £4. These people live on a bit of bog reclaimed and cut away, and one of the most important things in the barony of Tireragh to-day is to have something for these poor people, and people circumstanced like them.

28828. Mr. O'KELLY.—What is the name of the property?—The Comcuil. I think you know a little about it. I have been informed on very good authority since I came here that there are eight tenants, comprising forty-five individuals, living on £10 15*s.* valuation of land. Looking at all the small holdings we have in the lower part of this rural district I think it ought to be scheduled as congested. I think it would be a great benefit if it was; and I also think that those grazing farms should be acquired and divided. There is one especially, the ranch of Templeboy. Henry A. King is the landlord. He lives in Australia, and was not in this country for the last fifty years, and it is probable that he remembers when there were three villages of tenants living near it. They were all evicted. I don't think they owed arrears of rent, but they were evicted to make room for large farms.

28829. Sir JOHN COLOMB.—Can you give us the date?—About 1848 or 1849. I was only a boy at the

Apr. 18, 1907.

Mr. William Mitchell.

time. These people were all sent away. Some of them went to live up in the mountains, in any places they could get holdings. Some of them emigrated. Some of their descendants can be found. I think if this land could be divided it should be divided, but you won't get this land divided in my opinion until we have some kind of compulsion by Act of Parliament. I think compulsion must be used before you can ever take up grass lands in this country. Graziers are not running this at present. Graziers had it and could not get a rent fixed because it was grass land, and they had to give it up; so they are now taking in grazing and making the most they can of it for the landlord who never sees it and probably never will see it; and it is some of the most fertile land in the County Sligo. It comprises 355 acres with a valuation of £227 5*s*. That would relieve congestion in a great part because one acre of that land is worth ten of what the poor people have in the mountains. No better land can be found.

28830. CHAIRMAN.—Where did you get these figures?—From the Blue Book; but I have it in my own book, because I value land. I have been all over this land.

28831. Sir JOHN COLOMB.—Would you apply compulsion to tenants as well as landlords who have land suitable and wanted?—Certainly.

28832. CHAIRMAN.—Where is Ballygrenan?—About four miles before you come to here.

28833. Did Mr. King farm this himself?—He is away in Australia sheep farming. He never farmed it himself. His father did.

28834. Who farms it?—A herd or bailiff for Mr. King. He takes in grazing cattle.

28835. From the tenants about?—From the tenants about. There are no houses on it, only a herd's house. Mr. King's father removed all the tenants and took it into his own hands.

28836. Sir JOHN COLOMB.—Suppose it was in the hands of a shopkeeper, would you take the land compulsorily from him?—It would all depend on the size of the farm.

28837. Whatever it may depend on, you would apply it indifferently to owner or tenant or shopkeeper holding the land?—I would.

28838. Mr. O'KELLY.—You think that congestion must be put an end to, and the only way of doing this is by acquiring land, and any obstacle standing in the way should be removed whether shopkeeper or non-residential grazier?—I would not take into consideration the person and circumstances of the land, but only whether it was required, and then I would apply compulsion for the general good of the community.

28839. CHAIRMAN.—Has Mr. King been asked to sell this land?—I don't know.

28840. You don't know if anybody has ever made an attempt to buy it from him?—I don't know.

28841. Is there a demesne house there?—There is no house at all except a herd's house.

28842. Is that the only grass land that that particular gentleman has got?—That is all.

28843. Has he any dairy land as well?—No.

28844. Only one tract of land?—One large tract with two herds upon it. He owns land here in Dromore West which is tenanted, but not at the place I mention.

28845. Most Rev. Dr. O'DONNELL.—When was that land cleared to which you refer?—About 1848, in the famine times.

28846. What happened to the people?—Some are living upon the mountain side, and some emigrated, and some are in their graves.

28847. CHAIRMAN.—Is there any other grass land in Templeboy that is suitable?—There is in my district. I am talking of Dromard East and West. We have Mrs. M'Munn, who lives at Templeboy also. Doonflynn is the name of the townland.

28848. Mr. KAVANAGH.—Are all these lands in the hands of graziers?—Yes.

28849. Suppose you broke them all up and gave them to migrants, what effect would that have on the cattle trade of this country?—You would have more stores because the people on these lands buy the stores in our neighbouring fairs and fatten them for a year and then ship them off to Liverpool or Glasgow as the case may be.

28850. I quite agree with you, but if you turn all these grass lands into small tillage farms you don't say that the market for store cattle will be greater in this country?—I do not.

28851. Sir JOHN COLOMB.—What would happen the small men who get a market for their stores from the workers of the grass lands: who is to buy up the stores if you dry up that?—My opinion is if a man had say ten or twenty acres of this land by a mixed system of farming he could fatten his own stores.

28852. How about the other people who are not taking up this land like the last witness, who said he had to part with stock at 1½ years old: what is to happen to him?—I am not a prophet.

28853. Mr. KAVANAGH.—You are a farmer?—Yes, I farm a good deal of land. I buy stores and rear stores.

28854. Sir JOHN COLOMB.—What is to happen if you cut off the market by splitting up these lands: what is to happen the people who now find a market from the owners of these lands?—The only thing I say is that a mixed system of farming is better. A small farmer can get more out of his ground by keeping his stores himself until they are fit for the market.

28855. Why don't they do that now if it pays so much better?—They have not the land to do it. If they got this land they could fatten a beast upon it.

28856. But what about the multitude of small holders who won't get this land?—The multitude of the holders don't sell to these people at all. Buyers from England and Scotland come over to buy from them. The best stores are sold in fairs every day and shipped at Sligo. If you have got a year old beast there is no beast in the fair you will sell to the foreigner better. I am informed that in England now there is double the price for young beef, and that fat year olds brought over from here are never put out to grass in England but are fed on oil cake and sold in the English markets at a high price.

28857. What is the size of your holding?—I have two holdings. Where I live I purchased under the Act. It has only 44 statute acres. In the other there is about 120 Irish acres.

28858. I presume on your two holdings you keep stock until it is two years old?—Yes, and some until it is three years old.

28859. But the people on the small holdings who sell them to the grazier cannot keep them so long?—My answer is they will always find a market.

28860. That a market somehow or other will turn up?—Yes. At present a great many of our best stores are shipped across to England and Scotland. I could not attempt to buy them when the Englishman comes into the market.

28861. There will be a diminution in the market?—There might be for a while. Things will right themselves in my opinion. If we want to do good for our country make the most of what the country can produce, turn the people on to the land, and you will sell more produce off one acre of land tilled than off five acres in grass.

28862. Do you mostly work your land in tillage?—I work about eight Irish acres.

28863. Out of a total acreage of what?—The one holding is not suitable in any way for tillage. The small farm is generally used in tillage.

28864. I want to get the benefit of your experience as a practical farmer: what amount of tillage do you have in proportion to the whole holding? What is in permanent grass and what is in tillage on your farm?—I have about eight acres of tillage.

28865. Out of what?—Out of twenty-eight.

28866. On the two holdings?—Twenty-eight is on this holding. On the other I have no tillage except what the herd tills.

28867. Therefore what you have got is two holdings. One you work in tillage and the other is a grass farm?—Yes.

28868. Do you think it would not be harsh to take away your grass farm from you?—It won't be very long a grass farm. One of my sons is going on it very shortly. I am not talking for myself at all. I want none of your grass land, not a bit.

28869. But you would like to hold on to what you have?—If it was for the good of the country I don't think I would hold on too tightly to it.

28870. Would not you think it only right and fair that you should get into your pocket what is the true value of this grass farm so that you should not be the loser?—Don't think for a moment that I suggest grass farms should be taken away for nothing. I would pay a fair price for them.

28871. You would leave a man the income that he had from it before?—I would allow the Government to fix a price.

28872. Would you think it right when compulsion is used for the benefit of the State that the State should lose or that the man against whom it is applied should lose?—I think neither of them would lose.

28873. You have advocated the principle of compulsion. Take your own case as an illustration: do you think it right that if compulsion for the benefit of the State is desirable as a policy that the person to whom it is to be applied should be a loser?—Certainly not.

28874. If there is any loss it should be borne by the State and not by the individual?—Certainly.

28875. Mr. SUTHERLAND.—If there is any profit on the transaction who ought to get it?—You cannot make two laws. If there is any profit let the State get it.

Apr. 18, 1907.

Mr. William Mitchell.

Mr. WILLIAM ROUSE examined.

28876. CHAIRMAN.—You also are a member of the Dromore West Rural District Council?—Yes.

28877. What do you wish to tell us?—The first point is the compulsory sale of the lands, and the second is the relief of congestion in part of the district which is not already scheduled.

28878. What is your opinion about compulsion: why do you think it is necessary?—In this district the Land Act of 1903 has not worked at all. In the parish of Easkey there are twelve or fourteen landlords and only two sales have been effected up to the present. I am led to believe that the reason there are not more sales is that the demands of the landlords are considered a bit exorbitant, and the number of years' purchase which they ask is more than the tenants are prepared to pay.

28879. You are talking of tenanted land?—Yes. On the other hand, I think they are more disposed to sell to the Congested Districts Board or the Estates Commissioners.

28880. Do you know anything about the Campbell, Rashleigh, Hale, Orme and Duke properties which were referred to this morning as having all been sold since the Act of 1903: do you know anything about these properties?—I don't know much about them.

28881. Have you any reason to suppose that any of these properties have been sold since the Act of 1903?—No; they have been sold since then, but I was referring to the parish of Easkey in which only two properties have been sold.

28882. Have they all tried to purchase?—In most cases they have. The idea failed in some cases from the fact that the landlords were not disposed to sell.

28883. Who have failed?—The tenants who prefer to purchase through the Congested Districts Board or the Estates Commissioners.

28884. Then your reason for wishing to have compulsion is in order to be able to get the land at a price which more nearly approximates to the tenants' offer?—Yes.

28885. Mr. KAVANAGH.—You would apply compulsion to tenanted as well as untenanted land—to all parties?—Yes.

28886. You are aware that there are only about five millions a year available for land purchase?—Yes.

28887. If you applied compulsion how much would be available then?—It is a question of money, undoubtedly.

28888. CHAIRMAN.—Is there any other point?—Then as to the congestion of the district in general, there are parts of the district already scheduled, and I consider that there are even smaller holdings and lower valuations in the unscheduled portions.

28889. Can you give us an instance?—Yes. I have made out a few instances. Quite convenient to Dromore West is the townland of Ballymeny, on the Worthington property. That contains fifty-five tenants. Three-fourths of those are under a valuation of £5.

28890. Do you know what the valuation per head of the townland is?—The population of the townland is 275. Taking the population of that townland, it would give each person 1 acre 3 roods to live on.

28891. You cannot tell us the valuation per head of the population of the townland?—No, I cannot.

28892. Why do you want the place scheduled?—I understand that some assistance should be given by the Congested Districts Board to such small valuations as these.

28893. Is there anything particular in the district which the people want done which they cannot get done because they are not scheduled?—An improvement to their little holdings would be necessary, and the houses really are in a very bad state in that particular place.

28894. Improvement is required to the holdings and the houses?—Yes. I understand that some aid is given to these matters by the Congested Districts Board when the place is scheduled.

Mr. William Rouse.

28895. Most Rev. Dr. O'DONNELL.—You might have a parish committee, I suppose?—Yes.

28896. CHAIRMAN.—Is there a parish committee in any of these other places?—Yes.

28897. Where is the parish committee?—In Rathmacurkey and Easkey. I might also mention that along the seaboard there is another townland called Rathlea, containing eighty tenants. Out of these there are more than half under £5 valuation. To my knowledge, there are some of them living on two and a half acres of land. There is a third property, a Mr. Brinkley's, which contains about fifty tenants. About half of these are living on farms of a valuation of £5 and under. There is very little grazing land in that particular place that might be split up. There are perhaps 300 or 400 acres that might be successfully divided among these small tenants. The place is very much lacking in industries. If there could be something done to foster industries to give the people some little employment with the small holdings they have to live on at present it would be a great improvement in their position.

28898. Have you any idea what industries would be suitable?—The only industry at present existing is the making of kelp. That industry at the present moment is almost a valueless one.

28899. Have you got any special industry in your mind?—One industry that might be encouraged with great success is lace-making.

28900. What reason have you for supposing that there is any greater opening for lace-making?—This much I know, that there are a great number of young girls in the locality who have practically no employment whatever except to emigrate.

28901. Do you know anything about the demand for lace and the probable market?—No; but I understand there is a market.

28902. An unlimited market?—I would say so.

28903. Have you never heard of lace classes in a district being temporarily shut up because the market was insufficient?—I never heard that.

28904. Most Rev. Dr. O'DONNELL.—Are there many girls without employment?—A great number.

28905. What do the girls do?—They have nothing to do except emigrate.

28906. Is there a fishing industry?—The fishing industry is rather poor owing to the very bad accommodation. There are some piers in existence, but they are practically of no use. I think there is one very central point, a particularly good spot for fishing, about the best along the coast, midway between here and a place called Poulaheeny. There is a fairly good natural harbour there, and with some expenditure it can be made a beautiful pier and landing place for boats.

28907. Is that district scheduled?—No. That is the reason I refer to these places having these wretchedly small holdings, in some cases between two and a half and five acres of land, with a valuation of under £5.

28908. You think they ought to be scheduled?—I think they should. I would like to draw particular attention to Poulaheeny.

28909. Most Rev. Dr. O'DONNELL.—Is there any lace-making in the neighbouring scheduled area?—None whatever.

28910. If started there the people in your area would benefit very much?—Yes.

28911. Perhaps someone would bring it under the notice of Mr. Walker?—Very well.

Apr. 18, 1907.

Rev. Patrick M'Nulty.

Rev. PATRICK M'NULTY examined.

28912. CHAIRMAN.—You are parish priest of Skreen and Dromard?—Yes.

28913. What points do you wish to bring before us?—I wish to explain that the district in which I live, and Tireragh generally, should be an agricultural district, and that the development of agriculture and the apportionment of the people to the land should be facilitated. I was interested in the evidence given by Mr. Mitchell about King's farm at Ballygrehan. Ballygrehan is about midway between Sligo and Ballina. I came into this district in July, 1869, and I came on Bianconi's car. The car was crowded, and the driver invited me to the top seat, and I was glad to get it. We went along and he knew all the places. As we came to this place he said: "This is King's farm." I said: "It looks well; it is a nice country." "It is a beautiful country," he said, "and a fine farm." "I came driving this car," he said, "from Sligo in the morning eighteen years ago, and when I came here it was in the month of May. There were twenty-six families asleep lying on the roadside. It rained a little during the night and they were wet, but still they appeared to sleep soundly. There were some saucepans and things lying about the people scattered on the road. Now," he said, "when I returned from Ballina in the evening the people were all gone. They were evicted the day before and driven out on the roadside, and they had to sleep that night on the roadside, and it rained, but still they slept, and in the evening when I returned they were all gone, never to see the place again." I heard it given in evidence that there are 355 acres of land on that farm. Continuously from that time, 1869, to my knowledge, and probably for twenty years before, it was a grass farm from which those twenty-six families were evicted, and it has remained ever since then in the hands of the landlord. I think the children of those families, so far as they can be found, should be sent back to that land. I don't see that it has served any useful purpose beyond rearing a number of bullocks and yielding a rent to the landlord.

28914. Do you know whether any attempt has ever been made to buy this farm from Mr. King?—I am not aware.

28915. If you are so anxious to see these people put back would not your first step be to see whether the landlord be willing to sell it?—I cannot form any opinion upon that. He lives in Australia.

28916. Would it not be a usual thing to find out if he is willing to sell it: if he is willing to sell it there would be no difficulty in getting it distributed among the people?—The difficulty arises in this that at present the whole decision as to sale rests with the landlord. If the landlord is not prepared to sell to the tenants the tenants can do nothing.

28917. You know perfectly well in many places all over Ireland local people have been the means of suggesting to the landlord sales which have been carried through?—I know that very well, because I have been concerned in a very large sale. I had a great deal to do with it. As far as the tenants were concerned there was no solicitor at all. There was no word about it in the country. The sale was carried through by the solicitors having carriage of sale. There was not the slightest complaint since. That was Webber's estate. In this case I was not concerned in the matter. It is not within my parish, but on the very borders of it. I pass through the place almost every day and know it as well as possible.

28918. I suppose he has got an agent here managing it for him?—A firm of solicitors from Dublin.

28919. No suggestion of purchase has been made even to the firm of solicitors?—No. I am not aware of that. Of course the only purchasers would be the Estates Commissioners.

28920. Mr. KAVANAGH.—Where are the twenty-six families now?—They are scattered.

28921. Are they in this country?—I don't suppose they are. That is a great many years ago.

28922. Has the attention of the Estates Commissioners ever been drawn to the fact that this land is there and might be available?—I am not aware that it has been brought to their notice.

28923. Have the Congested Districts Board been written to about it?—It is not in a scheduled district.

28924. CHAIRMAN.—It does not follow that because it is not in a scheduled area the Congested Districts Board cannot buy it. They can buy land outside a scheduled area.

28925. Most Rev. Dr. O'DONNELL.—Are there small occupiers close to it?—They are all round about. The worst feature is that these small occupiers are obliged to send their children to America just when they are grown up. I have painful instances of it in this very season, young men and girls having been obliged to go away.

28926. CHAIRMAN.—Are there any other grass lands that you know of available?—Yes; Carrowcullen, very near where I live.

28927. What is Carrowcullen?—It is a large extent of grass land in the Skreen electoral division.

28928. Lecarrow, is that one of the townlands?—Yes.

28929. What is the name of the landlord?—Guilfoyle.

28930. How much land is available there?—I think there is an extent of grazing land of about 200 acres there.

28931. Untenanted?—There are no resident tenants on it. It has been used exclusively for grass land for some years, but in years gone by it was entirely used for agricultural purposes.

28932. It is tenanted land you are speaking of?—It is.

28933. Are they judicial tenants you are speaking of?—They are.

28934. What do you propose should be done with regard to that?—I propose that there should be some authority vested in the Estates Commissioners which would extend agriculture and make the district agricultural and not have it a wilderness as it is now.

28935. Take a case of that kind where the lands are in the hands of a judicial tenant; what do you propose?—I could not propose anything. I see the difficulty very well, but I say that the Estates Commissioners should be vested with some power.

28936. What power have you got in your mind: you must have some idea of what you think should be done?—Here is how the injustice comes in. The landlord of those lands is not getting £1 a year as a judicial rent. The tenants who occupy those districts can get £4 and £5 an acre for it by the operation of law.

28937. That is not a scheduled district?—It is not.

28938. Your proposal is that the Estates Commissioners, the Congested Districts Board, or some body, should have power to take land of this class from these judicial tenants?—Yes, and keep the people from being driven out of the country.

28939. They are to take land, in the first instance, from these judicial tenants?—Yes.

28940. If they won't sell it, they must compulsorily buy it from the judicial tenants?—Yes. I don't see any other way for it, as far as I am concerned.

28941. Then you are prepared to apply compulsion not only to landlords but to tenants too?—Certainly; to extend agriculture and to employ the people on the land which will always pay, and not have this land given over to cattle. The whole of Tireragh is a wilderness—the best land in the country.

28942. Are you prepared to draw a line?—I would draw no line.

28943. The very fact of a man having got grazing land of any sort would involve the possibility of applying compulsion over the whole of it?—The land is naturally intended for tillage. Instead of that, it is a wilderness, while on the very borders of these lands, within a distance of 250 yards, there are young men and young women, the best of the family, who have to go out to America because they have not a place to labour.

28944. Then the whole point in your mind is that the land is under grass and not under tillage, and you wish to have people compelled to till?—I wish there should be moderate-sized holdings on which people could live. Then we could have the people, and we could have as many cattle as there are in the district at present.

28945. A judicial tenant has got a holding of 100 acres in grass: do you object to that man having that land merely because it is not tilled or because it is 100 acres?—I don't object to it either on the one ground or the other, but I object to there being such

an extent of grass land that tillage is pushed out of the country, and people must go away because there is no employment.

28946. That is objecting to it because it is not in tillage?—Yes.

28947. If that man tilled his 100 acres, or tilled 50 of it, would you be prepared to let him alone or apply compulsion?—If he tills 100 acres, or even 50, he must give a good deal of employment. At present those farms afford no employment. There is no one living upon those farms.

28948. So if a farmer with 100 acres had it under grass you would be prepared to apply compulsion to take it away from him, but if he preferred to till 50 acres you would leave him alone?—The district is an agricultural district, and should be used for that purpose; and 10 or 12 acres of that land is quite sufficient to maintain a family, and a family living upon 10 acres would be better for the State than 4 or 5 or 10 bullocks.

28949. Can you tell me any other instance anywhere in which the State lays down what are the rules under which an industry is to be carried on: is there any other business?—Not as far as I know. I am not concerned to deal with that question.

28950. If there is no other business that you can think of, where the State lays down rules under which it should be conducted, does not it seem to you rather a strong order that in agriculture the State should adopt that attitude?—I certainly think that Nature intended that district for human beings to live upon. Instead of living on the good land all through Tireragh, they are living in the slums of the mountain. They are driven on to the mountain land by the extension of the grazing farms.

28951. Do you think if you had a farm of 100 acres you would not resent very much the State laying down the conditions on which you were to farm?—I am sure I should resent it and feel indignant, but at the same time I should submit to justice.

28952. You don't mind creating indignation among these people for the good of the country?—I do mind it. I am always very peaceful.

28953. You think the State would be justified?—I think the State ought to have the power of resuming or taking up those lands as occasion might offer, and the State should encourage those young men who are leaving to remain at home. If their fathers' holdings were increased by a few acres even I have before my mind several instances in which the family could remain together. It is a sad thing to think that at present they only leave behind the old and infirm. That is the population of some of the villages.

28954. Mr. Kavanagh.—Would not these men till their farms if it paid them?—It won't pay them; but a man living on a small holding of land, if there are two good hours in the day, can work for those two hours or for a single hour, but a man having a large farm and employing labour employs them for a day. He must either keep them on for the day or send them home. A lot of broken time could be turned to good account by a small farmer. He will always find some little thing to do. The big man could not find time for these little things.

28955. You are going to apply compulsion to make a man do what you say it will not pay him to do?—No. In the case of the large farm I speak of a place like that would be taken up and given to tenants in reasonable holdings. They need not be very large. Small holdings of this good land would be worth a whole district to a poor man for supporting his family.

28956. Most Rev. Dr. O'Donnell.—Your point seems to be that tillage on a small scale is very different from tillage on a large scale?—Yes.

28957. Tillage on a small scale might pay where tillage on a large scale might not?—Yes.

28958. Owing to the climate and seasons men employing many labourers might find on occasions that he could not either dismiss them or keep them working?—That is so.

28959. In the other instance the small holder might find indoor jobs in rainy times?—Yes.

28960. With reference to the point that the State should not interfere with people and make regulations about tillage, I may put it in a negative way that you think it would be for the State not to give the same facilities for purchase to tenants of non-residential holdings as are given to those who are resident on holdings which they till?—Yes.

28961. Facilities for purchase should be given in the first instance, you consider, to residents who till?—Yes.

28962. Then to residents of some class?—Yes.

28963. Then non-residents would come after these two classes?—Yes.

28964. You feel quite confident that the State has an obvious advantage from a tillage system?—Certainly it has.

28965. Is not it for the advantage of the State that fine men should remain in the country?—Yes. The Irish race is perishing through strong, able men leaving the country.

28966. Have you heard at all in such countries as Australia of practical encouragement given to tillage by the State?—Yes.

28967. I am not familiar with it except through hearsay, but I believe it is so?—There certainly should be encouragement given to tilling the land and facilities given to people entering on the lands.

28968. Suppose that were done, how would you meet this difficulty? Suppose the small occupiers, after having the land divided up among them, took to grazing rather than tillage?—Small occupiers cannot do that. They must till the land. They could not live on it except they tilled it.

28969. A witness we had this morning said he could not live on his land if he did not work it. You think these people could not live on the small holdings unless they cultivated them?—They could not.

28970. Is there anything such as stall feeding on moderately sized holdings?—Very little of it is done in this country. The grass is taken off; the cattle are allowed to eat the grass. So far has that been carried that some of those who have grazing lands would not even cut the meadow for the purpose of feeding cattle during the winter. They would leave a field of meadow standing, and if the winter was very bad they would let the cattle on it so that there should be no labour expended on it.

28971. Has there been anything done for practical agricultural instruction in this country?—Yes. The County Council has employed an agricultural instructor.

28972. Has it been of service?—Yes. Unquestionably it has awakened the intelligence of the people a good deal, but so far as practical results are concerned I have not noticed it very much.

28973. Is it your feeling that you would require a resident instructor who would practically demonstrate by cultivation?—Some of the men possessed of land are quite capable of carrying out any system that would be pointed out to them. I say those parties should be encouraged to make their holdings demonstrations in the locality. There is very little good cultivation of the land practically. It is not what it ought to be.

28974. Is there room for improvement in the rotation of crops?—Yes.

28975. And in drainage?—Yes.

28976. And in improving the homesteads of the people?—Yes.

28977. Have you formed any mature opinions which you would like to convey to the Commission as to the extent to which a farmer's condition can be improved without the holding being enlarged? To what extent can the condition of the farmer in this locality be improved by the improvement of the holding, reclamation, drainage, and improved methods of cultivation, without the enlargement of the holding itself?—The land in this part of the district requires simple cultivation, and drainage of course would be a great service; but it is good land as a rule. Then there are other portions of it, and I do not think they will ever pay for the cultivation. There are holdings of land in the neighbourhood of our workhouse, and I do not think they were ever worth the labour that was expended on them.

28978. Some of the Commissioners were interested to-day in finding what class of land there was along the road within half a mile of this place: is it cut-away bog?—Yes, and I also say that the land from here to Ballina is cut-away bog and reclaimed after the turf is cut away.

28979. If a farmer has labour in his own family is it good business to put his son on the cut-away bog?—That sort of land will not pay the labour. It was only that the people had to be doing something, but it would never pay for hired labour.

28980. But it is a comparatively good outlet for the tenant's labour once his improvements are secured to himself?—It is.

Apr. 18, 1907.

Rev. Patrick M'Nulty.

28981. Sir FRANCIS MOWATT.—How many tenants were there on Mr. King's land?—The drover told me there were twenty-six tenants lying on the road.

28982. How many tenants are there now?—There are none. It is a grass farm. It is in the hands of the landlord and is managed by a firm of solicitors in Dublin. That is all he knows about it.

28983. Do they take in cattle at so much a head?—Yes. For a long time it was a grazing farm in the hands of one tenant.

28984. That is not so now?—It is not. It is managed by the landlord now, I understand.

28985. The CHAIRMAN.—Is there any other point you wish to mention?—This part of the country borders the sea. It is a splendid fishing ground, but there is really no accommodation for the men. There used to be a number of boats along the coast, but there are none at all now. In the parish where I live, the parish of Dromard, there is a place called Portavad, and there were as many as forty boats at that place. It is naturally a very nice and safe harbour. It is on Ballysodare Bay. When the cathedral in Ballina was being built by Dr. MacHale in 1828, a great deal of the stones were quarried and cut in my parish, and they were taken in boats from West Sligo up the River Moy and deposited on the very ground where the cathedral is built. At that time I always heard they were able to send forty boats from it. There is not any boat at all in it now. There is not any fishing at all in it now.

28986. Most Rev. Dr. O'DONNELL.—That was before the famine?—It was.

28987. Are you aware that in 1845, before the famine, twice as many men were engaged in the fishery on the Irish coast as there are to-day?—Certainly, I am aware of that. At that time at that little place they had forty boats, and they have none at all to-day. The coastguards and everyone who knows anything about the locality say that there are plenty of fish in the bay if there were only the proper means of capturing them.

28988. Those forty boats engaged in the fishing were regular fishing boats?—Yes.

28989. Sir FRANCIS MOWATT.—Do you say there is no fishing in Sligo Bay now?—There is plenty of it. Boats come from the Isle of Man, but there are no local boats.

28990. Mr. KAVANAGH.—Why is that?—I don't know. I think myself that fishing is a thing requiring a very special training. Men have to be accustomed to it and accustomed to the sea.

28991. Most Rev. Dr. O'DONNELL.—The fishing population were cleared away in the famine times?—The population declined and the industry dwindled away.

28992. And the industry never recovered?—It did not. I have received letters over and over again from people who never saw this country but whose parents were born here. They had heard that their fathers were possessed of fishing fleets here and imagined that there was some property to settle. I think the people have to be brought up to it. You cannot get a crew of men to go into a boat and manage it without training. That training is gone. It is not among the people. For twenty miles along the coast that business is entirely killed.

28993. Mr. KAVANAGH.—You do not think there is any opening for fishing in this locality as the people are carrying on their farms?—I would not say that. One of the things I always hoped for was that the population would be preserved to the country and take themselves once more to the sea, having got training and encouragement for it, and that it would receive its due share of attention along with agriculture.

28994. The CHAIRMAN.—What used they catch in those days?—There were immense catches of herrings.

28995. Do you know that the herrings are here still?—They are.

28996. You are sure they are here still?—They are. About three years ago there was a great deal of doubt on that. The men came over from the other side of the County Sligo, the Donegal side, and fished along with other boats, knowing the herrings were in it. The people of the locality, whatever means they have of determining that, said that the fish were in the bay. They went out, and some of the men who were there on that occasion told me they found they were driving the boat through the shoals of fish, and the fish were rubbing the boat. They commenced by selling them at 50*s.* per 1,000, and they ended by selling them at 7*s.* 6*d.* per 1,000, and then when the buyers got what they wanted they did not go further.

28997. Sir FRANCIS MOWATT.—You know that the Congested Districts Board have made 74 loans amounting to £626 16*s.* 10*d.* for small boats in Sligo?—There are a few of them in my own locality.

28998. There are a few?—About Sligo, but that is a very big coast of over 100 miles. There are three or four of those loans in my parish, but they extend from Ballysodare to where we are now in Dromore West, possibly about twenty-five miles of coast line.

28999. Most Rev. Dr. O'DONNELL.—Do you think some training would be necessary before the fleet could be greatly enlarged?—I think training is absolutely necessary. They won't go into a boat now and stay at fishing as they would do if they were trained.

29000. I suppose that any applications that were made have been freely acceded to?—They were. There is no difficulty at all about that. They got the money.

29001. Sir FRANCIS MOWATT.—But do boats come there from other parts of the West of Ireland to fish in Sligo Bay?—They have.

29002. Irish boats?—From the Isle of Man and even from the French coast.

29003. Do Donegal boats ever come to Sligo Bay?—I am not aware that they do. They fish the northern side of Sligo Bay, but they do not come over here.

29004. They do not follow the fish in Sligo Bay?—They do, but not along our coast.

29005. The CHAIRMAN.—Is there any other point?—I wish to refer to the inconvenience the people suffer for the want of locomotion. There are no means of transit throughout this large district. There is not the slightest public means of transit except a one-horse car that goes up in the morning and down in the evening, and the people here in marketing their produce actually lose three days by the journey to Sligo and back. They have to prepare a cart of oats or potatoes or whatever they have for market. They have to start at 2 or 3 o'clock in the morning. They have to stand in the market, and then they come home on the following night. This causes terrible inconvenience and danger to life, and three or four accidents have occurred to my knowledge.

29006. If this new railway comes it will help you?—Yes; it will do a great lot of good if it comes.

Mr. P. J. GILLIGAN examined.

Mr. P. J. Gilligan.

29007. The CHAIRMAN.—Where do you reside?—At Aughris, Skreen. I am a small farmer. My valuation is £9 3*s.*, and my rent £6 10*s.* My landlord is Mr. Bryan Cooper, of Markree Castle. The size of my farm is something about ten Irish acres.

29008. What do you want to tell us?—There are twenty-nine tenants on the townland, and sixteen are in rundale. Three have got holdings that have got eight different plots. I have five myself. I have a half-acre in one, one and a-half in another, and three acres in another, and there is over a mile distance between some of these plots. I have as many as ten different men to keep fences repaired with.

29009. Most Rev. Dr. O'DONNELL.—Neighbours of yours on the mearing?—Yes. We want the Congested Districts Board to buy.

29010. Will Mr. Cooper sell it?—We approached him. He offered us 5*s.* on first term rents and 3*s.* 6*d.* on second term rents. That was in June, 1904.

29011. What did you offer?—It would average 6*s.* for the whole townland. It was in trustees' hands at the time, and they could not accept their offer, and we had no reply from them since. There is a place there where often when we have the crop in full bloom the wind raises the spray of the sea and destroys our crop. Only for the money we get from our children in America we could not live on the land. They go to America. I have four in it myself. The oldest when he left me was under 18.

29012. Do any of them go to England as labourers?—They all go as labourers and remain in America. When they go they have no business coming back.

There is nothing for them here. Only for America we could not stand it at all. Very often I get as much as £30 and £40 annually myself from America.

29013. Is all that from your sons?—From my own family. I have three sons and a girl in it. It is a general thing with all the townland. There is not one in the townland that does not get very nearly as much, and some of them more.

29014. What are your sons doing in America?—Two of them are waiters in a hotel, and another is on a motor car, a conductor. We have a small pier here. A few years ago, before we got the pier erected here at all, we had a very good salmon fishery in it there. That would be over twenty years since. We made for three years in succession from £18 to £21 per man, paying all the expenses of fishing gear.

29015. Sir FRANCIS MOWATT.—In the bay?—Yes.

29016. Mr. KAVANAGH.—Do you think it would be a good thing to purchase with the rundale as it is at present?—I think it would be a very difficult thing to do. There is a grass farm on the mearing part of the townland called Garraduff. They have eighty acres. If we got any addition to our holdings we would be very much inclined to get it done.

29017. How does the rundale come about?—I could not tell you. It is that way this century.

29018. Is it going on since?—It is there the same as ever.

29019. Is it increasing?—Not a bit. It is just the same as when I first saw it.

29020. Would not it be better that the Congested Districts Board or the Estates Commissioners should buy it and restripe it?—That would be our wish.

29021. The CHAIRMAN.—What was the reason that the salmon fishing was declining?—I was a *bona-fide* fisherman at the age of twelve years. I fished every kind of fish from lobster to salmon. There was a great lot of salmon taken. There came a failure for eighteen or twenty years. Over twenty years ago they made from £18 to £20 a man after paying all expenses of fishing gear, and we did pretty well. Year after year it declined away, and we were fishing for nothing at all at the finish. Then we got out of boats.

29022. Sir FRANCIS MOWATT.—Where did you get your boat?—From Killala.

29023. You hired them?—No; we always bought our own boats.

29024. Then you had a boat?—I always had my share in two boats until the last few years. I fished salmon, herring and lobsters all my life from the time I was twelve or thirteen years of age. I can make nets and mend nets or do anything that way.

29025. Most Rev. Dr. O'DONNELL.—Are the herrings about still?—Any amount of herring, but we have neither boats nor nets.

29026. When you caught the herring were they sold fresh?—Immediately.

29027. If they were caught now in large quantities you would need them cured?—If we could not sell them we would cure them. We have barrels and we could salt them.

29028. You used to cure before now?—Yes; often up to 3,000 or 4,000.

29029. About those farms in rundale, is there any grass land near that could be used for enlargement?—Eighty-one acres on the very mearing part of the townland.

29030. Sir FRANCIS MOWATT.—You say that the herrings are still coming into the bay?—I never saw more sign of herring than lately.

29031. Would not it be worth while to fish them?—We had no boats to go out.

29032. Do they come in every year?—There are signs of them every year. I never saw better signs of them than during the last two years.

29033. You would not hire boats to fish them?—There were boats quite convenient, but the owners would not let for hire in the bay except on a very calm day.

29034. What if you had boats?—We could go out in very fine weather.

29035. Could you get men?—We would get a few young fellows to have a try, but I don't believe they would continue, unless it be made worth their while to stay, because they are up to age now, and they are away from sea altogether. We have a pier there, and it is a very remarkable slip. It is very dangerous coming in. When there is a ground sea on we have to be very cautious.

Mr. THOMAS PATRICK MELVIN examined.

29036. The CHAIRMAN.—Where do you live?—In Templeboy. I am a small farmer. I have fourteen statute acres at a rent of £8, but it will be £7 5*s.* when the sale is properly through. It is in the hands of the Land Commission, who are being paid 3½ per cent. on the purchase money.

29037. Who was the landlord?—Major Hillis.

29038. What is your townland?—Killasleeter.

29039. What do you want to say?—I have heard you ask Father McNulty about the ranch at Templeboy, the property of Mr. King, of Australia. It has been in the hands of a firm of solicitors in Dublin, Messrs. Longfield, Kelly and Armstrong. You asked him did he know whether there were any negotiations for sale and he said he did not know. I am in a position to say that there were. The firm of solicitors in Dublin made an offer. Some of the tenants resided in Dromore West and some in Templeboy. The tenants refused to buy unless the Ballygrenagh ranch and other ranches or farms were subdivided among them; so the sale fell through.

29040. Then Mr. King has got some tenanted land as well?—Yes.

29041. The firm of solicitors offered to sell this tenanted land direct to the tenants, and the tenants refused unless they could get Ballygrenagh grass land as well?—Yes; they made no offer of the untenanted land, but they offered to sell their farms to the tenants, who refused to buy, as their own holdings would not be enlarged.

29042. No more was heard of it?—No more was heard of it since.

29043. Sir FRANCIS MOWATT.—How long ago is that?—About one and a half years.

29044. Most Rev. Dr. O'DONNELL.—The tenants asked the owner to cut up this grazing ranch and sell it to them?—The tenants demanded that as a condition of sale, and it was denied.

29045. Mr. KAVANAGH.—Did the price suit them otherwise?—There would not be much trouble about the price if they got the lands for 5*s.* in the £ immediate reduction off.

29046. It was only the question of splitting up these lands that came between them?—Yes. I am not a tenant on that property, but some of my neighbours are. They appointed me to represent them here at this Commission.

29047. CHAIRMAN.—Is there anything else you would like to tell us?—No, except that there is a farm lying derelict—the Garryduff farm, of about eighty acres. No man will bid for it. The people round that farm say it should be sold for the purpose of improving their uneconomic holdings.

29048. Whom does that belong to?—Mr. Beatty, of Inniscrone. Close beside it are about forty small holdings under £5 valuation.

29049. What do you mean by derelict?—Without being utilised in any way. There are no cattle or anything on it. It is lying there growing wild grass.

29050. Are there any houses on it?—There is a herd's house, a labourer's cottage, a schoolhouse, and an old house that was a mansion-house about 200 years ago.

29051. Is that inhabited?—Not for the last thirty years.

29052. Why is this left derelict?—Because he cannot get a buyer for it. The people won't send their cattle to graze on it.

29053. Mose Rev. Dr. O'DONNELL.—Did this gentleman try to sell this land?—He tried to sell it by public auction. The people of the district were opposed to this sale, inasmuch as they expected it to be carried through to the Congested Districts Board or the Estates Commissioners, in accordance with Mr. Wyndham's Act.

29054. Do I understand from you that the small occupiers on the verge of this property were opposed to its passing into the hands of private individuals?—They were, and gave public expression to their indignation. They thought it should be sold to the

Apr. 18, 1907.

Mr. Thomas Patrick Melvin.

Congested Districts Board or the Estates Commissioners, and then they would derive a benefit. Before that it was a sort of accommodation farm to the tenants in the line of grazing. The grazing is not paying them. Some poor men suffered by the transaction, inasmuch as they have no place for their cows, and they had to sell their cows. Still they don't mind for the general benefit of the country.

29055. Most Rev. Dr. O'Donnell.—Do they send their cattle still to graze?—No. None will touch it.

29056. Sir Francis Mowatt.—How long ago was this?—Almost two years.

29057. Most Rev. Dr. O'Donnell.—Up to twelve months ago the small occupiers on the margin of this grass land were in the habit of sending the cattle to the land to graze—is that so?—Yes.

29058. They used to pay so much a head?—Yes.

29059. Who conducted the management of the farm?—They had a herd, who took in the cattle, and received the grazing money, as they called it, or the rent.

29060. Was the land usually stocked up to its carrying capacity?—It was sometimes overstocked.

29061. That all went on until it was proposed to sell?—Yes. Then they proposed to sell the two divisions in two plots, and, of course, then the people would be excluded.

29062. Was the proposed sale by auction?—Yes; but the sale was abortive. It fell through.

29063. Did they divide it into two lots before it went to auction?—Yes.

29064. Then in place of the surrounding men having this land it would have permanently passed into other hands?—Yes.

29065. And the possibility would disappear of having the holdings enlarged?—Yes.

29066. That was the cause of their displeasure?—Yes.

29067. They intervened in time?—Yes; they assembled, and appointed men to speak to Mr. Beatty.

29068. There was opposition to the auction?—Yes. Strangers would be afraid to come in there, inasmuch as the people would make things awkward for them, as far as they possibly could.

29069. They made it plain that people coming in there would not be comfortable there?—Yes.

29070. The owner, seeing that the auction fell through, did not press the sale to the surrounding people?—No; but the Estates Commissioners since sent down a man to examine the land, and see what the land would be worth, but I cannot say what arrangement was come to.

29071. How long ago was that?—About a month ago.

29072. No one can know yet what the result has been?—No.

29073. If the Estates Commissioners bought from Mr. Beatty they would make the land available?—Yes. The people would be satisfied.

29074. Then we don't know whether a sale will take place?—Not yet.

29075. During this period of uncertainty the surrounding men have left it severely alone?—Yes; and they are determined.

29076. They have not sent their cattle there?—Yes.

29077. Mr. Kavanagh.—It is not being used now?—No. There are no cattle, only the herds. Mr. Beatty is deriving no profit from it.

29078. Most Rev. Dr. O'Donnell.—Is he the owner of tenanted land in the neighbourhood?—No; but four or five miles away he has a small property. We heard a lot about Ballygrenagh, but very little about all the grazing ranches in Tireragh. Passing from Sligo to Ballina you can classify the whole barony of Tireragh as one grazing ranch.

29079. Chairman.—Have you anything more to say?—There are 1,100 acres in Ballygrenagh, if you include the rough sides of the mountain, whereas I heard it stated here there are only 300 acres. The blue book gives a return of 300 acres. There is none of it tenanted land. There is one portion claimed, but the man won't go into court. That proves that there is no proper tenant.

29080. Most Rev. Dr. O'Donnell.—You say there are more than 300 acres of untenanted land at Ballygrenagh?—Yes; there are 600 acres of good land, prime land.

29081. Your way of accounting for the fact that only 300 acres are given is that some sort of tenant has another 300 acres?—Yes.

29082. In addition, you seem to indicate that there is a lot of rough land?—Yes; rough pasture land. Very suitable for small farmers along the mountain side.

29083. It would be a useful outlet for them?—Yes. Of course, every farmer in the district has part of his land under grass and part of it under tillage. Some of the lands would not be suitable for tillage, making a horse do the work, but that land would come in very handy for the people of southern Templeboy district, and it was not tenanted at the time the Wyndham Act passed.

29084. Chairman.—Some tenant has got a right over that rough grazing land?—One tenant has a sort of a right. An attempt was made to have a fair rent fixed, which did not work. If he were a tenant he would be entitled to get a fair rent fixed.

Mr. J. O'Neill examined.

Mr. J. O'Neill.

29085. Chairman.—Where do you live?—In Camcuil, in the electoral division of Buncrowey, about a mile from here, on the Ballina side.

29086. Are you a farmer?—Yes. I am the son of a widow, who has a farm. My landlord at present is Mr. Cuffe. Before 1902 it was Mrs. Grace Niddrie. Then Messrs. Fenton and Lyons began to act as agents. Immediately after an auction was held of the house furniture and farm implements, and in May, 1902, Mr. James L. Cuffe, of Aclare, came in, and took the place for grazing purposes. Mrs. Neddrie died in October, 1902, and Messrs. Fenton and Lyons continued to act as agents for her grandson, Lieutenant Beamish, who did not visit this place since nor for years before. In the beginning of 1904 the agents wrote to the tenants offereing them terms of sale of their own holdings. The tenants said that they would not accept these terms, as the grass lands were being reserved. Finally the agents wrote to the tenants stating that they had offered to sell the whole property to the Congested Districts Board, and that negotiations were in progress for its purchase. In January, 1905, the Board's inspector came to inspect the estate, and on that occasion expressed surprise that some of the tenants were able to live on the miserable little patches of bog he found them in possession of. All went well until some time in 1905, when the tenants received the following communication from the agents:—"We beg to inform you that Mr. William Robert Delacour Beamish, grandson of Mrs. Grace Niddrie, who, since the death of the latter, has been the owner of Camcuil and Cuskernagh, has sold the entire property to Mr. James L. Cuffe, of Aclare, and he is now your landlord. All rents accruing due from the 29th September last now belong to Mr. Cuffe, and on his behalf we enclose you a form, which you will please sign in the presence of a witness, and return to us without delay. By this form you admit that Mr. Cuffe is your landlord, and unless we receive it back, signed by you, we must take it that you refuse to acknowledge Mr. Cuffe as your landlord, and it will thus become necessary to take legal proceedings against you for the purpose of compelling you to do so." The tenants did not sign the form referred to. There are thirteen tenants, and of these nine have land the total valuation of which is less than £11, and on these nine holdings there are forty-five people living.

29087. Most Rev. Dr. O'Donnell.—The reason they did not sign was that they wished, instead of a sale direct to them, a sale that would enable the holdings to be enlarged?—Yes. The reason they did not buy direct from the landlord was that they wished to get an addition to their holdings. A man with a holding of a valuation of 5*s.* did not see his way to buy. It made no matter to him. Mr. Cuffe swore at Easkey Sessions that he got his conveyance of the estate on 23rd August, 1905, while in September, 1905, the Board wrote to the tenants saying that they had not yet completed the terms for the purchase of the Camcuil estate, the owner being abroad. From these facts it can be inferred that the agents negotiated a private sale of the estate to Mr. Cuffe, without notifying the Congested Districts Board of their

intention to do so; and the tenants were kept in total ignorance of the sale to Mr. Cuffe until the bargain, which has deprived them of the benefits of the Land Act of 1903, was completed.

29088. CHAIRMAN.—Apparently there was a good deal of grass land about there which did belong to Mrs. Niddrie?—Yes.

29089. Has Mr. Cuffe bought that grass land too?—Yes.

29090. There is a mansion-house there too?—It is used as a police hut at present.

29091. Mr. Cuffe does not live there?—He does not. He has more grass lands down here. He holds as a yearly tenant three extensive grass farms in this neighbourhood, the total valuations of which amount to about £200, and also a very large grazing farm in Mayo, near Ballina.

29092. Does he farm these grass lands himself?—He has cattle there belonging to himself.

29093. He does not take them from surrounding people?—No.

29094. Have you tried to buy from Mr. Cuffe?—I don't see what use it would be. What difference would it make to a man with a 5*s.* valuation? It would be better to be in the workhouse than to buy it.

29095. The tenants would be willing to buy their holdings so long as they got some of the grass land as well?—Yes. That is what they are really in need of.

29096. You said something about refusing to sign a form recognising Mr. Cuffe as your landlord?—Yes. They did not know the law. They did not think the law would allow a man to come in and purchase on such a small estate over the heads of the tenants whose valuations are from five shillings upwards.

29097. What has been the result of that refusal?—He decreed them for rent.

29097A. Is not that a thing apart altogether from this form?—Yes, but he did not ask them to sign this form before purchasing.

29098. It does not become necessary then?—Seemingly according to law.

29099. Most Rev. Dr. O'DONNELL.—Could the mansion-house be used for any useful purpose in that locality except as a police barrack?—Yes. Twelve months ago the resident doctor of this place applied for a loan of £800 to get a mansion-house built. I think it would be a very suitable place for a doctor or some such person to reside in.

29100. In the case of intervention by a public board it would be important if you had any means of disposing of the mansion-house. That would at once take away a good deal of the purchase money and the instalments on the tenant purchasers could be met more easily?—Yes. I believe that could be done.

Mr. PATRICK MARLEY examined.

29101. CHAIRMAN.—Where do you live?—I live in Tembleboy.

29102. Are you a farmer?—Yes. I farm 15 acres Irish. My father bought it from the landlord.

29103. When was it bought?—About 1847.

29104. He bought the tenant right?—Yes. He got into it then.

29105. Who is the landlord?—Sir Malby Crofton.

29106. What have you got to tell us?—It is very hard to live on a small spot of land like that. Poor men are paying very dear for it.

29107. What do you do on your 15 acres—graze or till?—I do both. I keep a few cows and I till part of it.

29108. What do you get out of your tillage?—Oats, roots, meadow, potatoes, turnips, mangolds; a little of each.

29109. How much of it is under tillage?—About 3 acres.

29110. You graze the rest?—I graze the rest.

29111. How many cattle have you got?—I keep 2 two-year-olds, 2 cows, and a couple of calves, and a horse. That is as much as I can feed on it.

29112. Upon 12 acres of grazing do you mean to say you can only keep two head of cattle?—Two milch cows.

29113. The land would bear more if you could put it on?—Yes, but then I have to take meadow off it.

29114. Most Rev. Dr. O'DONNELL.—You have a horse and some young stock?—Yes, I have.

29115. CHAIRMAN.—Have you any sons at home?—The first I had to send away for want of employment at the age of 18.

29116. How many sons are with you at home?—Three are with me at present, and one is abroad. There are two daughters away in America and two at home.

29117. Most Rev. Dr. O'DONNELL.—I suppose America is a good friend of yours?—Only for it I would not be where I am. We all could not live on a poor patch like that.

29118. CHAIRMAN.—Do they send you money from America?—Yes.

29119. Do all the three sons at home help you?—There is only one able to help me on the farm. The other two are young and are not able to do much work as yet.

29120. So one son really does the farm?—Yes.

29121. Can he manage the farm himself?—He can by assistance, and by paying labourers on it. We have to get in workmen according as we want to do the work.

29122. If you got an enlarged holding how could you manage?—The young lads will grow up. They are going to school. Then I would keep them at home to help me to manage. Of course when they come to any sense or perfection and see they cannot live at home they go away.

29123 How old are the two young sons?—One is 16 and the other, I guess, is about 13.

29124. They are at school?—Yes. The two girls are younger than that again, so then, of course, the family is weak.

29125. Is there any particular point that you wish to tell us about?—No, except that if there is anything going in the line of these ranches we should get a division.

29126. Why should you?—To keep my sons at home and stop emigration—what is required in Ireland.

29127. Which do you think would have the best claim on grass lands: your sons or somebody whose holding wanted enlarging?—They would want to get an enlarged farm before they could live on it.

29128. If another man had a small patch there, a holding that needed enlargement, don't you think he would have a greater claim than your sons?—I cannot say. The man who has no land, would not he be more in need of it?

29129. Than you?—Than the man who has a patch.

29130. If there was a man with a holding much smaller and trying to make a living out of it: suppose he was the head of a family and the only way he could make a living was to have a bit of land tacked on to his holding, do you think he or one of your sons ought to get it?—Surely the man with a family and having a small lot would be more entitled than my son so long as he was youthful and able to go abroad.

Mr. RICHARD ST. GEORGE ROBINSON examined.

29131. CHAIRMAN.—I understand that you live at Seamount, Sligo?—Yes. I am a member of the firm of R. G. & J. D. Robinson, Land Agents, whose business was established about 1820. I succeeded my father as a partner in 1869. We manage estates in every county in Connaught, and also in Donegal. I have been a Grand Juror and Magistrate for County Sligo for about thirty years, and I farm about 300 acres. In the County Sligo, if suitable land were being divided for enlarging small holdings, each such occupier (including the land already held by him) should have in all sufficient to rear three or four cows and their calves till year-olds, with sufficient meadow and tillage, which a man could work with his own family. The area of the land required for such would, to a great extent, depend on the quality, say, one valued at £12 or over.

Apr. 18, 1907.

Mr. Richard St. George Robinson,

29132. That is your definition of an economic holding?—Yes. Of course the more they get the better.

20133. Why should they keep their young stock only until they are a year old?—The year-olds sell at such a high price in the country that the sooner a man sells them the more money he makes, in addition to which a farm of this size would be unable to carry them for a longer period.

29134. Don't you agree that the more he can fatten the more his profit?—Very few small farmers fatten at all. Men up to 20 and 30 acres don't try to fatten.

29135. They could if they knew how?—If they went in for tillage they might.

29136. If the sort of holding you refer to, valued at £12 and over, were tilled, is there any reason, supposing they knew how to do it, that they should not be able to fatten their calves a great deal more than they can now?—Tillage does not pay in my opinion.

29137. Does not it pay in connection either with dairying or fattening cattle?—It might pay with dairying, but you could not fatten cattle unless you had fattening land without tillage. You must have tillage or artificial feeding.

29138. There is no reason why it could not be done?—There is not.

29139. Is it true there is very little profit in selling young stores?—The profit chiefly is selling year-olds.

29140. Is there more profit proportionately in selling year-olds than two-year-olds?—Yes.

29141. Taking beef that comes over to England, perhaps from Canada or the Argentine, what age is that beef when it is killed?—Probably four years old I should think, from what I have heard. I have only heard that. I never tried to eat any of that beef.

29142. There must be a great deal of beef of first-class quality sold in the English market which is a good deal younger?—Yes. They are put as 1½-year olds into stalls in England and Scotland and they come out as 2-year-olds fat. Argentine beef is altogether grass-fed.

29143. Is that the reason why you think they would be old from the Argentine?—I always heard they were from the shippers. Some of them told me that the cattle very often were never less than four years old.

29144. Suppose a man was able to keep a beast until it was two years old—I am not talking of a small farming man, but a man who has got sufficient land to do it in a scientific manner—and fatten it and then sell it as prime beef, surely that would be more profitable than selling it as a yearling?—The prices of year-olds are much greater in proportion than those of two-year-olds. I have paid up to £8 2*s.* 6*d.* for year-olds this month. I have bought two-year-olds very good for £11. That is a difference of only £3 for another year's keep.

29145. Sir Francis Mowatt.—Was that an exceptional price or an average price?—From £7 to £8 is about an average price for good year-olds.

29146. What is the average price of good two-year-olds?—I have bought some up to £12, but I never did it before. They are about £1 5*s.* dearer this year than they have been for some years past.

29147. Mr. Kavanagh.—What is the keep of a yearling for a year?—They get a good portion of the cow's milk

29148. You say there is only £3 difference in price between yearlings and two-year-olds?—Yes.

29149. What would you consider the cost of keeping the two-year-old for the twelve months?—You would want to get £4 at least to pay you, and you would not make much profit out of it at that.

29150. But it would be proportionately as good a price as selling a yearling?—No, because they get £7 or £8 for a year's keep in the one case, and only £4 in the other.

29151. What is the difference he should get for a two-year-old to make up for the cost of keeping?—You ought to get as near £12 as you could get. That is to give you a fair profit. So far not many new lettings have been made in this County by the Congested Districts Board, I believe none by the Estates Commissioners. If the new occupiers had not sufficient capital to stock their farms, they would be driven to sub-letting, meadowing, and conacre.

29152. Chairman.—That might be only temporary?—Yes, if he has not sufficient capital.

29153. That has been done, I believe?—Yes. I believe the introduction of strangers from a distance would be strongly resented by the occupiers in the neighbourhood. When discussing with the tenants on different estates, the question of sale to them, where grazing farms existed, and their division was referred to by them, I have said to them that even if the owner consented, and could dispose of the grass lands to the Estates Commissioners, he could give no guarantee how such grass lands would be divided, that strangers might be brought from a distance for the whole or a portion of them. I have invariably been met with the retort—"You can leave that to us, as we shall take good care no strangers are let take them."

29154. Most Rev. Dr. O'Donnell.—What class of people are these?—Tenants on that estate.

29155. Are these small uneconomic holdings?—Some of them no doubt.

29156. Did you point out that these uneconomic holdings would be first enlarged?—No, because the grass lands in most cases were not in the hands of the owner. They were in the hands of judicial tenants.

29157. Is not it a very delicate matter dealing with a question of that kind?—It is very easy to get the people on edge over it.

29158. Hence, don't you think it would be necessary to put the matter to them as palatably as possible?—Certainly.

29159. Would not you say in those cases the right way for the public authority to intervene would be first to enlarge the uneconomic holdings in the neighbourhood?—That would be the best way.

29160. If put in that way would the same objection arise?—I think it would. The people on the estates want to get the grass lands for themselves.

29161. Do not you think the way you put it would be calculated to set them against it?—What I wanted to make clear to them was that even if an owner had power to sell grass lands he could not guarantee what the Estates Commissioners would do with these grass lands, because they wanted to bind me down that the land would be given to them.

29162. In this particular case I gather from you it was not conveyed to them that the Estates Commissioners were likely to enlarge the small holdings around?—No. The claim was that the land should be given to the tenants on the estate. They wanted to bind me down that on a sale no one but themselves would get this land, and of course, I could not give any such guarantee.

29163. You would not consider it unnatural on the part of these small holders on the margin of this property to take all precautions they could that strangers should not be introduced until they had their holdings enlarged?—No, I would not; but, of course, an owner could not give any such guarantee.

29164. If they had got that assurance about enlargement would they object to the introduction of congests?—I think they would.

29165 That is your opinion. There is nothing in the history of the case to prove that?—No. Take, as an example, the tenants on portion of a County Galway estate (numbering 129) over which our firm are agents, on which there is a large demesne, and two large farms which the occupiers use for grazing purposes, with whom we have arranged terms of sales through the Estates Commissioners. The tenants would not have agreed to buy had we included the seventy-three tenants on three congested townlands on the same estate, situated about seven miles off. I do not think occupiers of small holdings in a congested district would be willing to migrate to new holdings at any distance off. See Mr. Doran's answer (No. 2097), where he states the Congested Districts Board have been unable to re-let some of their lands. A migrant would, of course, require a house and offices built for him, farm fenced, and, in 70 per cent. of the cases, capital to stock farm, as there would be no use in planting a man on a farm without means. The buildings, fencing, and stocking would cost at least £300. I should think about 20 per cent. or so of them would have sufficient agricultural knowledge to work their new farms, if land was about the same quality. Migrants should not be allowed to sell their interest until they had been in occupation, say, five years. Sufficient land can easily be obtained by voluntary purchase if a fair price is given; more than can be dealt with in the next quarter of a century.

29166. Chairman.—Why do you put the money required so high as £300?—That includes the house.

29167. That is given him?—I was not aware it was.

CHAIRMAN.—The Congested Districts Board build the house, and add the cost of it to the annuity.

29168. Most Rev. Dr. O'DONNELL.—Yes, though not the whole sum, and the homesteads that have been provided up to this time have not cost up to the standard of £300?—For a fair house for a man and his family to live in, and for out-offices to keep two cows and a horse it might.

29169. CHAIRMAN.—They are up to that standard?—You won't build that under £200.

29170. For £120?—There would be a very poor house built for £120.

29171. Most Rev. Dr. O'DONNELL.—The average expenditure has been something like £120 on the house and £30 on the out-offices, but there is something left for the incoming tenant to do in the way of additions?—That may be.

29172. CHAIRMAN.—If £150 is spent by the Board on the house and out-houses, and also on the fences, surely a very large sum would not be required by the tenant?—No; but I contend that £150 will not build the out-offices and fence the farm.

29173. It has been done under £200 in all cases. They are very good, with three rooms and little dairy places?—Only £50 remains.

29174. You say that migrants should not be allowed to sell their interest until they have been, say, five years in occupation?—They get a very valuable interest. If you put a man on to twelve or fourteen acres, with a house, and giving him the tenant-right free, there is nothing to prevent that man selling his interest, and going anywhere he likes, and getting a good profit for it.

29175. Most Rev. Dr. O'DONNELL.—It seems to be necessary to suggest some provision of that kind?—Yes.

29176. At the same time in the cases with which the Congested Districts Board have dealt they have not given the tenant-right in that way. They think the land of Ireland is not sufficiently ample to give people presents like that. They have always put on something for the tenant-right. They have required a migrant to surrender the holding that he has left for the enlargement of adjacent holdings. That is his first payment for tenant-right. They have also occasionally added something to the annuity?—They have done very little in this county so far, so that I cannot speak from knowledge.

29177. You say sufficient land can easily be obtained if a fair price is given?—Within the next few months we are offering estates with 2,400 acres of good arable land in hands. It only remains with the Estates Commissioners to give a fair price for it. If they do they will get it. If they don't they won't. It is all good land. I have excluded bog-lands and rough land from that area.

29178. How many acres are offered?—It is not offered yet. We are about offering it. These lands represent about 2,400 statute acres.

29179. That is in the County Sligo?—Nearly all in the County Sligo, except 700 acres.

29180. That is practically all grass land?—It is all grass land.

29181. CHAIRMAN.—Is your idea of a fair price based on what we have heard of—one and one-third times the valuation?—Yes, with the option to the owner to have an appeal. In some cases it is very fair. In other cases it does not cover the value of the land, especially very good land. Compulsory powers are quite unnecessary. If granted, there should be an independent Court of Appeal, composed of three judges of the High Court. In no instance should the fixing of the price be left in the hands of either the Estates Commissioners or the Congested Districts Board. You might just as well say a man going to a fair to buy stock could fix the price he was to pay for them. As it is, the Estates Commissioners unfairly use a great deal of, so to speak, "backstairs compulsion."

29182. Most Rev. Dr. O'DONNELL.—That seems strong?—I can back it up. I can read one of their letters. I need not mention the name of the estate.

29183. CHAIRMAN.—If you read that I don't think it would be quite fair not to say the name of the estate?—Very well. It is a letter of theirs.

29184. If you will give me privately the name of the estate then you can read it?—Very well. "I am also to suggest that if the evicted tenant is reinstated it may facilitate in arranging terms for the sale of the rest of the estate to the tenants."

29185. Most Rev. Dr. O'DONNELL.—Is not that fair?—No.

29186. Mr. KAVANAGH.—It is merely a suggestion?—It is a very disgraceful suggestion to come from a Government quarter.

29187. Most Rev. Dr. O'DONNELL.—Are not they charged with the restoration of the evicted tenants?—They hold that out as a threat—if we don't restore the evicted tenants they will block the sale of the rest of the estate. As a matter of fact, these lands referred to are demesne lands, and never came within the ambit of the Land Acts at all. Notwithstanding this threat on their part we have offered to sell them this demesne if they will give us our net income on what the tenant formerly paid, not what we are making ourselves, because we make a great deal more.

29188. Would not you consider that a public authority charged with the restoration of the evicted tenants should try to further that programme as much as they can on occasions of this kind?—Certainly.

29189. Why would not they allude to it in the correspondence?—I do not think they have a right to use that paragraph.

29190. It seems to me that it does not refer to price directly?—No. I wrote then in reply to that telling what we would sell for.

29191. It is on the question of price apparently you say they use backstairs compulsion?—Yes.

29192. I suggest to you that that phrase can scarcely stand on the evidence?—I think it does, with due respect.

29193. It is a question of price?—I don't object to anything about the price, but that paragraph should not be put in a letter coming from a Government body.

29194. Let me read you your own paragraph. You say:—"In no instance should the fixing of the price be left in the hands of either the Estates Commissioners or the Congested Districts Board. You might just as well say a man going to a fair to buy stock could fix the price he was to pay for them. As it is, the Estates Commissioners unfairly use a great deal of, so to speak, backstairs compulsion." That is "backstairs compulsion" in connection with price?—No, but in connection with sale. We are quite willing to sell without that paragraph at all if they give us our fair price.

29195. It seems to me, without referring at all to the propriety or impropriety of that letter, that the letter scarcely supports this sentence?—I am sorry to differ from you, but in my opinion it does. If, instead of accepting one-and-a-third times the valuation, the vendor elects to prove that a higher basis should be taken, his evidence should be heard by three arbitrators appointed not by the Government or any Government Department, but by the judges of the High Court, with an appeal from them to the three judges. Further, if compulsory powers are granted, it would lead to renewal of boycotting and agitation. The mere mention of compulsory sale has already done so in portion of this and an adjoining county. I can quote three cases which took place after Mr. Bryce's speech announcing that the present Royal Commission would be appointed.

29196. Sir FRANCIS MOWATT.—Those are cases of boycotting and agitation?—Yes. If negotiations for a sale of an estate to the tenants were proceeding the compulsory taking of grass lands and introduction of strangers would stop the sale, even if negotiations had commenced on an estate. Where grass lands existed, the compulsory taking of them for migrants would seriously interfere with the sale of such an estate.

29197. Most Rev. Dr. O'DONNELL.—You say you can quote three cases which took place after Mr. Bryce's speech announcing the appointment of the Royal Commission; but what connection would there be between them and the appointment of this Royal Commission?—They told me in plain English they were going to get the land by compulsion, and going to force our hands.

29198. Did Mr. Bryce say that this Commission was going to have compulsory powers?—He mentioned the word compulsory powers in his speech introducing it—not this Commission, but that it would lead up to compulsory powers.

29199. Do you think Mr. Bryce foreshadowed what the report of the Commission would be?—He certainly referred to compulsory powers in introducing this Commission.

Apr. 18, 1907.

Mr. Richard St. George Robinson.

29200. I suppose there were cases of intimidation before Mr. Bryce's speech?—Yes, but not in the district I refer to. It was one of the quietest districts in the whole country up to then, but now it is very much disturbed.

29201. But considering the whole country, is not it very much quieter than it was before?—I am only referring to this district. This county has always been a very quiet county, except a very small portion of it.

29202. You would not think that any one spot in the country should be affected by Mr. Bryce's speech more than any other portion?—I certainly think that portion was.

29203 Is there any reason why you should take one spot more than another unless there was a particular allusion to that spot?—Rightly or wrongly, they got it into their heads that this Commission is going to lead up to compulsion, and they want to force our hands.

29204. You yourself would not feel insecure under compulsory powers if there was a proper court of appeal?—No; I would submit to it, though I would not like to part with my lands. I have been connected with the management of estates and the buying and selling of cattle for over thirty five years, and I look upon the grazing farmers as the mainstay of the cattle trade. In my opinion, the breaking up of all grass lands would be disastrous to it. If the grazing lands are divided and cut up the competition amongst local graziers will disappear, and consequently there would be a fall in price. I do not agree with Mr. Doran that the small farmers would feed their cattle to be two and a half-year olds or over, or with Mr. Finucane, who goes to Belgium to prove his case. In the first place the area of their holdings would be too limited to properly mature such stores, and they would have to resort to artificial feeding, which they could not afford to buy, and which would also be unprofitable. On the contrary, I believe the tendency would be to raise more young cattle, and dispose of them at the age of from one to one and a half years. The existence of creameries in the country will also foster this practice, in addition to which the profits on young stock up to one or one and a half years old are much more in proportion than from the ages of one and a half to two and a half years and upwards. The average price of year-olds in this county is from £7 to £8, and these may sell a year later at from £10 10*s.* to £11. Very good year-olds often fetch as much as £9 or £9 5*s.* You will see from this, it would be absurd to think that a small farmer will keep his stock to the age of two years or over. Take the case of twenty-two graziers in County Sligo, who feed annually between 3,500 and 4,000 head of cattle and over 3,300 sheep, which stock is practically all bought in the local fairs. If you banish men such as these from the county, where will the market for the young stock be? The absence of even three or four of them from a fair makes a considerable difference, and a like remark will apply to the other counties in Ireland. Of course there are more than twenty-two graziers in County Sligo. I only give the business of the principal ones, who personally gave me the numbers of the cattle and sheep they feed. As an example of the extent of the cattle trade in this county, take the four leading fairs in the village of Collooney, seven miles from the town of Sligo—23rd March, 3rd May, 17th September, and 31st October—and I find that last year two banks paid out a sum of over £62,400; this, of course, was chiefly to dealers, and would not represent anything like the total amount which changed hands, as many of the smaller dealers carry their cash with them.

29205. Chairman.—Do you mean to say that this £62,000 was paid out immediately after these fair days?—On fair days to pay for cattle that were bought.

29206. On these four days the amount paid out was that?—Yes; I got that from the bankers. The bankers are advised by dealers coming from a distance. The small local men bring the money in their pockets. I believe tenants, no matter what quantity of additional land they acquire, will not be inclined to increase the quantity of tillage, as the tendency amongst small farmers now-a-days is to till as little as possible.

29207. As to that, did you hear one witness who told us this morning that he did not believe the small farmer could exist unless he tilled?—We will come to the figures later on.

29208. You say, "In my opinion the breaking up of all grass lands would be disastrous to it;" and then you say, "On the contrary I believe the tendency would be to raise more young cattle and dispose of them at the age of from 1 to 1½ years"?—Yes.

29209. Won't that encourage competition of the graziers?—If the graziers are gone where is the competition to be?

29210. Why will they go if the new men sell more cattle at the young age?—If the grass farms are taken from them?

29211. Sir Francis Mowatt.—You mean for grazing. I thought you meant for selling afterwards.

29212. Mr. Kavanagh.—There are some other markets as well as these?—Yes.

29213. Is not that what the graziers buy, from 1½ to 2-year olds?—They buy year-olds and 1½ and 2 year olds. I believe there are thousands of acres of fattening land in County Sligo, which is used for finishing beef and producing forward stores for the Scotch market. Another class of store cattle should be taken into account, that is, the small cattle reared along the mountain districts, which can seldom be sold under the age of 2½ to 3 years, and are exclusively bought by graziers for their land. As the possible importation of Canadian and other foreign cattle has been much talked of I wish to say that I think it should be strongly opposed, mainly owing to the risk of the importation of disease, which would entail great losses on all classes of cattle owners in Ireland, and secondarily because it might lower the market value of both young stock and finished cattle. It should be added, however, that it would increase the demand for, and therefore the letting value of grass land, and this fact should be kept in view in estimating the fair price of such land if its present owners are asked to sell it. With the exception of one barony in this County, the small farmers do not go in for breeding sheep, so that the cutting up of grazing farms would mean a considerable reduction in the number and price of sheep. Tillage does not pay as well as grass farming, so I do not think the giving of additional land would be any inducement to small farmers to increase the area under tillage. As an example of how the production of oats has fallen off in this district, I submit the following figures kindly supplied to me by a leading firm of corn merchants and millers. They purchased in Sligo and Ballysodare during the seasons:—1883-4, 5,098 tons of oats; 1884-5, 3,927 tons, and 1885-6, 3,148 tons. The supply has gone on decreasing year by year until last season (1905-6), when they purchased only 365 tons. The exports of oats from Sligo by sea during the last twenty years or so tell the same tale. The following figures are taken from the books of the Sligo Steam Navigation Company:—1884, 10,157 tons——

29214. Sir Francis Mowatt.—Is this the export altogether or by that particular company?—The export altogether. The other years are:—1885, 7,522½ tons; 1886, 7,886 tons. The returns for from 1887 to 1898 not available. The returns for recent years are: 1899, 605 tons; 1900, 40 tons; 1901, 308 tons; 1902, 187¾ tons; 1903, 45 tons; 1904, 60 tons; 1905, 56½ tons, and 1906, 18 tons. To estimate a fair price for untenanted land the minimum income from it should be taken to be the Poor Law valuation with one-third added (that is, the basis on which the Government assess the income tax, viz., Schedule A on the fee, and Schedule B on the occupation), but with an option to the owner to produce evidence to prove that his net income was higher. The owner then should get a capital sum which, if invested in 3½ per cent. securities, would yield him the net income as above. In many instances, when an owner farms his own lands, the net receipts would not be a fair basis for calculating the selling value. He often employs more labour than is necessary, for the sake of giving employment, in making permanent improvements. Or, he may not have sufficient capital to keep the lands fully stocked. Or, the grazing stock may be scarce in the neighbourhood, and, therefore, only obtainable at reduced rates. Lastly, but not least, many such lands are wholly or partially boycotted.

29215. Mr. O'Kelly.—You say, "Lastly, but not least, many such lands are wholly or partially boycotted." Have you any cases in your mind?—Yes.

29216. Would you mind mentioning them?—I do not care to do so.

29217. Are they in the County Sligo?—I would rather you did not press that question.

29218. Are they on properties over which you are agent?—Yes. Mr. Commissioner Finucane contends that lower prices should be paid for tenanted lands if the rents are mostly small, because he assumes that the landlord's income from such rents is precarious. He must know very little, and have made no inquiries on the subject. Every landlord and land agent knows that these small rents are well paid, except here and there where political agitators try to get the tenants to refuse to pay their rents.

29219. What do you mean by political agitators?—There is only one meaning as far as I know.

29220. Have you any cases in your mind?—Yes, I have.

29221. Are they on properties over which you are agent?—Yes, and others too.

29222. Mr. Sutherland.—Is it general all over Ireland?—No.

29223. Mr. O'Kelly.—Would there be many cases?—In some places it is very bad.

29224. Are there many cases altogether?—It goes in rings. There are more estates than those I am connected with.

29225. Have you exact knowledge of the fact?—I have.

29226. How many altogether are there in the County Sligo?—I don't say what county it is in.

29227. Can you really say there is a single estate in the West of Ireland at the present moment where, in your felicitous terms, political agitators tried to get the tenants to refuse to pay their rents?—Tenants have refused to pay their rents.

29228. Have they refused because of the work of political agitators?—I believe so.

29229. That is the case in the West of Ireland at the present moment?—In parts of it.

29230. What has been the result of that?—No result.

29231. Ejectment processes?—Not as far as we are concerned. We hope that the tenants will have sense.

29232. You would not like to say that political agitators have tried to get tenants on properties with which you are concerned not to pay their rents?—Yes. It has happened this year on one property.

29233. The consequence was?—We did not get the rent.

29234. You are proceeding against them?—Not yet. We hope to get the rents.

29235. Are they long due?—They are usually paid in November. The tenants are quite willing to pay, but are afraid to do so.

29236. Are the tenants anxious to enter into an arrangement for the purchase of the property?—We showed them we were quite anxious to sell to them.

29237. What prevents you?—The chief reason was they wanted to fix their own price.

29238. My reason for asking this is if there were a a number of properties on which the people revolted against paying rents we should hear of it in the newspapers?—I think you have heard a great deal of it in the newspapers.

29239. When you say they refused to pay rents do you mean to say there was anything like the Plan of Campaign resorted to?—I refer to only one district.

29240. Does your knowledge extend outside County Sligo?—It does.

29241. Does this particular ring extend outside Sligo?—I would rather you did not ask me to name the district.

29242. You have made a statement which will go on the records of this Commission. I want to ask you before that goes on the record can you give us any cases in which this thing occurred. I am in blank ignorance of it, and I know the province of Connaught very well?—It has occurred in four estates which adjoin.

29243. In Sligo?—I had rather you did not ask me in what county. It is in Connaught.

29244. Sir Francis Mowatt.—Are those four estates in your hands?—Only one of the four.

29245. Mr. O'Kelly.—But you speak with knowledge of the other three?—Yes.

29246. Could you enlighten us as to the causes which operated? This is an important statement to go on the record of the Commission. Could you tell us any reason why the people on these estates refused to pay their rents? What was the *modus operandi* of the political agitator?—As far as I know they were told not to buy unless they got the land at a certain price.

29247. Told by the political agitators?—Yes.

29248. I suppose you were equally insistent that you would not sell unless you got your price?—We offered them very liberal terms.

29249. It so happens there was a difference of opinion?—I believe the tenants would have dealt with us straight off, because they are very decent poor chaps, not very well off. They are small tenants.

29250. Mr. Kavanagh.—Your opinion is that a small holding is a better security to the State for purchase than a large holding?—I would say equally good.

29251. It is not worse at all events?—It is not worse. I have particulars of prices on some of the estates of which I am agent.

29252. The Chairman.—You mean to say that the security is as good on a poor estate as on a rich estate?—I say that generally the rents are well paid in the West of Ireland.

29253. The money comes from America. It does not come out of the land?—No doubt some of it comes from America.

29254. Take a place like Inishmurray?—They pay no rent at all there or taxes either or rates. They pay nothing at all but they use the county institutions.

29255. We were told yesterday that there were twelve years arrears in Inishmurray. You would not say that the security of land in Inishmurray was extremely good?—I believe there are 100 years of arrears there. They never paid rent. I don't call that an estate.

29256. Sir Francis Mowatt.—Would you call them large or small holdings?—They have very small holdings. The chief industry is making poteen.

29257. Mr. Sutherland.—Why does the law allow that?—It is seven miles away from the mainland, and they can see anybody coming.

29258. Are not the magistrates responsible for the enforcement of the law?—You must catch them first. The magistrates will try any cases brought before them. You must first catch your hare before you make your soup.

29259. Most Rev. Dr. O'Donnell.—Would not it be difficult for the fishermen to live off the land?—Yes. It is very light bad land.

29260. On the other hand, you have not a good harbour on the island for fishing work?—No harbour at all, as far as I know. You might be able to land and you might have to stop there a week. You could not get off.

29261. However much we may deplore illicit distillation, it looks as if they must live on their wits in some way?—Yes. I believe it would be a grievous blunder in public policy to abolish the Congested Districts Board. They have done, and are doing, much excellent work, and no Government department would or could do the same kind of work as well. The income and powers of the Congested Districts Board should rather be largely increased, and their system of parish committees should be improved, extended, and assisted as much as possible. I think they should be asked to take charge of the drainage system throughout Connaught, as the new proprietors are unlikely to strike a maintenance rate. They refused to do so in the Dunmoran district in this county in 1903.

29262. Chairman.—The local authorities?—The landlords had, up to the passing of the Land Purchase Acts, to bear the cost of maintenance of schemes of arterial drainage. When the new landed proprietors came in the old landlords wanted them to join them in striking a maintenance rate and they would not do so, and the works are now lying derelict.

29263. Before the Land Purchase Acts who maintained the drains?—The landlords.

29264. How was it managed?—The work I refer to was done I should think in the later forties or early

Apr. 18, 1907.

Mr Richard St. George Robinson.

fifties. About 1,000 acres were drained. Since that work has been done whenever any damage occurred in the drainage system there was always a drainage board which entrusted a contractor with the work of repairing the damage, and struck a rate to pay for the cost of the repairs.

29265. The rate was struck by the drainage board?—Who consisted of landed proprietors.

29266. Were they constituted by Act of Parliament or voluntarily?—Under Act of Parliament.

29267. The powers to levy a rate were given them by Act of Parliament?—Yes.

29268. After the purchase Acts did these drainage boards still continue?—I happen to be honorary secretary to this Dunmoran district. The Board of Works wrote letters to me to call meetings of the proprietors. I did. I happen to act for a great many of the old landlords and for some of the landlords who had sold; but the new owners, the tenants who purchased, refuse point blank to have anything to say to it. Now the whole system is derelict. I believe the County Councils can be called on to take over these drainage systems, but that would be out of the frying pan into the fire.

29269. When you suggest that the Congested Districts Board would take over this they would have to do it out of their pockets?—I would give them compulsory powers if necessary to strike a rate.

29270. Why not give it to a local body?—I believe the County Councils have power, but I think that the Congested Districts Board would carry out the work much better.

29271. That is putting the Congested Districts Board in a very invidious and unpopular position to saddle them with a work with which they have nothing to do?—It is a very necessary work.

29272. You say the Congested Districts Board is not a department, and is able to do its work successfully because it is not a department?—I have not said that.

29273. "They have done and are doing much excellent work, and no Government department would or could do the same kind of work as well." Does not that amount to that?—It practically does.

29274. They derive their popularity to a great extent from the fact that they are not a Government department?—They are a very competent department.

29275. Some of their success must depend on the popularity?—No doubt, but they are a very competent Board.

29276. Don't you think very often in the difficult work that the Congested Districts Board have to do, restriping land and generally undertaking work requiring the good will of the people of the locality, their success is due to a great extent to the general popularity of the skilled officers who carry it out?—I have no doubt it is.

29277. If that is so would not it handicap them to a great extent to saddle them with work which they know beforehand is going to be unpopular?—I don't know about that, because it is absolutely necessary for the people's own protection to maintain these drainage works.

29278. Is not the proper body to do it the local authority that represents the district?—That is the County Council. They have quite enough to do to keep the roads in order if they would.

29279. Mr. Sutherland.—Do you mean that the Congested Districts Board should do it at their own expense?—No. I mean that they should be empowered to strike a rate to do it.

29280. They are not a rating authority. You have a rating authority and it is most desirable that that authority should be used if you are going to levy a rate?—The reason I suggest them is that they are a very competent board and have very good men under them and they would do it far better than anybody else.

29281. Mr. Doran, for instance?—Yes. They have an excellent staff.

29282. Mr. O'Kelly.—Do you mean to suggest that the Congested Districts Board would have power to compel the County Council to strike a rate for drainage purposes and then hand it over to the Congested Districts Board?—That seems a better way than I suggest, because they would see that the work was properly done.

29283. Sir John Colomb.—In speaking about the necessity of some authority to maintain drainage you meant somebody to take the place of the owners of property who have parted with their property?—Quite so.

29284. Take the cases subsidiary to arterial drainage, where portion of a drain went through various lands, was it a common arrangement with the tenants that each tenant should maintain his own portion?—That was so.

29285. Did you find after the Act of 1881 the same power did not remain to the landlords to make the tenants maintain what they had agreed to maintain?—That is so.

29286. Therefore you think that being so, now that the land is passing into the hands of individual proprietors, it is very important from the State point of view in the interests of the people that there should be some authority who would do what used to be done, that is, to see that the tenants discharge their obligation in reference to arterial drainage?—I think so.

29287. With regard to what you said in a previous paragraph, may I take it that all you meant was to pay a tribute to the natural honesty of the tenants of the West in discharging their rent obligations?—Yes.

29288. But at the same time you felt it your duty to point out that there were exceptions in exceptional circumstances where they departed from it?—Yes.

29289. But your general purpose was to explain that in your opinion, with your knowledge of the tenants in the West of Ireland, they were anxious to discharge the obligation of paying their rents?—Yes. Rents are well paid and paid without any trouble.

29290. Mr. O'Kelly.—You say it would be a grievous blunder in public policy to abolish the Congested Districts Board. In what would the blunder consist?—I do not see what you are going to put in place of them. They are a most excellent board and have done very good work.

29291. I suppose you have heard of the restrictions put upon their expenditure by the Treasury?—I would not be surprised at what the Treasury did.

29292. Have you come to any judgment as to whether it would not be wiser to commit the counties of Connaught entirely to the Congested Districts Board, leaving out the Estates Commissioners altogether?—Personally I would rather deal with the Congested Districts Board. I am only expressing my own opinion.

29293. Have you thought the matter over?—We have sold one estate to the Congested Districts Board and we have sold thirteen estates to the Estates Commissioners, or at least sold them direct. Four or five are, I think, in process of sale, and we are about offering three more. Of the above, only three have been inspected, and only portion of one conveyed, and that to the Congested Districts Board.

29294. But do you see any inconvenience in having two bodies doing the same work in the one province?—There is plenty of room for both—

29295. Do they ever compete?—Not to my knowledge. The Congested Districts Board is not doing very much in this county.

29296. Did you ever consider the matter whether it would not be as well to hand over the work of the Congested Districts Board to the Estates Commissioners because they are a Congested Districts Board now for certain purposes?—I never did consider it. I would not like to give an answer straight off.

29297. Again you say that no Government department could or would do the same class of work as well. What had you in your mind when you came to that opinion?—One reason is that the Congested Districts Board have a much more competent staff, as far as my knowledge goes, than the Estates Commissioners have.

29298. Are you acquainted with the staff of the Commissioners?—I have seen some of their valuators.

29299. Is it easier to come to terms with the Congested Districts Board?—It is much easier to come to terms with the man who knows his business than the man who does not.

29300. Would you suggest that the Estates Commissioners don't know their business?—I think a good

many of their officials do not. That is merely my opinion.

29301. That opinion is based on actual contact with them?—With the prices they offer.

29302. Is your prejudice against them entirely on account of the difficulty of getting them to agree to a price that they consider extravagant?—There is no danger of their being too extravagant.

29303. You find a difficulty in agreeing with them as to price?—Other people have more than we have.

29304. You say that no Government department can do the same work as the Congested Districts Board. In comparing that body and the Estates Commissioners, have you in mind any estate purchased by the Estates Commissioners?—No, but I have heard the prices offered for estates.

29305. But prices and the doing of work like that of the Congested Districts Board are two different things altogether?—The Estates Commissioners have practically done very little.

29306. Therefore is it just to make a comparison between their methods: have you in your mind's eye at the present moment any estate purchased by the Estates Commissioners?—No, I have not, except what I have heard from others.

29307. You have in your mind's eye estates purchased by the Congested Districts Board and improved?—I have.

29308. When you have no knowledge of the work done by the Estates Commissioners how are you in a position to make a comparison?—I make the comparison from what I have heard from land agents and landlords. It is merely an opinion and may be worth nothing.

29309. You base your opinion on hearsay evidence?—Really a great deal of the evidence one gives in a matter of this kind must be hearsay evidence.

29310. You say the income and powers of the Congested Districts Board should be largely increased. On that we are all agreed. What power would you give them?—I would increase their income.

29311. Would you give them a larger income and no power to expend it?—If they buy estates outside the congested districts at present they can only deal with the grass lands in hand, they cannot give it to the tenants adjoining. I think they should have power to give it to the tenants if they cannot migrate people. At present if they cannot get migrants they cannot deal with the land.

29312. Would not the difficulty be more in getting the land than in getting the migrants?—The difficulty is in dealing with the migrants too.

29313. Congestion is a great evil?—Yes.

29314. You would like to see it removed?—As far as it can be done fairly and squarely.

29315. Let me take a property where you have a good area of congestion and contiguous to it you have large grazing ranches. Would you agree with the view often expressed at public meetings, parties, boards and in Parliament that powers of compulsion to acquire any of the grazing land should be given to such a body as the Congested Districts Board or the Estates Commissioners?—No; I do not think compulsion should be given at all.

29316. Your view is although you admit congestion is a great evil, the application of compulsion would be a greater evil?—Yes.

29317. Why do you say that?—You can get plenty of land if you pay a fair price for it.

29318. They try that first under the voluntary system, but suppose you have a property in which there is a good area of grazing land and the landlord refuses to sell it, and that persuasion failed and everything else failed, would you feel it would be a greater evil to apply compulsion than to continue congestion?—Yes I say that the property belongs to the landlord and he has a perfect right to do what he likes with it.

29319. Therefore the public interest must be subordinated to the private interests of the landlord: is that it?—That is it, if you like to put it that way.

29320. In asking for compulsory powers for the acquisition of land we are not asking for anything new, there are precedents for it?—I am not aware.

29321. You have a railway from Claremorris to Sligo?—That is a different thing. The men from whom the lands for that railway were taken were well paid for them.

29322. Is it not more desirable that people should live than that they should travel fast?—They would like to do both.

29323. Which is the more important of the two?—To live, no doubt.

29324. If you have a large area of congestion which should be removed, and if the landlord is unwilling to yield, would you not apply compulsion?—No; if the landlord wants the land for himself he has just as good a right to keep it as anybody else.

29325. Take the case of a railway?—I don't think the two fall into line at all.

29326. Would you explain the difference between them?—I may leave that to you to do.

29327. Sir John Colomb.—I wanted to ask you, did you agree with evidence we had to-day—I don't know whether you heard it or not—that accepted this position, that if compulsion was to be applied to owners it must inevitably be applied to the farmers and shopkeepers who had grazing land?—I agree with that. Mr. Finucane describes at page 360 of the Appendix to the Third Report of the Commission how the Estates Commissioners value untenanted land. The Congested Districts Board value it as a final thing and add so many years purchase for the occupation, while the Estates Commissioners value it at so many years purchase, allowing nothing for the occupation. Suppose a tenant-farmer purchases the good-will of a farm, and then purchases the same farm under the Land Act, afterwards the Estates Commissioners have power to take it by compulsion—according to Mr. Finucane they would put a value on it, and the man would have to go out and get nothing for his occupation interest therein.

29328. You say a man has a perfect right to do what he likes with his own property?—Yes.

29329. Do I understand you to mean by that that in carrying out a national policy the landlord is not the man to suffer, and must be fully compensated?—Yes.

29330. That is what you meant?—That is what I meant.

29331. Chairman.—I think you went a great deal further than that. Did not you mean to say that in your view the State had no right to compel a man to sell his land if he did not wish it?—That is my view, that the landlord owns the land, and has a right to hold on to it; if he requires it for his own use I don't see why he should not.

29332. Mr. O'Kelly.—There was a Labourers Act passed last year?—Yes.

29333. The element of compulsion is there?—Yes; we don't know how it will work yet.

29334. That is another precedent?—Yes, I admit that.

29335. Of course we have many more precedents. In the Australian States the Government are resuming possession of large tracts of land that were given formerly to settlers, for the purpose of promoting closer settlement?—I have not heard.

29336. You may take it from me that it is a fact; and I think they are making similar proposals in New Zealand. What is morally right in New Zealand ought not to be morally wrong in Ireland. Geography has no effect on morals?—Distance might have. In confirmation of my general views I wish to read the following memorandum, which was sent to me on the 9th of this month by a small farmer in the Sligo district. It will be seen that his views correspond with my own in a remarkable degree, but they reached me after the outlines of my own evidence had been sent forward. He says:—"Some facts which may be worth bringing under the notice of the Royal Commission on Congestion.—An agricultural farm to keep a family going at all must be at least about twenty acres (Irish) of fairly good land of mixed quality, suitable to the production of the different crops required for a small farmer's housekeeping—to carry about five cows and their calves, summer and winter, giving about three acres to tillage. Many occupiers of holdings of twenty and thirty acres, Griffiths' valuation, £15 to £20, but only useful in one line, would find it most difficult to get on if not assisted by the produce of some of the large farms close by, while the holders of

Apr. 18, 1907.

Mr. Richard St. George Robinson.

much smaller farms of general quality could make a good living. The most uneconomic of all farms is that of thirty to fifty acres of hilly stiff clay soil, difficult of access, requiring much labour, depending on favourable weather, with poor return, cattle never fit for the market, dairy cattle producing little, while rents and rates are more than proportionally heavy on such land. Many holders of poor wet farms, as well as thrifty occupiers of small farms, who could badly go on if confined to such farms alone, added much to their income by availing themselves of facilities for grazing on the larger grass farms in the neighbourhood, thereby keeping in hands their young stock until they become full value, sometimes some extra dairy cows, which through the creameries paid even better. Grazing rates being regulated by the market price of stock. This system by the winter feeding added much to the value and production of the Home Farm, while it inculcated thrift and industry to the members of the family. Most owners of moderately large grass farms are most anxious to let grazing and at reasonable rates, because such a system involves less risk and capital. For this reason occasional grass farms are very necessary and useful to the very many small holders in the West of Ireland. Where large grass farms (not required for grazing) are stocked by the owners themselves, they cause a sharp local demand for the young stock of the neighbourhood, not yet fit for shipping for the English or Scotch markets. Without such local demand producers of young stores should suffer. There is no use of talking of home fattening on poor small farms. Where the division of large farms has to be resorted to, to relieve congestion, care should be taken only to take farms for that purpose where a large area of country is under grass lands, because the occasional grass farms is going far to help to relieve congestion already—its produce helping those around. There are many large dry grass farms in the West of Ireland, used mostly as sheep walks, which would never do for striping out to small farmers—they won't produce hay and are useless for tillage. Twenty-acre farms of such land would only beget still greater poverty. It is a doubtful problem if a peasantry of uniform small landholders, or nearly so, with the resources of this country could be prosperous. The best attempts made to relieve congestion in its present state must only go to create it elsewhere in a few years, and very likely a relapse to the old condition in the old places. Large grass farms at present paying a high rent—30*s.* to £2 an acre—if bought up for distribution on the basis of present rent, could never be made to repay such amount when in the hands of small holders, the land very shortly becoming deteriorated. Should migration from thickly inhabited districts do something to stay emigration for the present, it must only increase it the more after a short time. With a promise of a better education, and the commercial prospects in all newly-colonised countries, no young Irishman of any ability will settle down to the husbandry of a few acres of land here while he has reason to hope for a better condition abroad. In a word, more real service could be done to the people of our country by some aid and encouragement to the industrious ones; leave the idle and lazy to learn from their example; but, on the contrary, the State is every day making provision for those who put their backs to the wall and do nothing, thereby driving whatever capital and energy there is in the country out of it. Ireland cannot stand all who are playing on it from within and without.

29337. Most Rev. Dr. O'Donnell.—Are you aware it is the law at present that when the Congested Districts Board buy a property it may expropriate the holder of a present tenancy for the relief of congestion?—Do you mean judicial tenancy?

29338. Yes?—I was not aware of that.

29339. As a matter of fact, the State has already conferred on the Congested Districts Board the right on one of its own properties of expropriating a present tenant for the relief of congestion. That being so, would it modify the view you have expressed with reference to compulsion, if land is required for the relief of congestion and the landlord is given a sufficient price, that compulsion should not be applied?—I am afraid I stick to my opinion.

29340. Mr. Sutherland.—Your position is perfectly explicit. You say the right of the proprietor is superior to the right of the State?—The right of the man who owns the land is to be taken into consideration.

29340A. Sir John Colomb.—You don't claim for the landlord more protection than you claim for the occupying tenant?—No.

29341. Most Rev. Dr. O'Donnell.—At present the occupying tenant may be compulsorily expropriated?—You will find he will be very well paid for it.

29342. On the question of price, if there is compulsion you say it should be referred to a judicial tribunal?—Yes, exclusive of the Land Commission or the Estates Commissioners.

29343. That is the reason I asked would the fact that there are compulsory powers for the tenant modify your view to the extent that in certain circumstances there might be compulsion for the landlord?—I wish to read a letter I have received from Major O'Hara, Lieutenant of the County. He says:—"In former times on my property there was a staff of men and an estate steward who made and kept up roads and fences on the tenants' holdings, and the steward used to advise as to the best use to be made of the farms. I do not think there is any tenant on the property who has not a road to his house which was made by the landlord, and I still keep up many of the roads on my property. Planting, &c., of course, one always did. Orchards were planted in many cases on the property along the foot of the mountain, portions of which remain in a neglected state still, as is seen on the road from Ballina. Money was borrowed for drainage and roads which I am still paying, and I think that should not be allowed to pass unstated. Also in many cases houses were built for tenants. Another point which may be of use is that on some parts of the property where holdings were not large a field has been kept for the accommodation of the surrounding tenants, so that they could send their cows and young stock to graze there. Recently when there was talk of the property being sold, I was requested by the tenants in one instance to keep the land in my own hands for their use as at present."

29344. Mr. O'Kelly.—Major O'Hara did all this work?—Chiefly his grand-uncle and father.

29345. Have all the landlords in County Sligo followed his example?—Not so much. Lord Harlech did enough. But a great many landlords spent money making roads and drains.

29346. What percentage of landlords did that apply to?—I can only refer to those for whom my firm acts.

29347. Chairman.—Does your firm manage Lord Harlech's estate?—No, but I know it well. I did not look into this question. I never thought of it until I got this letter yesterday morning. Looking into the applications of the Board of Works I find we pay them £520 a year for different estates.

29348. Most Rev. Dr. O'Donnell.—Would the expenditure be repayable?—Not on Major O'Hara's estate. Of course if we expend money on making roads into bogs or on drains that does to a certain extent repay the landlord.

29349. It comes up when the rents are being fixed?—When there is an accommodation road for a farm it is worth more than when there is no accommodation, but most of the money I speak of is not returned.

The Commission adjourned.

SIXTY-FOURTH PUBLIC SITTING.

FRIDAY, 19TH APRIL, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Tubbercurry.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN M'LOUGHLIN examined.

Apr. 19, 1907.

Mr. John M'Loughlin.

29350. CHAIRMAN.—You are nominated by the Sligo County Council?—Yes.

29351. You represent Tobercurry upon the County Council?—Yes, I represent South Sligo, portion of South Sligo, and the county division of Kilmacowen—nominated by the County Council to be one of the two.

29352. I think you made out a scheme of your evidence?—The population of Sligo in 1841 was 180,886, and in 1901 it was 84,083. Area of the County Sligo, 452,356 acres; under tillage, 74,508 acres; pasture, 237,536 acres; plantations, 76,078 acres; waste, 120,819 acres; and under water, 11,815 acres. The number of agricultural holdings in County Sligo, 13,491, and the mean valuation of holdings, £13. In 1906 the total rateable valuation was £214,216. The emigrants from County Sligo from May 1st, 1851, to December 31st, 1905, was 79,829. In 1905 the number of emigrants was 792 and in 1900 the number of emigrants was 1,544.

29353. Is there any particular reason why in 1900 the number of emigrants should be so large—were there any special circumstances in that year which made the figure so large?—Well, yes; I believe the depression of the times forced more in 1900 than since.

29354. Was 1899 a very bad year?—Yes, and 1900 was the year depression pressed most on them, and at that time the population dwindled down so much on that account. In 1905 the migratory agricultural labourers were 169 landholders and 725 not landholders; 899 went to England and Scotland, and 17 to other parts of Ireland. The estates sold from 1st November, 1903, to 31st March, 1906, in County Sligo were 19, of which 8 were in Congested Districts.

29355. Can you tell us at all the number of estates that were sold in County Sligo during, say, the five years before 1903?—That would be under the Ashbourne Act?

29356. Yes?—No, but I could look it up.

29357. I see from returns prepared for the Commission that prior to the Act of 1903 twelve hundred holdings were sold under the various Acts, and since 1903 eight hundred holdings have been sold under the Act of 1903?—The estates sold from 1st November, 1903, to the 31st March, 1906, in the County Sligo were 19, of which 8 were in congested districts. The number of purchasers was 536, and the number of holdings on those 19 estates amounted to 800, including 278 in the congested districts.

29358. That is practically eight hundred purchasers under the Act of 1903, and there were twelve hundred purchasers under previous Acts. Should you say under those conditions that the Act of 1903 has been a failure in the County Sligo?—Well, I would not say it is encouraging.

29359. Although during the three years you got very nearly as many sales—at least you got two-thirds of the sales that have taken place under all the previous Acts?—I know that 99 per cent. of the tenant-farmers were all anxious to buy if they could purchase at a reasonable price.

29360. Do you realise what those figures mean—that in fifteen years under the various Purchase Acts that have been passed twelve hundred purchasers buy their holdings, and in three years under the Wyndham Act of 1903 eight hundred purchasers buy their holdings—two-thirds of the number that have bought in the whole of the fifteen years before. Can anybody say under those circumstances that the Act of 1903 has been a failure in County Sligo?—I do not say it is a failure, but I say it is not as encouraging as it should be, because the tenant farmers, 99 per cent. of them, were prepared to buy at a reasonable price.

29361. At any rate purchase operations have been from those figures very much accelerated in the County Sligo by the passage of the Act of 1903?—Oh, yes. In County Sligo the total number of agricultural holdings is 13,491. £4 and under, 3,511; £4 to £10, 5,606; £10 to £15, 1,817; £15 to £20, 860; £20 to £30, 704; £30 to £50, 472; £50 to £100, 320; over £100, 201. In 1905 holdings of land in Sligo County not exceeding one acre were 896; 1 to 5 acres, 1,422; 5 to 15 acres, 5,492; 15 to 30 acres, 4,495; 30 to 50 acres, 1,574; 500 to 100 acres, 782; 100 to 200 acres, 302; 200 to 500 acres, 123; above 500 acres, 37. Expenditure on poor relief, year ending, September, 1905—Sligo Union, 1*s.* 7¾*d.* in the £; Tobercurry Union, 1*s.* 10½*d.* in the £. Average number of persons in workhouse, 1905, Sligo, 448; Tobercurry, 103. There is a great deal of untenanted land in the district with which I am acquainted. Ballintogher East Electoral Division—In this electoral division in the townland of Killerry there are 1,252 acres; owner, William J. Griffith; valuation, £135. The population of Killerry fell from 241 in 1881 to 183 in 1901. It is in Sligo Union.

29362. This district you are speaking of is close to Collooney?—No, it is on the borders of the County Leitrim, near Dromahair, just south of Lough Gill. In the same electoral division, townland of Sleshwood, Mr. Owen Wynne owns 374 acres untenanted, valuation of the untenanted portion £25 10*s.* Mr. Wynne owns many grazing farms in County Sligo, and the Estates Commissioners have advanced him £15,000 for the sale of his demesne at Hazlewood.

29363. Sir JOHN COLOMB.—You give the fact that Mr. Wynne was advanced £15,000 for the sale of the demesne, but what was the total advanced for the whole property, because he could get only a certain proportion for the demesne in relation to the total advanced, do you know the total advance?—Mr. Wynne has not sold his whole property. He has a number of grazing farms.

29364. Never mind whether he sold his whole property or not. As you are able to tell us what he got advanced for his demesne, I want to know can you tell what is the total amount advanced for the tenants on other lands outside the demesne altogether?—Of course I did not look up your price by what he got in the other portions. Ballintogher West Electoral Division includes 1,913 acres of untenanted land, exclusive of Castledargan mansion house and demesne, occupied by Mr. Hosie. Only a small portion of those lands are as fit for grazing as for tillage.

29365. CHAIRMAN.—I can only find in the townland of Castledargan in the occupation of Mr. Hosie 194 acres?——

29366. Sir JOHN COLOMB.—Do you mean that in the Ballintogher West Electoral Division there are 1,913 acres of untenanted land exclusive of the 194 acres?—Yes.

Apr. 19, 1907.

Mr. John M'Loughlin.

19367. You do not mean that 1,913 acres was in the hands of Mr. Hosie?—No.

19368. The gross total is exclusive of the demesne occupied by Mr. Hosie, which amounts to 194 acres?—Yes. Ballinakill Electoral Division—This electoral division contains 522 acres of untenanted land, valuation £211. The population of this electoral division fell from 5,712 in 1881 to 4,359 in 1901.

19369. CHAIRMAN.—Do you exclude in that the demesne occupied by Mr. Stack?—Oh, yes. I did not include the mansion house or demesne of Castle Neno, which is in the electoral division of Ballinakill. Ballisodare East Electoral Division—This division contains 377 acres of untenanted land, valuation £266. All this land is of the richest quality, and is exclusively used for grazing. The population in 1881 was 888. In 1901 it had sunk to 667. Electoral Division of Ballisodare West—This division contains 694 acres of untenanted land, most of it in the occupation of Mr. Charles Keene O'Hara, a large landowner in the district. The valuation of this untenanted land is £172. One hundred acres of good land is held in the townland of Streamstown by Mr. Alexander Sim, a wealthy and enterprising merchant and manufacturer, and I have been informed that he would be ready to sell to the Estates Commissioners at a reasonable price.

29370. What reasonable price?—At a fair value between both parties.

29371. Is that estimated by you or the landlord?—To give justice between man and man.

29372. How do you know it would be a price satisfactory to both parties?—I would say justice between man and man would be a reasonable price.

29373. Do you know what is the price he has offered to sell at?—I am informed on reliable authority he would be prepared to sell at a reasonable price.

29374. If you don't know what the price is, how do you know it is reasonable?—Of course it takes a long judgment, because it is very hard to arrange to satisfy the landlord and the tenant in a case like that.

CHAIRMAN.—That is why I was surprised to hear you say what you said just now.

29375. Most Rev. Dr. O'DONNELL.—Did you hear he was not likely to demand an exorbitant price?—Yes, I heard he was prepared to sell at a reasonable price.

29376. Sir JOHN COLOMB.—Did you hear it from himself or other parties?—It was other parties.

29377. That is a rumour?—A strong rumour. The population of this electoral division (Ballisodare West) dwindled from 850 in 1881 to 712 in 1901. Electoral Division of Bricklieve—In this division there are 411 acres of untenanted land, valuation £323. Owners, Sir Josslyn Gore-Booth and Mr. Crichton. The land is of exceptionally fine quality.

29378. CHAIRMAN.—With regard to that—is that land which Sir Josslyn Gore-Booth considers to be his demesne or not?—Oh, no; he lives in North Sligo.

29379. This is away from where he lives?—Twenty miles.

29380. Is that the land which he told us had been already offered to the Estates Commissioners?—Perhaps so; I am not sure.

29381. Has any land there been sold by Sir Josslyn?—Well, I am not sure. I could not say. The population of this electoral division (Bricklieve) fell from 668 in 1881 to 499 in 1901. Electoral division of Collooney—In this electoral division, excluding Markree demesne and the mansion house, there are in the occupation of Mr. Cooper 2,505 acres of untenanted land, the valuation of which is £927. A considerable portion of these lands are occupied by game preserves.

29382. What do you mean, "are occupied by game preserves"?—Game preserves.

29383. Yes, but land is not given up to hares and rabbits?—No; portion of it is in game preserves; pheasants and all classes of game. It is given over to game preserves.

29384. I suppose that is a general thing. Is there anything special about that land?—You don't know how all things stand, and just to give you information of how the property stands—portion is given over to game preserves.

29385. What do you mean by "given over"? Do you mean to say nothing is on it except game?—Well, of course, he may use it for other things, but the public is excluded from touching it. There may be cattle and other things, but game preserves is the principal thing I say on it.

29386. Cattle preserves, too?—There may be, and what is very rare there is deer to be found on it. There is a deerpark, and there are deer to be found on portion of it.

29387. Outside the demesne?—I could not say is it included in the demesne.

29388. Do you mean to say there are deer outside the demesne?—They have their own park.

29389. That is the demesne?—There are 2,505 acres of untenanted land exclusive of the demesne.

29390. And on this land you can find deer?—I do not say that.

29391. Where are these deer?—I believe the deerpark belongs to the demesne.

29392. Most Rev. Dr. O'DONNELL.—You say the demesne comprises 497 acres?—Yes, and the valuation is £400; that is apart from the 2,505 acres.

29393. Sir JOHN COLOMB.—What sort of game is to be found besides deer?—There are hares, rabbits, pheasants, partridge, and numbers of others. I suppose if we had the gamekeepers here they would give us more information. The population of Collooney Electoral Division fell from 2,018 in 1881 to 1,287 in 1901.

29394. Is that in any way due to the rise of the game or not?—It is a misfortune to the country to lose such game as the population.

29395. The two things are not joined in any way?—The population fell from 2,018 in 1881 to 1,287 in 1901.

29396. Most Rev. Dr. O'DONNELL.—Do you think when the population was at a higher figure was there so much untenanted land as 2,505 acres in that electoral division?—There was a large portion of it, but I would not say there were evictions on that particular estate since that; but the population having no prospect before them to better themselves, they went to the four quarters of the world.

29397. CHAIRMAN.—When the population was at this high figure in 1881 of 2,018 people living there were those game preserves then there or not?—Yes, of course they were there.

29398. And game was preserved?—It was directly after the bad harvest of 1879. The people did the best they could for a year or two, and when there was no prospect before them I believe they had to emigrate to better their condition. I believe that is all owing to the persecution of the distress of the harvest of 1879 and no room for the poor to make a livelihood at home—no change in the land laws that would benefit them and root them in the soil.

29399. No change to benefit them?—There was no prospect before them that they could make a livelihood after 1879, and they emigrated to different parts of the world.

29400. Most Rev. Dr. O'DONNELL.—Were the holdings small holdings?—Yes.

29401. The people had no prospect of being able to live from their small holdings?—I believe the population by dwindling down enabled the people on the small holdings to hold their own there, but what reduced the population was the stalwart young sons and daughters of those poor struggling farmers going to foreign countries to make a livelihood. I have known in my own district struggling poor farmers to rear from four to six sons, and five had to emigrate although being reared up as expert farmers; if they were rooted in the soil they could live in the country. The most stalwart and able and the most intelligent went to foreign countries to fight the battle of life, leaving the weak and the aged.

29402. What class of farms had they?—Small farms—from £20 valuation to £1, I would say.

29403. Sir JOHN COLOMB.—You are now dealing with Collooney?—Yes.

29404. Are you aware that the overwhelming majority of the farmers in that district are over £10 in valuation? Is that so?—We do not take into consideration what I call the poor man, the labouring man who helped to build the population—they had to emigrate.

29405. Are you aware that the number of small holdings in Collooney is very small compared to other parts of Ireland, and if you take £10 as the economic valuation, the overwhelming number are over that?—I would ask you——

29406. I merely ask you are you aware of it?—I am not aware, but I know it is the poor labouring man's family that emigrates most.

29407. Most Rev. Dr. O'Donnell.—From the return I have here before me, I think your general description must be pretty correct. In that electoral division there are forty-five holdings under £4 in valuation, and forty-three under £10 valuation.

29408. Sir John Colomb.—Eighty-eight out of a total of 170.

29409. Most Rev. Dr. O'Donnell.—So that if we exclude the holdings above £10 there would be over half the holdings not economic, that is, there would be eighty-eight holdings from which the tenants or the sons and daughters probably emigrated?—Yes.

29410. Sir Francis Mowatt.—The holdings that were vacated by the emigrants, what became of them?—I would not say they were vacated. Of course the old people are there.

29411. Do you know what happened the holdings that were vacated by the emigration—did other people take them up or were they divided?—I did not say there were any holdings vacated like that. Of course in this electoral division it did not come under my notice, but I know that the bone and sinew of the youth had to go to foreign countries, and it was the labour of those that had to pay the rent in many cases. It was never taken from the land. Electoral Division of Drumfin—In this electoral division there are 385 acres of untenanted land. The population of this electoral division fell from 937 in 1881 to 792 in 1901, from similar causes, I suppose.

29412. Mr. Kavanagh.—You do not give the valuation—are they mountain lands?—No.

29413. You gave the valuation in every other case?—I have not taken it here. Electoral Division of Kilmackowen—In this electoral division there are 365 acres of untenanted land, valuation £371. The population in 1881 was 1709, and in 1901 it had fallen to 1,363. Electoral Division of Knocknarea—Excluding the demesne and mansion house of Mr. J. F. Walker, this electoral division contains 953 acres of untenanted land, valuation £738. The population was 1,207 in 1881 and in 1901 it had fallen to 978. Lisconny Electoral Division—In this electoral division there are four large farms of excellent quality untenanted. In the townland of Doorly there is a farm of 271 acres, valuation £189, belonging to Miss Cooper, and in the townland of Lisconny there is an untenanted farm belonging to the same lady containing 226 acres, valuation £171. In the townland of Lisruntagh there is an untenanted farm owned by Dr. Tweedy of 128 acres, valuation £84. In the townland of Spotfield there is an untenanted farm owned by Mr. R. A. Dilke containing 289 acres, valuation £129. Electoral Division of Riverstown—In this electoral division there is an untenanted farm at Ardcumber owned by Mr. Phibbs containing 161 acres, valuation £100. In my opinion the whole of Connaught should be scheduled as congested.

29414. Chairman.—What is the object of that?—To relieve congestion on the mountain slopes and in the bogs I would believe the entire province should be "congested" for the migration of the poor and overcrowded districts, and to make room for the stalwart farmers' sons that they could support. The Congested Districts Board or the Land Commission or the State should take over all those waste lands.

29415. You say it should be scheduled altogether in order to relieve congestion from the mountain slopes?—And the bogs where the people are overcrowded.

29416. What do you mean by relieving congestion?—I would say where a number of poor peasants are crowded in holdings of under £4 that some two should be taken up and removed out to the waste lands, and leave one in possession of what three occupy to-day to make an economic holding.

29417. Yes, but that can be done without scheduling the whole of Connaught—that could be done now?—I believe it would be the readiest method.

29418. But without scheduling the whole of Connaught you can do that now?—Every county and almost every district has its own poverty-stricken corner, and I do believe that if the entire province was "congested" that we would be on the right road to success.

29419. What do you gain that you have not now by scheduling the whole of the province? I suppose those places you speak of where poor people are crowded such as you describe are scheduled?—Oh, no; that is my point.

29420. Do you mean to say——?—Where I live is not scheduled, and poverty is extreme in it.

29421. What you mean to say is that there are places in County Sligo where there is considerable poverty and those people cannot be helped because they are not in the scheduled area?—That is my point.

29422. Most Rev. Dr. O'Donnell.—How many electoral divisions in Sligo are scheduled, do you know?—Not one I believe of all I have read out.

29423. You know that in these electoral divisions that are not scheduled there are townlands that need remedial treatment very much?—Yes, and poverty exists there as much and perhaps more so than where it is scheduled.

29424. How is the valuation put up above the limit for scheduling in those electoral divisions? Is it owing to the existence of large grazing farms?—Yes.

29425. Chairman.—Why do you say "Yes"—what does that mean?—The valuation of the large grazing farm is high. The valuation of the poor is small, but the grazing farms are high as the land is of superior quality.

29426. That puts up the valuation of the district?—The valuation per head goes up.

29427. In the good farms the valuation is high, and where people are crowded on the mountain sides and on the bogs, but where the valuation of the electoral divisions is high owing to the grazing farms, they are not scheduled?—That is my opinion.

29428. Sir John Colomb.—Per head of population. You mean the small holding is rated at such a small valuation that the land with a high valuation raised unduly from your point of view the valuation per head of the population, is that what you mean?—Yes.

Mr. O'Kelly.—It brings it above the thirty shillings standard.

29430. Mr. Sutherland.—About the scheduling of the whole of Connaught, what was your object in recommending the scheduling of the Province of Connaught?—My object in having the entire province scheduled is that if the existing law cannot deal with congestion in those districts, where will you migrate the people to except you have it congested.

29431. That is my difficulty, and I am asking you this question—Would you confine the people of Connaught to Connaught itself?—No, I would not. I believe there are counties outside that are in as bad a condition.

29432. Do you think there is sufficient accommodation for the people of Connaught to live all over the province?—I do not think there is.

29433. You would not shut it out from participating in the good lands in other parts of Ireland?—No. It would be a step in the right direction. It would be bringing the people from poverty to prosperity.

29434. I wish to know clearly how it would be, because we have recommendations to make. It does not involve that the present population of the country should still remain in the county?—No.

29435. Mr. Kavanagh.—Are you aware the income of the Congested Districts Board is limited, and that consequently if you enlarge the area of congestion you take money away from perhaps poorer parts—do you know Mayo and Galway?—I believe the Congested Districts Board should get larger powers.

29436. Would you compare your county with Mayo and Galway in condition of poverty?—Unfortunately there are parishes to be found in County Sligo as bad as any other parts of Ireland.

29437. Are you acquainted with Mayo and Galway?—Well, not directly, only from hearsay.

29438. If you were told they were worse?—Well, if they are worse, I say God help them.

29439. Sir John Colomb.—You said just now you were anxious to get the small holders from the mountain sides. Well, now, if you take the case of Collooney, I see that there is only forty-five out of 170 holdings not exceeding £4. Now, is there not at Collooney more or less of a town?—Yes, a country town.

29440. And some of those around the town have a plot of land and are included in that forty-five?—The land in the hands of the townspeople is very small.

29441. It will probably be included in this forty-five?—I would not say it could. I do not believe so.

29442. Holdings on the skirts of the town with a couple of acres would they not be included in the forty-five holdings under £4?—I would say that a few of the large shopkeepers there would own this land, but not the general working people or the poor.

29443. But I mean all small holdings?—I do not believe there are any in the hands of the town.

Apr. 19, 1907.

Mr. John M'Loughlin.

29444. You mean to say that in Collooney there are not cottages with small potato gardens attached to them?—I believe they are very few.

29445. Can you throw any light on this? You have given very striking figures, and I must compliment you on the information you gave. Can you tell when you point to the decline of the population of Collooney how much of that was emigration from the town of Collooney—young men and women from the town who were not on the lands outside?—I would not say it is from the town. It is from the electoral division of Collooney.

29446. That includes the town. What I want to know is whether in the towns such as Collooney there is an equal restlessness and desire of the young and strong to emigrate as there is, unhappily, in the country? From your knowledge of the country, because we come here to get information from gentlemen like yourself who know the locality and what they are speaking about—can you tell me that?—The circumference of the country round Collooney parish is mountainous to a great extent.

29447. I am not limiting myself to Collooney, but as a type of the country town I want to know if there is the same desire amongst the young men and women in the town to emigrate as there is, I say, unhappily, in the country?—Well, I believe the young people are more prosperous in the town than in the country round it.

29448. Am I to draw from that the inference that the young men and women in Ireland do not leave the towns or small villages as much as people in the country?—No; they do not.

29449. That is your opinion?—Rural districts suffer most.

29450. They suffer any way?—There is some little encouragement in the village. In Collooney there is Mr. Sims. He is a very enterprising gentleman. It is a little manufacturing town.

29451. Does not that industry give employment not only to the people in the town but draw the young men and women from the parish towards the town?—Yes, if it was larger.

29452. It does do it?—Yes, they come in from the country.

29453. And therefore the development of industries does tend to stop emigration from the rural districts, because it finds employment for people who have no employment in the country and go to the town?—Oh, certainly it would be most beneficial if you could establish industries. In my opinion the whole of Connaught should be scheduled——

29454. CHAIRMAN.—Would it not satisfy you if those places you describe as very poor were scheduled? You told us there are places in the county that are not at present scheduled and where great poverty exists. Under the present law you cannot deal with those places because they are not scheduled. As a remedy to that you want to schedule the whole of Connaught. Why not schedule merely those parts? Why do you want to schedule the whole lot?—My opinion is that if you were to schedule the spots most required, the most deserving portion might be left out in the cold. By taking in the entire province you meet with it. Congestion is so visible in the different electoral divisions that except you include them all you will not hit on the real road to create prosperity.

29455. Would it not satisfy you if you had the cases scheduled where poverty could be shown to exist?—Where would you remove them to?

29456. Where you remove them to does not matter. You could do that now if the place where the poverty exists is scheduled. It is not necessary that the land you are going to remove them to should be scheduled?—It exists very strongly in each electoral division, and where will you make the selection?

29457. Simply wherever it exists. There may be a great many districts in the county where there is no poverty, and where, on the other hand, there is prosperity. Why do you want to schedule those places merely for the sake of dealing with a particular number of poverty-stricken spots?—I do believe that you would not have any room for the landless people and the farmers' sons of the County Sligo, and perhaps some of the more congested counties out of their own bounds without having the entire province scheduled as congested. It would save them from emigration.

29458. I think there is a little confusion in your mind. Perhaps you think that you could only carry out migration if the whole of the province is scheduled. That is not so. If those places that you speak of were scheduled now—those poor places—you can now under the existing law remove those people to grass lands in any part of Ireland that might be bought by the Congested Districts Board or the Estates Commissioners. The Congested Districts Board are not limited to purchasing land within the scheduled area. They can purchase outside for the purpose of people inside the scheduled areas, and can move the people from scheduled to non-scheduled areas?—If it is voluntarily given to them. We want some little compulsory powers.

29459. It has nothing to do with that?—The powers of the Congested Districts Board would become more powerful.

29460. Mr. SUTHERLAND.—We were afraid you were wanting to limit it by what you were proposing.

Witness.—All non-residential grazing lands should be taken over by the State and used for enlargement of uneconomic holdings and for creation of new holdings.

29461. CHAIRMAN.—That is a very important point. What do you call non-residential grazing farms?—Non-residential grazing farms are those that are given over to the use of bullocks and sheep, nobody living there. I have known some gentlemen to have six to eight or ten of those. They might live on one, and have five to six more under the eleven months' system.

29462. How do you define the difference between residential and non-residential?—The residential farm the gentleman lives on, and the non-residential farm he does not live on.

29463. Supposing you were to say that non-residential holdings were liable to be taken over by the State and supposing that gentleman promptly built a house and put his son into it, would you call that non-residential or residential?—It would be residential.

29464. Would not the whole of what you want to do be frustrated by the erection of a small house?—There are many of those big men who have no sons.

29465. I suppose some of them may have?—It is the poor unfortunate peasant on the mountain side who has them by the half-dozen.

29466. Suppose the case of one or two who are fortunate enough to have sons. What is to prevent a man of that kind from building a house upon his non-residential holding and putting his son to live there. How are you going to meet that case?—Naturally we could not touch it. It belonged to himself and his son. I say non-residential farms.

29467. My point is, how are you going to prevent a non-residential holding being turned into a residential holding in a few weeks by the erection of a very small house which could be rapidly built. Would not that make it a residential holding, and then you could not touch it?—You will be sure of the gentleman who has no son to put into it. We want you to do the best you can for the struggling poor.

29468. Most Rev. Dr. O'DONNELL.—Would not something depend on whether the son was going to remain *bona fide* or not? Suppose the son went in there only for the show of residence, would you consider that should constitute him a residential occupier? Are there not two ways by which land of that class might be dealt with? The son might go in there and become a real *bona fide* occupier of the holding; that is one way. The other way would be to go in for a week or two. Would not some test apply?—Yes.

CHAIRMAN.—Supposing he does go in as a *bona-fide* resident, is it not likely that the man who had a non-residential holding would be much more willing to put in his son than to allow it to go out of his possession.

29470. Most Rev. Dr. O'DONNELL.—Don't you think if it went out of his possession he would be paid for it sufficiently. In some cases he might be disposed to put in his son, but in many cases he would not? That is your point?—Yes. My point is these non-residential holdings should be taken over by the State, that is, to relieve congestion, and, of course, where the gentleman had a son for one of his additional farms there was no question. I would not dispute it.

29471. Unless it was a very large farm, and if

he were grazing it, would you, under any circumstances, ask him to surrender?—Certainly?—I believe God made the land for the people, and not for any gentleman

29472. CHAIRMAN.—You have to draw a line. You told us that where a man puts in his son you would not disturb it, but now you say you would if it is of a certain size. How are you going to draw the line?—Of course it is not easy to draw the line in a case of that kind; if we draw the line for the prosperity of our country it should be tilled.

29473. Do you suggest the Congested Districts Board should act without any fixed principles?—I would give him thirty acres at least.

29474. Then do you mean to say you would not allow anybody to have more than thirty acres?—No; I say that the stalwart farmer's son that would make a practical farmer would be very happy to get thirty acres, and I know 80 per cent. of the people would become good trusted subjects here. It would create peace and prosperity if they were rooted in the soil. They would be thankful to get thirty acres of this land, and the gentleman's son who would not be able to use a spade would not be thankful for fifty or a hundred.

29475. We are probably all agreed on that, but that is not the point. How do you propose to do this? You want to bring the man down and give him thirty acres. You have bought up the whole of the untenanted land and put people on it, and now you have got to supplement the untenanted land by taking non-residential holdings. In the first place how are you going to get over the difficulty of dealing with a place of that kind if there is a *bona fide* occupier on it in the shape of a son of the owner, and if his presence is not to prevent you, how much of his land are you going to take—are you going to take all or leave some portion?—If he is a *bona fide* occupier on the land I would not touch him, but if he is bogus——

29476. If he is the *bona fide* owner—that is to say, if his father puts him in a house on the land, are you going to touch him or leave him?—If he is *bona fide* he should be left there.

29477. You would leave him there?—Yes.

29478. No matter what the size of his holding?—Except it was to deceive the Act. If he was put there for a bogus purpose I should say the question would be different.

29479. Well, you come to a different question, and that is of having to decide why he was there. You know perfectly well there are such things as *bona fide* travellers. They are not always genuine, and you might have the same difficulty with *bona fide* occupiers?—If it was clearly proved he was *bona fide* it was all right.

29480. What do you call a genuine occupier—would you call the son of a man put in there to occupy a house a *bona fide* occupier?—If the son occupies one of the farms belonging to his father, why should not he be there? My evidence is, these non-residential farms being so numerous in the district, and our population dwindling down, and our country driving to decay from an agricultural point of view——

29481. I think you would find them less numerous if you proposed anything like that?—I say this, that instead of the stalwart sons of the farmers going to use their hands and brains to build up the prosperity of other countries, every attempt should be made to keep them on the land. Their labour would enrich the country by making the land pay. There are a lot of those big farms going back to prairie condition. The water is not drained, and the land is not tilled. It is splendid crop land if it was put into the hands of young farmer's sons that would be willing and able to make it pay.

29482. Why is it not tilled now if it would be so much better under tillage?—By the labour of these poor people they are striving to rear large families on the mountain side. They are struggling an uphill battle until they become men, able to fit them to go to foreign countries to make a livelihood. All those lands are in the hands of non-residential graziers.

29483. Why does not that gentleman till it—if a man has a hundred acres of grass, and if that holding would pay very much better under tillage, why does he continue to carry on a system of agriculture that is not as profitable?—We have two classes. There is the industrious, hard-working class, and the idle and unproductive class. One works, and the other won't.

29484. The people who graze are unproductive?—Yes.

29485. Sir JOHN COLOMB.—You are anxious to redistribute what you call the untenanted land among the smaller tenants?—Yes, and the landless people and the young farmers' sons.

29486. Are you thinking of the sons of occupiers, or are you thinking of the small occupiers themselves?—I am thinking more of their family, their growing sons.

29487. You think it more important to get those grass lands for the sake of the farmers' sons than for the sake of the small holders in the bog?—I would say I would get it for the sake of both where congestion would be very visible. I would give three small holdings to one.

29488. You have spoken of the desire to place stalwart farmers' industrious sons on the land, and I want to know in your idea of acquiring untenanted lands whether you mean for the purpose of fixing farmers' sons upon them?—Principally.

29489. Well, now, in those lands you are anxious to get hold of for the purpose of settling farmers' sons upon them, I suppose whoever uses the untenanted land ought, in your opinion, to be purchased out or disposed of?—Yes.

29490. Supposing that the grazing farm is in the hands of a man who has a tillage farm and who has acquired by the sweat of tillage and industry money and buys up the grazing farm in order to keep up his grazing land—would you take it away from the farmer?—I would compensate him.

29491. I understand that the man should be paid, but my point is, would you interfere with what that farmer did, taking away the holding which he acquired in order to increase his means of making money as a necessary addition to his tillage land?—I believe one farm was sufficient for him. I think that power should be in the hands of the State.

29492. Then your policy of acquiring by the State untenanted land or grazing land would hit farmers as well as owners?—Yes.

29493. Take the case of a shopkeeper who by his own industry and toil and by his energy and brains has built up property and money, and who sees a grazing farm and a good application for his money, and buys that grazing farm—are you going to go to him and say, "You must give it up. We will compensate you?" Is that your opinion?—Yes.

29494. Therefore your policy of compulsion as applied to grazing farms is to take them away, not merely from the owners, but from the farmers adjoining who have bought them, and the shopkeepers—in fact, from anybody in the world who would make money and put it into grazing farms as a matter of business?—No, I would not say that. As you make a remark about the shopkeeper, he has the custom of the poor all around and making a general profit on the poor man, and is not the class of man who should starve him from the land. He is building himself up on the struggling farmers around him. I say the shopkeeper and gentleman farmer is a dangerous thing in the country.

29495. In order to improve the country you consider the shopkeeper and trader on which the country relies as a dangerous thing?—The poor man cannot touch land so long as the shopkeeper is a bidder in the field.

29496. You would deprive him of the opportunity of acquiring land?—I would give him a portion of land but not the face of a country for miles around. One or five farms won't do some shopkeepers.

29497. Are you a farmer yourself?—Yes.

29498. What is the size of your holding?—About thirty acres.

29499. How much of that do you till?—I till a large portion of it.

29500. How much?—Six or eight acres, or may be twelve acres, and meadow portion of it.

29501. The Chairman asked you some very crucial and pointed questions, and one of them was why it is if tillage pays better than grass everybody does not go in for tillage instead of grazing, and I ask you what proportion of your farm is tilled?—Tillage pays twice over.

Apr. 19, 1907.

Mr. John M'Loughlin.

29502. I want to get information from your own instance as a practical farmer, and I ask you, out of thirty acres how much do you take for rotation crops?—Six to eight, sometimes ten acres.

29503. Therefore you have got two-thirds at the least under grass?—Yes.

29504. Taking your experience, two-thirds of the acreage of the holdings must as a rule be under grass?—I believe there is more; there is generally more. I believe one-half the lands of Ireland should be tilled.

29505. I am taking you as an example?—I say if we could create prosperity half the land of Ireland should be under tillage.

29506. Why don't you put half your land under tillage?—The labour is gone out of the country, and there is no encouragement to the agricultural labourer who would make a practical labourer.

29507. Do you mean you cannot get labour?—Even at any money.

29508. Mr. SUTHERLAND.—Is there one-third of the area of farms in tillage?—There is not that much. There is not one-sixth.

29509. Can we see large farms on which there is no tillage at all?—Where there is no tillage whatsoever.

29510. You do not contemplate cultivating altogether?—I say one-third should be.

29511. Most Rev. Dr. O'DONNELL.—Let us look at that for a moment. If those lands were put into tillage you would not contemplate the tillage farmer every year tilling the whole of the holding?—No.

29512. Good farming would require a very considerable portion of it to be under grass?—Yes.

29513. A mixed system of farming is what you advocate?—Yes.

29514. Even from the point of view of good tillage the land should be let out in grass occasionally?—Yes.

29515. In addition to that grass, I daresay there would be a good deal of rough pasture attached to those farms?—Yes.

29516. In these two ways in a good system of tillage there would be a considerable portion of land under grass?—Yes.

29517. What you said about the advantage of keeping land in tillage seems to be very interesting. In answer to Lord Dudley and Sir John Colomb you said the young men were gone. Supposing there were some inducement to the young men to stay in the country would it not serve to encourage tillage on the farms?—Yes.

29518. If they were not flocking to America, as they are, you would find it much more convenient to get hands for your farm when you required them?—Yes.

29519. Do you think, as a practical farmer, that enough is being done to instruct the people in the best form of agriculture?—There is not enough done.

29520. If practical agriculture of the best kind were brought under the notice of the people in a suitable way don't you think that of itself would constitute an inducement to till more?—What little information they have got is inducing them to till more.

29521. CHAIRMAN.—I want you to give me your best opinion on one question. I want to ask you, and just take time to answer, what, in your opinion, is the real reason why so much land about here is in grass—is it because there is really a difficulty in getting labour to till it, or is it because, in your opinion, as you said just now, the people who graze the land are idle and prefer the idle method of agriculture?—The large farms are in possession of those who will not work nor till the land, nor let the people who are anxious to do so work or till the land. They prefer to live on the grazing system—an idle life.

29522. Is that because they are idle, and because they prefer to carry on farming in an idle way, or that they cannot get labour?—I would not say it is because they are all idle.

29523. Do you mean to tell us seriously that the reason why there is so much land in grass is because these people cannot get labour to till it?—The labourers are not to be had, but still they don't want to till it. The land is not in the occupation of the poor farmers who would till it.

29524. They could get labour to till it?—They are men of money, and they could have horses, but they are allowing the country to drift to decay, and our population to fly.

29525. Am I right in supposing the chief reason why this land is in grass is not because there is an insufficiency of labour, but because those people do not choose for reasons of their own to till it?—That is my real opinion.

29526. Will you tell me why you think that if you broke up those holdings into smaller holdings of forty or thirty acres that you would be sure to get this land tilled?—I am certain that would be done.

29527. Why—how can you be sure that if you did that they would not be merely smaller grazing farms?—Because it is so much more profitable to till the land. It pays so much more by tillage than grass, the young farmers' sons or struggling tenant farmers on the mountain sides or bogs, if they got into good lands it would be such prosperity to get from poverty to start in prosperity, I believe they would make it pay double.

29528. If there was such a very great difference in the value of the two systems, do you think you would find the present people so determined to keep the land in grass?—I am certain they would work unceasingly for it, being the new created tenants.

29529. But why is it that those present people prefer, according to you, to throw away all the advantages of getting more money out of their holding by tilling it?—As I said, there are two classes. It came from father to son on the mountain slope to work hard, whereas it came down from father to son for the grazier to be idle.

29530. But, then, according to you, the grazier is not only idle, but an idiot absolutely to refuse to conduct his holding in the most profitable way?—Well, that may be as I have known.

29531. Does it not strike you?—What I look to in a well-governed country is that the State—

29532. Does it not strike you as being very extraordinary that an enormous class, as the grazing class is, occupying in many counties great tracts of land, people should be so idiotic that they absolutely insist upon conducting their holdings in the most unprofitable way that can be found, instead of having more profit—is it not very extraordinary?—Yes, but so long as they see the poorer class on the mountain side they are contented.

29533. As long as they are much better off?—Yes; they are better off and not working, and the poor man must be the slave.

29534. Mr. SUTHERLAND.—On what tenure is the grazing farm generally held—is it on the eleven months' system?—The property owner gives them to many on the eleven months' system, and then they are used for grazing purposes to take in the milch cow and dry stock.

29535. Is it on the eleven months?—More are.

29536. Are the majority?—Well, the majority are.

29537. I daresay you would hold in that case that a man who has only an eleven months' take would not be likely to settle down or to invest his money in buying implements and horses to cultivate—is that one of the reasons?—The eleven months' man has no right to till, but there is what I call large farms.

29538. Is that one of the reasons why these eleven months' grass men cannot cultivate?—Oh, no. The eleven months' system is worked principally between the landlord and the middleman grazier, where the poor man has no look in at all.

29539. Who really occupies the land—the third man?—The middleman, and let the poor men come forward with their cattle and pay the highest grazing.

29540. The middleman has the land?—He has set it back.

29541. So it arises more out of the system of tenure than the economic question?—That is doing a deal of the harm. If this did not exist, the real tiller of the soil would get at the soil. The eleven months' system is the only block between the farmer and the land.

29542. Most Rev. Dr. O'DONNELL.—Take the general case, as put by Lord Dudley, and let us see how it works out. You have a grazing farmer who has two hundred acres in grass. Now, it is one thing to turn that into tillage and work it himself, and is it quite another thing to have it split up into small farms, and a number of occupiers brought on the farms. I call your attention to this.

Might not agriculture on a large scale be unprofitable when agriculture on a small holding would be very profitable?—Quite right.

29543. Suppose a man takes to agriculture on a farm of two hundred acres, would he not have to employ all the labour?—Yes.

29544. If he had a great many employed hands what would he turn them to on a wet day? He would have a difficulty in employing them?—Yes.

29545. Take that land split up into thirty-acre holdings. Would the tillage on those holdings be largely done by the farmers themselves?—Yes.

29546. Would he have to employ a man or two?—It would be on a small scale.

29547. No matter what the weather might be, would it not be possible for that farmer to find for his sons or himself useful indoor employment?—Yes.

29548. In other words, from the circumstances of the case and climate it looks as if it would be possible to have remunerative agriculture on small holdings where it might be very dubious on large holdings?—Yes.

29549. When you propose that there should be a general turn to agriculture, is it agriculture in the latter sense that you mean. Do you mean that the land should be divided into comparatively small holdings, so that the farmer and his sons could do most of the work?—Yes.

29550. That is the class of agriculture which you consider takes most out of the land?—Yes.

29551. You do not undertake to say that in this climate agriculture on a very large scale would be equally remunerative. Does that distinction commend itself to you?—Yes. I do not believe in the large holdings, they never pay. Furthermore, on the small holdings there is a lot of profit from the poultry industry and pig feeding and other small industries which the large holding cannot reach. If a man gets twenty-five to thirty acres you will have a little hive of industry in each house which would bring in their own different profits and each will create a general prosperity for the country.

29552. Mr. KAVANAGH.—You have said that tillage pays better than grazing?—It does, twice over, when done by the farmer who would be able to cover the labour.

29553. You say tillage pays better in a small holding but does not in the very large holding?—If labour has to be paid generally by the owner, of course it could not. The farmer and his family would cover expenditure on the small holding.

29554. Mr. O'KELLY.—Would you agree with the view that tillage is decreasing owing to the objection of the people to till?—No, I would not say that, though there should be some class of the community not satisfied to labour, but then from a general point of view the mass of the people are anxious to till the soil and make it pay.

29555. CHAIRMAN.—You told his lordship, the Bishop, that in your opinion there was a great difference between the profits to be expected from tilling a farm, say, of two hundred acres and the profits to be expected from tilling a holding, say, of fifty or forty acres. His lordship put you a series of questions with regard to the method in which large farmers farming two hundred acres would deal or would find employment for his labourers when the weather was bad. From those questions you left me under the impression that you thought that whereas a holding of fifty acres might be profitably tilled, a holding of two hundred acres could not be profitably tilled?—Yes.

29556. You know the district pretty well, and do you know of any case here now at present of a farmer, a grazing farmer, with, say, fifty acres of land living in this district?—Yes, plenty with fifty acres.

29557. Grazing farmers?—Yes, and round where I live myself.

29558. If it is possible, therefore, to make these profits by tilling fifty acres of land, why don't those grazing men who own those fifty acres till?—He is just living an idle man, and he knows the poor man on the mountain side requires the grazing of a cow, and the poor man must come in there and pay whatever that idle man's demand is.

29559. In other words, his system of farming is to take in the grazing beasts of the poor man on the mountain to grass?—Yes.

29560. It is what is called accommodation land?—Yes.

29561. Therefore, in his opinion, it is better for him to carry on his holding by using it as accommodation land than by tilling it, so that the question of size does not arise, for two hundred acre farms may be used for the same purpose?—Yes.

29562. What reason have you to suppose that if you were to create more fifty-acre holdings they would not be conducted in exactly the same way?—I would create holdings from twenty-five to thirty acres.

29563. What security have you that they would not be carried on like that?—I do not believe they would. We would remove some of the unfortunate people from the mountain sides who would be anxious to make it pay.

29564. How are the people on the mountain then going to rear their calves unless somebody is going to have accommodation land to take in the calves?—If one of those people on the mountain sides had the land which three occupied to-day they could do well without the accommodation land.

29565. They would not have to send them down to the accommodation land?—No.

29566. Mr. O'KELLY.—They would not need accommodation land?—They would have their own little accommodation.

29567. CHAIRMAN.—You relieve congestion in the district, and you have got, perhaps, three farms, each of ten acres?—Perhaps not five.

29568. Say five acres, so that you have three of five acres, making fifteen acres in all. Those three men have got two head of cattle each?—Sometimes one.

29569. So they have got a calf apiece?—Yes.

29570. At present those three men have not got sufficient to graze one calf on their holdings, and they have to send their calves to the accommodation land?—They make a little tillage on the mountain side and send the calf away grazing.

29571. If you amalgamated the holdings you would have one of fifteen acres, and then, in your opinion, the result would be that five acres would be tilled and ten acres remain in pasture?—Some for pasture and some for winter feeding.

29572. The three calves would be grazed on the ten acres of rough grass?—Yes, and they would not require the grazing farm. The grazing farm could be used more profitably if it was used in the hands of expert farmers.

29573. The fifty-acre man down in the valley, having no longer any calves to take in, no young beasts to take in upon his accommodation land, would be forced to till it himself?—Till it or take the compensation, and let him have it who would till it and be anxious to till it.

29574. Sir JOHN COLOMB.—Could the ordinary holders of thirty acres in this county, in your district, which you know so well, do without an outlet where they could get grazing for their cattle?—That depends on the locality they are in.

29575. I am asking now of your district. Supposing that the lands used as accommodation lands on which they grazed their cattle, all ceased to be available for their use, what would happen to them?—They have to either till it themselves or take the compensation.

29576. I am talking of the cattle. Does the thirty acre man take grazing every year?—Very few of them in my district. It is generally on the thirty acre farm he keeps his milch cows, as he can profitably supply the town and also the creamery.

29577. Well, he parts with the young stock?—Yes.

29578. Who buys the young stock?—There are always the fairs—local fairs, and fine demand.

29579. Who are the buyers at those fairs?—They come from many places. They come from the North of Ireland.

29580. Are they graziers?—Well, even the farmers themselves buy.

29581. Are they graziers—that is people who have grass lands and buy and make a market for the holders who have to part with the young stock?—Yes, and the farmers themselves buy.

29582. Are they bought in the locality at the fairs by the graziers and people who have grass farms?—Yes, and even the farmers buy them, too.

29583. Big farmers?—Yes, and small farmers, as their means allow them.

Apr. 19, 1906.

Mr. John M'Loughlin.

29584. Do you think if you broke up all the grazing farms that there would be the same demand for the young stock? Take the existing holders, now. What would happen to them if there were no graziers or any persons having grass lands that live by buying stock and keeping it on the land?—I believe we would have a mixed system of stock and tillage, and it would pay better.

29585. You mean that would be compensated by the existing holding adopting a different system of agriculture?—Yes, a different system.

29586. You acknowledge otherwise there would be great danger to the ordinary occupiers of land, small holders in this country, if the market went from them for the young stock?—No, I would not say that at all. There is no fear of the market going except if the importation of foreign cattle came about.

29587. Supposing a man were to go out to a grazing farm of two hundred acres and find certain cattle on it, I want to know, would those be cattle bred by the small holders?—No, I believe the price would rise for them. The more you till the less cattle could be raised, and I believe the price would rise.

29588. Supposing a man was to go on to one of those grazing farms you have been describing, would a large proportion of those cattle on it be cattle that were bought and obtained from and had been produced by the smaller holders of the district?—Yes.

29589. If you take that particular farm you are speaking of, you would find on that farm the younger cattle that the smaller holders had been obliged to part with because they could not keep them on their own land?—I do not believe it would reduce the price.

29590. You would find largely the younger cattle that had been bred by the smaller farmer?—The smaller farmer when restored to the land would rear those cattle on his own little holding apart from sending them away.

29591. Do they do it now?—They are not in possession. On the land you would restore them to they would have a mixed system of cattle and tillage.

29592. Mr. O'Kelly.—The small farmer would finish the store himself?—I believe so.

29593. In that way he would do away with the profits of the middleman?—Yes.

29594. So you do not think the grazier is an economic necessity in the country?—No, I believe he is a real ruin.

29595. And that the profits he makes on that system would go to the small man?—They would rise with the start he would get.

29596. Would he need any capital to assist him over the interregnum?—He would require something of a capital.

29597. Chairman.—Just tell us about the sea fisheries?—Steps should be taken to develop sea-fishing at Coney Island and Ballisodare Bay.

29598. What could be done?—If there was something of a small pier built that would be suitable to the people. It is in a very poor condition.

29599. Is there any pier in Ballisodare Bay?—It is a very poor one. It is in a poor condition. I may say all the fishermen say they are in a deplorable condition. Coney Island is in a very deplorable condition.

29600. Do people live on Coney Island?—Yes, and cannot get off from the mainland except when the tide is out.

29601. Have the Congested Districts Board done anything with regard to the fishermen at Coney Island?—No, it is not scheduled. That is my point. Many poor places are left out in the cold.

29602. Have the Department of Agriculture done anything? Oh, yes, their intentions are very good, but their services cannot reach the people who most need them. They did nothing in Coney Island up to the present. Even the prize competitions and everything of that kind are captured by moneyed parties.

29603. I am talking of fishing?—They have done no improvement for them there. The drainage of the Owenmore is a necessary work.

Chairman.—You need not go into that.

Mr. Charles Phibbs examined.

Mr. Charles Phibbs.

29604. Chairman.—You appear on behalf of the Landowners' Convention?—Yes.

29605. You are a landowner in this district?—Yes.

29606. You have been for more than thirty years?—Yes.

29607. You have been a magistrate for about the same time?—Yes.

29608. Will you read us your memorandum?—I am a resident landowner in the Tobercurry district for about thirty years, and have been a magistrate of the county for about the same period. I purchased the Doobeg estate, on which I reside, in the Landed Estates Court in 1877. It comprised the whole townland of Doobeg, 742 acres, 2 roods, 7 perches statute. Of this 476 acres are in my own hands, including about 176 acres of bog. There were twenty tenants in 1877, and I created one new small tenant. The rental was then £190, which was very low, and it was raised to £224 on a valuation made by a valuer nominated by the tenants themselves.

29609. Sir Francis Mowatt.—At what date was that raised?—In 1878. Two tenants, whose rents were £6 each, sold their interests to me some years afterwards, one to go to America, and the other wished to confine himself to a farm which he got on Lord Harlech's estate. I paid them their own prices. A third tenant, whose rent was £12, got into difficulties, and I bought his interest from him for £130. I gave him back a small portion at a rent of £1 10*s.* and helped him to build a house on it, in which he still lives. Most of the remaining tenants afterwards got judicial rents fixed, and, of course, got the usual reductions, and the rental is now £156.

29610. You bought a tenant's interest for £130, and still he remained there?—I gave him back a small portion of the holding.

29611. What year was that?—About ten years ago.

29612. He is now a future tenant?—Yes, a future tenant. I paid £11,000 for the estate, which represented about twenty-three years' purchase of the court valuation, and thirty-two years' purchase of the poor-law valuation, and I bought subject to tithe rent charges of about £23 per year. The estate belonged to an absentee, and was in a deplorable condition. Eighty acres had been let by the agent to conacre tenants who had been allowed to burn the soil. In addition to the Doobeg estate, I own the townland of Mullane Phibbs, near Clonacool, which is set to tenants, the rental being about £120. Until recently I had also six other townlands, now sold to the tenants under the Act of 1903, namely, two near Ballymote, rental about £70; two near Collooney, rental about £150; and two near Tobercurry, rental about £220.

29613. Rental about £220—were they pretty large tenants?—No, small tenants, all. That is the rental of the townland. I regard the graziers as the backbone of the West of Ireland, and if any policy is adopted which would greatly diminish their numbers or their trade, the Government will create greater difficulties than they have ever yet had to face in that part of the country. The gigantic and widespread schemes of migration and enlargement of holdings which have been propounded by witnesses like Mr. Henry Doran and Mr. Commissioner Finucane seem to me to be both impracticable and mischievous. They would involve, as Mr. Finucane has proved, State advances to an amount equal to, or exceeding, the total advances made under all the Land Purchase Acts up to the present time. A very large proportion of these small purchasers would not have sufficient capital to till or stock their enlarged holdings. They would therefore have to meadow, or conacre, or sub-let most of the land. The land would soon become deteriorated or exhausted by such methods, and the purchasers would then declare themselves unable to pay their purchase annuities. Their last state would become worse than their first. The Government and the taxpayers would lose enormous sums by their default. Their bad example would tempt many other tenant purchasers to invent excuses for not paying their annuities also, and in a few years the whole policy of purchase, which has hitherto been working well, would get into great difficulties and discredit, and become the cause of a new agrarian agitation.

29614. "Gigantic and widespread schemes of migration . . . seem to me to be both impracticable and mischievous." There have been, as you know, 284 people migrated under the Congested Districts Board, and there has been no case of failure?—I am only speaking about my own neighbourhood. They have only recently been placed on those lands.

29615. If 284 men can succeed why should you say that a scheme of migration is impracticable?—That is wholesale. The evidence was very voluminous, and I have only glanced at it. That is my impression on reading it.

29616. Am I to understand that you think migration on a small scale might be carried out successfully and on a large scale it would not succeed?—On a wholesale scale.

29617. What is there that would bring about this break down?—It would necessitate in the first instance the taking of all the land that is under grass.

29618. Sir JOHN COLOMB.—Is your meaning this, Mr. Phibbs, that you wish to convey your view, that a scheme must be cautiously and gradually carried out, and that a great sweeping bold scheme suddenly carried out would be dangerous?—Yes, that is my idea.

29619. You wish to rather impress the mind with your view that any scheme like that must be cautiously and carefully carried out, and that a great sweeping reform suddenly imposed would, in your mind, be unsuccessful and disastrous?—I believe so.

29620. CHAIRMAN.—Might I ask you are you in favour of migration or not?—Oh, yes, just gradually, if the land could be got, and if the people would agree to it.

29621. If they will migrate you are in favour of it as a policy?—Oh, I believe so.

29622. Then your doubts about it are as regard to the pace it should be carried on at?—Yes, very much that.

29623. What would you call a reasonable pace?—I think if the land could be acquired by degrees.

29624. Could you give me any idea of the pace you would be prepared to see migration carried on?—I am afraid I could not.

29625. Do you think if you delayed this too long all the land that might be available now would be bought up and sold?—How do you mean bought up?

29626. I mean this; is it not the fact that a great amount of grass lands is changing hands, and the tenants are buying their lands and becoming purchasers?—I do not think there are many changes in the ownership of grass lands.

29627. I think there are. A great deal has been already bought up?—Bought up under the Act of 1903?

29628. Bought up under the Act of 1903?—Where they can get it they will buy it as a matter of course.

29629. Does it not strike you that if you proceeded very slowly with this scheme of migration, that land which you might want is every year more and more being bought up by men from whom it is difficult to get it?—Yes.

29630. Has it struck you that the Estates Commissioners are buying as much grass land as they can get for the purpose of creating new tenancies and for the purpose of putting back the evicted tenants—you know that is so?—Yes.

29631. If that goes on, how would you suggest these migrations should be carried out. You will have a lot of new tenancies created in the persons of sons of tenants, and evicted tenants; and those people who are now in the congested districts, living upon uneconomic holdings, will be debarred from relief which at present exists?—There are two properties quite close to me which have been purchased by the Congested Districts Board, and the land has been already, or most of it, striped.

29632. Would you agree or disagree that if a scheme of migration were carried out too slowly that the difficulties of it would be very much increased?—I think it would be more likely to succeed.

29633. If it is done very slowly?—Slowly.

29634. How are you going to retain a call upon the grass land—how are you going to feel that in ten years or fifteen years you will be able to get grass land if you do not buy it soon?—I believe there are a great many ready to sell who do not occupy the land themselves and let it for eleven months.

Apr. 13, 1907.

Mr. Charles Phibbs.

29635. Owners?—Landowners.

29636. They are willing to sell?—Yes.

29637. What objection is there that the State should buy the land?—I see no objection to that at all.

29638. Am I to take it this is what you mean—that you are prepared to see migration carried out immediately to the extent of the land that the landowners are willing to sell?—Quite so.

29639. Well, when you say go slowly, you only mean you are not prepared to go faster if it means clearing men out by anything else than voluntary means?—By anything else.

29640. The line you draw is voluntary sale?—I think so. The other seems extravagant and expensive, the wholesale purchasing of millions.

29641. There is not much danger in carrying out migration rapidly so long as the land is bought by voluntary purchase?—No.

29642. There is a considerable danger the moment you go to clear it out by wholesale means?—I think that is so.

29643. Sir JOHN COLOMB.—The land cannot run away, and the difference, with reference to Lord Dudley's question, would be, it is the owners selling their land now to persons that become occupiers of that land—the land does not run away, it remains, doesn't it?—Yes.

Mr. SUTHERLAND.—But the price may rise.

29644. CHAIRMAN.—You say, "A very large proportion of these small purchasers would not have sufficient capital to till or stock their enlarged holdings. They would, therefore, have to meadow or conacre or sub-let most of the land." Surely that would be rather a temporary process?—If you reduce land by every crop without manure or in any way reduce it by grazing without feeding, you reduce the value of the land very much.

29645. I suppose there is a good deal of the land could be described in that way now?—The older the skin is the more valuable it is.

29646. Does not grass land deteriorate if you continually graze it year after year?—It does, as grass land, unless you feed on it.

29647. Is there very much feeding on those grass lands round here?—Not in the country generally.

29648 Then the grass land is deteriorating?—Some of it has, and is.

29649. That would be remedied by tilling?—Yes, proper tillage or feeding on it.

29650. Then there is no reason to suppose that a temporary sub-letting either in conacre or meadow would be more disadvantageous than the present system?—I think it would. Of the two it would be worse.

29651. What difference would there be?—As I have seen it, and see it every day, at the end of three or four years it would grow nothing at all.

29652. The small holder is brought from a poor district to a grass country, and he is put into a holding of, say, forty acres. He has not got sufficient capital or labour to immediately till as much of that or to stock as much of that as he would like to do. He, therefore, to use it up, is forced for a year or two to sub-let portion of his holding in conacre or meadow until he can accumulate sufficient capital to put stock upon it, or until he has got time to till a larger portion of it. What difference is there in the process he would carry on and what goes on now?—Your lordship understands in that kind of work all the crops are taken off the land. There is no feeding of the land of any kind. Under the landlord and tenant system they consume the produce off the land. There is great difference in land. There is land and land—very different land. You talk of any forty acres.

29653. Forty acres of fair land with a man who cannot stock it all, and who has not got time to till it all. For the first year or two what has he got to do with the balance? He is bound to sub-let it in some way?—I suppose he is if he cannot use it himself.

29654. And he will probably either meadow it or take in cattle. What is there in that process which would be more injurious to the land than what goes on now?—Your lordship would see that if you worked land—a crop of potatoes and a crop of oats and one

Apr. 19, 1907.

Mr. Charles Phibbs.

or two crops of rye-grass meadow taken off the land and it is left there. It is worthless then.

29655. He does not till. The man has got a forty-acre holding, and he has only got enough stock to stock the half of it?—I thought your lordship meant no stock at all.

29656. I suppose he has a certain amount of stock to bring down, or from the proceeds of it he has a sufficient amount to stock half of it?—That is a very much improved situation.

29657. But still even then he is not able to take full advantage of his forty-acre holding. The other twenty acres which are in grass he sub-lets for a year or two, or he takes in cattle, or meadows them. What difference is there between that and what is going on now?—Although it might be deteriorating a little, it is safer under the grass and more valuable than it would be after being tilled.

29658. Sir JOHN COLOMB.—Is that on your assumption he won't have the manure?—Yes. There will be no manure.

29659. Sir JOHN COLOMB.—The reason you give Lord Dudley is that you do not see where he is to get the manure necessary for the tillage to put into the land, so that the tillage would be an impoverishment instead of a benefit.

29660. CHAIRMAN.—I am not talking of the part he has tilled at all. You say the very fact of sub-letting it for meadowing or grazing will lead to all these deplorable results, but what is the difference between the process that he will adopt and the process that is now adopted by the large man?—The large man does not adopt that process now.

29661. He puts his own cattle on it, and the smaller man will put other people's cattle?—I do not object to that.

29662. If he sub-lets it and takes in cattle as he has not got the stock himself for a few years?—I understood you meant conacre. There is no exception to that.

CHAIRMAN.—I assume this remains in grass.

29663. Mr. SUTHERLAND.—Why should it be a fault in the case of the tenant and a benefit in the case of the large grazier which you yourself recommend?

CHAIRMAN.—Do you understand my point?

Mr. SUTHERLAND.—I put exactly what Lord Dudley put.

CHAIRMAN.—You have given forty acres to a man and the tenant can only till, say, twenty for the first few years, and he has not got sufficient stock or capital to buy more stock or time to till. Therefore he tills and uses for himself half his holding, namely, twenty acres. And the other twenty acres is left on his hands. He wants to make some use of it, and so he takes in cattle of other people and makes it accommodation land or else he meadows it. Is there any greater deterioration of that land by that process carried on by the small man in that way than there would be if that land was part of a large farm of one hundred and fifty acres and grazed by a man by his own cattle?—None whatever.

29664. Therefore, so long as the tenant has not got sufficient capital and deals with his land judiciously there is no reason to suppose the land will deteriorate any faster than now?—Not in that case as you put it.

29665. Most Rev. Dr. O'DONNELL.—What examples of deterioration have come under your notice?—A great many.

29666. On the estates purchased by the Congested Districts Board?—There is not time.

29667. There have been 289 migrants?—Not in Sligo.

29668. Seeing that you have penned this paragraph, would it not have been advisable to see what the experience has been with those migrants?—There is not time.

29669. Mr. SUTHERLAND.—You came to a conclusion?—I heard of people letting in conacre.

29670. Most Rev. Dr. O'DONNELL.—"Their last state would become worse than their first." Don't you think that is a prophecy?—Just so; that is all it is.

29671. At all events, you have not any experience to go upon in the migration process of the Congested Districts Board to sustain this?—No.

29672. What has been done on the estates of the Congested Districts Board within your observation?—The lands have been striped and mud fences put up.

29673. The men have been moved on to them?—Yes, on the Doocastle property and the Chaffpool property, both near here.

29674. How long are the migrants in the holdings?—Very recently on the Chaffpool property and Doocastle last year, which is just on my dividing wall.

29675. The holdings on which those men are planted are divided grass lands?—They are all grass lands they have been put on. They are all the tenants of two different properties. I know of one exception.

29676. They have all migrated?—Only one.

29677. The others have got enlargements?—They have been migrated on the same property, giving up the old holding.

29678. Sir JOHN COLOMB.—District tenants have given up their holdings and got them enlarged or were brought from another. No migrants were brought in?—I know of one who migrated.

29679. Mr. O'KELLY.—In the beginning of the paragraph you say that if any policy is adopted which would greatly diminish the numbers of the graziers the Government will be creating greater difficulties than they have ever yet had to face. What are the difficulties you have in mind?—Oh, I think generally upsetting everything.

29680. Upsetting what?—The cattle trade in particular.

29681. How would it upset it?—The graziers are the largest purchasers I think in this country of one and a half year olds.

29682. You do not agree with the views expressed by Mr. M'Loughlin a while ago?—Not altogether.

29683. You do not agree with what he said, that the grazier was not a necessity?—No, I do not agree with that.

29684. Why?—I think he is a necessity.

29685. Upon what grounds?—A source of sale to the small farmers.

29686. If you had a mixed system don't you think the small farmer would be able to finish his stores and get the profits that the grazier now secures?—He won't do that. He has not done that.

29687. If he had the land might he do it?—He might, but I do not believe he would myself, or that they will ever fatten cattle.

29688. In any case it is quite possible?—Of course it is.

29689. CHAIRMAN.—There is just one more question as to this statement. At the end of it you say the result of this deterioration of the land would mean that the purchasers would probably be unable to pay their annuities?—Oh, yes. That is only my poor opinion.

29690. You say that the security for the annuities would become very doubtful owing to the deterioration of the land. That rather assumes, in your view, the security for the State in the matter of the collection of the annuities depends a great deal upon whether the land is good or bad?—I think the annuities are small. Of course it depends upon the prosperity of the country.

29691. And the excellence of the land. Does not the whole of your argument, and the latter part of that paragraph mean that so long as the land is good and is kept in good condition, and does not deteriorate, the annuities are well secured?—The people will be well off and willing to pay.

29692. And, therefore, the security of the State will be good, because they will be able to pay?—Yes.

29693. If the land deteriorates they will not be able to pay, and the security of the State is not so good—it becomes doubtful?—Possibly.

29694. That is the argument running through this paragraph?—Yes.

29695. Does not that mean, then, that where land starts with being bad, the security of the State as regards the annuity may be very doubtful?—Not the present annuities, five shillings below the second term rents.

29696. How much will those lands have to deteriorate in order to make the payment of the annuity insecure?—I could not say.

29697. Up to the point they would cease to be good lands, and when they would become bad lands?—There is such a thing as worn-out land.

29698. Don't you know there are many lands which could be described even now as worn out?—They are all worn out almost.

29699. And are passing from landlord to tenant under the Act of 1903?—Yes.

29700. And you say with regard to those worn out lands that the security of the State with regard to the annuities is very doubtful?—I am perfectly certain it is not.

29701. That is the security in regard to those tenanted lands is secure and as regards the untenanted lands insecure?—You have a basis in one case and none in the other. You are starting on no basis.

29702. It is only relative. If the land is bad land. no matter how it gets to be bad land, it is a doubtful security for the payment of the annuity?—If the annuity is very low it is not.

29703. That is if the annuity is low even on bad land the State is secure. Does it mean this, that if the land is bad it obviously can only be security up to a very limited extent?—Perhaps so.

29704. That is your opinion?—Yes.

29705. Where land can be proved and shown to be bad land do you believe the State ought to be very careful as to the annuity that it allows to be fixed on that land?—Do you mean land in the hands of the tenant?

29706. Yes?—It has been already twice overvalued, reduced twice over, and the purchase annuities are a further reduction.

29707. You think no matter how bad the land is so long as it is tenanted it can be regarded as perfectly good security for payment?—For payment of an annuity.

29708. And an annuity which is fixed without any inspection as to the value of land?—Have there not been two inspections?

CHAIRMAN.—There may or may not have been.

Mr. KAVANAGH.—Then it would not be within the zones—a judicial tenancy.

29711. CHAIRMAN.—It could be fixed out of court. It does not follow every judicial tenant has been into court?—It does not, but they are very small.

29712. Those fixed by agreement?—Yes.

29713. They are judicial tenants, and if that estate were sold under the Act of 1903 they are within the zones and there would be no inspection?—No. You will get no estate in which there have not been many rents fixed.

29714. With regard to this, there has been no inspection when the rent is fixed by agreement?—Except the fact that the tenant has agreed to the reduced rent—the landlord and tenant have agreed.

29715. There has been no inspection of the farm?—There may not have been in some cases.

29716. Mr. O'KELLY.—I suppose you will admit that in the last few years prices of land have risen?—Occupation prices have risen tremendously.

29718. And the prices diminished under previous Acts where the farmer was purchasing?—The landlords have given up selling.

29719. Do you think land would be more valuable in 1902 than in 1907?—No.

29720. And I suppose you know the case of a landlord in this district who offered to sell his property in 1902 at twenty years' purchase, but negotiations did not succeed, and in 1904 he wanted twenty-three years' purchase plus the bonus—could you account for the increase in that case?—There are reasons in every case almost.

29721. Mr. O'KELLY.—I suppose you know the landlord, Mr. Phibbs? Was it your own property?—No. There were special circumstances in the case. I was joint owner with another man. I only agreed to sell my own property at twenty years.

29723. What was the property that was being negotiated at that time?—I think I know it. It was joint property. The owner was myself and another.

29724. They agreed to sell it?—I don't know that they agreed to sell it. There was no agreement.

29725. Did you not have some negotiations with the tenants?—Yes; I think there was.

29726. Was there any suggestion as to the price that might be paid?—That was to avoid the cost and expense of partition between the owners which was afterwards carried out.

29727. That has nothing to do with the price of land and we are on the question of securities. Did you and the other make any suggestion as to the price the tenants might pay?—We may have.

29728. Would you mind recalling it?—I believe it is as you say. *Apr.* 19, 1907.

29729. In 1904 you entered into negotiations for the sale of the same property?—Yes. Mr. Charles Phibbs.

29730. And on that occasion you asked twenty-three years' purchase?—That was after the partition. They are not the same owners now.

29731. Partition has nothing to do with the value of the land. Twenty-three years' purchase was asked in 1904. You say land did not enhance in value between 1902 and 1904 when the Act of 1903 was passed plus several bonuses?—There would be no bonus. My estate is solvent and the other is insolvent.

29732. Was that the reason—to make the property solvent—that you raised the price to make the property solvent and consequently you lifted the bonus?—No. The annuity is less.

29733. That has nothing to do with the question of security. Would you not generally conclude, Mr. Phibbs, that three years' purchase is a rather excessive advance in the price of land considering that there has been in the interval no enhancement in the value of land?—You ask me shortly about it. There were a great many circumstances. Every one did not agree to that twenty years' purchase, and there was pending the costs of partition.

29734. Of course the tenants had to pay for the costs of the partition?—I imagine it would take a less price to save a lot of costs. That is no proof that the full value was being paid.

29735. Sir JOHN COLOMB.—This paragraph commences with a reference to the dangers of breaking up the grazing land and ends with a warning of more or less fear about the security of the annuities. I take your whole paragraph to mean first of all that there is the question of interference with the cattle trade as affecting the well-being of existing small holdings?—That is what I mean.

29736. With regard to the question of the treatment of the land, it was this, was it not, that unless those tenants had sufficient capital they would be driven to meadow and conacre which would naturally deteriorate the land; and, therefore, does it not mean this; that you are taking the case of tenants put on to those lands without sufficient chance by reason of capital without resorting to conacre or meadow?—Yes.

29737. It was only that you meant. You did not mean that if those men are put after agreement on a thirty acre holding on a grass farm and care is taken that he can have sufficient capital to work the farm himself, that then there is danger?—Oh, no.

29738. CHAIRMAN.—When the point was raised just now you said there was a very small number of cases that have been settled by agreement of judicial tenancies. As a matter of fact, I find that out of a total of three hundred and sixty thousand which are the number of judicial tenancies created since 1881, one hundred and fifty thousand, or nearly half, have been fixed by agreement?—I don't think that is so in this part of the country; in this district.

29739. Those are the figures?—It surprises me very much.

29740. CHAIRMAN.—So that in the whole of those one hundred and fifty thousand cases there has been no inspection for the fixing of rent or sale.

29741. Sir JOHN COLOMB.—Has not the tendency to settle out of Court diminished very much; it was very prevalent at first and is it not less prevalent now?—I fancy so.

29742. Mr. SUTHERLAND.—Are not nearly all the rents judicially fixed now?—I fancy they are nearly all judicially fixed. I had no idea the agreements were as large as your lordship says. (*Witness resuming memorandum*).—The general breaking up of grass lands would bring down the price of all young stock up to 1½ years old. This would certainly not be a benefit to the small farmer. Even with enlarged holdings small farmers would not keep their young stock longer than one year. Even if they did, such cattle would not thrive like cattle which have larger tracts to run on. It is said that the small farmer should stall feed or in-feed them, but he knows nothing of such a system and would not have sufficient capital to enable him to adopt it. Dealers would not buy immature stores because they would be totally unfit for shipping, and if graziers were abolished there would be very little market for young cattle.

Apr. 19, 1907.

Mr. Charles Phibbs.

29743. Mr. SUTHERLAND.—One question on that. We have a great deal of evidence on this point from practical farmers and they assure us that there would be ample provision by these people themselves on the new holdings to do this operation themselves—you do not agree with that?—No. Cattle want a larger range to do well; from year-olds to two and a-half-year-olds. That is one serious reason.

29744. You know how they are done in Scotland; mostly inside?—Oh, yes.

29745. Why should they not do that?—Do you think what is in Scotland would be carried out here.

29746. The conditions are most favourable?—In the month of July I saw the most beautiful stall-fed cattle I ever saw in Glasgow.

29747. Why should not these people do the same?—I do not believe it would suit this country.

29748. Mr. O'KELLY.—Why would it not suit?—They have never done it.

29749. Is there anything in the atmosphere that prevents it?—We are very subject to disease, and if we began to house half-year-olds to year and a half we would soon have anthrax in its intensity. As it is it is over the country.

29750. Sir FRANCIS MOWATT.—Do you attribute that in part or a large part to in-feeding?—If you attempt to force young beasts there is danger.

Sir FRANCIS MOWATT.—No danger in other countries.

29751. CHAIRMAN.—Why should there be more danger?—Want of skill amongst the rest.

29752. Is there any reason why they should not learn skill?—Quite so.

29753. If they knew how to do it is there anything in the climate or conditions which would make what is successful in Scotland impossible here?—No, I suppose not.

29754. Sir JOHN COLOMB.—Is there not this on the farms in Scotland—very considerable housing accommodation, and would not a change by which stall-feeding was to be generally carried out in Ireland involve an enormous outlay to provide for shedding and accommodation and all that which is essential to stall-feeding which cannot be carried on without it?—It is not only shedding we want, but capital for all the other heavy outlay.

29755. If you take stall-fed cattle, must they not have not merely a cow-house but they must have a roofed-in considerable space to move about in, and you cannot stall-feed unless you have great accommodation for the cattle, and therefore is that not one of the reasons of the difference—that that is not the case in Ireland—the tenant has not that enormous housing accommodation necessary for stall-feeding?—That is so.

29756. Mr. KAVANAGH.—What we want to get at is the six months in which the beast goes to the grazier before he goes to the fattening lands. Is it not possible for small farmers with thirty acres to get their stores without actually stall-feeding them?—Through the summer.

29757. Through the winter?—Stock are never put in here in winter at all.

29758. Mr. SUTHERLAND.—Is that not a great advantage over Scotland. In Scotland the climate necessitates them going in?—We have a better climate for that work.

29759. Therefore it is more easily done in Ireland?—Our climate is superior—much milder.

29760. Mr. KAVANAGH.—In our climate they can live out where they could not live out in Scotland—have we not an advantage in that way?—We have an advantage in that way.

29761. Sir JOHN COLOMB.—You agree possibly that the reason the system is different in Scotland is that the climate forces the agriculturists in Scotland to put up the buildings, but the Irish climate is so genial it does not force them, and it is not necessary?—Yes, quite so.

29762. Mr. KAVANAGH.—Therefore we can keep them six months easier than the Scotchman, who has to stall-feed them?—It has been said that small farmers would, or should, till most of their enlarged holdings, and this seems to be the expectation of witnesses like Mr. Doran. But everyone who lives in the country knows that the people are growing more and more averse to tillage. and are more and more anxious to get all or almost all their holdings into grass. Apart from the fact that this kind of farming involves less work and less personal exertion, grass farming in one form or another is more profitable and more suitable to the climate, especially in the West of Ireland. The climate generally is too wet, too cold, too uncertain, and there is too little ripening sun for successful tillage, except in small patches. Consequently you rarely see more than three acres tilled on small farms, and usually much less than that. The theories and advice of Mr. Doran and his friends won't induce the small farmers to adopt tillage to any larger extent.

29763. Mr. O'KELLY.—What is Mr. Doran's theory?—Mr. Doran's theory is for tillage, as I understand.

29764. You differ from Mr. Doran's theory in that connection?—I do, in that as to tillage being a success.

29765. You are aware Mr. Doran is a man of large experience on farming matters?—Is a man of very large experience.

29766. Is a practical farmer himself?—I don't know as to that.

29767. I think I can tell you that he is. His view is founded on experience?—He has had very large experience.

CHAIRMAN.—And large experience of small holders in many parts of Ireland.

29768. Mr. O'KELLY.—And is a farmer himself?—I think so.

29769. You say the country people are growing more averse to tillage—is that so in this part of the country?—Yes.

29770. You would not agree with the view expressed by the former witness that the contrary is the fact?—I know for a fact—I can state for a fact—they are reducing their tillage.

29771. Will you tell us what is the reduction. Take the ordinary farmer of ten or fifteen or twenty acres?—I do not know the figures at all, but there is a gradual reduction of tillage.

29772. How do you arrive at that conclusion?—Simply from seeing it.

29773. Observation?—Observation and seeing it with my own eyes.

29774. Do you base your view on any of the reports from the Department of Agriculture?—Not a bit on the public reports.

29775. But simply observation?—My own observation, for a fact, I can state so.

29776. Can you give us any concrete case. Run your mind's eye over the country you are familiar with?—It is before you. Three acres is as near as I could go to the average of the tillage.

29777. Has it in recent years diminished?—It has been gradually going into grass year after year.

29778. You say we have three acres of tillage on a ten-acre farm?—Yes, something like that.

29779. How many would you have five years ago?—Oh, I suppose, perhaps, double that. That is, five years ago there might have been.

29780. Twenty years ago?—Double, I should say.

29781. Six acres?—I would say so.

29782. You would not agree with Mr. M'Loughlin that the people are not getting averse to tillage?—They are getting averse to tillage, I believe.

29783. He expressed a different view, but you maintain yours?—Yes.

29784. Mr. KAVANAGH.—Are there any creameries in this district?—Yes.

29785. Do you find the presence of the creamery reduces tillage?—I think it does.

29786. We had evidence yesterday on this. Do you think it does?—It is more a matter of money. The people sell the milk to the creamery.

29787. Don't you think more tillage would have produced more milk?—If they tilled differently, but there are no turnips or mangolds grown—practically none.

29788. Tillage would really do better for the rearing of dairy cattle?—It would give more milk in the early spring, for instance.

29789. Do you approve of creameries as a rule?—I do not think they are good for the country.

29790. Do you think they deteriorate the calves?—Yes, decidedly; that is a most serious thing. That is not the fault of the creamery, but is the fault of the farmer, who sends too much milk to it, and does

not reserve enough for the calves. The calves cannot be reared without milk up to a certain age, and the longer you can keep them on milk the better.

29791. CHAIRMAN.—Did you go to the Cork Exhibition four or five years ago?—No.

29792. Do you remember the experiments that were made at that time with regard to adding cod liver oil to the skim milk for feeding calves?—I do not remember, though I have been continually reading the Live Stock Journal.

29793. Do you believe in that?—I believe nothing can properly rear a calf or calves but milk.

29794. Natural milk. You don't think by adding——?—I limit it to a month or six weeks or two months. I say a couple of months for milk, and then begin to add other things. I now find oatmeal is the best to add, and the milk is reduced by degrees.

29795. Sir JOHN COLOMB.—As a matter of fact, is it not the case that a calf on separated milk properly treated by restoring the fatty matter for the first six weeks gets on extremely well?—I have never tried it.

29796. That is my experience?—If you separate yourself. In the creamery it goes through processes we don't know anything about, and we get back stuff hardly fit for using.

29797. Sir FRANCIS MOWATT.—You say they grow no mangel-wurzel in the country. Is that because they never have been here or have grown them?—It has been grown; I have grown seventy-five tons to the acre.

29798. It is gradually shrinking?—Oh, there is no mangel grown.

29799. Sir JOHN COLOMB.—Have you found from your experience in this district that mangels do extraordinarily well?—Yes.
